Although the last decade of Villa-Lobos's life was marked by a gradual deterioration in health, he remained for the most part remarkably active: in 1949 he made a series of tours in Europe, the USA and Japan; concerts in Paris in 1951 and 1955 were especially well received; in 1952 at the Théâtre des Champs-Elysées with the Orchestre National de France he gave first performances of his early Symphony no.4 ('A vitória') of 1919 and the four suites *Descobrimento do Brasil* of 1937. During his final seven years, Paris became his home once again, from where he responded to numerous engagements and commissions, particularly from the USA, including works for the Boston SO and the Philadelphia Orchestra. On the eve of his 70th birthday a *New York Times* editorial (4 March 1957) praised his distinguished service, while in Brazil, 1957 was declared 'Villa-Lobos year' by the Ministry of Education and Culture.

The following year Villa-Lobos was still active, working on the film score of *Green Mansions*, whose concert version he retitled as *Floresta do Amazonas*, and conducting in Europe and New York. In December 1958 his sacred work *Bendita sabedoria* for mixed chorus was first performed at New York University, on the occasion of his award of an honorary doctorate. However, by the time he returned to Rio de Janeiro in July 1959 his health had worsened considerably. Although he continued to preside over the Brazilian Academy of Music, he died a few months later. His funeral was attended by many dignitaries, including the country's president.

5. Works. Villa-Lobos was unquestionably a strongly nationalist composer, though over six decades of extraordinarily prolific work his nationalism took on many faces. His identification with folk and popular music was of the utmost significance to him, but it would be simplistic to classify his works merely in terms of its presence or absence; or indeed to try to view such references as separate from his numerous and varied experiments in style and language, even within a single work.

The period 1901–22 covers Villa-Lobos's initial search for stylistic definition. The 50 or so works written during these years include some of his famous early piano pieces – such as the *Danças características africanas* (1914–15), the *Prole do bebê* nos.1 and 2 (1918, 1921) and the *Carnaval das crianças brasileiras* (1919–20) – but also chamber music such as the *Sexteto místico* (1917), the woodwind Trio (1921), the first four string quartets the song cycle *Epigramas irônicos e sentimentais* (1921–3), the first five symphonies and the ballets *Uirapuru* (1917) and *Amazonas* (1917). Despite the strongly post-Romantic, French Impressionist character of several of these works, particularly in the harmonies and tone-colouring, the home-grown is evident too, for example in the 'Chorinho' from the *Suite popular brasileira*.

The substantial and attractive *Uirapuru* is a particularly revealing example of Villa-Lobos's struggle to establish the elements which contributed to his own identity as an original national composer, while still dependent on the French models of the time. Both a ballet and tone poem, it is based on a legend involving an enchanted bird from the Amazon, considered by Indian worshippers to be the king of love. As a ballet it displays many of the ingredients of similar works of the 1910s (such as Stravinsky's *The Firebird*), in its mixture of the romantic, fantastic and primitivist. As a tone poem it exemplifies the ideal genre for Villa-Lobos, who revealed throughout his career a frequent use of extra-musical associations or programmatic concepts as a means of designing the formal structure of his works.

Although Villa-Lobos was not himself a very accomplished pianist, his contribution to 20th-century piano literature is remarkable for its range of expression, the techniques used and the sheer quantity of different works. Of the earlier works the *Prole do bebê no.2* stands out: the nine movements which comprise the piece portray toy animals, but are in essence a set of 'transcendental studies' (Souza Lima, 1969). 'O boisinho de chumbo' ('The Little Lead Ox'), for example, calls for fast scale passages in different intervals, diatonic and chromatic glissando figurations, large intervallic skips and the use of extreme ranges of the keyboard, rhythmic layering and accentuation of some complexity and up to three simultaneous dynamic planes. The final grandiose section (ex.1), with its massive chordal blocks across the registers, clearly depicts the eponymous ox. However, despite an at times violent and atonal harmonic vocabulary, the melodic invention, associated with Brazilian children's tunes, is quite tonal. Some original folksongs are quoted with few alterations, for instance *Fui no tororó* in the second part of 'A baratinha de papel' ('The Paper Bug') (ex.2), which

Ex.2 'A baratinha de papel'

at the start also exhibits a typical habanera ostinato pattern and a theme whose flexible contour and rhythm underlines the Brazilian spirit. The ostinato reveals an ingenious treatment in the alternation of black and white keys: in the first group of semiquavers the first, third and fourth notes are on white keys, with the second note on a black key; in the second group, the second and third notes are now white, and the first and fourth black.

In 1923 Villa-Lobos wrote one of his most characteristic works, the *Noneto*, given its première in Paris in 1924. Subtitled 'Impressão rápida de todo o Brasil', the piece represented a new synthesis of national musical expression. Closer to *choro* than many other works of the 1920s which bear the title, the *Noneto* comprises a comprehensive anthology of the most common but also most original and appealing rhythms of urban popular music (ex.3). The atmosphere is added to by the rhapsodic and improvisational manner of the melodies, whose richly contrapuntal working is reminiscent of other *choro* composers such as Pixunguinha, Donga and Benedito. The employment of the saxophone, flute, harp (in place of guitar) and *cavanquinho* in the ensemble also points to *choro*, and to Impressionist sources. The *Chôros* are still generally considered the compositions with which Villa-Lobos most clearly established his aesthetic – a daring balance of the vernacular and the Modernist – becoming in the process Brazil's foremost nationalist musical voice. For a variety of instrumentations, from solo guitar, solo piano and chamber ensembles to orchestra and chorus, including one work for two orchestras and band (no.13), the *Chôros* represent Villa-Lobos's most extensive vehicle in his crusade to communicate the tropically fertile, exotic nature of the music of his country.

Although the model of the *choro* is closely followed in *Chôros no.1* for guitar, it is in *Chôros no.5* ('Alma brasileira') for piano that Villa-Lobos best portrays the serenade-like aspect of the style; the strongly expressive lyricism in the piece may also be related to the love song genre of *modinha*. In sharp contrast *Chôros no.8* conveys a carnival celebration in Rio de Janeiro, by means of highly infectious rhythmic and timbral play and a large number of thematic ideas drawn from *choro*, children's songs and other popular types. The work also contains aspects of Villa-Lobos's earlier interest in evoking the dances of South American Indians. It was well-received at its Paris première and performed frequently subsequently. Of all the pieces in the series, *Chôros no.10* ('Rasga o coração') is generally considered his masterpiece. The subtitle comes from a *modinha* by the poet Catulo da Paixão Cearense, which had previously been adapted by Anacleto de Medeiros to his piano schottische *Yara*; passages of this piece are quoted in the second part of the Villa-Lobos, which describes a tremendous crescendo of primitive energy. The work's two main themes take on the form of bewitching, vigorous ostinatos; powerful onomatopoeic effects are produced by the complex counterpoint of nonsense syllables, echoing the phonetic sounds of aboriginal languages; polytonal and tone cluster features become more prominent, and, in combination with cross-rhythmic groupings, multiple syncopations and polyrhythm, create textures of quite a high complexity. The virtuoso orchestration also reveals a sophistication unknown until then in Brazil.

Of the major piano works composed in the 1920s, *Rudepoema* and the series of *Cirandas* occupy a special

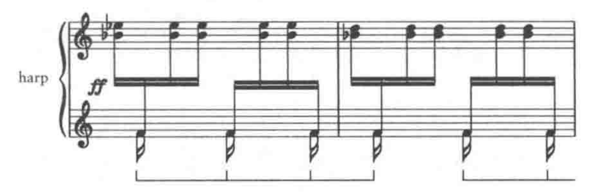
Ex.3

(i) 'Habanera' figure (as found in Brazilian tango, maxixe, samba, choro)

(ii) 'Afro-American' syncopation

(iii) Piano part, rehearsal nos.2 and 13

(iv) Various rhythmic combinations with cross-rhythms involving piano, harp, celesta, and woodwind, rehearsal no.2



(v) Syncopated figure by accentuation, güiro and rattle, rehearsal no.6

(vi) Duple and triple combined, piano part, rehearsal no.13

(vii) Example of syncopation obtained through melodic means only

place. *Rudepoema* was dedicated to Artur Rubinstein and is a portrait of the pianist, who gave its first performance in Paris in 1927. The technical and aesthetic complexity of the work arises from its great diversity of moods, probably the result of Villa Lobos's interpretation of Rubinstein's personality. The overall character is still decidedly experimental, especially in the treatment of rhythm and tone colour. By contrast, each piece of the *Cirandas* (1926), children's round-dances, is built on a traditional folk tune.

During the period of the Vargas regime Villa-Lobos composed the nine *Bachianas brasileiras*, described by

him as a 'homage the great genius of Johann Sebastian Bach ... [who I] consider a kind of universal folkloric source, rich and profound ... [a source] linking all peoples'.

These works were not intended, however, as stylized renditions of the music of Bach but as an attempt to adapt freely to Brazilian music a number of Baroque harmonic and contrapuntal procedures. The *Bachianas* are formally conceived as suites, in the Baroque sense of a sequence of two, three or four dance movements. With the exceptions of the second movement of no.6, the outer movements of no.8 and those of no.9, each movement has two titles – one formal à la Bach, such as prelude, introduction, aria, fantasia, toccata, fugue, the other nationalistic, such as *embolada*, *modinha*, *ponteio*, *desafio*and *choro*. These national elements tend to be conveyed primarily by rhythmic structures, but also at times by melodic type and treatment, and by timbral associations.

Bachianas brasileiras no.1 (1930) for a minimum of eight solo cellos typifies the unique stylistic blend of European Baroque and Brazilian folk; while in *no.2* ('O trenzinho do Caipira') a toccata-like last movement graphically depicts the gradual increase and subsequent decrease in speed of a locomotive in the Caipira region of the state of São Paulo. *No.4*, originally for piano solo, is perhaps the most Bachian of the set in its techniques; it includes a chorale prelude as its second movement. Nevertheless, a Brazilian tropicalism still prevails, mainly

Ex.4 *Bachianas brasileiras no.5*, first movt

through free improvisation-like passages. A further important trait of the *Bachianas*, solo songs, guitar pieces and chamber music of the 1940s and 50s is the increase in a Puccini-like lyricism, in opposition to a melodic invention based upon short, rhythmic motifs. Cantabile outpourings of the *modinha* type abound, but none as emotionally expressive and powerfully engaging as the soprano line of the 'Aria-Cantilena' from the *Bachianas brasileiras no.5*, Villa-Lobos's deservedly best-known work (ex.4).

Besides the improvisatory character of the soprano's long, arching phrases, which suggests something unending and are reminiscent of the serenading *chorão*, the specifically Brazilian quality is also underlined by the treatment of the cello ensemble accompaniment, a kind of amplified version of a guitar technique known as *ponteio* (picked). The doubling of the soprano line an octave below by the first cellos not only adds volume, but also creates a unique blend of colouristic depth.

Among his numerous chamber works, the 17 string quartets preoccupied Villa-Lobos throughout his career; they are broadly representative of his changes in style and technique, though often remain overlooked. His principal pieces for guitar have achieved a much wider appeal. The virtuoso 12 études, completed in 1929, are especially challenging for performers, while also evoking Brazilian popular culture; the five preludes (completed in 1940) and a concerto (first performed by Segovia in 1956) reveal, on the other hand, a more Romantic character, while remaining highly sophisticated and idiomatic additions to the repertory.

6. PERSONALITY AND STYLE. Villa-Lobos is often reported to have said that music creation constituted for him a biological necessity. While this may explain in part his enormous output – 'the fruits of an extensive, generous and warm land', as he described it – it also reveals the instinctive bent of his own personality which felt and understood the many facets of the landscape and people of so large and diversified country as Brazil. It also accounts for the composer's aversion to preconceived compositional plans and the resulting natural, if uneven, flow of his music as well as his seemingly spontaneous, improvisation-like language. Although matching the basic premises of the nationalist aesthetic agenda of his era, his own nationalism was kaleidoscopic to correspond to his numerous creative sources, many of which sublimated the simple incorporation of indigenous musics. In effect, he created his own individual symbols of identity and made them acceptable as uniquely national. As widely different in sound structure or style as many of his works may be, his express intent was directed towards the best representation of what he perceived as powerfully suggestive of the wide continuum of the multiple and varied Brailian cultural traditions. Although his music is not a comprehensive synthesis of the plurality of Brazilian oral music traditions, more than any other composer of his generation he defined the exuberant stylistic eclecticism that has continued to characterize Brazilian art music.

GERARD BÉHAGUE

Villalpando, Alberto (*b* La Paz, 21 Nov 1940). Bolivian composer. He studied composition at the National Conservatory in Buenos Aires (1958–62) under Ginastera and García Morillo. Later he enrolled, at Ginastera's suggestion, in the newly-established music department of the Instituto Torcuato di Tella, where he was able to absorb a range of contemporary techniques from a series of visiting teachers including Malipiero, Dallapiccola and Messiaen. He has served in Bolivian public office, including a spell as director of music at the ministry of culture (1967–73) and a diplomatic posting in Paris in the late 1970s. His educational work began in the 1960s at the helm of the National Conservatory in La Paz. The following decade he initiated, alongside the conductor Carlos Rosso, the Taller de Música, an experimental music course at La Paz's Catholic University, loosely modelled on Ginastera's di Tella Institute; out of its ranks have sprung some of the leading figures of the younger generation. He is now professor of composition at the conservatory and at the Universidad Evangélica. He is married to the Bolivian poet Blanca Wiethüchter.

Villalpando's leading position among Bolivian composers has made him the natural recipient of state commissions for patriotic occasions, such as *Cantata de homenaje* (1975) for the sesquicentennial of independence and *Al mar* (1978–9) to mark one hundred years since the loss to Chile of Bolivia's Pacific coastline. The *Concertino semplice* for flute and orchestra (1966) is an early example of a youthful ability for combining the aleatory and post-serial currencies of the time with textures, colours and melodic formulae taken from the vernacular. Generally, his folkloristic vein has found a more comfortable outlet in the soundtracks for Jorge Sanjinés's films. Elsewhere, the accomplishment of each work often hinges on the balance between recognisably separate styles. A striking equilibrium is achieved in *Música para orquesta I*, a distant soundscape of La Paz where random superimpositions of diverse materials portray the urban bustle. Less cohesively, in *Mística* no.7 the momentum generated by a forceful opening in G minor dissolves into a mock-atonality produced by unsynchronized overlays of tonal folk-like fragments. His stark, economic, mature style displays none of the earlier sylistic dichotomy. In such works as *Mística* no.8 (1994–5), syncopation and chromaticism act to subvert a new order ruled by slow-moving diatonic sequences on a, for the most part, regular rhythmic grid.

AGUSTÍN FERNÁNDEZ

Villancico (Sp., diminutive of *villano*: 'peasant'). A term first applied in the late 15th century to a Spanish vernacular musical and poetic form consisting of several stanzas (*coplas*) framed by a refrain (*estribillo*) at the beginning and end, giving an overall *ABA* structure. The number of stanzas varied, as did the number of times the *estribillo* was repeated between stanzas in performance. Originally derived from a medieval dance lyric of the virelai or ballata type and associated with rustic or popular themes, the villancico was extensively cultivated in secular polyphonic music of the late 15th century and the 16th. In the second half of the 16th century devotional and religious themes gained in importance and the form became used increasingly for sacred compositions in the vernacular which were introduced into the liturgy on feast days. In the 17th century it became more important than the Latin motet, and although its artistic quality rapidly declined in the 18th and 19th centuries it remained popular in both Spain and Latin America. Since then 'villancico' has come to mean simply 'Christmas carol'.

1. ORIGINS TO 1600. The term 'villancico' was first applied by Renaissance writers to a refrain taken from or modelled on a rustic or popular song, and then to a number of 'closed' poetic and musical forms based on such a refrain. The earliest evidence of the use of the term in connection with the poetic form is in the Chansonnier Espagnol d'Herberay des Essarts (*c*1463; ed. C. Aubrun, Bordeaux, 1951), where a little poem entitled 'Villancillo' has the form *aabbba* etc. (Table 1(a)). At about the same

time another poem with an analogous genre designation, a 'Villançete' ascribed to Carvajales, appeared in the Cancionero de Estúñiga (ed. N. Salvador Miguel, Madrid, 1977), but it is less closely related to the textual history of the villancico than the poem in the Chansonnier Espagnol is. The earliest known song (complete with music) designated 'villancico' is *Andad, pasiones, andad* by Pedro de Lagarto in the 15th-century Cancionero Musical de la Biblioteca Colombina (ed. in MME, xxxiii, 1971); the poem is a refined exercise in courtly love but the three-part music has the simplicity of a popular tune. Lagarto's song also appears in the Cancionero Musical de Palacio (see below), in which most of the villancicos show a similar simplicity. The form is that of a typical villancico with introductory refrain of three lines and one stanza (Table 1(b)). The first description of the villancico is in Juan del Encina's 'Arte de poesia castellana' from his *Cancionero* of 1496. His comments suggest that the villancico had no specific poetic form and was not necessarily based on traditional verse, though he might have taken for granted the use of a traditional melody:

> If the refrain has two lines we may call it a *mote* [motto] or a villancico or a *letra* usually of the poet's invention. ... If it has three complete lines and one half-line, it will likewise be called a villancico or *letra* of the poet's invention. ... And if it has four lines, it may be called a canción and sometimes a *copla* [stanza].

The texts of the villancicos in his cancionero have up to 12 stanzas of six or seven lines each. Such flexibility was indeed characteristic of the villancico (as of popular song in general), even as late as 1592 when Díaz Rengifo, in his *Arte poética*, attempted a precise definition, emphasizing that it was a song, not just a poem, that it was comparable to the Italian ballata, and that it had a 'head' (refrain) joined in a variety of ways to the 'feet' (the *mudanzas* with their *vuelta* forming the strophe). The tendency from the 15th century to the 17th was for the term 'villancico' to be applied to a refrain song of up to four lines that was popular in flavour, as well as to the refrain itself, while 'canción' was more apt to be used for a courtly song of more than four lines; but as the terms were used inconsistently during the period it is impossible to draw rigid distinctions.

From Encina's definition and the examples of the villancico in the musical and literary cancioneros of his day two basic types emerge, shown in Table 1; the schemes shown in Table 2 are less common. The following characteristics should be noted: a lack of symmetry, though not invariable (Table 2), occurs between the metrical and melodic repetitions of the *estribillo* in the *vuelta*; the rhyme of the first verse of the *vuelta* links it with the *mudanzas*, but its music 'returns' directly to that of the *estribillo*; the last or last two verses of the *vuelta* often repeat wholly or in part those of the *estribillo*; frequently the *mudanza* melody incorporates by repetition or variation a phrase of the *estribillo* melody.

This form, in its various patterns, already existed in medieval monophonic songs such as the French virelai, Provençal *dansa*, Italian *lauda*, ballata and Hispanic cantiga. All display with some consistency the curious 'asymmetry' between verse and music of the *vuelta*. The villancico's direct prototypes appear in the great collection of semi-popular devotional songs, the *Cantigas de Santa María*, compiled by Alfonso el Sabio in the late 13th century. A usual though not invariable repetition of the *estribillo* between the *coplas* recalls responsorial dance forms from which all these 'closed' forms probably derived. A notably large proportion of the *Cantigas* present the apparently basic pattern shown in Table 1(a). Consequently the striking formal and metrical similarity of the 12th-century Andalusian–Arabic *zajal* (*aa*, *bbba*), although no music survives, raises problems of relationship still to be elucidated. The *zajal* often ended with a refrain in street language (a *jarcha*), another apparent link with the villancico, which early in its history was related to popular refrains. Spanish poetry of the 14th and 15th centuries exhibits numerous examples of the cantiga–*zajal* type, always in a popular context. However, the earliest polyphonic songs from the second half of the 15th century are settings, strongly influenced by the Franco-Flemish chanson, of the canción, an aristocratic lyric form with a four- or five-verse *estribillo* and symmetrical *vuelta*. Reacting against its musical and metrical complexities, Encina's generation revived the simpler patterns of popular tradition in the villancico. Stylistically the villancico of this latter period is almost identical to the frottola, and its form very similar to the *barzelletta*, a type of frottola. Frottolas are found in the Cancionero Musical de Palacio, and villancicos by Encina appear in the second and fourth books of frottolas printed by Andrea Antico (RISM 1516[2], 1517[2]). Considering the close relations between Spanish and Italian courts of the period, this association is not surprising.

More than 300 villancicos appear in the famous Cancionero Musical de Palacio (*c*1490–*c*1520; ed. in MME, v, 1947; x, 1951; xiv, 1965). Two collections from the decades around 1500, Cancionero Musical de la Colombina (*c*1490; ed. in MME, xxxiii, 1971) and Cancionero Musical de Segovia [ed. V. Lama de la Cruz, 1994), contain numerous villancicos, although the older canción still predominates. However, of the 65 three-part courtly love songs in the Portuguese Cancionero Musical de Elvas (*c*1500; also known as the Cancionero Musical de la Hortênsia, ed. M. Morais, PM, ser. A. xxxi, 1977) the majority are villancicos; important composers represented are Juan del Encina, Juan de Anchieta, Millán,

Pedro de Escobar, Juan Ponce and Francisco de Peñalosa. The villancicos of this period, in three or four parts, are usually texted only in the superius, which carries the melody, and are predominantly homophonic in texture. The generally syllabic melody, of narrow range and set in simple contrapuntal style and often conjunct motion, matches the rhythm of the verse and frequently cadences at its close with brief ornamentation. Duple mensuration prevails, but triple metre is also common, often with jaunty use of hemiola. The normal octosyllabic verses are sometimes combined with a half-verse; shorter lines tend to occur in popular, lively pieces. These villancicos were composed for an aristocratic environment. Courtly love songs mix with pieces, often setting satirical texts, that reflect the lives of peasants. The freshness of the music complements the rustic poems, and brings genuine expression to the more artificial courtly love songs. Feasting songs and satirical and bawdy pieces were skilfully set for witty, realistic or dramatic effect. Devotional and particularly Christmas villancicos form a characteristic group, though most pieces in the Cancionero Musical de Palacio and in Encina's *Cancionero* of 1496 are secular rather than sacred.

In the 16th century a new generation of composers developed a new polyphonic style; all voices now share equally in the text and melody. The polyphony develops primarily through imitation, but homophonic style is not uncommon. The text, frequently reduced to an *estribillo* and one *copla*, often with a symmetrical *vuelta*, is treated expressively through repetitions distributed among the voices. Triple metre becomes more common, and irregular metres and simple tunes, though artfully treated, betray the continuity of a popular tradition; yet many imitative villancicos from the mid-16th century are in fact sophisticated compositions. Two collections illustrate this period: the manuscript Cancionero Musical de Barcelona with some 20 villancicos (*c*1520–*c*1534; ed. E. Ros-Fabregas, 1992); and the print *Villancicos de diversos autores* (RISM 1556[30]), now known as the Cancionero de Upsala (ed. R. Mitjana and L. Querol Rosso, Madrid, 1980) or Cancionero del Duque de Calabria, which represents the period 1530–50 and contains 55 villancicos, most anonymous, but one is attributed to Gombert and others have been attributed through concordances to Cristóbal de Morales, Matheo Flecha (i), P.J. Aldomar and Bartolomé Cárceres. The first 36 and the last three texts are concerned with secular love, while the remainder are dedicated to the Virgin. The collection includes 12 Christmas villancicos, among them *Ríu, ríu, chíu*, perhaps the most famous Renaissance villancico.

The villancico reached a notable plateau in the *Villancicos y canciones* (1551; ed. E.A. Russell, 1970) and *Recopilación de sonetos y villancicos* (Seville, 1560; ed. in MME, iv, 1946) of Juan Vasquez. Vasquez relaxed the form by expanding the *estribillo*, often leading from it without pause into the *copla*, now through-composed, and 'returned' to the *estribillo* music with variations. None of the 48 villancicos in his *Recopilación* sets a religious text. Far from the simple part-writing with plentiful homophony characteristic of most of the villancicos in the Cancionero Musical de Palacio and Cancionero de Upsala, Vasquez's inhabit a more sophisticated contrapuntal world, with supple imitations and different rhythmic flow in individual voices, and show a strong preference for the sonorities of the major modes on C and F and the minor modes (one-flat signature) on D and G. Exceptional examples of more a passionate and despairing mood are *Cavallero queraysme dexar*, a lover's complaint that inhabits mode 4 and uses abundant low bass Es, and *Qué razón podeis tener*, which uses A minor sonorities with repeated cries in the top voice.

Arrangements of polyphonic villancicos appear in numerous collections of vihuela and keyboard music throughout the century, and settings for voice and vihuela provide early examples of accompanied solo song. These and settings for solo vihuela kept alive the traditional villancico repertory to the end of the century. Luys Milán published 12 original villancicos in his *El maestro* (Valencia, 1536). He printed ten of these works in two verions: one basically homorhythmic with the singer encouraged to ornament, and the second with a more elaborate vihuela part and the singer instructed not to ornament. Later vihuelists (Narváez, Mudarra, Valderrábano) also published their own settings of traditional tunes. Fuenllana often made instrumental transcriptions of polyphonic villancicos, notably those by Vasquez, including his famous *¿Con qué la lavaré?*, intabulated by Fuenllana almost identically to the way it appears in Vasquez's *Recopilación*. Monophonic villancicos are found in poetic cancioneros of the period, including, for example, the Cancionero sevillano (*c*1575; ed. M. Frenk, J.J. Labrador Herraiz and R.A. Di Franco, Seville, 1996).

In the later 16th century 'villancico' referred increasingly to a devotional or religious composition that reflected the widespread popular devotion inspired by the Counter-Reformation. Sometimes devotional villancicos were borrowed secular pieces with the text appropriately modified. Villancicos were introduced into the liturgy of festival days, and the traditional Christmas villancicos were especially cultivated in addition to those celebrating Corpus Christi or written in honour of the Virgin and other saints. Francisco Guerrero published a distinguished series in his *Canciones y villanescas espirituales* (Venice, 1589; ed. in MME, xvi, xix, 1949–57). The 31 villancicos offer novel effects in contrasting sonorities, with a four- or five-part *estribillo* against a *copla* for solo, duo or trio. They are rhythmically lively, usually in triple metre, with frequent syncopation, hemiolas and changes of metre, and syllabic declamation that follows the accents of the text. The dance-like rhythms and accessibility of some of Guerrero's melodies in these villancicos would seem to indicate popular influences. Guerrero made much use of word-painting and of expressive effects such as chromatic inflections and sudden contrasts of bold homophony with freely imitative passages, and of solo and duo textures with tutti passages. The part-writing is always sophisticated, even in the light-hearted Christmas and Epiphany villancicos (nos.13–24 and 25–8 for five voices, and nos.52–3 for four). Unlike these villancicos (the *villanescas* of the title), the canciones have no opening refrain and are in duple time; they also reveal Guerrero's flair for the general pause.

No villancicos are known by Victoria, but Philip II's court composers Philippe Rogier and Géry Ghersem wrote many. Rogier was among the first to write a lively *negro* (*Hu, hu, hu, a duo, cantaremo la Nacimento*, for five voices), and Ghersem's output includes several Christmas villancicos with antiphonal exchanges between a solo voice and instruments.

In 1596 Philip II ordered performances of the villancico in the vernacular to be banned from the Capilla Real, a prohibition that was clearly not very effective: chapel records show receipts from copyists for 24 villancicos in 1596, 15 in 1597 and 16 (by Mateo Romero, copied by Claudio de la Sablonara) in 1615 (R.M. Stevenson: 'Pedro Cerone (1566–1625): Impostor or Defender of the Faith', *Inter-American Music Review*, xvi/1, 1997, pp.1–27, esp. 16, note 31). Cerone (*El melopeo*, 1613, pp.196–7) wrote that villancicos were used in all churches in Spain, but they were a distraction from devotion, especially the light-hearted ones setting dialect texts. Vernacular villancicos were reinstated early in the 17th century by Philip IV.

For further information about sources *see* CANCIONERO.

2. AFTER 1600. The villancico after 1600 was essentially a religious genre sung in cathedrals, monasteries and other religious institutions as a substitute for Latin responsories in Matins at Christmas and Epiphany, in services for the Immaculate Conception and other Marian feasts, in Corpus Christi processions and on saints' days. In addition to being one of the most pervasive musical genres in the Western world during the 17th and 18th centuries, the villancico was a significant social phenomenon. While projecting the appropriate religious devotion for their purpose, villancicos were nonetheless often populated with characters of the popular theatre, from cowardly peasants and foolish mayors to stereotypical representations of minority groups, creating a complex tapestry that says much about contemporary culture. Lines spoken by these characters, often written by anonymous poets of modest ability, include references to theatrical themes and are found in every metre and poetic form of the day. The musical style of the villancico, especially in the 17th century, was also infused with popular culture. The dominant traits – triple metre with extensive hemiola and syncopation, syllabic declamation, homorhythmic textures and conjunct melodies – were found in most settings of Spanish and Portuguese texts of the day, including theatre music and popular songs. Meanwhile, secular song in Spain during the 17th century saw a blurring of formal lines between the villancico and the ROMANCE, and secular pieces in villancico form, such as those in the Cancionero de la Sablonara (ed. J. Etzion, Woodbridge, Suffolk, 1995), were called *tonos humanos*, a genre associated with theatre music later in the century.

The villancico's major sources today include music manuscripts found in archives throughout the Iberian peninsula and Latin America and *pliegos sueltos* of text, printed primarily for villancicos performed on feast days. Both types of source were routinely exchanged by composers at religious institutions who were expected to write dozens of villancicos each year.

During the 17th century and the first half of the 18th, Spanish and Portuguese composers produced sets of villancicos (often eight, sometimes followed by a setting of the Te Deum) in great profusion. The enormous popularity of the genre is reflected in the *Catálogo de villancicos y oratorios* of the Biblioteca Nacional, Madrid (1990): among the 1361 printed villancico books catalogued, 305 were published in Seville between 1701 and 1821, 200 in Madrid between 1701 and 1844, 112 in Zaragoza and 108 in Barcelona. The many villancicos by Miguel de Irízar in the library of Segovia Cathedral include 184 for Christmas (1657–83), 202 for the Sacrament (1656–78) and 87 for the Blessed Virgin (see López-Calo, 1963, 1965, 1989).

Important villancicos from the early 17th century include the 12 in Pedro Rimonte's *El Parnaso espanõl de madrigales y villancicos* (Antwerp, 1614; ed. P. Calahorra, Zaragoza, 1980) and the more than 80 works by J.B. Comes extant in manuscript (mostly in *E-VAc*; 56 ed. J. Climent Barber, Valencia, 1977–8). Rimonte's pieces are for five or six voices, while those by Comes range from solo pieces to polychoral ones for 16 voice parts. Comes's villancicos generally begin with a *tonada* for soloist or small vocal ensemble, followed by a parody of the same musical setting of that text, labelled 'responsión', for large choir (six to 12 voices), then the *coplas* (strophes) for soloists or small vocal ensembles. A similar structure is seen in the 20 surviving examples by Urbán de Vargas. Rimonte and Comes, like Guerrero, usually wrote in triple metre and made extensive use of syncopation and hemiola. Textures varied from homophony to overlapping points of imitation, the latter less frequent. *Basso seguente* parts, usually identified as 'acompañamiento', appear in Comes's works and were common later in the century, played on the organ or harp.

Thousands of villancicos from the second half of the century are extant in Iberian archives, but only a small percentage exist in modern editions. Most works are composed for voices with basso continuo; other instruments seldom appear. Typical performing groups are four voices (SSAT), eight voices in two choirs (SSAT SATB) and 12 voices in three choirs (SSAT SATB SATB). Polychoral pieces often included continuo parts for each choir. After Rimonte and Comes the form of the villancico changed: some works start with an *introducción*, often a strophic setting for a few voices; then follows the often lengthy and through-composed *estribillo* for full forces, sometimes subdivided by changes in texture and metre; and the *coplas* are usually for reduced forces and are often strophic. There may be as many as 18 *coplas*, usually sung by soloists from the first choir. Instead of constant alternation between *estribillo* and *coplas*, the *estribillo* may be repeated after a group of *coplas* or each *copla* may end with a *respuesta* based on the *estribillo*. Musically the most interesting section is the *estribillo*. Each line of text is set to a different phrase that is repeated when the line of text returns. Textures tend towards the homophonic, but imitation is a frequent addition, and alternation occurs between smaller and larger groups, qualities that, along with many other stylistic features, are shared with settings of Spanish texts for other venues such as the theatre.

In the second half of the 17th century villancicos were composed in large numbers by the *maestro de capilla* at most important religious institutions in Spain, Portugal and Latin America; at León Cathedral in 1663, for example, the *maestro* was expected to compose about 75 villancicos. Custom dictated that villancicos be performed once, but many were re-used. In constant need of new texts, *maestros* exchanged prints of texts sung in a particular Matins service; manuscripts of music were also exchanged. These are important sources for understanding the genre. Dissemination patterns of texts and manuscripts in Spain demonstrate that the most influential composers were those at the royal institutions in Madrid and in the major cathedrals, including, for example, Mateo Romero, Juan Hidalgo, Cristóbal Galán, Pedro

Ardanaz, Sebastián Durón, A.T. Ortells and Benito Bello de Torices.

17th-century villancico texts were written in most popular verse types of the period, including *romances*, *seguidillas*, *quintillas* and others. Most texts are anonymous, but important authors included Manuel de León Marchante. In Christmas texts the traditional characters often appear alongside contemporary Spanish characters, including members of various professions portrayed as fools and stereotypical figures from the Spanish stage (such as *negros*, *gitanos*, *gallegos* and *jácaros*), many speaking distinctive dialects. Texts for Corpus Christi, Immaculate Conception and saints' days were more serious in tone. Dances by choirboys (*seises*) were an important part of these villancicos, especially those performed on Corpus Christi.

Italianate recitatives and arias were common in Spanish dramatic music from the 1690s, especially in the works of Durón. An indication for 'recitado' is found as early as 1678 in a villancico text from Toledo Cathedral. In the decades around 1700 villancicos also tended to include elaborate and demanding solo arias and duos (sometimes in da capo form), a small orchestra of violins, wind instruments and continuo, and forms and textures that resemble those of the Italian concerto. In fast movements, the violins and wind (often oboes) played extremely active passages in support of the singers. Villancicos with recitatives and arias were called *cantadas*, and in these the traditional villancico sections were broken into subsections (*see also* CANTATA, §V). The third villancico sung at the Capilla Real, Madrid, for Christmas 1703, for example, opens with an *introducción* followed by an *estribillo* divided into *arieta italiana*, *coro*, *recitativo italiano* and other sections. Villancicos with traditional sections still appeared, but as the century passed, the older forms began to disappear.

There are even more extant villancicos from the 18th century, but again few have been studied or published. J.F. de Iribarren was particularly prolific: more than 500 of his villancicos survive at Málaga Cathedral. Influential composers include Antonio Rodríguez de Hita, Antonio Ripa and Antonio Soler. Soler's 125 extant villancicos (ed. P. Capdepón Verdú, Madrid, 1992–) demonstrate his melodic gift, original manipulation of formal conventions, somewhat daring harmonic sense, and effective use of varied textures, including polychoral forces.

Accompaniments limited to wind, harp and organ in the 17th century gave way in the 18th to ensembles including strings, oboes and brass. These delighted the public, but incurred the wrath of theorists such as Pablo Nassarre, J.F. de Sayas (*Música canónica, motética, y sacrada*, Pamplona, [1761]) and BENITO JERÓNIMO FEIJÓO Y MONTENEGRO, who criticized the italianate theatricality of contemporary church music (*Theatro critico universal*, i, 1726, no.14, 'Música de los templos'). Pope Benedict XIV's encyclical *Annus qui* of 1751 led to an episcopal edict against the use of villancicos in the diocese of Pamplona, but they were not actually banned there until 1777. In 1765 an attempt was made to ban works with vernacular texts from Spanish churches (eventually the oratorio remained the only sacred genre to use vernacular texts). The demise of the villancico as a religious genre gained further impetus towards the end of the 18th century: García Fajer, the *maestro de capilla* at the cathedral of La Seo, Zaragoza, from 1756 to 1809, offered to use his Latin responsories in place of villancicos in Matins, and in 1798 the chapter of Málaga Cathedral voted to expel villancicos from all church services. This reform was then adopted at the cathedrals of Santiago de Compostela, Granada, Pamplona, Santander, Cádiz and Jaén. Villancicos did remain in use in some places into the 19th century, however, being sung at Avila, Córdoba, Toledo, Valladolid and Valencia until about 1820, for example; and villancico texts were printed in Madrid and Palma de Mallorca in the 1840s, but these are devotional Christmas poetry rather than texts for use in specific services. These texts, called *gozos* (*goigs* in Catalan), are still popular in Spain, but the term 'villancico' now means simply 'Christmas carol', the genre's decline the result not just of the banning of all vernacular music from Spanish churches in the 19th century, but also of the concurrent fall in church revenues and the consequent loss of opportunities for good composers and performers of sacred music.

3. LATIN AMERICA. From the earliest mention of the villancico in Latin America in 1539 until about 1800, the genre was used for the same feasts as it was in Spain. Religious institutions in Latin America went to great expense for the performance of villancicos, the cathedrals at Mexico City, Puebla, Lima, La Plata and Bogotá being particularly important centres. A manuscript now at Oaxaca Cathedral includes more than 250 villancicos (and other pieces with vernacular texts) by Gaspar Fernandes, who wrote them between 1609 and 1620. Many of these include popular regional or dance elements. Perhaps the most celebrated of the hundreds of extant villancicos are eight cycles of Christmas villancicos by Juan Gutiérrez de Padilla, composed for use at Puebla Cathedral in the 1650s and including *jácaras*, *gallegos* and *negrillas* (survival of complete cycles is unusual in both Spanish and Latin-American archives). The villancico texts of the late 17th-century Mexican poet Sor JUANA INÉS DE LA CRUZ, written for use at the cathedrals of Mexico City and Puebla, are especially fine examples. Like many authors of villancico texts, Sor Juana borrowed from earlier poems, and several texts in her villancico cycles appeared in earlier Iberian sources from Madrid and elsewhere. Her texts were set by Mexican composers including Antonio de Salazar, M.M. de Dallo y Lana and Joseph de Loaysa y Agurto.

One of the characteristics of the Latin American villancico, the use of texts and music associated with the many ethnic groups that occupied Spanish-speaking areas in the Americas, is seen in Sor Juana's work, which includes texts sung to popular dances, and texts based on *negros*, Aztec *tocotines* (some in a mixture of Náhuatl and Spanish) and other dances including the *canario*, *folías*, *cuatro*, *gaita*, *puerto rico* and *pandero*. Other Latin American villancicos from the 17th century, like those from Spain, incorporated the GALLEGO, *irlandés*, *portugués* and JÁCARAS (the latter a type of theatrical piece sung by lower-class characters). A number of these villancico types make greater use of syncopation and hemiola than do those in the Iberian vernacular style. The only native dance permitted in Mexican churches was the TOCOTÍN, danced in two facing rows, the accompaniment perhaps provided by Aztec instruments such as the *huehuetl* and *teponaztli*. Although 17th-century villancicos usually have continuo parts for harp or organ alone, other instruments may well have been included in

performances: one of Sor Juana's texts, for example, lists trumpet, sackbut, cornett, bassoon, organ, shawm, violin, tromba marina, double bass, zither, vihuela, small rebec, bandore and harp. Like its Iberian counterpart, in the 18th century the villancico in Latin America was accompanied by a small orchestra.

Except for additional syncopation in Latin American *negros* and other ethnic types, the history of the Latin American villancico is not materially different from that of the Iberian villancico. Connections between Spain and Latin America were constant: many colonial *maestros de capilla* came from Spain, and there was continuous flow of villancico manuscripts and texts between the Iberian peninsula and the Americas. The broad range of styles of the Latin American villancico is illustrated by the works of two composers in particular: the lively *jácaras* among the 142 that survive by Juan de Araujo, *maestro* at La Plata (now Sucre) Cathedral in Bolivia from 1680 to 1712, and those by Manuel de Zumaya, *maestro de capilla* at the cathedrals of Mexico City (1715–39) and Oaxaca (1745–56), that are cantatas in all but name, combining the traditional *estribillo* and *coplas* structure with italianate arias and unsurpassed orchestral writing. In many Latin American villancicos after 1700, as in Iberian works, the *estribillo* was divided into recitatives, arias and choruses. Important composers of villancicos in this italianate or theatrical style include Ignacio Jerusalem, José de Orejón y Aparicio and Tomás de Torrejón y Velasco.

The genre survived in Latin America until the end of the 18th century, and in some places into the 19th. The folk traditions found in the villancico of the colonial period may be seen today in devotional genres such as the *adoración*, *alabanza* (*see* ALABADO), AGUINALDO and *esquinazo*.

ISABEL POPE/PAUL R. LAIRD (1), PAUL R. LAIRD (2–3)

Villan di Spagna (It.). *See* VILLANO.

Villanella [villanesca, canzone villanesca alla napolitana, aria napolitana, canzone napolitana, villanella alla napolitana] (It.). A generic term applied at various times to popular songs that originated in Naples and flourished from about 1537 to about 1650.

1. Terminology and content. 2. Theatrical contexts. 3. Genesis. 4. Metrical and musical forms. 5. Settings for three voices. 6. Arrangements for four or more voices.

1. TERMINOLOGY AND CONTENT. The generic designation *canzone villanesca alla napolitana* ('rustic song in the Neapolitan style') was coined in Naples to mark the début in print of a local genre (RISM 1537[5]). It was used consistently until 1565 to describe strophic songs for three or four voices in Neapolitan dialect that consciously imitated (or borrowed from) lyric traditions of the street and countryside. Venetian printers sometimes used the local equivalent, *villotte alla napolitana*, as a title or subtitle for their editions of *villanesche*. The term 'villanella' first appeared in the title of a Roman anthology (1555[30]), but it was not applied regularly until the *villanesca* had been transformed by north Italian composers, who preferred the *topos* of pastoral life and a more refined diction. The terms 'villanesca', 'villanella' and 'villotta' were often used synonymously because of their similar etymological derivation from the Latin *villanus* (peasant, or person of humble birth), but distinctions can be drawn between them and related genres such as the *bergamasca*, *giustiniana*, *greghesca*, *moresca* and *todesca*. During the 1560s Neapolitan idioms were gradually replaced by stereotyped conceits in the Petrarchan or Arcadian vein, giving rise to the gentler designations 'villanella' and 'napolitana'. After 1580 the term 'canzonetta' became standard for non-Neapolitan songs descended from the villanella. The villanella, in turn, was affected by the lively declamation, short imitative motifs and high tessitura of the canzonetta and gradually came to be called 'canzonetta' as often as 'villanella'. During the 17th century solo songs as well as partsongs were sometimes described as villanellas. All the terms appear in the titles of Italian chapbooks to describe texts intended to be sung to familiar or improvised tunes ('canzoni da cantare').

Rustic and pastoral songs were both classified by Einstein as 'lighter forms' because they are comic reversals of the madrigal's serious discourse. *Villanesche*, for example, may be narrated by awkward lovers who aim to seduce stubborn, ill-bred women or complain about amorous deception. Some *villanesche* are ironic serenades, others are humorous anecdotes; virtually all explore the relationship between masculine frustration and feminine deceit, parodying character-types of both sexes – impudent maidens, over-protective guardians, scheming courtesans, cuckolded husbands, lovesick old men and jealous suitors. The actions of the characters are conveyed realistically in crude euphemisms and rustic metaphors, which serve as pretexts for harsh criticism of female vices and imperfections. Although some *villanesche* are set in a garden or village, urban locations are more common. The object of love might be a peasant girl or shepherdess in an idyllic pastoral setting, or a city woman or noblewoman: both are normally addressed in polite but casual terms.

2. THEATRICAL CONTEXTS. Farces and rustic comedies that record the characteristic actions, songs and dialects of peasants flourished throughout Italy during the early 16th century, especially in aristocratic circles. By reasserting the legitimacy of natural instincts and the dignity of the supposedly vulgar, these plays provided a favourable climate for the introduction of the *canzone villanesca* and its construction of an alternative, more spontaneous world.

In the area around Naples, the rustic fool was a stock character in improvised *farse cavaiole*. These were presented annually at Carnival, which was traditionally celebrated in Naples with theatrical activities that encouraged the performance of songs rich in farcical invention and ethnic folklore, such as the *villanesca* and its offspring the *mascherata alla napolitana*. Masked musicians strolled through the streets improvising ribald songs, and famous court singers such as Luigi Dentice, G.C. Brancaccio and Scipione delle Palle doubled as actors in comedies staged at the Prince of Salerno's palace. Many *villanesche* are derisive in tone and were well suited to function as realistic insertions in the main action of these comedies. When Emperor Charles V visited Naples during Carnival 1536, he witnessed a broad range of comic entertainment and heard groups of musicians compete in singing *villanesche* and madrigals. Pirrotta has suggested that the first edition of *villanesche* (1537) was close enough in time to the imperial visit to be considered an expression of Neapolitan pride in a local genre that stood full comparison with the madrigal. When these newly developing genres spread simultaneously into the same social circles, the *villanesca* became the madrigal's comical companion, complementing rather than mocking its lofty Petrarchan discourse. Stylistic exchanges between the genres during the 1570s came about as composers explored ways in which elements from opposite worlds could subtly be combined. Intentional parody of madrigalian conventions was rare. The exceptions, which arose in theatrical contexts, are travesties of famous madrigals such as Rore's *Anchor che col partire* by the actor and writer of comedies Andrea Calmo, and Palestrina's *Vestiva i colli* by Banchieri (in his *La pazzia senile*).

Although it is difficult to tell whether comedy suggested characters and situations to the songs, or songs to the comedy, interactions were generated by musicians familiar with the stage. Among the most notable were Lassus and Troiano, both gifted performers trained in Naples. At the Munich court in 1568 they collaborated on an improvised comedy with music, Troiano playing the role of the country bumpkin from La Cava and Lassus the Venetian 'magnifico', a character already endowed with attributes of the *commedia dell'arte* character Pantaloon. Lassus's rendition of the Neapolitan serenade *Chi passa per questa strada* to his own lute accompaniment reveals a keen awareness of the traditional relationship between comedy and a song that sketches a character-type.

3. Genesis. The key to understanding the genesis of the *villanesca* lies in the social structure of Naples, where nobles, artisans and servants had a long history of familiarity with one another's musical customs and languages. Peasants from the rural provinces were drawn to Naples by flourishing trades in wool and silk and by domestic employment in noble households. From the overlapping of social and linguistic boundaries there emerged a city vernacular which *villanesca* composers appropriated in creating their own poetry for music. In the earliest *villanesche*, dialectal and literary idioms converge in unmistakable patterns, confirming their origin in urban popular culture (and putting to rest romantic theories of 'folk' origin). The title-page of the *Canzone villanesche alla napolitana* (RISM 1537[5]) features a woodcut of three female peasants tilling the soil, plainly labelled 'bas. can. ten.'. Poised in this way, they signify the mingling of oral and written traditions; in the one, music is created instinctively according to nature; in the other, it is composed artistically according to rules. Moreover, the peasants represent the three ages of woman, their features corresponding to vocal ranges; they symbolize the characteristic high-pitched sound of the *villanesca*, the cantus singing in a medium range and the tenor and bass in a range about a 5th higher than usual.

4. Metrical and musical forms. *Villanesca* poems normally consist of four isometric strophes of between three and eight lines. Einstein developed the theory that the *villanesca* was initially a *strambotto* (a poem of four hendecasyllabic couplets) expanded by the insertion of a refrain: (1) *AB* + *R*, (2) *AB* + *R*, (3) *AB* + *R*, (4) *CC* (or *AB*) + *R*. Dialectal *strambotti* with the rhyme schemes *ABABABCC* (*strambotto toscano*) and *ABABABAB* (*ottava siciliana*) were the most common models for *villanesca* poets, who deliberately preserved their assonance and colloquialisms. The *strambotto* models consist largely of clichés and proverbial sayings strung loosely together, making a witty point in the final couplet. These features characterize *villanesca* poems too, confirming the main line of evolution and the continuing assimilation of oral traditions. *Villanesca* refrains typically consist of one hendecasyllabic line or a series of brief polymetric lines with short-range, jingling rhymes that evoke the humorous tone of popular singers.

Three types of rhyme scheme prevail in *villanesca* poems up to 1560. The predominant type has an unchanging refrain, and in most cases the last line of the couplet and the first line of the refrain share the same rhyme as far as the final strophe, for example *ABb ABb ABb CCb* or *ABbb ABbb ABbb CCbb* (upper-case denotes couplets that change in content, and lower-case the unchanging refrain). In the second type there is no linking rhyme between the couplet and refrain (e.g. *ABc ABc ABc DDc*). In the third type the refrain of the fourth strophe is modified to rhyme with the final couplet (e.g.*ABb ABb ABb* CCC). Between 1560 and 1570 the *villanesca* evolved into a non-refrain poem, coinciding with a change in generic designation to villanella. Short strophes predominate, often consisting of a free mixture of seven- and eleven-syllable lines and changing rhymed couplets (e.g. *AABB CCDD EEFF GGHH*).

Each line of the *villanesca* or villanella strophe is set to a different musical phrase, but phrases are repeated in many different patterns that resist classification. There was however a strong tendency to repeat the first and final phrases, so that a consistently popular form for a three-line strophe was 1–1 2 3–3 (with the central phrase commensurate in length with the outer ones), and for a four-line strophe 1–1 2 3–4 3–4. Bipartite forms such as 1–1 2–3 2–3 entered the repertory during the 1560s.

5. Settings for three voices. The musical formulae of oral culture are deeply ingrained in the *villanesche* tunes that emanated from Naples, which include a set of 'arie napoletane' published in Rome (*c*1537[8]). Composers invariably put the tune in the top voice, which unfolds with a coherent sense of direction (a phenomenon Pirrotta designated 'aria'). Characteristic Neapolitan devices include phrase-endings where a sequential passage of 3rds descends in conjunct motion to the final note, syllabic declamation reflecting accentual patterns in the poetry, and the truncation of single words or the fragmentation of phrases, which are then repeated afresh. The result is a comical stuttering that was a significant factor in the success of the *villanesche* sent to Venice for publication during the 1540s by Nola (2 books, 1541, reprinted 1545), Vincenzo Fontana (1545), Cimello (1545), Maio (1546) and Burno (1546[18]). Neapolitan tunes are always supported by a discreet triadic background. When the tune moves by step the lower parts often follow in parallel motion, producing consecutive 5ths. Nola used 5ths discreetly, reserving them for the beginnings and ends of phrases, in contrast to the long chains preferred by Maio. Einstein claimed that 'forbidden' 5ths served to caricature contrapuntal mastery and to enhance elements of parody in the poems, but Pirrotta has proposed that 5ths reflect the habits of a popular singer moving his hand in a fixed position along the fingerboard of a rudimentary stringed instrument to harmonize tunes. Indeed, Zacconi (*Prattica di musica*, 1592/*R*) argued that villanella composers could disregard the rules of counterpoint when the tune moved by step because they were imitating untrained musicians who, 'when singing, blend together by means of natural consonances' and 'do not know any other way of moving to neighbouring notes'.

The homophonic textures of *villanesche* were often enlivened by declamation on short note values and by short points of imitation with sequential expansion. Cimello (*De perfettione*) insisted that the minim could be the unit of measure as well as the semibreve. He complained that *villanesche* were not correctly performed in Rome, where they were published anonymously in 1557 in anthologies compiled by the printers Dorico (1557[19]) and Barrè (1557[20]). Lassus, who moved to Rome from Naples, played an important role in transmitting

and encouraging the composition of Neapolitan songs, as can be seen in the anthology *Villanelle d'Orlando di Lassus e d'altri eccellenti musici libro secondo* (Rome, 1555[30]), which acknowledges his leadership in the title. Anthology publishing shifted to Venice during the 1560s: Gardano published six books of anonymous Neapolitan songs (*Villotte alla napolitana*), drawing in part on a repertory that had circulated in Rome; Scotto introduced a new circle of composers from the Kingdom of Naples dominated by Primavera and Dell'Arpa, whose arioso tunes use short compact phrases that contrast sharply with the earlier sequential elaborations.

The first anthologies to contain *napolitane* by north Italians were edited and partly composed by Bonagiunta (1565[12], 1566[7]). In modifying *napolitane* for the northern public, composers such as Dattari and Trombetti studiously avoided southern mannerisms such as parallel 5ths and truncation in favour of more spacious imitation and decorative melismas. At this time the texts of the 'lighter forms' circulated in manuscript copies independently of the music, which resulted in the variable ordering of strophes and the transfer of strophes between poems. The treatment of these poems as 'open forms' proved to be a significant factor in stylistic exchanges between villanella and madrigal. Scotto, for example, filled the second and third books of the series *Corona delle napolitane* (Venice, 1571) with his own settings of poems devised by reassembling texts from the first book, and he set an influential example by consolidating selected lines from a multi-strophic poem into one strophe, as in a madrigal.

Villanellas thrived in southern Italy, particularly in Bari under the aegis of Giovanni Giacomo de Antiquis, who compiled two books of pieces composed by himself and 20 colleagues (1574[5-6]). In Rome Pompilio Venturi and Gasparo Fiorino explored a new social role for the villanella by setting reams of poems in praise of prominent local noblewomen (*La nobiltà di Roma*, 1571[8], 2/1573[19]). Between 1584 and 1587 Marenzio, at the insistence of Roman friends, published 115 villanellas which typify the prevailing stylistic variety: pastoral idylls, short droll songs and longer ones with expressive devices borrowed from the madrigal. 50 of them were later copied into the Tregian Manuscript (*GB-Lbl* Eg.3665; facs. in RMF, vii, 1988), prompting Morley's enthusiasm: 'If you think [villanellas] worthy of your pains to compose them, you have a pattern of them in Luca Marenzio and John Ferretti'. Marenzio's trademark is a polarized texture, with the bass moving independently of the upper parts, which are closely linked by imitation or motion in parallel 3rds. Between 1602 and 1618 villanellas were once again composed and published in Naples, with notable contributions by Montella, Francesco Lambardi and d'India.

The most successful villanella composer in Germany was Jacob Regnart, whose *Kurtzweilige teutsche Lieder, nach Art der Neapolitanen oder welschen Villanellen* filled three volumes (1576, 1577 and 1579) and were repeatedly reprinted up to 1611. In England the villanella (now known as 'canzonet') underwent an easy naturalization through conventions established almost single-handedly by Morley. An interest in light Italian music had been established much earlier, however, in English royal circles. The Earl of Arundel, after a trip to Italy in 1566–7, ordered a set of 47 villanellas for his library at Nonesuch (*GB-Lbl* Roy. App.59–62), and about the same time someone connected with Elizabeth I, perhaps a suitor, commissioned the Winchester Partbooks (*GB-WCc* 153), which contain 55 villanellas.

6. Arrangements for four or more voices. From 1537 to 1565 the *villanesca* evolved along parallel lines: as high-pitched settings for three voices by Neapolitan composers; and as arrangements for the fuller sonority of the madrigalian quartet. The first arranger was Willaert, who established influential techniques for reworking Neapolitan models for four voices in his *Canzone villanesche alla napolitana* (Venice, 1545). In his literal arrangements the cantus and tenor exchange positions, the original bass is retained with small modifications, and the alto fills out the harmony. In his free arrangements the tune is in the tenor or migrates from voice to voice, imitative passages are converted to homophony (or vice versa), and new material is liberally inserted. Willaert and his followers (Barges, Perissone Cambio, Nasco, Baldassare Donato) were attracted to the *villanesche* of Nola and Vincenzo Fontana, whose brisk irregular rhythms also appealed to Lassus. His *Quatoirsiesme livre a quatre parties* (Antwerp, 1555) contains six arrangements and marks the début in print of the *villanesca* outside Italy; 12 more arrangements, dating from his youth, were published in Paris in 1581. These 18 arrangements are contained in RRMR, lxxxii–lxxxiii (1991). Lassus's arrangements range from literal transcriptions to free elaborations that allude to the model only at the beginning. His preference for placing the tune in the tenor freed the cantus part, inspiring effective changes of register, contour and speed to accommodate every flicker of meaning in the text. Others such as Waelrant, Severin Cornet, Scandello and Le Jeune, while not endowed with Lassus's keen sense of humour, contributed to the villanella's enthusiastic reception in northern Europe. Regnart and Leonhard Lechner followed Giovanni Ferretti's highly influential example in arranging villanellas for five voices, making sophisticated use of spritely rhythmic declamation and varied vocal groupings. Villanellas for four voices that were free compositions rather than arrangements of pre-existing models, were published first by Nola (1567) and then by Mazzone (1570). The five-voice villanella (called 'canzone') enjoyed a brief vogue during the 1570s with Conversi, Lodovico Agostini and Caimo (among many others), who took as texts the initial stanzas of villanellas and infused them with features typical of the madrigal.

Eye-witness accounts of the performance of 'lighter forms' indicate a preference for solo voice with instrumental accompaniment, even though all the parts are texted in the published editions. This performing practice is confirmed by the existence of numerous arrangements of villanellas for solo voice and lute and by a vogue for monodic villanellas accompanied by the Spanish guitar. Giulio Caccini clearly thought of villanellas as models for his strophic arias: their emphasis on a well-defined melody and bass moving in the same rhythm makes them well suited to solo performance. Moreover, Vincenzo Galilei cited villanellas, and the popular airs that inspired them, as models for the sort of monody he envisaged in his *Dialogo della musica* (1581/*R*).

DONNA G. CARDAMONE

Villanelle (Fr., from It. *villanella*). Rustic song. Cotgrave's *Dictionarie* (1611) defines the word as 'a country dance, round or song'. Like 'villanesque' it was transliterated from the Italian during the literary invasion of France around the middle of the 16th century to describe stanzaic verses in a pastoral vein, using simple language and refrains. An important link was provided by Ferrante Sanseverino, Princo of Salerno, who in 1544 captivated the ladies at the court of François I at Fontainebleau by singing *canzoni napolitani* with the guitar. On his return to Naples Sanseverino sponsored the falsettist Luigi Dentice and the poet-composers Vincenzo Fontana and G.B. da Nola who, along with Lassus, followed him to Rome. Exiled in France, Sanseverino served Henri II in various military adventures between 1552 and 1554, during which time the villanella became more fashionable in France. The first examples to appear in Parisian musical publications were Arcadelt's three-voice *La pastorella mia* (1554), Clereau's *chansons tant françoises qu'italiennes* (1559) and a set of anonymous *Villanelle alla napolitana* (1565).

A French 'villanelle' printed in Joachim Du Bellay's *Jeux rustiques* (1558), *En ce mois delicieux*, was set for four voices by Nicolas (1559) and Arcadelt (1565) and for six voices by Certon (1570); the poem comprises four stanzas of eight lines, with the last couplet of each as a common refrain. Desportes' *Rozette pour un peu d'absence*, set by Caietain (1576), Chardavoine (1576) and Besard (1603), has the same form, but his *M'ostant le fruit de ma fidelle attente*, set by Caietain (1576) and Didier le Blanc (1579), has six stanzas, with a single-line refrain. Other examples in similar form are found in the chansons, *airs* and canzonets of Utendal (1574), Caietain (1576), Lassus (1581), Guillaume Tessier (1582), Charles Tessier (1597, 1604), Claude Le Jeune (1585, 1612) and others, but unlike Jacob Regnart's German collection (1576) these follow the current French musical style and do not adopt the three-part texture and parallel chordal writing of the popular Neapolitan genre. Some of Baïf's *chansonettes mesurées* translate or imitate Italian villanellas, notably *Une puce*, which was set by Lassus, Caietain and Le Jeune. A more standardized verse form comprising an odd number of tercets and final quatrain with two rhymes was introduced by Jean Passerat (1534–1602): his *J'ai perdu ma tourterelle* (*Oeuvres*, 1606) has the typical rhyme scheme A^1BA^2 ABA^1 ABA^2 ABA^1 ABA^2 ABA^1A^2. This type was revived in the 19th century by Théodore de Banville and by British poets such as William Henley and Andrew Lang.

The term is also found as the title of both instrumental and vocal pieces by Telemann, Berlioz, Chabrier and Dukas.

FRANK DOBBINS

Villanesca (It.: 'rustic'). A term for VILLANELLA, used particularly before about 1570.

Villani, Filippo (*b* Florence, 1325; *d* ?1405). Italian chronicler. He completed his law studies in Florence in 1360, was chancellor of the city of Perugia 1376–81, and was lecturer on Dante in the University of Florence 1391–1404. His writings include a continuation of the *Nuova cronica* (ed. G.C. Galletti, Florence, 1847), begun by his uncle Giovanni and continued by his father Matteo, a commentary (surviving incomplete) on Dante's *Commedia*, and the two-volume *Liber de origine civitatis Florentiae et eiusdem famosis civibus* (ed. G.C. Galletti, Florence, 1847; ed. G. Tanturli, Padua, 1997). The second volume mentions several 14th-century musicians, including Bartolo, Lorenzo da Firenze, Giovanni da Cascia and Jacopo da Bologna; it also includes a biography of Francesco Landini. For the latter this is the most detailed

account to survive (although some of it is now thought to be spurious) and was used as a source of information for references to the composer throughout the 15th century.

F. ALBERTO GALLO/GIANLUCA D'AGOSTINO

Villani [Villano], **Gabriele** [Gabriello, Gabrielle] (*b* Piacenza, 1555; *d* Piacenza, 1625). Italian composer. Like his brother Gasparo, he worked in the orbit of the Farnese, dukes of Parma and Piacenza, and was a participant in the prestigious musical *ridotto* of Count Giambattista Barattieri in Piacenza. He was organist and *maestro di cappella* at S Maria di Campagna, Piacenza, from 1588 to 1624. Villani called his two books of four-voice works 'toscanelle', drawing attention to the influence of Tuscan literary culture in Farnese circles. In style they resemble contemporary villanellas and canzonettas of composers such as Marenzio and Ferretti.

DAVID BRYANT, FRANCESCO BUSSI

Villani [Villano], **Gasparo** (*b* Piacenza, after 1546; *d* Piacenza, after 1619). Italian composer and organist, brother of Gabriele Villani. His uninterrupted residence in his native city makes him one of the most genuinely Piacentine musicians. According to the contract with the chapter of Piacenza Cathedral, dated 15 December 1595, he was appointed to the post of organist there for life at an annual salary of 300 librae with the additional sum of 100 librae paid to him every four months. In the contract Villani is referred to as the probable son of 'Iseppo Villano', mentioned by the madrigalist and organist Girolamo Parabosco, who goes on to say, 'he was my employer and executor in this town of Piacenza'. This identification seems to fit on historical and geographical grounds. Giuseppe Villani, Gasparo's father, was also mentioned by A.F. Doni: he wrote in a letter dated 3 June 1543 to the sculptor Giovanni Angelo: 'At present I am in Piacenza, where in addition to violinists, flautists and lute-players, there are those excellent instrumentalists Claudio Veggio, Brambiglia and Giuseppe Villano'. Most biographical information on Gasparo Villani comes from the indications contained in his printed works. The dedication of the volume *Missa, psalmi … et motecta*, besides praising the generous patronage of Claudio Rangoni, the Bishop of Piacenza, who had summoned artists from other towns to enrich the cathedral with statues, pictures and music, states that the composer had been organist in the cathedral for some time. The dedication of the *Gratiarum actiones* to the powerful Duke of Piacenza and Parma Ranuccio I Farnese proclaims the ruler a long-standing patron of the musical art. The title-page of the *Psalmi* (1619) indicates that Villani was then still active in his post as organist. The *maestri di cappella* at the time of Villani's tenure include Luigi Roince, G.C. Quintiani and Tiburzio Massaino.

Villani's output, which consists entirely of church music and resembles more that of a *maestro di cappella* than an organist, shows him to have been responsive to the new concertante tendencies to alternate tuttis with various solo combinations (which are mostly optional), that set off the melody in an expressive fashion. Nevertheless he did not neglect traditional composition for two or more choirs, following the fashion set by Andrea Gabrieli and other Venetian composers. He made up for a certain lack of originality of invention with his mastery of counterpoint and with a pleasing facility in alternating the different choirs, supported by a basso continuo on the organ. His masterpiece is the *Gratiarum actiones*, written to extol, with Venetian polychoral splendour, the pride and majesty of the Farnese family, and to celebrate the birth of a son, Alessandro II, to the duke. The family is symbolized by the lily mentioned in the hymn *Ave Virgo gratiosa*, the motivic material of which is the source of the cyclical mass included in the collection.

FRANCESCO BUSSI

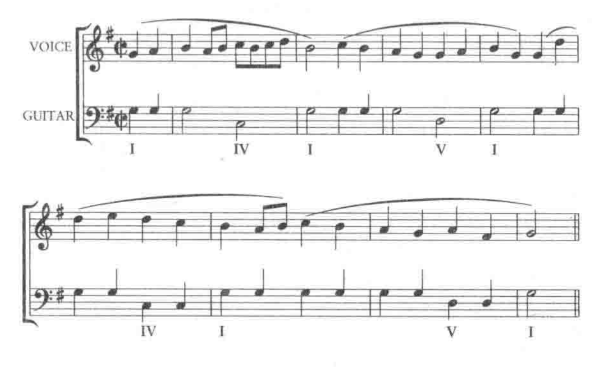
Villanis, Angelo (*b* Turin, 1821; *d* Asti, 7 Sept 1865). Italian composer and conductor. He received his musical education in Turin, studying with Luigi Rossi. He suffered from the frustration that although his operas were generally received with favour, none of them enjoyed many productions. The superficial attractiveness of his music could not long conceal his lack of real originality.

Like a number of other Italian opera composers of his generation who found success elusive, he supported himself by conducting opera orchestras. In 1856 he became director of the Orchestra Ducale of Parma. He wrote many songs and vocal chamber works. Villanis's nephew, Luigi Alberto Villanis (*b* San Mauro, nr Turin, 20 June 1863; *d* Pesaro, 27 Sept 1906), was a writer and music historian who wrote about 19th-century Italian piano music, and also contributed to *La stampa* of Turin and edited *La cronaca musicale* in Pesaro.

WORKS

OPERAS

I saltimbanchi di Spagna (ob, 2), Turin, Gerbino, spr. 1849; La spia, ossia Il merciaiuolo americano (F. Romani, after J.F. Cooper: *The Spy*), Turin, Sutera, 5 March 1850; La regina di Leone, ovvero Una legge spagnola (op semiseria, 3, G. Giachetti), Venice, Apollo, 22 Feb 1851; La figlia del proscritto (melodramma, 4, A. Codebò), Turin, Carignano, 22 Nov 1851; Alina, o Il matrimonio di una cantante (op semiseria, 2, Giachetti), Turin, Nazionale, 19 Oct 1853; La vergine di Kent (dramma, 4, G. Prati), Turin, Regio, 1 March 1856, rev. as Giuditta di Kent, Senigallia, Fenice, Aug 1857; Vasconcello (os, 3, T. Solera), Venice, Fenice, 18 March 1858; Una notte di festa (os, 3, Solera), Venice, Fenice, 15 Feb 1859; rev. as Emmanuele Filiberto, 1863; Bianca degli Albizzi (tragedia, 3, Marcello), Milan, Scala, 18 March 1865



WILLIAM ASHBROOK/HELEN GREENWALD

Villano (Sp.: 'villain', 'peasant'; It. *villan di Spagna*). A sung dance popular in Spain and Italy during the 16th and 17th centuries. Diego Sánchez de Badajoz mentioned it with the canary in the *Farsa de Sancta Bárbara* (in his *Recopilación en metro*, Seville, 1554), and Francisco de Salinas gave its melody in *De musica libri septem* (1577/*R*, p.296). There are numerous literary references from the 17th century, in works of Cervantes, Lope de Vega, Calderón and others. Its choreography was described by Esquivel in *Discursos sobre el arte del dançado* (1642/*R*); Briçeño, in his *Método mui facilissimo* (1626), provided guitar music and text for two examples, each with a two-line refrain and two four-line strophes. A manuscript in the Biblioteca Riccardiana (*I-Fr* 2973 [III]) gives guitar chords for what appears to be a four-line refrain, but most refrain texts are similar to Briçeño's first example:

Al villano que le dan
La çebolla con el pan

The music of the villano is built on the recurring harmonic pattern I–IV–I–V–I (a progression used also in the canary, sarabande and *passamezzo moderno*) with various discant melodies added. The lower staff of ex.1 shows a typical guitar accompaniment, which spans four lines of text (the melody on the top staff actually continues for four more phrases in the manuscript). For comparison, ex.2 presents an Italian keyboard version, with sufficient music to fit six lines of poetry (corresponding chords have half the note value of those in ex.1).

Chordal villanos for the five-course Spanish guitar appear in at least 25 Italian tablatures between 1606 (Montesardo) and 1677 (Ricci). Giamberti included a *Villan de Spagna* among his instrumental duos of 1657 (repr. 1664, 1677 and 1689). The Bentivoglio manuscript (*US-SFsc*) contains an example for lute, and the third edition of Matteo Coferati's *Corona di sacre canzoni* (1710) gives a discant melody (repr. in *AcM*, xliv, 1972, p.213). Spanish sources include guitar villanos by Sanz (1674), Ruiz de Ribayaz (1677) and Guerau (1694), a set of keyboard variations in Martín y Coll's collection (*E-Mn* 1360) and a choral setting with text (*E-Mn* 1370). The villano may still be found in the folk music of Spain (*see* SPAIN, §II, 4).

Ex.1 A villano melody from *E-Bc* (no.78 in Pedrell's *Catàlech*, i, 99), with a guitar accompaniment by Romanus from *I-Rsc* A 247 (the notes represent major triads; the stems show the direction in which the hand strums the chords)

Ex.2 *Villan di Spagna*, *US-LAum* 18 (formerly 51/1)

RICHARD HUDSON

Villanueva (Conroy), Mariana (*b* Mexico City, 8 April 1964). Mexican composer. She began studying music in Mexico with Lavista (1982–4) and in the composition workshop of the National Music Research, Documentation and Information Centre, where she had classes with Daniel Catán, Julio Estrada and Federico Ibarra. Later, she studied at the Carnegie Mellon University in Pittsburgh with Lukas Foss, Leonardo Balada and Robert Page. There she won the first prizes for composition (1989) and orchestral composition (1985). She has also had scholarships from the Rockefeller Foundation (1995) and from the Mexican government (1993, 1996).

Her output, still quite small, represents a synthesis of various elements which converge to form a style that is both eclectic and personal. Starting from a careful use of intervallic developments and of complex rhythmic

configurations which link her to Mexican composers such as Revueltas, Villanueva's works tend, in her own words, to reflect 'that gigantic force, magnificent and supreme, which nourishes all living creatures', an image which has inspired works such as *Anabacoa*, *Ritual*, *Prometeo* and *Anamnésis*, and which situates Villanueva alongside other Mexican composers wishing to convey in their music the existential dilemmas of the *fin de siècle*.

RICARDO MIRANDA-PÉREZ

Villanueva, Martín de (*d* Valladolid, 2 June 1605). Spanish composer and organist. In 1586 he was among the first Hieronymite monks to be brought to the monastery of El Escorial specifically because of their musical skills. He sang the polyphonic passions in Holy Week 1587 together with Gaspar de León, Pedro Marín, Bartholomé de Santiago and Pedro de Alcalá. On 29 October 1589 he was professed a second time at El Escorial where he served the community as *corrector mayor del canto*, organist, archivist and keeper of the relics. He became a confidant of El Escorial's founder Philip II, even attending to the monarch on his deathbed, and was the only musician to be named in the king's last will. On the composer's death in the Hieronymite monastery of Nuestra Señora del Prado in Valladolid, he was mourned by Philip III, Queen Doña Margarita and their courtiers and ministers.

Villanueva's masses are written for *alternatim* performance, and are scored for four voices of which the tenor quotes a plainsong cantus firmus in notes of equal duration at about the tempo plainsong was performed at El Escorial. The pieces employ an unusual notational device in which the cantus firmus is written in black neumes which, despite their arrangement in ligatures, must all be read as semibreves. The voice ranges rarely exceed an octave and imitation is cast in a subservient and decorative role. It seems that Villanueva developed this rather uninspired and thoroughly orthodox style in response to the wishes of Philip II.

MICHAEL NOONE

Villar, Rogelio del (*b* León, 13 Nov 1875; *d* Madrid, 4 Nov 1937). Spanish composer, teacher and musicologist. A follower of nationalism in its most direct phase, he investigated the folk music of his native region and at once used popular rhythms and melodies in orchestral, vocal, chamber and piano works; however, in some of his songs, settings of classical and Romantic Spanish poets, he cultivated an elegant and refined salon style. Two of his three quartets are based on Leónese folk music, whose characteristics brought out Villar's innate lyricism, melancholy and nostalgia, qualities for which he became known as 'the Spanish Grieg'. From 1919 until the beginning of the Civil War (1936–9) he was a professor at the Madrid Conservatory, where he defended the Spanish music of his generation. In 1928 he founded the magazine *Ritmo*, in which, as in his books and essays, he inveighed against the most recent musical trends, supporting tonality, melody as the basis of all music, and the essentiality of a functional modal harmony derived from national folk music. Nevertheless, he was an ardent defender of Falla and of his most daring work, the Concerto for harpsichord and five instruments.

ENRIQUE FRANCO

Villa Rojo, Jesús (*b* Brihuega, Guadalajara, 24 Feb 1940). Spanish composer and clarinettist. He studied at the Madrid Conservatory, where his teachers included Cristóbal Halffter for composition; in 1965 he received a grant to study with Jesús Bal y Gay. After graduating in 1967 he spent a year teaching the clarinet, then studied further with Boris Porena at the Accademia Chigiana, Siena (1969), and with Franco Evangelisti and Petrassi at the Accademia di S Cecilia, Rome (1970–72).

Villa Rojo performed with ensembles including Nuova Consonanza, the Forum Players and Nuove Forme Sonore from the early 1970s, and in 1975 founded the ensemble Laboratorio de Interpretación Musical (LIM). Iconoclastic to an exceptional degree, on becoming director of the last-named he gained immediate attention by breaking decisively with the static aesthetic that had dominated performance in Spanish musical life. In his dual role of performer and director Villa Rojo has always been at

pains to facilitate communication between a work and its audience.

His earliest works – *Cuatro movimientos* for wind quintet (1967), *Música sobre un tema* for instrumental ensemble and Sonata for clarinet and piano (both 1968) – reveal a predilection for eliminating the superfluous and a tendency towards the abstract and experimentation with sound as the organizing principles of his work. While not rejecting his traditional training, he quickly found his own direction. To the years spent in Siena and Rome belong *Musica para obtener equis resultados* (1969), for a single performer on clarinet and piano, and Variations (1970), for an ensemble of unspecified instruments, in which there are early indications of the path he took later with the series of *Juegos gráfico-musicales*. Among his compositions of the 1980s are a number of multi-media works, such as *En el centro del ciclón*, *RND Draw* and *Sombras y luces para una improvisación*; later outstanding electro-acoustic works include the tape composition *Caminando por el sonido* (1991).

In 1994 Villa Rojo's work was recognized by the award of the National Music Prize for Composition. As director of the Centro para la Difusión de la Música Contemporánea (1995–7) he has played an important role as an organizer, performer, and disseminator of experimental music by many Spanish and foreign composers. The importance of his work, above all in matters involving new techniques and sound possibilities realized in different media, lies in its application of theoretical and conceptual principles to practical execution.

Among Villa Rojo's writings, *El clarinete y sus posibilidades* (1975) examines new techniques designed to broaden the performing capabilities of the clarinet. *Juegos gráfico-musicales* (1982), a study encapsulating some years of work and research on new approaches to composition, contains analyses (from a graphic and interpretative viewpoint) and editions of the works with the same title composed between 1972 and 1975.

MARTA CURESES

Villarosa, Marquis of. *See* ROSA, CARLANTONIO DE.

Villarroel, Verónica (*b* Santiago, 2 Oct 1965). Chilean soprano. After studying at the Juilliard School, New York, with Ellen Faull and privately with Renata Scotto, her mentor, she made her stage début as Musetta (to Scotto's Mimì) at the Teatro Municipale, Santiago, in 1986. In 1988 she was winner of the Pavarotti Prize and in 1989 of the Metropolitan Auditions. Villarroel made her European début, as Fiordiligi, in Barcelona in 1990 and her Metropolitan début, as Mimì, in 1991; she has since appeared successfully at the Metropolitan as Violetta, which she has also performed at Covent Garden and elsewhere in the USA and Europe, her sympathetic personality and warm, expressive voice suiting her well for the role. She has performed zarzuelas in various

centres with Domingo, taking the role of Cecilia alongside him in Carlos Gomes's *Il Guarany* at Bonn in 1994 and subsequently recording the work. Villarroel's repertory also includes Luisa Miller, Gounod's Marguerite and Butterfly.

ALAN BLYTH

Villate, (Montes) Gaspar (*b* Havana, 27 Jan 1851; *d* Paris, 9 Oct 1891). Cuban composer. After early music studies in Havana, he emigrated with his family to the USA in 1868. He returned to Cuba in 1871 and two years later went to Paris, where he continued his musical studies with Bazin, Victorien Joncières and Dannhauser. During the next few years, back in Havana, he composed his elegant piano *Contradanzas* (1873) and several habaneras and *romanzas*, which constitute his brief encounter with truly Cuban music. Otherwise almost totally divorced from Cuban musical nationalism, his style, particularly in his operas, which are based on French, Venetian, Roman and Russian subjects, is strongly Romantic, influenced by Meyerbeer and early Verdi. He stayed for long periods in Europe, mainly in Paris, and his operas had European premières.

AURELIO DE LA VEGA

Villaverde Redondo, Enrique Manuel (*b* Cañizar, Guadalajara, 16 July 1702; *d* Oviedo, 4 May 1774). Spanish composer. From 1714 to 1724 he was at Toledo Cathedral, where he performed with a small group of boy singers (the 'seise') and was a pupil of Miguel de Ambiela and probably also of the organists Jacinto del Río, Matías Solana and Joaquín Martínez de la Roca. On 24 May 1724 he was appointed *maestro de capilla* of Oviedo Cathedral. He held the post for almost half a century, during which time the cathedral experienced a golden period, in terms of both religious activity and musical composition. In April 1735 he was ordained priest. Villaverde Redondo may have harboured anti-Italian sentiments for he refused to adapt two masses and some vespers which the precentor of Oviedo Cathedral had brought from Italy. Similar behaviour was recorded in the chapter records of 1751, 1755 and 1757.

Of the 179 works attributed to Villaverde Redondo in various inventories, only 14 survive, in the cathedrals of Oviedo, Astorga and Zamora, and in Piedrahita, Avila. The surviving works, all sacred, represent a number of compositional styles: *a cappella* (*Salve regina* and *Magnificat*), music for voices with basso continuo (*Pange lingua*) and music for one or two choirs with instrumental accompaniment (*Homo natus de muliere* and *Parce mihi*). The works for solo voice, for example the lamentations, are technically more advanced, with ornamented melodies and some elements of gallantry. Some of the works setting Spanish texts use four sopranos in unison.

BEATRIZ MARTÍNEZ DEL FRESNO

Villeneuve, Alexandre de (*b* Hyères, 24 May 1677; *d* ?Paris, after 1756). French composer. He was a chorister at the primatal church of St Trophime in Arles from 10 April 1697, and was *maître de chapelle* there from 15 November 1701. In December 1706 he became *maître de musique* in Paris with the Jesuits in the rue St Jacques. His cantata *Thétis* was performed on 4 January 1712 by the chapel of the Count of Toulouse to celebrate the count's recovery of health. In 1726 Villeneuve applied without success to succeed Lalande as *sous-maître de chapelle* of the royal chapel at Versailles. However, his *Premier concert spirituel* was performed before the queen in 1727, and his *Epithalame* for the marriage of the infante of Spain to the infanta of Portugal was performed on 18 April 1728. His *opéra-ballet*, *La Princesse d'Elide* (1728), was only moderately successful. Villeneuve's sole writing on music was the *Nouvelle méthode* which is particularly useful for the study of ornamentation in Rameau's cantatas.

The man responsible for the manuscript of M. Marais' *Pièces de viole ajustées pour le pardessus de viole à cinq cordes par Mr de Villeneuve, 1759* (*F-Pn*) is probably Jean-Pierre de Villeneuve, an 18th-century dilettante. The André-Jacques Villeneuve cited by Fétis is undoubtedly the same person as Alexandre de Villeneuve.

WORKS

printed works published in Paris

SACRED VOCAL

Livre de musique d'église qui contient les 9 leçons de Ténèbres, le Miserere, 6 motets pour le saint-sacrement (1719)
Premier concert spirituel, 1–4vv, insts (1727) [Ps xcvi, trans. S.-J. Pellegrin]
Numerous lost sacred works, see Bonfils and Durand

SECULAR VOCAL

□

Villeneuve, Louise [Luisa, Luigia] (*fl* 1786–99). Soprano, active in Italy. According to Zinzendorf's diary (11 July 1789), she was a pupil of Noverre's, in which case she was probably the Mlle Villeneuve who was a member of Noverre's ballet company in Vienna from 1771 to 1774. Her first known appearance as a singer was in 1786 in Milan. In 1788 she appeared in Venice and Milan, singing, among other roles, Amore in Martín y Soler's *L'arbore di Diana*. She sang the same role for her début in Vienna on 27 June 1789, successfully replacing Luisa Laschi, the acclaimed original Amore, on account of 'her charming appearance, her sensitive and expressive acting and her artful, beautiful singing' (*Wiener Zeitung*, lii, 1789, p.1673). Mozart supplied arias for her in Cimarosa's *I due baroni* (K578) and Martín's *Il burbero di buon cuore* (K582–3), and wrote for her Dorabella in *Così fan tutte* (26 January 1790), alluding in her Act 2 aria to her role as Amore. There is no evidence that, as is often stated, she was the sister of Adriana Ferrarese, who sang Fiordiligi. After leaving Vienna in spring 1791, she resumed her peripatetic singing career in Italy, performing at least until 1799, when she appeared in Venice.

DOROTHEA LINK

Villers [Vilers, Villa], **Antoine de** (*fl* 1547–56). French composer. 18 chansons are attributed to him in anthologies printed by Le Roy & Ballard between 1553 and 1556. Another chanson (*Au feu d'amour*), published by Attaingnant in 1547 with attribution to 'De Villa' may also be by him. One further piece, the sacred contrafactum *Le pelican de la forest*, appeared in Haultin's anthology of sacred chansons (RISM 1578[4]). The four-voice chansons in Le Roy & Ballard's fifth book (1556[14]) all set folklike poems (one is designated 'chanson poitevine') in a predominantly syllabic manner; they abound in short note values, including groups of *semifusae* which were still rare in the contemporary chanson. The 13 two-voice chansons published with attribution to 'Villers' are arrangements of four-voice models, mostly published during the 1540s by composers of the previous generation – Certon, Crecquillon, Gentian, Jacotin, Janequin, Maillard, Maille and Sandrin – but they include reductions of Villers' own chansons *Au feu d'amour* and *Que gaignez-vous*. Ten of these songs (excluding the arrangements of Villers' own works) were reprinted in 1578.

Le Roy & Ballard and Haultin distinguished Antoine de Villers from P. DE VILLIERS, but it is not known whether Antoine was related to a François de Villers, *maître des enfants* at Amiens and *chantre ordinaire* to the brotherhood of Notre Dame du Puy in 1543–4.

WORKS

6 chansons, 4vv, 1547[9] (attrib. De Villa), 1553[23] (attrib. De Vilers), 1556[14] (attrib. Ant. de Villers)
13 chansons, 2vv, *c*1555[24]; 9 ed. B. Thomas, *Adrian Le Roy & Robert Ballard: Premier livre de chansons à deux parties, 1578* (London, 1977), with incorrect attribution to [Pierre] de Villiers
Chanson spirituelle, 4vv, 1578[4] (contrafactum)

FRANK DOBBINS

Villesavoye, Paul [de] (*b* Paris, 1683; *d* Strasbourg, 28 May 1760). French teacher and composer. He worked at Lyons from 1703 as a music teacher, and it seems likely that when the Académie des Beaux-Arts was founded there in 1713 Villesavoye was associated with it. He may have become *maître de musique* for the academy in 1718, on the resignation of N.-A. Bergiron de Briou from that post; he was certainly appointed director of its concerts in 1726. In their early years these were given only by academicians, taught and rehearsed by the *maître de musique*, but this amateur music-making gradually gave way to more professional performances. Among the few professional singers at the academy during Villesavoye's time was his second wife, Suzanne Palais, whom he married in 1707. About 1731 he left Lyons for Strasbourg where he became *maître de musique* at the cathedral. While holding that appointment he directed the festival music for a visit of Louis XV to Strasbourg on 8 October 1744.

His output was small. The *Idylle héroïque, ou le Retour de Pyrrhus Néoptolème en Epire après le siège de Troye* was presented at the Académie des Beaux-Arts at Lyons in 1718, with a libretto by Nicolas Barbier (who may have written the text of Rameau's cantata *Les amants trahis*). There is a copy of the *Idylle héroïque* at Lyons, but a Kyrie and a Gloria once held by the academy's library there are now lost. Ballard published a *cantatille* (*Enfin la nature*) and an *air* (*Forcé d'aimer une inhumaine*) by Villesavoye in the collections of 1716 and 1717. (L.

Vallas: *Un siècle de musique et de théâtre à Lyon, 1688–1789*, Lyons, 1932/*R*)

DAVID TUNLEY

Villiers, P. [?Pierre] **de** (*fl* 1532–*c*1550). French composer. According to Lesure, a Pierre de Villiers was canon at Cambrai Cathedral in 1516. But the name is a common one and there is no proof that he was identical with the 'P. de Villiers' most of whose music (52 chansons, six motets, two madrigals and one mass) was published by Jacques Moderne at Lyons between 1532 and 1543. 14 of the four-voice chansons were reprinted in Paris by Attaingnant, who also introduced 17 *unica* between 1536 and 1548. Du Chemin published three new chansons (1549–50) and Le Roy & Ballard a further two for two and three voices (1553–5). After that, however, there arises some confusion with Antoine de Villers. Although Moderne specified 'P. de Villiers', Attaingnant and Du Chemin generally gave only 'Villiers' or 'de Villiers'. Le Roy & Ballard used the same forms, but 'Antoine de Villers' appears in their fifth book (1556) as well as 'Villers', 'De Villers' and 'De Viliers' in their other publications of about the same date.

P. de Villiers was probably resident at Lyons in the late 1530s; one chanson, *Lo meissony sur lo sey*, is in a local dialect, and others are settings of poets resident in the city (Du Guillet, Scève and Sainte-Marthe). In a mystery play printed at Lyons in 1538, the humanist, writer and director of the Collège de la Trinité, Barthélemy Aneau suggested Villiers' *Le dueil issu* as a *timbre* for a *noël mystic* whose second stanza introduces the pun on his name, 'Le Rossignol *vy lier* par accords'. His friendship with Aneau and also with Charles de Sainte-Marthe suggests that Villiers might have taught music at the Collège de la Trinité; the symbolism of his canonic three-voice *Missa de Beata Virgine*, subtitled 'Trinitas in unitates', might have more than the usual religious significance. The composer may have visited Augsburg (a city closely associated with the Lyons book trade) in the early 1540s, since his seven-voice motet *Sancte Stephane* praises a prominent prelate 'civibus Auguste gloria', and his four-voice lament *Tundite vos musae* was published there by Philipp Ulhard.

Villiers' interest in contrapuntal devices is demonstrated by the canonic chanson *Elle est m'amye*, as well as the *Missa de Beata Virgine*. All his motets adhere to the principle of pervading imitation and even his courtly chansons are generally more akin to those in the contrapuntal style of Flemish masters than to the more homophonic style of the Parisians. These chansons, however, show a typically French sensitivity to declamation and balanced prosody (using one musical phrase for a line of text and frequently reflecting the poetic form).

WORKS

SACRED

Missa de Beata Virgine ('Trinitas in unitate'), 3vv, 1540[1]; ed. in Dobbins (1992)

Motets: Ante portam Jherusalem, 4vv, 1532[11], ed. in Pogue, 375; Benedicat nos, 4vv, 1539[4]; Ecce vere Israelita, 4vv, 1539[4], ed. in Pogue, 382; Regina coeli, 6vv, 1542[5]; Sancte Stephane, 7vv, 1542[5], p. ed. in Pogue, 393; Tundite vos musae, 4vv, 1545[2] (attrib. Piere Vuilliers)

CHANSONS

for 4 voices unless otherwise stated

Edition: *Thirty-Six Chansons by French Provincial Composers (1529–1550)*, ed. L. Miller, RRMR, xxxviii (1981) [M]

Amour et mort, 1550[7] (attrib. 'Villiers'); Apres avoir longuement attendu, 1547[11]; Autant que moy heureuse, 1540[12], M; Celles coulleurs, 1543[14]; Ce n'est pas moy, 1538[15], ed. in Dobbins (1972); Craignant amour, 1547[11]; Cueur sans mercy, 1538[16], M; Dame qui as, 1541[8]; D'une dame je suys saisy, 1538[10]; Elle est m'amye, 5vv, 1538[16], M, and ed. in Dobbins (1972); En grant douleur, 1538[15]; Est-il heureux, 1547[11]; Est-il ung [nul] mal, 1540[12]; Fault-il pour ung verre cassé, 1547[11]; Force d'amour souvent (C. de Sainte-Marthe), 1541[8], M and ed. in Dobbins (1972); Je n'entendz pas, 1548[3]; Je n'oserois le penser (P. Du Guillet), ed. in Dobbins (1992)

La grant doulceur, 1549[27]; Languissant suis, 1540[12]; Las je ne sçay, 1538[16]; Las plus je viz, 1541[8]; Le cler soleil, *D-Mbs* Mus.ms.1508; Le dueil issu, 1538[17]; Le temps me vengera, 1538[16]; Le veoir, l'ouyr (M. Scève), 1540[13], ed. in Dobbins (1972); L'heur et malheur (C. Marot or M. de Saint-Gelais), ed. in Pogue, 379; L'heureux soucy, 1547[12]; Lo meissony sur lo sey, 1541[7], ed. in Pogue, 387; L'yver sera, 2vv, *c*1555[24]; Monsieur l'abbé (C. Marot), 1549[27]; Mort ou mercy (J. Marot), 1538[16]; Nenny desplaist (C. Marot), 1547[11]; Ne te plains tant, 1536[4]; Plus loin j'en suis, 1538[15]; Pour avoir heu de ma dame refus, 1547[11]; Pourtant si je suis brunette (C. Marot), 3vv, 1553[22]

Preste-moy l'ung de tes yeulx biens aprins (François I), 1540[16]; Que gaignez vous, 1553[23] (attrib. 'De Vilers'); Qui de tout bien, 1538[15]; Rien n'est plus cher (Sainte-Marthe), 1543[12], M; Si d'ung seul mal, 1541[8]; Si envieulx et faulx raportz, 1543[14]; Si le service, 1538[10]; Si ton plus grand desir, 1548[3]; Si tu voulloys, 1541[7]; Si vous avez, 1547[12]; Si vous voulez (C. d'Orléans), 1538[16], ed. in Dobbins (1972); Tristesse, ennuy, 1539[20], M; Trop plus que (la) mort, 1539[20]; Ung compaignon, 1538[15]; Venus avoit son filz Amour perdu, 1559[14]; Veu le grief mal, 1538[17]

MADRIGALS

Chi l'eta sua, 4vv; ed. in Pogue, 390

Priegi qui muoia, 4vv, 1538[15]; ed. in Dobbins (1972)

FRANK DOBBINS

Villiers, Ubert [Hubert] **Philippe de** (*fl* 1553–69). French writer and composer. He was secretary to the leading Huguenot Louis de Bourbon, Prince of Condé, from 1557 to the prince's death in 1569. He published a number of translations from Italian (including Girolamo Parabosco's *Lettere amorose*) and original writings, chiefly in Lyons, beginning in 1553. Charles Fontaine (1555) praised his practical and theoretical mastery of the two celestial sciences, 'Muses' and 'Musique', in a poem that echoes the paen of Charles de Sainte-Marthe (1541) to 'Villiers, Musicien tresparfaict'. The latter may, however, refer to the elder P. DE VILLIERS. His last known work and only surviving musical composition is *Aer funèbre sur la mort de … Loys de Bourbon, Prince de Condé* (n.p., 1569). The lament, an early example of the *air de cour*, begins with a single treble voice representing France addressing Heaven, which replies with a homophonic three-voice chorus for men's voices with a flexible declamatory rhythm. (F. Dobbins: *Music in Renaissance Lyons* (Oxford, 1992), 85–6, 186–8)

FRANK DOBBINS

Villifranchi [Villafranchi], **Giovanni Cosimo** (*b* Volterra, 1646; *d* Florence, 12 March 1699). Italian librettist. His first dramatic work, *Amore e politica* (1677), which exists only in manuscript (in *I-Sc*), was a forerunner of the melodrama, a spoken play with incidental music organized in introductory and final scenes. His first published libretto, *Amore è veleno e medicina degl'intelletti* (Bologna, 1679), was a poetic version of G.B. Ricciardi's prose comedy *Il Trespolo tutore* (Bologna, 1669). Villifranchi's

publication of his libretto was intended to counter a gross plagiarism that had been set by Bernardo Pasquini and performed at the Palazzo Colonna in Rome in 1677. Stradella composed a score for the authentic version (retaining *Il Trespolo tutore* as the title) for a performance in Genoa in 1678 or 1679 and probably for Modena in 1686.

Villifranchi wrote most of the comic librettos staged in the Villa di Pratolino by Prince Ferdinando de' Medici, whom he also served as personal physician, altogether writing five such works beginning with *Lo speziale di villa* (1683) and concluding with *L'ipocondriaco* (1695). He wrote only one serious opera, *Filippo Macedone*, which has not survived. His comic librettos enjoyed revivals in Florence and Bologna as late as 1743 in settings by G.M. Buini, Chinzer, Lirone and other, unknown, composers.

His importance as a comic-opera librettist has been obscured by the lack of any surviving scores except those of Pasquini and Stradella for *Il Trespolo tutore*. He was nevertheless the most productive and creative Italian comic librettist in the second half of the 17th century, and also deserves attention as an advocate of simple and natural language. As he wrote in his introduction to *L'ipocondriaco*, he wished to make 'verse appear to be prose and music a natural discourse'.

ROBERT LAMAR WEAVER

Villot, Jean. *See* VEILLOT, JEAN.

Villoteau, Guillaume André (*b* Bellême, 6 Sept 1759; *d* Tours, 27 April 1839). French writer on music. He attended the *maîtrise* of Le Mans Cathedral, where he met Le Sueur, and studied oriental languages at the Sorbonne. He was ordained a priest and, as a tenor, joined the *maîtrise* of Notre Dame on the eve of the Revolution. During the Revolution, however, the *maîtrise* was suppressed, and he joined the Opéra chorus, soon gaining the post of chorus leader.

In 1798 he went to Egypt as a member of a large scientific group accompanying Napoleon on his Egyptian expedition; this journey determined much of Villoteau's future career. During two years in Egypt he amassed numerous documents, mainly on music, which he later studied with the aid of the principal Paris libraries. He then published several works, the first of which was *Recherches sur l'analogie de la musique avec les arts qui ont pour objet l'imitation du langage* (1807): a two-volume work of uneven interest, it combines a vast compilation from ancient writers on Greek, Egyptian and Hebrew music, with some of Villoteau's more personal theories. He attempted to establish an analogy between music and language: 'The only difference . . . between the effects of the two arts is that song makes its appeal directly to the soul, whereas the word . . . appeals first to the mind'. Because of his moralistic view that music should serve a civilizing (as opposed to a pleasurable) function, he believed that music which portrays nothing has no value, and therefore condemned fugue and symphonic music while praising operatic music. He thus showed himself the true successor of the 18th-century French aestheticians, for whom music was, above all, an imitative art. In explaining his ideas, already conservative when they appeared at the dawn of the Romantic period, he frequently opposed the perspicacious views of Chabanon, whom he refuted in the preface to the first volume of *Recherches sur l'analogie*. A tightly reasoned argument against Rousseau's *Essai sur l'origine des langues* is in the same volume.

Villoteau also wrote the sections on music in the collection *Description de l'Egypte*. They provide descriptions of music in various Middle Eastern countries, Greece and Egypt (including that of the Arabs and Jews), the music of ancient Egypt, and musical instruments depicted on the sculpture of Egypt's ancient monuments. Villoteau's research was in many areas the first of its kind; but his writings, though of remarkable erudition and still useful in some ways, are badly outdated and reveal both his reliance on conjecture and his lack of critical sense. With the exception of Fabre d'Olivet, Villoteau's contemporaries paid his theories scant attention.

After a notary brought him near to financial ruin, he left Paris for his small house in Tours, where he spent the rest of his life. There he prepared both a *Traité de phonétésie*, in which he undertook to demonstrate 'the expressive property of sounds and of the inflections of the human voice', and a French translation (from the Latin text of Meibom, 1652, rather than the original Greek) of *Antiquae musicae auctores septem*. He planned but abandoned a dictionary of terms relevant to Egyptian and oriental music.

JEAN MONGRÉDIEN/KATHARINE ELLIS

Villotta (It.). A type of polyphonic song based on a popular tune (or tunes) that originated in the Veneto in about 1520. A substantial repertory spread quickly to Lombardy, Tuscany and Rome, flourishing for about ten years in manuscript and in print. Thereafter villottas were usually published in small quantities within collections.

The term is derived from the north Italian dialect word *vilòte* ('peasant'; *see* ITALY, §II, 3). Printers sometimes used the terms 'villotta', 'villanesca' and 'villanella' interchangeably, although linguistic and musical distinctions can be drawn between them (*see* VILLANELLA).

The earliest four-part arrangements of Italian tunes ('proto-villottas') were produced by Franco-Netherlanders active in Italy during the late 15th century (e.g. Obrecht's *La tortorella* and Compère's *Che fa la ramacina*). These composers and some Italians of the next generation developed styles of text-setting that have strong affinities with the 'new' chanson and *chanson rustique*, such as points of imitation on declamatory themes, rapid alternation of voice pairs and homorhythmic, chordal textures. Michele Pesenti established a model for the contrapuntal villotta in which fragments of the tune, normally placed intact in the tenor, permeate the other voices (e.g. in *Dal lecto me levava*, RISM 1504[4]). These textually conceived forerunners are related to the villottas 'in contrappunto arioso' of the 1520s, which Torrefranca mistakenly dated some 40 years earlier and called the 'ramo tardivo' of the Ars Nova caccia. Important sources of the fully fledged villotta include the

Ex.1 Francesco Santa Croce, *Dillà da l'acqua sta (Libro primo de la croce*, 1526)

Venetian manuscript *I-Vnm* It.Cl. IV 1795–8, which contains the first pieces called 'villotta', and *I-Fc* Basevi 2440; some villottas are also found in Tuscan sources of the early madrigal (e.g. *I-Fn*, Magl.XIX.164–7; facs. in RMF, v, 1988).

Villotta texts are consciously rustic in diction and vocabulary, with occasional traces of northern dialects. According to Prizer, this 'popularizing' manner was adopted to provide a context for citations of popular material. Villottas typically have free rhyme schemes and shifting line lengths; they may open with alternating rhymes and may have internal rhyming lines. Some villottas conclude with a refrain (*nio*) set in contrasting metre. Sexually explicit references contribute to a crude and elemental tone, along with curses, threats of cuckolding and imitations of animal sounds; the amorous encounters of low-bred characters in the village or countryside are routine occurrences. Prizer described this as 'a kind of play of the elite with the popular culture through a distancing from the notions of *amour courtois*'.

Textual categories within the repertory include quodlibet-villottas (notable examples are found in *I-Bc* Q21, *c*1526, in Werrecore's *La bataglia taliana*, 1549, and in *Villotte mantovane*, 1583), ingenious treatments of solmization syllables, spirited dance scenes, and satirical attacks on old people. This last type frequently opens with the tenor announcing the tune alone; narrative sections are declaimed in full chordal textures and rhyming lines are set off in dialogue between paired voices (ex.1).

During the 1520s villottas were sung at Ferrarese banquets to enhance comic skits presented by itinerant theatrical troupes: 'First came the buffoons, Zuan Polo and others, likewise Ruzzante the Paduan, in peasant costumes who did acrobatics and danced very well, and six dressed as *vilani putati* who sang *villotte*' (Marin Sanudo, *I diarii*, 1524). The 'beautiful canzoni and madrigals in Paduan style' that Ruzzante's troupe sang at Ferrara in 1529 probably typify the homophonic and imitative villotta types in circulation at the time. (Lorenzo Zacchia's painting *Musical Group with Four Figures* inscribes a villotta with refrains popularized in Ruzzante's comedies, and has been interpreted as a tribute to the popular singer and poet.)

In the 1540s a preference arose in Venetian academies for villottas that represented comic characters or situations. Willaert's *Un giorno mi pregò una vedovella* compares a love affair to navigating through stormy seas, for example, and his *Sospiri miei d'oimè dogliorirosi* recreates the stammering of a lovesick suitor. Amusing vocal imitations of cackling and chirping in Barges's *Canzon della gallina* suggest the antics of Pulcinella. Similar works are found in the first printed collection of villottas, *Il primo libro delle villotte* (1541), dedicated to Duke Ercole II of Ferrara by the actor Alvise Castellino.

Willaert and his colleagues Perissone Cambio and Nasco who worked in Venetian territories often incorporated elements of the mid-century villotta into their *villanesca* arrangements (ed. in RRMR, xxx, 1978). The two genres co-exist and overlap stylistically in Azzaiolo's three books of *Villotte del fiore* (1557[18], 1559[19], 1569[24]), which contain many familiar tunes and the harmonic patterns traditionally associated with them. His dance-song arrangements gained fame in intabulations (e.g. *Ti parti cuor mio caro*) and were held up as models by Vincenzo Galilei.

DONNA G. CARDAMONE

Vilnius (Pol. Wilno; Russ. Vilna). Capital city of Lithuania. It has at various times been under Polish and Russian dominion. From the 14th century there was a ducal court there and a singing school at Vilnius Cathedral. The granting of a city charter in 1387 led to the formation of musicians' guilds; around 1400 Grand Duke Vytautas had players of the flute, clavichord and organ in his retinue. The church of St John had a choir and music school by 1515, and the cathedral had an organ by 1551; Vilnius became a centre of organ building, the first mention of workshops dating from 1585. After Lithuania's union with Poland in the mid-16th century, Vilnius became an important musical centre. The Academia et Universitas Vilnensis was founded by the Jesuits in 1579. Polyphonic and choral singing were taught there and at the seminary. The court musical ensemble of Wladislaw IV Wasa (1632–48), with Italian soloists, gained wide renown; in 1634 the court heard the first opera given in Vilnius, *Il ratto di Helena* (probably by Marco Scacchi). In 1667 Žygimantas Liauksminas (*c*1596–1670), a professor at the Academy, published a manual on musical notation and choral singing, *Ars et praxis musica*.

By the late 18th century the Lithuanian aristocracy was in decline and cultural life was becoming democratized. Recitals were organized by Joseph Frank (1771–1842) and his wife, the singer Christine Gerhardi. Haydn's *Creation* was performed in February 1809 with Gerhardi in the soprano part, which she had sung at the work's première in Vienna. Subsequently other oratorios and masses by Haydn and Schubert were given, as well as Mozart's Requiem in 1840. Touring opera companies visited the city from the late 18th century; a permanent opera company was established in 1827, giving mostly Italian opera. A German company was active from 1835 to 1844. J.D. Holland taught theory, counterpoint and composition at the university from 1802 to 1826, and established the chair of musicology in 1803; instrumental performance was also taught there. After the nationalist revolt of 1832 was put down, the Tsarist government closed the university and introduced press and stage censorship, with dramatic works to be performed only in Russian. The Polish composer Moniuszko was active in Vilnius from 1840 to 1858 as organist, conductor and teacher; his opera *Halka* had its concert première there in 1848, and its stage première in 1854. In the 1850s and 60s concerts were given by Vieuxtemps, Henryk and Józef Wieniawski, Schulhoff, Antoni and Apolinary Kątski and Anton Rubinstein, among others. A private music college was opened in 1867, and the college of the Russian Music Association in 1874. In 1869 a Russian theatre was opened; there were visits from Italian, French and Ukrainian companies and from singers en route to Moscow or St Petersburg.

In 1904 the ban on the Lithuanian language was lifted. The composer M.K. Čiurlionis moved to Vilnius in 1907 and was active in musical life, directing the Vilnius Kanklės Society Choir. In 1906 this society gave the première of *Birutė*, with music by Mikas Petrauskas (1873–1937); a play with incidental music, it is often counted as the first Lithuanian opera. From 1919 Poland occupied the Vilnius area for two decades; Kaunas became the Lithuanian capital, and much musical activity shifted there. Vilnius University reopened in 1919. Among music schools active in this period were the Vilnius Conservatory (1921–35), the M. Karowicz Conservatory (1935–40) and the Jewish Institute of Music (1924–40); teachers included Tadeusz Szeligowski, W. Rudzyński and Stanisław Szpinalski (1901–57). In 1939 the main national cultural institutions were restored to Vilnius. In 1940, following Soviet annexation, Vilnius was made capital of the Lithuanian SSR. During the German occupation (1941–4) an opera company functioned there in difficult conditions. In the Soviet period some new institutions appeared, including the City SO (later the PO; founded by Balys Dvarionas), a professional choir and ensembles for traditional song and dance, but concert and theatrical repertory reflected Soviet ideology and were supervised from Moscow. The Vilnius Conservatory resumed activity in 1945; it merged with the Kaunas Conservatory in 1949 to form the Lithuanian State Conservatory.

Outstanding postwar ensembles include the internationally renowned Chamber Orchestra, founded in 1960. The Čiurlionis competition for pianists and organists was founded in 1965, and a chamber music festival in 1967. The national opera company gives a season from September to June each year, mostly from the standard (especially Russian) repertory, but also including Lithuanian works by Račiūnas, Klova, Barkauskas, Juzeliūnas and Balsys. The company performed at the Vilniaus Miesto Teatras (Vilnius Town Theatre) up to 1974, and then in the newly opened Operos ir Baleto Teatras. The Vilnius Museum of Theatre and Music was founded in 1964. Since 1946 the Lithuanian Song and Dance Festival has been held every five years in Vilnius, with between 30,000 and 40,000 participants.

JUOZAS ANTANAVIČIUS

Vimercati, Antonio. *See* ARCHILEI, ANTONIO.

Vimercati, Pietro (Maria Giovanni) (*b* Milan, 20 Sept 1779; *d* Genoa, 26 July 1850). Italian mandolin player and composer. He was born and raised in the well-known instrument workshop of his father, Gaspare Vimercati, in the Dogana district near Milan Cathedral. He was probably introduced to music by his father, and by 1802 was a violinist at La Scala with his brother Carlo (1766–1829). In about 1808 he embarked on a solo career as a mandolinist, and immediately won acclaim in the most prestigious Italian theatres. He appeared regularly in Milan, and in April 1814 performed a mandolin concerto by Simone Mayr at the Teatro Carcano. On his tours of Italy and Europe he often performed with his wife, the contralto Maria Rossetti (1788–1830), whom he married in 1814. On his first European tour in 1820 he appeared with great success in Munich, at the theatres of the Kärtnertor and Hofoper in Vienna, in Prague, where he met the violinist Charles Lafont, and in Berlin, Breslau, Stockholm, Paris (with Hummel at the piano), London and Weimar. He returned to Italy in 1822.

On the death of his first wife in 1831 Vimercati married the contralto Caterina Bianchi. Between 1831 and 1834 he undertook another Italian tour, and subsequently appeared in Darmstadt (1835) and Berlin (1836), where he played the mandolin part in *Don Giovanni* at the Hofoper. The following year he was in Helsinki and St Petersburg, and in 1838 he was in Riga. In 1843 he returned to Italy but, disappointed by the musical situation in Milan, announced in an interview in the *Gazzetta Musicale di Milano* his intention to travel to London. In 1844 he was again in Vienna, and the following year in Olmütz (now Olomouc). He gave his final concert at the Palazzo Ducale in Genoa on 5 July 1850.

All of Vimercati's compositions, except for a short autograph of a *Sovenir*, have been lost. Concert programmes reveal that he wrote variations and potpourris for mandolin on themes from operas by Paisiello and Rossini, as well as original works including a concerto which he performed in Parma in 1834.

CARLO AONZO

Vin. Sassanian horizontal angular harp. *See* IRAN, §I, 5.

Vīṇā. The principal indigenous term for chordophones in India and other countries of South Asia. The name (and its derivatives: Tamil *vīṇai*; New Indo-Aryan *bīṇā*, *bīṇ*, etc.) has been used for almost three millennia to denote the main type of the age: the musical bow; the early harps; the short lute (fig.1); the medieval stick or tube zithers; bowed chordophones; and various descendants of the above in the contexts of both traditional music and Hindustani and Karnatak traditions, including the modern South Indian *vīṇā*, a lute.

1. Early history. 2. Medieval instruments. 3. Stick zithers in local traditions. 4. The Hindustani *bīṇ*. 5. *Sarasvatī vīṇā*. 6. Fretless *vīṇā*.

1. EARLY HISTORY. The name *vīṇā* is first documented in the *Yajurveda* (*c*1000 BCE). A possible chordophone, however, referred to in the earlier *Ṛgveda* and *Atharvaveda* is the *gárgara* or *karkarí*, which may have been a musical bow resonated on a skin-covered pot or gourd. Some ideograms of the pre-Aryan Indus culture (3rd–2nd millennia BCE) may show a curved stick with three or four strings which could have evolved into the later harps or bow harps. From the *Ṛgveda* on, there are frequent references to the 'song' of the archer's bow which points to this as the possible origin of later chordophones. The medieval Sanskrit *pinākī* and later northern *pināk* are bowed bows, while the southern *vil* or *villu* are struck bows.

The *Yajurveda* contrasts the *vīṇā*, said to be associated with animals (*paśu*), with the *kāṇḍavīṇā*, associated with plants (*oṣadhi*). The meaning of the latter (*kāṇḍa*: 'internode of cane') makes it likely to have been a tube or

1. *Short-necked lute (vīṇā) and transverse flute: detail of a marble relief from Amarāvati, 2nd–3rd century* CE *(Indian Museum, Calcutta)*

a stick zither, possibly idiochord; it is not known if it had an extra resonator. The later stick zithers probably go back to these early forms. At the same time, it is clear that *vīṇā*, unqualified, at this period denoted the harps or bow harps, whose animal components are referred to. The name may derive from a pre-Aryan root meaning 'bamboo' (possibly Dravidian, as in the Tamil *veṛam*: 'cane'), giving also *veṇu* ('bamboo', 'flute'), and *veṇa* ('caneworker'). In this case the name would have originated with early tube or stick zithers.

Arched harps are assumed to have reached South Asia from the ancient Middle East. Various types of *vīṇā* (not all necessarily harps) are mentioned in the Vedas (1st millennium BCE) as instruments of ritual, and in classical literature (*c*500 BCE onwards) as instruments of court entertainment music. The latter role is confirmed for the harp by the earliest (mainly Buddhist) art from the 2nd century BCE until about the 6th century CE. The harp continues to appear sporadically in iconography to the end of the 1st millennium, but seems then to have died out in South Asia, with the possible exceptions of the *waji* of Nuristan and the *bīṇ bājā* of Madhya Pradesh.

Apart from angular harps known in Gandhāra (North-West India), all South Asian harps were horizontal arched (or bow) harps: the curved wooden neck merged at the lower end with a wooden boat-shaped resonator. The gut or vegetable-fibre strings typically numbered seven (*citrā vīṇā*). The 'bow-harp' type, in which the resonator is attached beneath one end of the arch, and in which the strings are attached to the arch at both ends in the manner of a polychord musical bow, can occasionally be identified in iconography, and is represented today by the *waji* and the *bīṇ bājā*. This type is distinct from harps elsewhere in Asia, most of which have a separate string-bar, and perhaps derives from indigenous musical bows under the influence of harps from West Africa.

In South Asia, short-necked lutes first appear in the Graeco-Buddhist art of the 1st to 3rd centuries CE of Gandhāra. They appear in Buddhist art from the 2nd to 6th centuries CE, and thereafter sporadically in Hindu art to the end of the millennium. They generally occur in the same contexts as harps.

In Gandhāran art a wide variety of types are found. The resonator may be ovoid or barbed, with or without soundholes. The strings, generally three or four, may be attached to a straight, lute-type bridge, or pass over a flat rectangular bridge, similar to that later characteristic of various Indian instruments. In South Indian art larger, generally five-string, uniformly pear-shaped lutes appear.

Of various unidentified instrument names in Sanskrit literature, *kacchapī* ('tortoise') *vīṇā* is thought to denote a lute type.

2. MEDIEVAL INSTRUMENTS. In the second half of the 1st millennium CE various types of single-string stick zither with gourd resonators supplanted the harp- and lute-*vīṇā* as instruments of court music and assumed an important role in religious iconography. They may have been indigenous traditional instruments before their adoption into art music. The type survives in the modern north Indian *bīṇ*, and in various traditional instruments including the *ṭuila*, *kullutan rājan*, *jantar* and *kinnarī vīṇā*. There are very detailed descriptions by the 13th-century musicologist Śārṅgadeva who distinguishes three principal types: *ālāpinī*, *ekatantrī* ('one-string') and *kinnarī vīṇā*.

All the stick zithers comprised a hollow bamboo or wooden tube, along which a single string (of gut, sinew, silk, cotton or metal) was stretched. At the lower end the string passed over a rectangular bridge with a convex upper surface, which caused a buzzing effect when the string vibrated; at the other end the string was attached to the body either directly or (on the metal-stringed *kinnarī vīṇā*) with the aid of a tuning-peg. Additional resonators could be attached. On the *ālāpinī*, a hemispherical cup made from half a hollowed dried gourd was fastened behind the upper end of the tube; the opening of this cup was pressed against the player's chest to form a closed resonance-chamber. A similar gourd on the *ekatantrī* and *kinnarī vīṇā* was held higher, resting on the player's shoulder; on the latter a second and even third gourd could be attached lower down the instrument.

Bowed chordophones are also mentioned in or described by medieval Sanskrit texts. The *Saṅgīta-ratnākara* (early 13th century) gives a detailed description of the bow and of two instruments played with it. The *pinākī* ('bow') *vīṇā* was a musical bow, with a tapering staff about 80 cm long. Two small terracotta *kheṭaka* ('inverted cups') are fixed to each end at the back, and the string is threaded and tied through holes near each end. The lower end of the bow was placed on a gourd resonator held on the ground by the feet, and the upper end leant against the shoulder. The string was stopped by the stem of a small gourd held in the player's left hand.

The playing bow (*cāpa*, *dhanu*, both, like *pināka*, meaning 'bow') was about 40 cm long, but reduced (by curvature) to a hair length of 'two fists' (not a standard measurement, but perhaps about 30 cm). To the whittled-down ends would be attached the hair ('of horse's tail'), with resin (*rālā*) from the *sāl* tree.

Another bowed instrument is described by Śārṅgadeva is the *niḥśaṅkā vīṇā*. The description of the instrument indicates a string four hands long tied at its upper end to a piece of wood and at its lower end to another piece (measuring one-and-a-half hands), whose last two 'inches' are whittled to a spike one 'inch' thick. A gourd is attached near the bottom. A thimble of dried-out leather (*peśī*), stiffened with an inside rod (*koṇa*), or the rod alone, may be used to stop the string. The manner of stopping the strings of these *vīṇā* is probably the origin of the similar method found on the modern *sāraṅgī*.

3. STICK ZITHERS IN LOCAL TRADITIONS. Many of the aspects of the medieval stick zithers described above survive in traditional instruments throughout the subcontinent, though the name *vīṇā*/*bīṇ* is rare. The *ālāpinī* type appears to survive in India only in the Orissan *ṭuila*. The instrument which has contributed most to the concert *vīṇā*, and which is most widespread in various shapes and sizes, is the *kinnarī vīṇā*. Of this type are the small stick zithers of the eastern Ādivāsī peoples, such as the *kullutan rājan* of the Saora; others include the large *kinnarī vīṇā* of Karnataka and the *jantar* of Rajasthan, the smaller *jantar* of Madhya Pradesh (now bowed) and the *king* of the Punjab and Jammu.

4. THE HINDUSTANI 'BĪṆ'. The *vīṇā* in the North Indian form *bīṇ* is found in the early Muslim court and early Mughal period records, along with other forms of *vīṇā* such as the *jantar*, *kinnarī vīṇā* and the *sirbīn*. It had evolved from the medieval *kinnarī vīṇā* into what is substantially its modern form by the 16th century.

The body of the *bīn* is a long, hollow, wooden 'stick' (*danḍi* etc.), or tube, sometimes carved outside with nodes to resemble bamboo and capped at both ends with brass tubing, to which two large bottle-gourds (*tumbā*; *alābu*, *lāū*) are attached some way below the ends near each end of the fret area. It is around 122 cm long with 24 frets and seven strings. The strings are of metal (brass and steel). The gourds are almost whole and are attached by plaited leather thongs passing up from an interior supporting wooden disc through an intermediate wooden bobbin and holes in the stick; a round hole (about 12 cm wide) is excised in their base. Modern *bīn* may have their gourds attached by a heavy brass screw-tube. Both frets (about 2 cm high) and nut (about 2·5 cm) are thin (4 mm) upright brass-capped wooden plates; they are straight on top but carved below in an arch which fits on the neck and is held by a cement of wax and soot. The peg area has a typical bilateral arrangement of five main pegs (two on one side and three on the other), and a clockwise disposition of strings 1 to 5 from above the nut on the right side (player's view) to the same position on the left; strings 1 to 4 pass over the nut from right to left (i.e. with the main string nearest to the player's right hand, an arrangement similar to that of the southern *vīṇā*). String 5 runs down the left side of the neck, and strings 6 and 7 pass from pegs below the nut down the right. A complex bridge-piece is fitted into the lower opening of the tube, often carved as the front of a peacock, with deep, curving bone or ivory surfaces on its back and wings for the three sets of strings tied around projecting pin string holders below each section.

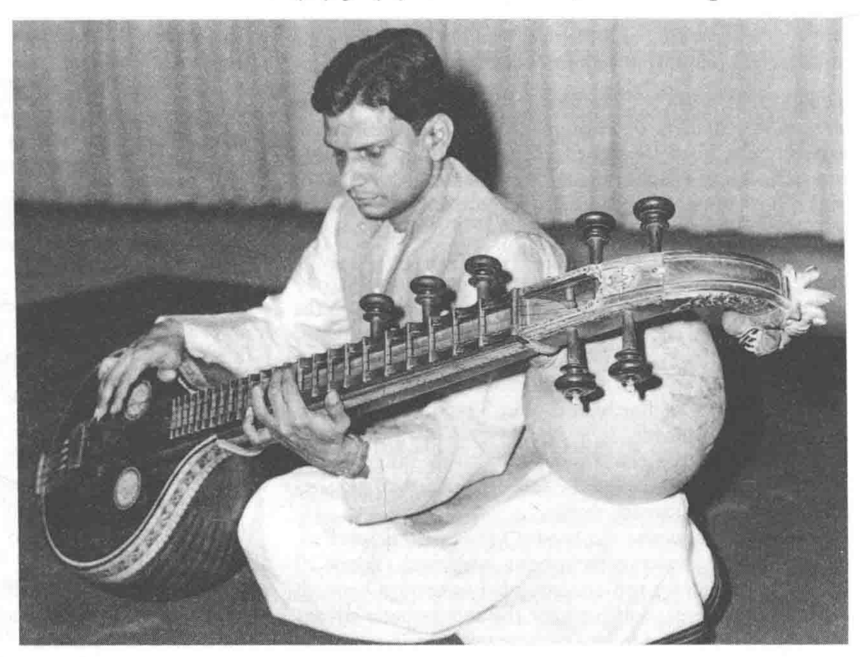
The tuning of the four melody strings *ma-sa-PA-SA* has become standard, giving a range of three and a half octaves on the 23 or 24 frets. This, with the two *cikārī* on the right (tuned to the upper and middle tonics) and the drone string on the left (usually tuned to the middle tonic), provided a model for the developing Hindustani lutes (*sitār*, *sūrbahār*) in the 19th century.

The main strings of the *bīn* are played with downward strokes of the right index and middle fingers, and the side-strings with upward strokes of the little fingers (on the left side the thumb is also used). The instrument is held across the body, with the left gourd on the shoulder and the right on the hip.

The *bīn* is sometimes known as the *rudra vīṇā* (the *vīṇā* of the ascetic god, Śiva, the great *yogi*). Since it has no soundtable, the forward projection of the sound is weak, but it vibrates powerfully into the body of the player. The stick with its nodes is regarded as the *merudanḍa* (both the human spine and the cosmic axis) and the gourds as the breasts either of Śiva's wife Parvati or of Sarasvatī, goddess of arts and learning.

5. 'SARASVATĪ VĪṆĀ'. This is a large, long-necked, plucked lute, the principal chordophone of Karnatak music (often simply called '*vīṇā*'). It is played mainly by members of the *brahman* caste in the four southern states of India (Tamil Nadu, Andhra Pradesh, Kerala and Karnataka) and in Sri Lanka.

The name refers to the icon of the Hindu goddess Sarasvatī playing this *vīṇā*. Sarasvatī is the goddess of *vidyā*: the understanding of the nature of life which releases the individual from the cycle of reincarnation. It is thought that the pursuit of music leads to this understanding.



2. Mid-19th-century bīṇ player: watercolour (c1840) attributed to Ghulām 'Ali Khān (GB-Lbl Add.27255, f.134v)

(i) Structure. The *Sarasvatī vīṇā* is a long-necked lute, a later development than the stick zithers described above, which are found equally in southern medieval sculpture. Tamil tradition ascribes changes in the *vīṇā* to the reign of Raghunatha Nayaka of Thanjavur (1614–32). In terms of historical organology, the instrument's origins are hybrid. The main body derives from the long-necked barbed *rabāb* of the pre-Mughal Deccan Muslim courts. As on the latter, the neck and shell are sometimes in one piece; hence also the flange where they meet, a vestige of the barb, and the open, bent-back animal-motif pegbox. The wooden soundtable, the bridge and the stylised shoulder-and-ribs pattern on the shell derive from the long-necked lutes which were originally carvel-built. A final layer of features (the embedded chromatic frets, the mock-gourd upper resonator, the stringing and tuning and the playing technique) originate in the stick zither tradition. This *vīṇā* is thus a unique blend of South Asian types, perhaps around three centuries old.

There are two types of modern instrument: the Thanjavur and the Mysore. The latter is made of blackwood and the former of lighter jakwood. Other differences lie mainly in the decoration of the instruments (the Thanjavur *vīṇā* is much more elaborately carved and brightly painted) and in the position of the soundholes on the table.

The body has three main parts. The shell (*kayi*, *kuḍam*) is hemispherical and hollowed from a single piece of wood, often with mock 'shoulder-and-ribs' carving on the back. The heavy hollow neck (*danḍi*) has straight sides rounded at the back and tapering lightly towards

3. *South Indian Sarasvatī vīṇā (long-necked lute), Thanjavur model, played by Nageswara Rao*

the top; a second resonator (*burra*), of gourd, metal or papier-maché, is screwed into a small metal cup fixed to the back of the neck below the nut. The pegbox is bent back, and open at the front, with a bilateral peg arrangement (two on the right, two on the left); it terminates in a dragon (*yāli*) head design (sometimes there is also an opening compartment for accessories). These three parts are often separate, but for tone quality the *ekadaṇḍi vīṇā*, with shell and neck of one piece, and above all the *ehāṇḍa* or *ekavada vīṇā*, with all three parts solid, are specially prized. A projecting ivory ledge (*gvantu*) round the sides and back of the neck and shell joint is found on some types. The shell is covered by a round, thin, flat wooden soundtable (*yeddapalaka*), which has two decorated soundholes about 5 cm in diameter in the upper quadrants. The bridge (*gurram* or *kudirai*: 'horse') is in the centre of the soundtable; it is similar to that of the sitar, with a wooden, bench-shaped trestle about 6·5 cm wide and 3 cm deep, but covered with a metal plate. The four main strings pass over the top, and the three *tāla*, or side strings, over a buttress-like metal arc which extends from the right side of the bridge down to the soundtable.

The neck is covered by a thin board (*daṇḍipalaka*). Along each side is a raised ledge (*maruvapalaka*) to which is applied a cement of wax and lamp-black which holds the frets (*metlu*) in place. The frets are straight brass bars, rounded on top and about 5 mm thick; there are 24, giving two full chromatic octaves on the first of the four main strings. The strings (two of steel, two of brass) are fitted in right-to-left descending order. The three side strings pass from their pegs in the side of the neck, below the nut and over three small knobs.

All seven strings are secured below the bridge to thick wires (*langar*) with fine-tuning devices in the form of sliding metal rings attached to an inferior string holder, a unique development on Indian lutes.

(ii) Technique. The player sits cross-legged on a mat, with the left foot tucked behind the right knee and the left leg resting on the right foot. The secondary resonator, attached below the neck of the instrument, rests on the left knee and the main resonator rests on a mat, touching the right knee. The instrument is played tilted forwards. The left arm encircles the neck to fret the melody strings. The left forearm, moving up and down the smooth surface of the neck, also supports the *vīṇā* (it is considered sacrilegious to play the *vīṇā* left-handed).

The melody strings are struck (downwards only) with the nails of the middle and forefingers of the right hand and muted with the fingertips. The melody string nearest the *tāla* strings is called *sāraṇī* and is tuned to the system-tonic (*shaḍja*). The next string (*pañcama*) is tuned a 4th below, and the next (*mandra*) an octave below the *sāraṇī*; the fourth string (*anumandra*) is tuned an octave below the *pañcama*.

The melody strings are fretted with the forefinger and middle finger of the left hand. The player develops a groove from the corner of the nail across the tip of each finger within which the string slides, the method of playing being up and down single strings. The low string tension permits pitch movements of up to four semitones by deflection of the string downwards and along the fret. The player deflects, or 'pulls', the *sāraṇī* under the *pañcama* (and the *pañcama* under the *mandra*), while simultaneously muting the *pañcama* etc. with the underside of the tips of both fingers.

The large frets and absence of a fingerboard permit the player to sound notes without using the right hand by gliding up to a fret from a pitch below and/or by deflecting the string behind a fret. Both types of melodic movement are called *gamaka* (*see* INDIA, §III, 3(i)).

In the Mysore tradition, facility in executing *gamaka* is highly regarded; in deflected *gamaka* the timing is often deliberately complex and asymmetrical. The Mysore *vīṇā* masters teach the skill of alternating struck notes, which mark rhythmic accents, and *gamaka*, which through their relative dynamics and complex timing mask (or conceal) rhythmic accents.

The three *tāla* (metre) strings are tuned to the system tonic, the octave above and the perfect 5th between. They

are struck (upwards only) with the nail of the little finger on the right hand. (For repertory *see* INDIA, §III, 6(i).)

6. FRETLESS 'VĪṆĀ'. The *vicitrā vīṇā* and *goṭṭuvādyam* are unfretted lutes of Hindustani and Karnatak music respectively. They are played, Hawaiian-guitar style, by a smooth sliding-block in the left hand and plucking by the right. Both appear to be modern instruments dating from the 19th century. The *goṭṭuvādyam* ('block instrument') is structurally a *sarasvatī vīṇā* without frets, but, uniquely for a southern classical instrument, it has from 7 to 13 sympathetic strings, which run from their pegs (set in the distal side of the neck) through and along the fingerboard under the main strings. The instrument rests on the floor before the player, with the resonator to his right. The sliding-block is of hardwood. The first melody string, nearest to the player, is a double course tuned to an octave. The instrument is plucked with the fingers. The *goṭṭuvādyam* is also called the *mahānāṭaka vīṇā*, suggesting an origin in dramatic music.

The northern *vicitrā* ('colourful') *vīṇā* is structurally a hybrid of the *bīṇ-sitār* type: it has a wide neck (about 10 cm) which is flat on top and rounded in section beneath (about 3 cm deep), and pegs for the sympathetic strings set in the proximal side (the playing position is as for the *goṭṭuvādyam*). The neck terminates on the right in an integrated, wood-covered resonator, which in some cases is smaller and pear-shaped, in others larger and similar to that of the sitar. The instrument rests on two large bottle-gourds which are screwed into the back of the neck. The main strings are tuned in descending 4ths and 5ths; the slider (*baṭṭā*) is a glass egg.

ALISTAIR DICK (1, 3, 4, 5(i), 6), RICHARD WIDDESS (2), GORDON GEEKIE (5(ii))

Vinaccesi [Vinacesi, Vinacese], **Benedetto** (*b* Brescia, *c*1666; *d* Venice, 25 Dec 1719). Italian composer. He came from a family of merchants and civic functionaries who moved to Venice from Tuscany in the 14th century and emigrated to Brescia in the 16th. The famous 'universal savant' Fortunato Vinaccesi (1631–1713) was his cousin. Benedetto's intellectual curiosity and love of experimentation must have been stimulated by visits to Fortunato's salon in his youth. He learnt the organ and possibly other instruments from Pietro Pelli, a former *capo musico* at Brescia Cathedral.

Vinaccesi's initial interest as a composer was in secular music. In 1687 a collection of chamber sonatas 'a tre' was published in Venice as his op.1. The title-page identifies him as *maestro di cappella* to Ferdinando Gonzaga, ruler of the neighbouring statelet of Castiglione delle Stiviere. This post was probably non-residential, and the composer's duties are unlikely to have continued beyond 1691, when a local uprising drove Ferdinando into exile. In 1688 Vinaccesi dedicated a volume of cantatas to Prince Ferdinando of Tuscany, who passed through Brescia on his way to Venice. This publication was given the out-of-sequence opus number 3 in allusion to the fact that, on succeeding his father Cosimo, the prince would become Ferdinando III. In 1692 a set of church sonatas appeared as Vinaccesi's op.2; this was followed by another set of chamber sonatas, op.4. At some point before 1692 he received the title of *cavaliere*, but it is not known who conferred it on him.

In 1690 Vinaccesi applied unsuccessfully for the post of organist at Brescia Cathedral. In the next few years he concentrated on sacred music. His oratorios *Gioseffo che interpreta i sogni* (1692) and *Susanna* (1694) were performed at the court of Modena. In 1698 he was appointed *maestro di coro* at the Ospedaletto, one of Venice's four *ospedali grandi*, at an annual salary of 200 ducats. During his tenure of this post, which lasted until 1715 (his application in 1713 for retirement on a pension was refused), he wrote, by his own estimate, over 450 works. For a few years around 1700 he composed operas, but he found the experience unrewarding and soon gave up.

Unsuccessful in his application for the post of *primo maestro* at S Marco in 1702, Vinaccesi had better luck when, on 5 February 1704, he won the competition for the post of principal organist at the basilica's second organ, which added another 200 ducats to his annual income. He kept this post until his death in 1719. A high point in his career came in 1714, when he dedicated to the procurators of S Marco a published collection of 14 motets for two and three voices with organ, which earned him a gratuity of 100 ducats. Contemporary reports suggest that Vinaccesi was held in the highest esteem in Venice. He was often selected to write the music for serenatas and to direct and compose music for the festivals

of churches without a resident *maestro*. The German composer Friederich Georg Dieterich and Nicolò Domenico Turri, *maestro di canto* at S Marco, were his pupils.

The small quantity of Vinaccesi's music that survives is distinguished by its originality and carefully designed structure. The op.1 works are early examples of multi-movement chamber sonatas; they all contain 11 or 12 movements (with a central group placed in a secondary key centre) and admit such rare dance-types as the *taiheg*, the *pira* and the *arcicorrente*. Vinaccesi's writing for solo voice in cantatas and dramatic music is characterized by effective bursts of coloratura. The overture of his oratorio *Susanna* anticipates later practice by referring quasi-programmatically to the subject of the drama. His setting of compline psalms for eight voices demonstrates his mastery of polychoral writing and complex counterpoint. However, the core of his work lies in the motets styled as sacred chamber duets and terzets, in which, unusually, da capo form is combined with elaborate polyphonic treatment. He cultivated opera only as a sideline, but his pastoral *Chi è causa del suo mal pianga sé stesso*, performed in Rome at the court of Cardinal Pietro Ottoboni, reveals a talent for dramatic music. Many numbers betray his (and Ottoboni's) attachment to the French style.

WORKS

presumed lost unless otherwise stated; more details in Talbot, 'Benedetto Vinaccesi' (1994)

OPERAS, SERENATAS

Chi è causa del suo mal pianga sé stesso (pastoral, G.B. Neri), Rome, 1697, *F-Pn*

L'innocenza giustificata (dramma per musica, 3, F. Silvani), Venice, S Salvatore, carn. 1699, 1 aria *GB-Lbl*

Gli amanti generosi (dramma per musica, 3, G.P. Candi), Venice, S Angelo, carn. 1703

Sfoghi di giubilo per la nascita del Serenissimo Duca di Bretagna (serenata, P. Robert), Venice, 21 June 1704

ORATORIOS

Gioseffo che interpreta i sogni (Neri), Modena, 1692

Susanna (G.B. Bottalino), Modena, 1694, *I-MOe*

Il cuor nello scrigno (F. Arisi), Cremona, 13 June 1696

Li diecimila martiri crocefissi (A. Paolini), Brescia, 22 June 1698

SACRED VOCAL

Messa concertata, a, 8vv, ob, tpt, str, inc. *I-Rli*; Compline music, 8vv, 2 vn, bc, *Vnm*

[14] Motetti, 2–3vv, org (Venice, 1714); some movts survive separately, *Pca*, Assisi, Sacro Convento di S Francesco

Motets: Alme Jesu, sponse care, A, bc, *Vc*; Astra campi, belli flores, A, 2 vn, va, bc, *D-Bsb*

CANTATAS

Il consiglio degl'amanti, o vero Cantate amorose a voce sola, op.3 pt 1 (Venice, 1688)

Belve, se mai provaste, S, bc, *F-Pc*; Dal tuono il lampo aspetta (A. Ottoboni), S, bc, *D-Bsb*; Filli, un sol tuo sguardo, A, bc, *Bsb*; Hor fia mai vero, o lontananza infida, S, bc, *Bsb*; Ingratissima Clori, S, bc, *Bsb*; Là nelle verdi spiagge, B, bc, *F-Pn*; Quanto mi vien da ridere, B, bc, *Pn*; Su le sponde d'un rio, S, bc, *D-Bsb*

SONATAS

[6] Suonate da camera a tre, 2 vn, vc, hpd, op.1 (Venice, 1687)

Sfere armoniche o vero [12] Sonate da chiesa, 2 vn, vc, org, op.2 (Venice, 1692)

Suonate da camera a tre, 2 vn, vc, hpd, op.4 pt 1, lost

MICHAEL TALBOT

Vinandi, Johannes. *See* JOHANNES DE LYMBURGIA.

Viñao, Alejandro (Raul) (*b* Buenos Aires, 4 Sept 1951). Argentine composer. He studied the guitar and conducting in Buenos Aires before moving to London in 1975 to continue his studies at the RCM; in 1988 he took the PhD in composition at City University, London, and thereafter worked in London as a freelance composer. Most of his works make use of electronics, and his skilful integration of acoustic instruments with computer or tape has frequently resulted in prizes at international electro-acoustic music competitions, including those at Bourges and Linz. In 1994 he was awarded a Guggenheim fellowship. The influence of his Latin American background permeates his music especially rhythmically; for example, he sees his melodic writing as developing through rhythmic rather than harmonic structures. His harmonic vocabulary is often consonant without necessarily being tonal, though in a work such as *Son entero* much of the attraction is its play on functional harmony. His expressed purpose in using technology is to create an illusion of acoustic instruments transforming into something new; something outside the physical world's experience. He is interested, also, in exploring the 'ambiguous area where harmony and timbre can no longer be distinguished as separate musical functions'.

STEPHEN MONTAGUE

Viñas, Francisco (i) (*fl* early 18th century). Spanish composer. He was a Franciscan and served from 1716 to 1730 as *maestro de capilla* at Jaca Cathedral, where almost 100 sacred works by him survive, most of them for five to eight voices with continuo. They include five masses, four *Magnificat* settings, Lamentations, psalms, motets and villancicos. Other sacred works are extant in the cathedrals of Calahorra, Pamplona and Albarracín.

JESUS M. MUNETA MARTÍNEZ

Viñas, Francisco [Viñas, Francesc; Vignas, Francesco] **(ii)** (*b* Moya, nr Barcelona, 27 March 1863; *d* Moya, 14 July 1933). Spanish tenor. He studied in Barcelona and made an outstanding début as Lohengrin at the Gran Teatro del Liceo (1888), after which he was presented by Julián Gayarre with his own Lohengrin costume. The following year he sang the role at La Scala, where he was last heard, in Franchetti's *Germania*, in 1904. He sang Turiddu in the first London performance of *Cavalleria rusticana*, at the Shaftesbury Theatre (1891), and in 1893 made his Covent Garden début as Lohengrin, returning for the seasons of 1895, 1904 and 1907 as Edgardo, Radames, Tannhäuser, Cavaradossi and Mascagni's Fritz. At the Metropolitan in 1893 he sang with Calvé in *Cavalleria rusticana* and with Melba in *Lucia di Lammermoor*. For many years he appeared regularly in Spain and Italy, and in 1910 at the Colón, Buenos Aires. In that year, too, he added Tristan to his repertory and in 1913 Parsifal, achievements which marked the summit of the latter part of his career. He retired in 1918, publishing a book on the art of singing in 1932. Recordings, made between 1903 and 1912, are not faultless but reveal a compact and ringing voice, expressively used.

J.B. STEANE

Vinay, Ramón (*b* Chillán, 31 Aug 1912; *d* Puebla, Mexico, 4 Jan 1996). Chilean baritone, later tenor. He studied with José Pierson in Mexico City, where he made his début as Alphonse (*La favorite*) in 1931. For several years he sang baritone roles, including Rigoletto, Luna and Scarpia, and then, after further study, he made his tenor début in Mexico City in 1943 as Don José, following it in 1944 with Otello. In 1945 Vinay made his New York début at the City Center as Don José and then sang at the Metropolitan (1946–61). He inaugurated the 1947–8 season at La Scala as Otello, a part he also sang at Salzburg (under Furtwängler, 1951) and Covent Garden (in 1950 with La Scala, and, even more memorably, under Kubelík in 1955). From 1952 to 1957 he sang at Bayreuth, as Tristan, Parsifal, Tannhäuser and Siegmund. In 1962 he resumed baritone roles, singing Telramund at Bayreuth, and also Iago, Falstaff, Scarpia, Dr Bartolo and Dr Schön (*Lulu*).

In his prime Vinay sang with ease and expressive, dark-grained tone. His artistry, intelligence and musicianship were always in evidence, and his acting was distinguished by pathos and nobility. His Otello was recorded live under Toscanini (1947) and Furtwängler (1951), and is a remarkable portrayal of a heroic general undone by jealous vulnerability. Equally eloquent are his recordings from Bayreuth, notably his Siegmund and Parsifal under Krauss and his Tristan under Karajan.

HAROLD ROSENTHAL/R

Vincenci, Giacomo. *See* VINCENTI, GIACOMO.

Vincençio da Imola [Vincenço]. *See* VINCENZO DA RIMINI.

Vincenet [Vincentius du Bruecquet] (*b* Hainaut, Belgium; *d* ?Naples, before 1480). South Netherlandish composer and singer. Though long known only as 'Vincenet' (which was thought to be a surname), and often conflated with the singer and priest Johannes Vincenet (Vincenetti, Vicenot) of Toul, who served in the papal chapel from 1425 to 1429 and is now known to have died in 1447, the Vincenet of the later 15th century is a quite different person, whose full name is now known to have been Vincenet du Bruecquet.

The earliest information about Vincenet places him at the court of Savoy, where he was a singer and organist between about 1450 and 1464. By August 1469 he was at the Aragonese court of Naples, where a payroll notice dated 14 August reads: 'To Vinxenet de Enaut, singer of the chapel of His Majesty the King [Ferrante I] viii ducats, for writing and notating viii polyphonic offices for the said chapel, which offices he has delivered to Mossen Pere Brusca [the king's *maestro di cappella*]'. Thus Vincenet was a singer and at least a part-time scribe at the Neapolitan court. He is mentioned in a letter of 21 March 1469 from the singer Jachetto da Marvilla to Lorenzo de' Medici, from which it seems clear that Vincenet had recently passed through Florence, had turned down an offer to recruit singers for that city, and knew Jachetto well. Since Jachetto himself had been a singer at Naples during the period 1458–66, it may have been there that the two became acquainted; Vincenet may therefore have been at Naples before 1469. In 1470 Vincenet lodged a petition (dated 22 June) to resign all his benefices in order that he might marry (the petition refers to him as a cleric of Cambrai). He is last mentioned in a Neapolitan account book of 1479, which records the presence at court of 'Vanella, widow of the late Vincenet, singer to His Majesty the King'; thus Vincenet had indeed married, and left a widow when he died. Finally, he can probably be identified with the Vincenet mentioned in the list of musicians in the sixth stanza of Jean Molinet's *Lettres missives*.

Eight works are attributed to Vincenet, four masses and four secular songs, all stylistically typical of his time. Of the former, only one is built on a plainchant cantus firmus: the *Missa 'Eterne rex altissime'*, which draws on the Matins hymn for the Feast of the Ascension; the other three are based on central European models (perhaps suggesting that he spent some time in that area).

The masses on Bartolomeo Brollo's rondeau *Entrepris suis* and Johannes Touront's well-travelled song-motet *O gloriosa regina* illustrate the tendency, prevalent in the third quarter of the 15th century, to draw simultaneously on all voices of the polyphonic model. The model for the three-voice mass published as a *Missa sine nomine* is not Johannes Pullois' *De madame* (as claimed by Burkholder and by Ward in *Grove6*) but the German song *Zersundert ist das junge herze mein*, which appears in the Glogauer Liederbuch (*PL-Kj* 40098).

All four secular works appear in the Mellon chansonnier (*US-NH* 91), compiled at Naples in the mid-1470s when Vincenet was presumably there. *Fortune, par ta cruaulte* and *Ou doy je secours querir* are French rondeaux; the former was Vincenet's most widely disseminated work, and was included in Petrucci's *Odhecaton* (1501). *La pena sin ser sabida* is a Spanish canción, a genre perfectly at home at Aragonese Naples. *Triste que sperò morendo* is problematic: although its musical form is rondeau-like (half-cadence at the mid-point, full cadence at the end), its Italian text has eight octosyllabic lines rhyming

ABBACDDC, and thus resembles a *barzelletta* in which the *volta* (which would have consisted of four further lines rhyming *DEEA*) is missing. A *barzelletta*, though, reverses the positions of the half and full cadences, so the Italian poem is probably a contrafactum.

WORKS

Edition: *The Collected Works of Vincenet*, ed. B.E. Davis, RRMMA, ix–x (1978) [complete edn]

Missa 'Entrepris suis', 4vv (based on Brollo, 'Entrepris suis')
Missa 'Eterne Rex altissime', 4vv (hymn melody c.f.)
Missa 'O gloriosa regina', 4vv (based on Touront, 'O gloriosa regina')
Missa 'Zersundert ist das junge herze mein', 3vv (pubd as Missa sine nomine)
Fortune, par ta cruaulte (rondeau), 3vv
La pena sin ser sabida (canción), 4vv
Ou doy je secours querir (rondeau), 3vv
Triste qui sperò morendo, 4vv (?rondeau with barzelletta contrafact text)

ALLAN W. ATLAS

Vincent. The name of several French musicians documented in early 17th-century Paris, two of whom can be identified as lutenists and composers.

One (*b* c1580s; *d* ? after c1643) was a composer of *airs de cour*, of which around 50 survive, most of them for solo voice and lute (1608[10], 1609[13], 1610[13], 1611[10], 1613[8], 1613[9], 1614[10], 1615[11], 1617[8], 1619[10]; 2 ed. A. Verchaly, *Airs de cour pour voix et luth*, 1961). His first publication of an air was in 1608 and, although he published no book of his own, he contributed several pieces to almost all air collections from 1613 to 1619. They range from the lyrical, 'romantic' style notable also in the airs of Pierre Guédron and Etienne Moulinié, to bawdy drinking-songs. He also contributed to several *ballets de cour* (three airs in the *Ballet des trois âges*, 1613). It is probably to him that Gantez refers along with two other air composers, Denis Macé and Nicolas Métru, as 'the three most famous and famished composers in Paris' ('fameux et affamez Maîtres'), and who was master of the music of the Duke of Angoulême.

The other identifiable Vincent (*b* c1610; *d* after 1661) wrote around 30 dances for solo lute (*Ch-Bu*, *D-Bsb*, *DS*, *Ngm*, *ROu*, *F-AIXm*, *B*, *Pn*, *GB-En*) as well as a Pavane for keyboard (*F-Pn*), which is probably an arrangement of a lute piece. The lute works are in the D major and D minor tunings used after about 1640. Ennemond Gaultier's remark, reported by Mary Burwell's teacher, that he, Germain Pinel and Dubut 'le père' 'would have made good fidlers because there Lessons were aiery and might be turned into singing or dansing' probably refers to this Vincent. He also appeared in court ballets, with Pinel and others, between 1657 and 1661. He reportedly mixed in political intrigue and espionage. The memoirist Guy Joly (*fl* 1648–65) thought him and his singer wife 'vraye canaille', and Tallemant des Réaux (1619–97) talks of the influence 'Mlle Vincent' is supposed to have had with Abel Servien, Marquess of Sablé, superintendent of finances in the 1650s.

The careers of these two composers evidently overlapped in the 1630s and 40s. It is not clear to which of them Mersenne refers in one place as among those in Paris who teach singing and composition, and in another as a composer of solo lute music, if both references are to the same person. Either Vincent may have been the one who gave Constantijn Huygens a lute in 1636, or took part in sacred concerts in the house of (1) Pierre de la Barre (iii) in the 1640s.

DAVID LEDBETTER

Vincent, Caspar. *See* VINCENTIUS, CASPAR.

Vincent, Gene [Craddock, Eugene Vincent] (*b* Norfolk, VA, 11 Feb 1935; *d* Los Angeles, 12 Oct 1971). American rock and roll singer and songwriter. He was responsible for one of the greatest rock and roll anthems of the 1950s, *Be Bop A Lula*, co-written with Sheriff Tex Davis. It was recorded in a sparse, intense style with over-emphatic echo on Vincent's hoarse but expressive voice and a slashing and highly influential guitar solo from Cliff Gallup, a member of Vincent's group the Blue Caps. Vincent and the group performed the song in the film *The Girl Can't Help It* (1956) and recorded further hits including *Blue Jean Bop*, *Pistol Packin' Mama* and *Crazy Times*. Vincent toured Europe and was involved in the 1960 car accident in England in which fellow singer Eddie Cochran died. He was especially popular in Europe and Japan where diehard rock and roll audiences appreciated the black leather clothing and menacing presence of his stage act. However, his career tailed off towards the end of the 1960s and he died of a ruptured stomach ulcer. Ian Dury later composed a tribute, *Sweet Gene Vincent*.

DAVE LAING

Vincent [van Ijzer-Vincent], **Jo(hanna Maria)** (*b* Amsterdam, 6 March 1898). Dutch soprano. She was the daughter of Jacobus Vincent, carillonneur of the Amsterdam Royal Palace. She studied with Catherina van Rennes

and Cornélie van Zanten, and made her début in 1921. She became the leading concert soprano of the Netherlands; her only operatic appearance was in 1939 at Scheveningen as Countess Almaviva. She appeared regularly in concert with Mengelberg in Beethoven, Bach and Mahler. Outside the Netherlands she was particularly popular in England during the 1930s. She sang in the first performance of Britten's *Spring Symphony* (Amsterdam, 1949), which was recorded. Her other recordings, which include Schubert lieder, oratorio and Mahler's Second Symphony (under Klemperer), show the pure, ethereal quality of her voice.

LEO RIEMENS

Vincent, John (*b* Birmingham, AL, 17 May 1902; *d* Santa Monica, CA, 21 Jan 1977). American composer and teacher. He studied at the New England Conservatory under Converse and Chadwick (diploma 1927), at George Peabody College (BS, MA), and under Piston at Harvard University (1933–5), where he won the John Knowles Paine Traveling Fellowship for two years of study with Boulanger; in 1942 he gained the PhD at Cornell University. He was head of the music department at Western Kentucky State University (1937–45) and Schoenberg's successor as professor of composition at UCLA (1946–69). In addition, he conducted orchestras throughout the USA and South America, and he was a director of the Huntington Hartford Foundation (1952–65). His music is rhythmically vital and lyrical, essentially Classical in form and distinctly individual. The free tonality of his work makes use of what he calls 'paratonality': the predominance of a diatonic element in a polytonal or atonal passage. He published *The Diatonic Modes in Modern Music* (Berkeley, 1951, rev. 2/1974).

WORKS
(*selective lsit*)

W. THOMAS MARROCCO

Vincent, Ruth (*b* Yarmouth, 22 March 1878; *d* London, 8 July 1955). English soprano. She studied singing with Hermann Klein and was educated for the stage by Jacques Brohy in Paris. Her début was in London as Gretchen in the original production of Gilbert and Sullivan's *The Grand Duke* (1896). Within a year she became principal soprano at the Savoy Theatre, where she appeared in several Gilbert and Sullivan revivals and in the original productions of Mackenzie's *His Majesty* (1897) and Caryll's *The Lucky Star* (1899). She made a particularly strong impression as the blind heroine Laine in Sullivan's *The Beauty Stone* (1898), but left the company abruptly during the run.

From about 1900 Vincent was in demand in both comic and grand opera, as much for her extraordinary beauty as for her notable lyric soprano voice. She appeared regularly at Covent Garden, her repertory including principal roles in *Hänsel und Gretel*, *Carmen*, *Les contes d'Hoffmann* and *Don Giovanni*, and was Vreli in the London production of Delius's *A Village Romeo and Juliet* (1910). In May 1904 she sang the title role in Messager's *Véronique* at the Apollo Theatre, returning there in 1907 in German's *Tom Jones*. From about 1912 until her retirement in 1930 she sang with increasing frequency at the Palladium and variety theatres.

FREDRIC WOODBRIDGE WILSON

Vincent, Thomas (*b* London, *c*1720; *d* ?10 May 1783). English oboist and composer. A pupil of Giuseppe Sammartini, his playing was praised by Hawkins. He is known to have played at the Foundling Hospital (1754, 1758) and was a member of the King's Band in the 1760s. He was a founder-member of the Royal Society of Musicians (1739) and performed at many of its annual benefit concerts, 1743–68. In 1764–5 he became joint manager (with Gordon and Crawford) of the King's Theatre while still playing in the orchestra, but the venture bankrupted him. A 'Mr Vincent', possibly Thomas, performed at the Rotunda in Dublin in 1770. In 1775 Vincent performed concertos at Drury Lane during the spring oratorio season; he had 'not appeared in public for several years' and was perhaps driven by financial necessity. He published *Six Solos for a Hautboy, German Flute, Violin, or Harpsichord, with a Thorough Bass* op.1 (London, 1748), *A Sett of Familiar Lessons for the Harpsicord* op.2 (London, 1755) and several songs (some published separately and others in anthologies).

Vincent was a member of a family of musicians active in London in the mid- to late-18th century; they are often difficult to identify because all are referred to simply as 'Mr Vincent'. Thomas was a son of a Thomas Vincent (*d* 1751), a bassoonist in the Guards, and had a brother James (*d* London, 6 Oct 1749), who composed songs and was 'joint organist of the Temple with Stanley, and a brilliant performer' (Burney). Richard Vincent (1701–83), a brother of the elder Thomas, was an oboist at Vauxhall and Covent Garden and a composer of songs. His wife was an actress at Covent Garden. His son Richard Vincent (*d* London, 28 Aug 1766), a violinist and drummer, was married in 1755 to the soprano Isabella Vincent, née Burchall (*b c*1735; *d* London, 9 June 1802), who made her début at Vauxhall Gardens in 1751 and sang at Drury Lane (1760–67), Marylebone Gardens (1764–7) and the Haymarket Little Theatre (1764); she married Captain John Mills in 1767. A 'Mr Vincent' is listed among the oboes for the Handel Commemoration (1784) and someone with that name was a member of the King's Music in 1793 and 1795.

CHRISTOPHER HOGWOOD/JANET K. PAGE

Vincent de Beauvais [Vincentius Bellovacensis] (*b* ?Beauvais, *c*1190; *d* Paris,1264). French scholar and theorist. His *Speculum maius* makes him the greatest encyclopedist before the 18th century. Very little is known of his life; he entered a Dominican order in Paris about 1220, was later assigned to the priory in Beauvais (established 1228) and was one time lector, from about 1250, at the monastery of Royaumont (Mons regalis) on the Oise near Paris; at about the same time he was appointed lector and chaplain to the royal court of Louis IX. During this time, 1260–61, he wrote a treatise on the education of noblewomen for the royal tutors, *De eruditione filiorum nobilium*. The *Speculum maius*, compiled between about 1220 and 1254, is a vast compendium of all the accumulated knowledge of the Middle Ages; it is in three books, the *Speculum naturale* (33 books on natural history), the *Speculum doctrinale* (18 books on scholastic knowledge) and the *Speculum historiale* (32 books on world history from the Creation to the crusade of St Louis). A spurious fourth book *Speculum morale* was added in the early 14th century.

The *Speculum doctrinale* is a vast summary of all the learned arts: mechanical, practical and liberal. Book 17 deals with the *Quadrivium*, chapters 10–35 being devoted to music. Vincent's account of music is not practical, nor may he lay any claim to originality; his is an academic definition, scholastic, and suitable for a general educated public. He drew definitions of music from Richard of St Victor: 'Music is the concord of many voices reduced to one', a possible reference to polyphony; from al-Fārābī through to Gundissalinus: 'Music is that which demonstrates an understanding of the species of melody (*armonia*)'; and from Isidore of Seville: 'Music is the skill of modulation of sound and of voice'. However, most of the discussion is drawn direct from Boethius: *musica mundana, humana et instrumentalis*, the theory of consonances and dissonances, and Pythagorean proportions of the monochord. Vincent's greatest influence was on other academic writers on music, such as Roger Bacon, and on the teaching of *ars musica* in the schools, where theoretical rather than practical issues still prevailed.

GORDON A. ANDERSON

Vincenti, Alessandro. Italian bookseller and music printer, son of GIACOMO VINCENTI.

Vincenti [Vincenci, Vincenzi], **Giacomo** (*d* Venice, 1619). Italian bookseller and music printer. He may have been of Spanish origin, since he signed some books 'Vincenci' when he started publishing in 1583 and for the next few years, and signed his edition of Guerrero's *Canciones y villanescas espirituales* (1589) 'en la emprenta de Iago Vincentio'; but in 1583 he also used the spelling 'Vincenzi', which was his usual form until 1588. Thereafter he used 'Vincenti'.

Between 1583 and 1586 Vincenti printed, in partnership with Ricciardo Amadino, about 20 books a year, almost all musical editions. Vincenti seems to have been the more assertive partner; he signed several dedications of joint publications while Amadino signed none, and when they began to print separately in 1586, Vincenti kept the joint printer's mark, a pine-cone. The separation was probably amicable, for they continued to use the same typefaces, type ornaments and decorative initials, and printed jointly a number of books on religion and philosophy (1600–09). The copyrights acquired together probably continued to be shared. In 1587 Vincenti issued Marenzio's fourth book of madrigals for six voices, with Marenzio's dedication of 10 December 1586. Amadino's edition followed shortly with the same dedication, but 'newly reprinted and purged of many errors' and with slightly changed contents (for details of their joint productions *see* AMADINO, RICCIARDO).

Working separately Vincenti remained as prolific as before, printing music by most of the principal north Italian composers: Croce (55 or more editions), Viadana (53), Marenzio, Asola, Banchieri (music and theory), Cifra, Alessandro Grandi (i), Felice Anerio, Girolamo Diruta, Ignazio Donati, Giovannelli and many others. He reprinted Caccini's *Le nuove musiche* (1615; abridged as *Nove arie*, 1608), and also printed numerous anthologies; theatre music, including the *Intermedii et concerti* of 1591 (music for the 1589 wedding of Ferdinando de' Medici and Christine of Lorraine); and a reprint of Caccini's *L'Euridice* (1615); and much instrumental music as well as tutors and *passaggi*. These include works by Bassano (1591), Riccardo Rognoni (1592), Diruta (1593), Bovicelli (1594), Spadi (1609) and Bottazzi (1614). With Amadino he printed Artusi's *L'arte del contraponto ridotta in tavole* (1586), and alone he printed a *Seconda parte* (1589; repr. 1598). In 1600 he printed *L'Artusi, overo Delle imperfettioni della moderna musica*, attacking Monteverdi, with a *Seconda parte* (1603), and in 1608 Artusi's *Discorso secondo … di Antonio Braccino da Todi*, answering the reply in Monteverdi's *Scherzi musicali* (1607). He also printed Banchieri's *Cartella musicale* (1601) and Romano Micheli's letter *Alli molt'illustri … musici della cappella di N.S.* (1618), concerning the composition of canons.

Vincenti's main competition was with the firms of Gardano, Scotto and Amadino, but his musical production, including music theory and criticism as well as non-musical books, was more wide-ranging. He was among the first music publishers to issue a trade list, in 1591. It was followed by at least five more, published from 1621 to 1662, usually with prices. His non-musical production was small: three Tasso editions, a few plays (including

one by Banchieri) and books on history, medicine, geography and philosophy.

Vincenti, like many other Venetian publishers, had connections with booksellers in other parts of Italy. He printed, together with Amadino, three books with music by Caimo in 1583–6 for Pietro Tini of Milan; and in 1593 he hired a Neapolitan bookseller to pursue debtors in Rome and Naples. The occasional use of Vincenti's device and motto by the Neapolitan printer-booksellers O. Salviani and F. Stigliola may indicate connections with his firm.

Two sons, Vincenzo and Alessandro, together published 12 volumes of *Villanelle, et arie napolitane* (Venice, n.d.). Vincenzo seems to have taken no further part in the firm, and it was Alessandro Vincenti (*fl* 1619–67) who faced vigorous Venetian competition from Gardano's successors, Bartolomeo and Francesco Magni, and growing competition from printers outside Venice. Energetic and enthusiastic, he printed copiously the music of Cazzati, Donati, Grandi, Merula, Martino Pesenti and Galeazzo Sabbatini, and in lesser quantity the music of Banchieri, Gasparo and Girolamo Casati, Cozzolani, Crivelli, Ghizzolo, Salamone Rossi, Giovanni Valentini and many others. He took a solicitous interest in the blind Pesenti, whose third book of *Correnti alla francese* op.12 (1641) was dedicated to 'the most illustrious and excellent Signore Domenico Vincenti' by his 'most devoted and obliged relative Alessandro Vincenti', though with no indication of how they were related.

Among Alessandro Vincenti's notable editions were Monteverdi's eighth and ninth books of madrigals (1638, 1651) and *Messa … et salmi* (1650); reprints of Frescobaldi's *Capricci* (1626, 1628), and first editions of his *Canzoni* (1635), *Fiori musicali* (1635) and *Canzoni alla francese* (1645); and Cavalli's *Musiche sacre* (1656). His last known work is Rosenmüller's *Sonate da camera* (1667). He also printed music theory and criticism, including Zacconi's *Prattica di musica seconda parte* (1622) and Scacchi's polemical *Cribrum musicum* (1643); and reprints of Banchieri's *L'organo suonarino* (1622, 1627, 1638) and *Cartella musicale* (as *La Banchierina*, 1623), the second part of Diruta's *Il Transilvano* (1622), Scaletta's *Scala di musica* (1622, 1626, 1656, 1664) and Sabbatini's *Regola facile* (1644).

The Vincenti music editions, printed from movable type, met the needs of their times but typify a period of technical stagnation and artistic decline in Italian music printing generally (except in music engraving, which Vincenti did not practise). Most are mediocre in appearance, and some are marred by ugly decoration, worn type, poor inking and errors in text and pagination. The best, however, are accurate and well-executed, and a few have excellent engraved title-pages.

THOMAS W. BRIDGES

Vincentius [Vincenti] (*fl* 1515). Italian instrument maker from Livigmeno (possibly Livignano, Tuscany). His harpsichord constructed in 1515–16 is the oldest known to survive (*see* HARPSICHORD, §2(i)); that made in 1521 by Hieronymus Bononiensis long held this distinction). An inscription on the harpsichord indicates that it was made for Pope Leo X in 1516, and a signature on the underside of the soundboard reveals that the instrument was started on 18 September 1515. Although the harpsichord was made in a style consistent with other early harpsichords, and probably with a single register, its compass cannot be definitely established. It may have been *C/E–f‴*, although *FGA–g‴a‴* is also possible.

Another harpsichord maker called Vincentius (*fl* 1610–12), of Prato, made harpsichords that are now at Leipzig University, at Vassar College, Poughkeepsie, New York, and at the Germanisches Nationalmuseum, Nuremberg.

DENZIL WRAIGHT

Vincentius [Vincent], **Caspar** (*b* Saint Omer, *c*1580; *d* Würzburg, 1624). Flemish composer and organist, active in Germany. He was a chorister first at Saint Omer Cathedral and later in the court chapel of Archduke Ernst of Austria in Brussels. On the archduke's death in 1595 he was transferred to the imperial chapel in Vienna, where his abilities came to the favourable notice of the Kapellmeister, Philippe de Monte. Having completed his education in Vienna, he was appointed civic organist of Speyer about 1602 and became acquainted with Abraham Schadaeus, rector of the town school, with whom he collaborated in compiling three volumes of the *Promptuarium musicum*, a mammoth collection of motets for church use. In 1615 he resigned his post in troubled circumstances and, after officiating for a time at the organ of the Andreaskirche, Worms, became organist of Würzburg Cathedral on 3 August 1618, remaining there until his death.

Vincentius's importance lies primarily in his role in the production of the *Promptuarium*. This consisted of adding a continuo part (which he issued himself) to the first three volumes (1611–13), as well as directions for performance to the second volume, the production and printing of the third after Schadaeus had left Speyer, and the compiling of the whole of the fourth. This final volume contains 132 Latin motets for five to eight voices, the majority for double choir. Italian composers predominate, but less so

than in the first three volumes, for 17 German composers are included, as is the Englishman Peter Philips. The directions for continuo performance are based largely on Viadana's rules: it seems clear that Vincentius did not add the continuo part with a view to 'improving' the compositions but rather to promote their wider circulation by replacing the old method of making keyboard tablatures with the 'nova methodus' of the figured bass. In the preface to his edition of Lassus's *Magnum opus musicum*, for which he published a continuo part in 1625, he implied that the practice of adding such parts to the compositions of others was common in both Italy and Germany. Vincentius's own motets in the *Promptuarium* show strong 16th-century influence, with the continuo functioning more as a *basso seguente*; however, the homophonic writing and the use of refrain forms show that he was not entirely unaffected by the new ideas from Italy.

Vincenzo da Rimini [Magister Dominus Abbas de Arimino, L'abate Vincençio da Imola, Frate Vincenço] (*fl* mid-14th century). Italian composer. The presence of his works in *I-Fl* 87 (where he is depicted in Benedictine garb; see illustration) and their style indicate that he was perhaps a somewhat older contemporary of Lorenzo da Firenze. The designations 'da Rimini' and 'da Imola', both cities not far from Bologna, indicate his place of birth or place of employment. It has been suggested that he may be identifiable with an abbot of the Benedictine monastery of S Maria in Regola, near Imola, from about 1362 to 1364 (see Long). However, from the sources Vincenzo was also associated with Florence. Support for this theory is found in the madrigal *Ita se n'era*, which perhaps originated as a rival piece to Lorenzo's with the same text: in addition, it contains a possible allusion to the Florentine villa of the Alberti family (*Il Paradiso*). Pirrotta did not exclude the possibility that Vincenzo was associated with Pandolfo Malatesta (Rimini) who, before 1357, was closely linked with the Milanese court and later with Florence.

Miniature thought to portray Vincenzo da Rimini: detail from the Squarcialupi Codex (I-Fl Med.Pal.87, f.35v)

Four madrigals and two cacce by Vincenzo have survived, all transmitted in Tuscan manuscripts (though not in *I-Fn* 26). Stylistically Vincenzo's work stands between that of Jacopo da Bologna on the one hand and that of Lorenzo and Donato da Cascia on the other. From Jacopo he adopted the monophonic linking passages between the madrigal lines, and yet in contrast to Jacopo his works contain an increasing amount of imitation. The two important cacce, which show linguistic traits of northern Italy, are market scenes and are metrically very free. These stand stylistically between the earlier works of Piero and Zacharias's late caccia *A poste messe*.

KURT VON FISCHER/GIANLUCA D'AGOSTINO

Vincenzo di Pasquino. *See* BASTINI, VINCENTIO.

Vinci, Leonardo (*b* Strongoli, Calabria, ?1696; *d* Naples, 27/28 May 1730). Italian composer. His music exerted a direct influence on many composers of the next generation, notably Pergolesi and Hasse, and also made an impact on older composers such as Vivaldi and Handel, whose later works incorporate elements of the style of Vinci and his colleagues.

1. LIFE. The year of birth usually given, 1690, is based on the death register of S Maria della Neve, Naples, which describes Vinci as 40 years old in 1730. Another death register, however, that of S Giovanni Maggiore, describes him as 'about 34', placing the year of his birth at about 1696. This supports Dent's speculation about the composer's age and would seem to tally more closely with subsequent events in his life. Vinci entered the Conservatorio dei Poveri di Gesù Cristo, Naples, on 14 November 1708 as a 'convittore', paying 36 ducats a year, but after three years this fee was waived; apparently he was by then earning his keep as a 'mastricello' or student teacher. At the conservatory he studied composition with Gaetano Greco. After ten years of study he left and for a short time served as *maestro di cappella* to Prince Sansevero.

Vinci made his operatic début on 19 April 1719 at the Teatro dei Fiorentini in Naples with the *commedia per musica Lo cecato fauzo*, enthusiastically reviewed in the *Avvisi di Napoli*. His second opera followed immediately in July, and for the next three years he was virtual house composer at the Fiorentini; not until Piccinni in the 1760s would another composer dominate the comic stage in Naples to the same extent. Vinci's first operas were of the *commedia per musica* type, full-length comic operas with texts primarily in Neapolitan dialect. His *Li zite'ngalera*, from carnival 1722, is the earliest surviving score of a Neapolitan *commedia*. Vinci produced his first serious opera, *Publio Cornelio Scipione*, at the Teatro S Bartolomeo in Naples on 4 November 1722; it was so successful that after the production of *Lo labborinto* during Carnival he turned primarily to the *dramma per musica*. This was not only the more prestigious but also the more cosmopolitan genre, dialect restricting the *commedie* to Naples. Only on one subsequent occasion, the inauguration of the Teatro della Pace in Naples in May 1724, did he return to the comic genre (though most of his *drammi per musica* for Naples contain comic intermezzos).

In 1724 Vinci secured his first commission outside Naples, setting Lucchini's *Farnace* for the Teatro delle Dame in Rome. According to Burney, 'so great was the success of this drama, that [Vinci] was called upon to furnish at least one opera every year till 1730, when he composed two'. Roman theatres were closed for the Holy Year in 1725, but Vinci wrote two new operas for the Teatro S Giovanni Grisostomo in Venice that year; their success probably led to a commission for a new opera at Parma in the spring involving the same composer and principals. Vinci's activity reached a peak during winter 1725–6 when three new operas were produced: *Astianatte* in Naples in December, *Didone abbandonata* in Rome in January and *Siroe re di Persia* in Venice in February. The last two were the first of a series of successful collaborations between Vinci and Metastasio. Vinci set all but one of Metastasio's early librettos, and except in the case of *Didone* these were first settings. This collaboration was cited as the ideal by Algarotti, who urged composers to 'keep up such a dependence and friendly intercourse as subsisted between Lully and Quinault, Vinci and Metastasio'. Vinci's success seems to have been challenged by his older colleague Porpora. Productions of operas by the two men in Venice and Rome fuelled a rivalry which, according to Burney, dated back to their youth.

Following the death of Alessandro Scarlatti in October 1725, Vinci was appointed pro-vice-*maestro* at the royal chapel in Naples. His activity was now virtually restricted to Naples and Rome, but in 1728 he took on further commitments: in spring he collaborated with C.I. Frugoni on the opera *Medo* and the equestrian ballet *Le nozze di Nettuno* for the wedding of the Duke of Parma; he served during the summer as *maestro* at his former conservatory, where Pergolesi was among his pupils; and in autumn he became a lay brother with the Congregation of the Rosary at the monastery of S Caterina a Formiello, where he also served as *maestro di cappella*. Most of Vinci's few sacred works were written and performed at S Caterina a Formiello.

During the 1729–30 season Vinci was one of the impresarios at the Teatro delle Dame, as well as its principal composer. In the latter capacity he collaborated with Metastasio on three major works: the serenata *La contesa de' numi*, performed at the palace of the French ambassador in Rome on 26 November in celebration of the birth of the dauphin, and the operas *Alessandro nell'Indie* and *Artaserse* at the Teatro delle Dame the following January and February. During the same season Porpora presented two operas at the Teatro Capranica in Rome; according to Marpurg, Vinci, fearful of Porpora's challenge, resorted to sabotage in an attempt to crush his rival. Vinci's machinations were hardly necessary, as both his operas became celebrated examples of the *dramma per musica*. According to De Brosses, the Italians did not 'want to see again any piece ... that they have already seen another year, unless it is some excellent opera by Vinci'. Vinci did not live to enjoy his success. He died in Naples amid rumours that he had been poisoned because of an illicit love affair.

2. WORKS. Almost all of Vinci's surviving music is in opera or opera-related genres and consists of an alternation of recitative and da capo aria. It was principally in his arias that Vinci forged the new style which can be regarded as the beginnings of Classicism. His early works derive their style from his immediate predecessors in Naples, notably Sarro and Porpora. The origins of the new style can be detected first in the surviving arias of his final *commedie* of 1722–3, in the additional arias of his first *drammi* (1723–4) and, on a somewhat broader scale, in his settings of Stampiglia from 1724–5. This suggests that the new style was developed first in comic opera and gradually introduced into heroic opera, with the comic elements in Stampiglia allowing for a more consistent

development. The foundations of the new style were already established by the time Vinci began collaborating with Metastasio, whose *drammi* were ideal for the development of the new style. Vinci's rivalry with Porpora undoubtedly served as a catalyst, with each composer trying to outdo the other in writing *à la mode*. Because Porpora and Vinci were Metastasio's original collaborators, the new style became an important ingredient of Metastasian opera as it began its conquest of the theatres of Europe.

The new style was characterized by the periodic treatment of melody. Marmontel in his *Essai sur les révolutions de la musique en France* considered Vinci to be the originator of this new periodicity:

> But the true moment of its glory was when Vinci first traced the circle of periodic song which in the pure elegant and polished design presented to the ear, as a period to the wit, the development of a thought completely rendered. Therefore this was when the great mystery of melody was revealed.

Whether or not Vinci was the first to trace 'the circle of periodic song', he was the first composer of international repute to cultivate the style consistently, to such an extent that it became associated with him and those who continued in this vein were regarded as his disciples.

Vinci's periodic melody had its origins in the dance, and many of the arias in his early works are based on dances such as the minuet, passepied, bourée and gavotte. However, as F.-J. Chastellux pointed out, this new periodicity was not the static, dance-based periodicity of contemporary French music, but a new dynamic one that incorporated thematic development, almost like a fusion of traditional dance periodicity and Baroque *Fortspinnung*. This dynamic periodicity includes a third element, declamation. Not only is the theme generated from the opening line or couplet of the aria text, but each subsequent phrase is devoted to a line or couplet and delimited by a caesura or cadence. This poetically sensitive periodic melody is what Burney had in mind when he singled out Vinci for his 'considerable revolution in the musical drama':

> Vinci seems to have been the first opera composer who ... without degrading his art, rendered it the friend, though not the slave to poetry, by simplifying and polishing melody, and calling the attention of the audience chiefly to the voice-part, by disintangling it from fugue, complication, and laboured contrivance.

Burney's reference to disentangling melody 'from fugue, complication, and laboured contrivance' refers to Vinci's simple homophonic accompaniments, the other important element of the new style. The contrapuntal obbligato-style accompaniments of the late Baroque aria give way to accompaniments for four-part string orchestra which can be reinforced by oboes, horns or trumpets. The transparency of the accompaniment is further enhanced by doublings; during the ritornellos the violins play in unison, while in the vocal sections the violas double the basses at the octave and the first violins frequently double the voice. The most important aspect of this simplification is the increasing use of *Trommelbass* (steady repeated notes in the bass during periods of harmonic stasis). While this occurs sporadically in Vinci's early operas, in his later ones it is used to a greater or lesser extent in almost all the arias. The device, a standard feature of the mid-century aria, undoubtedly contributed to the slowing of harmonic rhythm during the second half of the 18th century.

Leonardo Vinci: caricature by Pier Leone Ghezzi, pen and ink, c1729 (I-Rvat Cod. Ottob. lat.3116)

The simplified accompaniments also allowed for a greater rhythmic diversification of the melody, heightening its polished elegance through the use of dotted and lombardic rhythms, triplets and sextuplets, appoggiaturas and ornaments, and various types of syncopation. This rhythmic flexibility is responsible for breaking down the motoric rhythms of late Baroque music. Although the *Trommelbass* gives the singer greater flexibility, and may be exploited for the sake of virtuosity, vocal pyrotechnics are not an important element in Vinci's music. Coloratura is almost completely absent from the surviving comic arias, and in the heroic arias it is often relegated to a single passage at the end of each vocal period as a means of extending and intensifying the final phrase.

From a modern dramatic viewpoint Vinci is inconsistent in matching music to drama, particularly in the arias. This was noticed even in the late 18th century by Grétry, who in *Artaserse* praised Arbace's 'Vò solcando' because 'the melody, and above all the accompaniments, absolutely match the words', but dismissed Semira's 'Torna innocente' as 'a gay dance air to express fury ... like the anger of Pulcinella'. This inconsistency, found to a greater or lesser extent in all Vinci's operas, was not considered problematic by contemporaries. Martello's *Della tragedia antica e moderna* (1715) contains advice on aria construction that, although intended for librettists, could also be applied by composers:

> Keep in mind that in the aria, the more general the propositions, the more they will please the people. ... Avoid generalities [only] in the *arie di azione* ... that are in spirit adapted to one action and no other. ... [Therefore] do yourself honour in the recitative, and in one or two arias in each act.

Vinci followed this principle: apart from one or two arias in each act, usually the *arie di azione*, the arias tend to be tuneful and dance-like or simple and declamatory. On the other hand Vinci indeed did himself 'honour in the recitative'; his accompanied recitative in particular attracted considerable attention during the 18th century. His mastery is apparent as early as his first setting of *Farnace*, and culminates in the recitative finales of *Didone abbandonata* and *Catone in Utica*. Moreover, some of the simple recitative, though it tends to be in long stretches, contains passages as fine as the more celebrated accompanied recitatives.

There are two fine caricatures of Vinci by the Roman artist Pier Leone Ghezzi, the first drawn in 1724, the second probably originating from the production of *La contesa de' numi* in November 1729. In the latter Vinci is depicted conducting (presumably a rehearsal) according to the modern fashion, before a lectern with a piece of manuscript paper (see illustration). To the earlier caricature Ghezzi appended a description of Vinci's death: 'he died in Naples on 28 May 1730 on Sunday at the 17th hour, from a colic pain in an instant without even being able to confess' – a description that gives the rumours of poisoning greater substance. Ghezzi also provided a fleeting glimpse of Vinci's personality: 'he was a man who would have gambled his eyes [away]; he was a "valentuomo" in music who composed with much spirit, but his behaviour was diverse from the talent that he had. May God give him paradise for his talent'.

KURT MARKSTROM

Vinci, Leonardo da. *See* LEONARDO DA VINCI.

Vinci, Pietro (*b* Nicosia, Sicily, *c*1525; *d* Nicosia or Piazza Armerina, after 14 June 1584). Italian composer and teacher. He was the founder of the school of Sicilian polyphonists and was highly rated in his own day, particularly as a madrigalist.

1. Life. 2. Works. 3. Reputation and influence.

1. LIFE. Vinci probably grew up in Sicily and maintained contacts there when he left the island. His first four works were dedicated to Sicilian noblemen, and the titles of the ricercares for two voices (1560) are proverbs and names in Sicilian dialect. He probably lived in Naples around 1560 since his first two pupils, Giulio Severino and Ambrosio Marien, were both connected with the city. After some years in different parts of Italy, including Tuscany and Lombardy, he was appointed *maestro di cappella* at S Maria Maggiore in Bergamo on 15 May 1568; he held this post until 28 July 1580. He married in Bergamo, and his pupils there included his compatriot Paolo Caracciolo and the Englishman John Cowden (Giovanni Coudenno). During this period he became associated with the Milanese patron Antonio Londonio, to whom he dedicated no fewer than four books of madrigals; it is clear from the dedication that the works in the second book of six-voice madrigals (1579) were written while Vinci was living in Londonio's house in Milan. Several of Vinci's madrigals (and two each by Caracciolo and Cowden) are in praise of Londonio or of his family, especially his wife Isabella, who was a celebrated singer. After relinquishing his post at S Maria Maggiore, Vinci made preparations to return to Sicily. He made ready a large number of his works for printing, including two collections of sacred music (published in 1581 and 1582) in which he referred to himself as *maestro di cappella* of Nicosia Cathedral; it was probably to take up this appointment that he finally left Lombardy for Sicily on 11 October 1581, but he seems to have held it for less than a year, if at all, since his publications of 1583 and 1584 make no mention of it.

After returning to Sicily, Vinci sent only two works to his publisher: the Lamentations (1583), the dedication of which shows that he was then employed by the viceroy Marc'Antonio Colonna, and the seventh book of madrigals for five voices, which was dated from Piazza Armerina on 15 June 1584 and the dedication of which may imply that Vinci was near death or that it was dated posthumously. Vinci's most important pupil of his last years, Antonio Il Verso, lived at Piazza and probably acted as his executor; he was responsible after Vinci's death for the publication of Vinci's remaining works in collections of his own music. Antonio Falcone's statement that Vinci was a *maestro di cappella* at Caltagirone is supported by documentary evidence, but Mongitore's claim that Vinci worked in Rome is probably based on a confusion of S Maria Maggiore, Bergamo, with the church of the same name in Rome.

2. WORKS. According to Cerone, Vinci and Ingegneri were the first composers whose music was distinguished by a variety of contrapuntal techniques including 'double and inverted counterpoint at the 10th and 12th'. In spite of his prodigious contrapuntal skill, Vinci's use of strict contrapuntal devices is rarely ostentatious; polyphonic complexity is always subordinate to the smooth flow of the part-writing and the orderly succession of harmonies. On the whole his style is reserved and his harmony essentially neutral without a well-defined tonal bearing. Mompellio called this 'diatonic atonality'; the harmonic experimentalism of the previous generation is absorbed into an expressive homophony in which chromaticism acts as a medium for changes of timbre. The leading note is often replaced by the flattened supertonic, or they may appear in succession or even together. It is perhaps for this reason that Vinci's music was reported to be difficult: according to Francesco Patrizi the singers at the Ferrarese court struggled with some of his madrigals until they were joined by Tarquinia Molza, taking the top line. The restraint of Vinci's musical style matches his choice of more academic musical forms and his preference for texts of high literary merit; his serious-minded approach to composition is borne out in many of the dedications of his works.

Vinci's 11 surviving books of madrigals cover a period of over 20 years during which fashions in the choice of madrigal texts changed from Bembo's Petrarchism to

Guarini's eroticism. Of Vinci's 263 madrigals, 117 are settings of texts by Petrarch; other poets represented include Ariosto, Dante, Tarquinia Molza, Girolamo Casone, Giuliano Goselini, Gabriele Fiamma and Tasso, whose words he was among the first to set (from 1573). His spiritual madrigals, the *Quattordeci sonetti spirituali della illustrissima ... Vittoria Colonna* (1580), represent a political rather than a literary choice, aimed at securing the patronage of Marc'Antonio Colonna, the Sicilian viceroy, in preparation for Vinci's return to Sicily. In the first two madrigal books (1561, 1567) the texts are almost exclusively by Petrarch, but in the two books of 1571 the forms of the sonnet, sestina and canzone are joined by the madrigal, and erotic epigrams make their first appearance. The next two books (1573, 1579) contain no texts by Petrarch, but 18 sacred poems by Fiamma, a champion of the Counter-Reformation, are in strict Petrarchan forms. In the 1582 book Petrarch's texts are again favoured, probably because such classic poetry was felt to match the didactic aim that had been associated with three-part polyphony since the time of Willaert and Rore. The last three books contain almost equal numbers of madrigals and fixed forms, with Petrarch's texts making up a third of the total.

As a madrigalist Vinci is an important successor to Rore, whose compositional innovations he inherited and developed to suit his own needs. His stylistic range is even greater than Rore's. In setting the weightier Petrarchan texts, such as *Passa la nave mia* (in the second book for six voices), Vinci adopted a somewhat ponderous style with dense and compact textures reminiscent of Willaert's works in the *prima pratica*; the erotic madrigals, however, are in a lighter vein, and, although the number of voices may be up to six, the textures are more transparent and the counterpoint freer.

Vinci's sacred music oscillates between a simplification of his madrigal style and a more developed application of contrapuntal techniques. The masses include both parody and cantus firmus types. Several sections of the masses, and some of the motets (e.g. *Sacerdos et pontifex*), contain canons and other systematically applied structural devices. Other motets, such as *Mandatum novum do vobis* and *O crux benedicta*, are examples of pseudo-monody. Some motets, for example *Lucia virgo*, were written for the Sicilian liturgy. Others commemorate important state or political occasions; one of these is *Intret super eos formido*, which celebrated the victory over the Turks at the Battle of Lepanto. The ricercares are similar in style to the texted works; one is based on Sicilian folk songs.

3. Reputation and influence. Vinci was the founder of the Sicilian polyphonic school, whose focal figure was his pupil Il Verso. Among his other disciples were the Neapolitans Severino and Marien and the Sicilians Caracciolo and Riccardo La Monica, as well as the Englishman John Cowden. Vinci's own second book of six-voice madrigals (1579) contains a madrigal in his honour set by Giovanni Monino, and another appeared in Giuliano Goselini's *Rime* (1581). In 1587 Vincenzo Galilei published a commemorative madrigal depicting Vinci in the company of Orpheus and surrounded by the Muses. He also rescored the madrigals of Vinci's third and fourth books and some from the first book for five voices (manuscript in *I-Fn*); two of these he published in lute transcriptions in his *Fronimo* (1584[15]). Pietro Pontio, Vinci's predecessor as *maestro di cappella* at Bergamo, quoted some of Vinci's transitional cadences in his *Ragionamento di musica* (1588); Cerone, who grew up in Bergamo while Vinci was there, mentioned him in his treatise as an outstanding musician and one of the best madrigal composers.

PAOLO EMILIO CARAPEZZA, GIUSEPPE COLLISANI

Vincze, Imre (*b* Kocs, 26 Sept 1926; *d* Budapest, 3 May 1969). Hungarian composer. He studied composition with Szabó at the Liszt Academy of Music, where he was appointed to the staff after graduating in 1951. His earliest pieces, two three-movement symphonies, were influenced by Szabó; they are marked by well-balanced orchestration, slightly stiff form and a resolutely melodic conception. The Second Quartet (1958) signalled an important point in Vincze's development: he began to use 12-note serial technique and to build his pieces from sequences of linked short movements. This formal method reached maturity in the *Cantata senza parole* and the Symphony no.3, freely atonal works which draw a great deal from Bartók. The symphony also contains some elements of Webernian pointillism, while the *Rapsodia concertante* has a richly ornamented, Lisztian piano part. Vincze won the Erkel Prize in 1952 and 1956.

JÁNOS KÁRPÁTI/PÉTER HALÁSZ

Vinders [Vender, Venders], **Jheronimus** (*fl* 1525–6). South Netherlandish composer. From 16 June 1525 to January 1526 he was *zangmeester* of the guild of Onze-Lieve-Vrouwe-op-de-rade at the Janskerk (now St Baaf Cathedral), Ghent. Two compositions demonstrate Vinders's respect for Josquin: the *Missa 'Stabat mater'* is a parody mass on Josquin's motet, and the lament *O mors inevitabilis* was composed on his death. Vinders's works show a predilection for both modern and outmoded compositional procedures. Pervading imitation and voice-pairing are the primary techniques in compositions such as the *Missa 'Fit porta Christi pervia'* and the four-voice Flemish songs. The five-voice *Salve regina* and *Assumpta est Maria*, on the other hand, testify to a strong reliance on the older cantus-firmus technique. The *Missa 'Fors seulement'*, however, uses both cantus-firmus and parody technique in different sections. Vinders's works occasionally have unusual features, such as the trope at the end of the *Magnificat*, which makes this composition unsuitable for performance during Vespers and turns it into a motet-like setting of *Luke* i.46–56.

The *Missa 'Myns liefkens bruyn ooghen'* is transmitted anonymously in its only source; it may well be by Vinders (see Jas, 1994). The music of its second Agnus Dei was published with the words of the original song and attributed to Vinders. The mass is based on a song by Benedictus Appenzeller and also quotes from Appenzeller's *Salve regina*, which uses the same secular tune. The psalm-motet *Laudate pueri Dominum* gives further evidence of Appenzeller's influence; it seems to have been written in response to his motet *Corde et animo*.

WORKS

MASSES

Missa 'Fit porta Christi pervia', 5vv, *NL-SH* Cod.74 (on plainchant)
Missa 'Fors seulement', 5vv, *SH* Cod.74 (on chansons by Févin and Pipelare; attrib. Gombert in *D-ROu* Mus. XVI-49, ed. in CMM, vi/2, 1954)
Missa 'Myns liefkens bruyn ooghen', 5vv, *NL-SH* Cod.75 (on Appenzeller's song)
Missa 'Stabat mater', 5vv, *SH* Cod.74 (on Josquin's motet); ed. in EMN, vii (1972)

ERIC JAS

Vine, Carl (Edward) (*b* Perth, 8 Oct 1954). Australian composer. Playing cornet, then piano and organ as a child, at the age of 16 he won a youth composition competition with an electronic work *Unwritten Divertimento* (1970), and while still at school completed an electronic commission for the West Australian Ballet. After studying science at the University of Western Australia, as well as taking piano with Stephen Dornan and composition with John Exton, he had a brief period at the BBC Tape Transcription Unit, London, in 1973, then he won the Perth Music Festival instrumental prize (1972) and the ABC Instrumental and Vocal Competition (1973). From 1975 worked as a pianist in Sydney with A–Z Music, the Australia Ensemble, the Seymour Group and other contemporary ensembles. With the trombonist Simon de Haan he was co-founder of the contemporary group Flederman (1979–89), which commissioned a large body of new Australian work and performed it widely in Australia and abroad. During the same years he was pianist and composer-in-residence with the Sydney Dance Company (1978), the London Contemporary Dance Theatre (1979), the NSW State Conservatorium (1985), the Australian Chamber Orchestra (1987) and the Western Australia Conservatorium (1989). He taught at the Queensland Conservatorium,1980–82, but works chiefly freelance. He was deputy chairman of the Australia Council, 1992–5.

His earliest works were mainly electronic, such as Tip (1977), for amplified string quartet, orchestra and electronics (later withdrawn), but he came to prominence as a composer of vibrant, imaginative music for dance, and of incidental music for plays, television and films. His work with Sydney Dance Company led to *Poppy* (1978), the first full-length Australian dance work, and he has since composed a large number of commissions for dance companies including *The Tempest* (1988). These are works of great vitality and wit, written with deep understanding of the dancers' needs. His years with Flederman produced a number of chamber works, including *Café Concertino* (1984), increasingly an Australian classic; these are virtuosic works, with complex manipulations of the rhythmic pulse, yet their texture is never opaque and is always superbly crafted with a player's understanding of technique.

More recently, he has produced orchestral works for the ABC, including four concertos and six symphonies, works which suggest he is becoming increasingly tonal, without losing the individual eloquence of his earlier voice. These have been particularly successful: his Symphony no.2 was performed by the Sydney SO on tour across the USA, and with the Symphony no.1 was choreographed for the Canadian National Ballet; his Symphony no.3 was featured at the 1990 Adelaide Festival. One of the most widely performed and commissioned composers in Australia, he is both a first-rate performer and one of the most articulate and gifted composers Australia has produced. His numerous awards include a Sounds Australian Award (1989) and three Australian Guild of Screen Composers Awards (1993, 1994).

WARREN BEBBINGTON

Vinea, Antonius de. *See* DE VINEA, ANTONIUS.

Viner, William (*d* ?Dublin, 1716). English violinist and composer. He was active in Dublin in the early 18th century, holding the position of Master of the State Music from 1703 until his death. His will was proved on 30 November 1716. In the present stage of research into this meagrely documented period of Dublin musical activity, little is known of the details of Viner's contribution. It is not clear, for instance, why the annual birthday ode was composed each year from 1709 by J.S. Kusser (known in Dublin as Cousser), who succeeded Viner as Master of the State Music in 1717. For the celebration of the Peace of Utrecht on 20 June 1713, Viner collaborated with Kusser in the preparation of special music for the Play House. Walsh published a set of solos for violin and bass which are described as 'composed by the late Mr Viner of Dublin', and Thomas Cross engraved a song by him, *No Coelia … I'll no longer mourn*. He was the arranger of a piece in *Arie di camera* (*c*1727) and is lauded in a poem by Pilkington, *The Progress of Musick in Ireland* (Dublin, 1730).

BRIAN BOYDELL

Viner, William Litton (*b* Bath, 14 May 1790; *d* Westfield, MA, 24 July 1867). English organist and composer. He studied the organ with Charles Wesley, and in about 1810 became organist of St Michael's Church in Bath, where he also built a reputation as a composer and teacher of the organ, harp and piano. In 1835, on the recommendation of S.S. Wesley, he became organist of St Mary's, Penzance; he also ran a music shop, Viner's Musical Repository. Viner emigrated to the USA in 1859 and settled in Westfield as a teacher; few of his extant sacred compositions date from this period, suggesting that he was not employed as a church musician during this decade. Viner's compositions, which include anthems and service music as well as a set of 12 preludes for the harp, are conservative in idiom. He is best known for his collections of hymns and psalm tunes, *100 Psalm and Hymn Tunes, in Score* (London, 1838), *A Useful Selection from the most Approved Psalms and Hymns* (London, 1846) and *The Chanter's Companion* (Penzance, 1857).

STANLEY C. PELKEY

Viñes, Ricardo (*b* Lérida, 5 Feb 1875; *d* Barcelona, 29 April 1943). Spanish pianist. After early study with J.B. Pujol in Barcelona, he went to the Paris Conservatoire in 1887 and studied the piano with C.-W. Bériot, chamber music with Godard and harmony with Lavignac, receiving a *premier prix* in 1894; he made his début at the Salle Pleyel the following year. His international career began in 1900, when he toured Russia, and tours throughout Europe followed. He played in South America in 1920 and 1924 and from 1930 to 1936 lived in Argentina, playing frequently in that country as well as in Chile and Uruguay. He returned to Paris in 1936 and continued performing until his last year.

Viñes had an exceptional technique and a prodigious repertory, and was the foremost champion of new music by French, Spanish, Russian and Latin American composers. He became close friends with Ravel, Debussy, Satie, Séverac, Falla and Granados, and he introduced many of their works, including Ravel's *Jeux d'eau*, *Miroirs* and *Gaspard de la nuit* and Debussy's *Pour le piano* and *Images* (book 1); he also gave the first performances in France of Musorgsky's *Pictures at an Exhibition*, Balakirev's *Islamey* and Prokofiev's *Sarcasmes*. Among the dozens of works dedicated to him are Ravel's *Oiseaux tristes*, Debussy's *Poissons d'or* and Falla's *Noches en los jardines de España*. He recorded *Poissons d'or* as well as Debussy's *La soirée dans Grenade* and a number of pieces by Spanish composers; the playing reveals an unforced virtuosity, charming rhythmic pointing and shimmering pedal effects.

As a composer, Viñes left a few songs and piano pieces. He also wrote several articles on music and kept a journal that is a valuable source of information about his contacts with important musicians. His piano students included Marcelle Meyer, Joaquín Nin-Culmell and Poulenc.

CHARLES TIMBRELL (with ESPERANZA BERROCAL)

Vineux [Vineus]. Rubric, indicating the title, identification, or possibly composer, of a monophonic mensural Sanctus setting associated with the trope *Qui januas mortis confregisti* (Chevalier 16434). Four monophonic sources are recorded. In *F-Pa* 204 it is linked with a matching Agnus troped *Patris filius eterni*, and these are the only two mensurally notated pieces in the manuscript; in *I-AO* A 1°D19 it is the only monophonic piece in the entire polyphonic manuscript; and in Tournai, Trésor du chapitre, 471 (destroyed in 1940), it had the trope *Qui vertice Thabor affuisti*. Only in the Aosta manuscript is it headed 'Vineux'.

Six related polyphonic compositions are known. The four-voice *Sanctus vineus secundum Loqueville* in *I-Bc* Q15 (ed. Reaney, CMM, xi/3, 1966) is flanked by a three-voice Sanctus and Agnus on the same tenor ascribed to Du Fay (ed. Besseler, CMM, i/4, 1962 and CMM, i/5, 1966) and linked in *I-Bc* Q15 with a Du Fay Kyrie on a similar tenor (also present in *I-AO*). A Sanctus-Agnus pair (the latter troped, unlike the Du Fay Agnus) appears in *F-Dm* 2837, a fragment discovered and described by Wright. Both Agnus settings are musically almost identical with their related Sanctus, though with their sections in a different order. The Du Fay Kyrie, on the other hand, is rather different musically; the linkage may be a scribal initiative.

The origin of the Vineux melody is unknown, though a possible geographical explanation was offered by Fallows. Only the lack of a known polyphonic origin precludes a

complete analogy with the mensural storage and subsequent use found in the apparently English phenomenon of squares (*see* SQUARE).

The *Missa 'Vinnus vina'* (*I-Rvat* C.S.51), now considered to be by Faugues, is not related to the melody.

MARGARET BENT

Vinholes, Luís Carlos (Lessa) (*b* Pelotas, 10 April 1933). Brazilian composer and music critic. After initial studies at the conservatory of his native city, he studied flute and composition in São Paulo with Hans Joachim Koellreutter and singing with Celina Sampaio (1953–7). He wrote music criticism for the newspapers *Opinião pública*, *Diário popular* (Pelotas) and *Diário de São Paulo*. At the end of 1957 he went to Japan for further study and lived there from 1961 to 1977. In Tokyo he worked for the cultural department of the Brazilian Embassy, studied Japanese music and played the flute in several chamber groups. He became associated with the Japanese avant garde of the 1960s. Since 1977 he has worked at the Brazilian Embassy in Ottawa.

Although not a prolific composer, Vinholes's works reveal an interest in experiment: his *Instrução 61* (1961), for any four instruments, is considered the first aleatory piece in Brazil. An example of his use of serialism, with restrained lyricism, great economy of means and concern for an overall stylistic coherence, can be seen in his series *Tempo-Espaço*.

Viniziana. *See* GIUSTINIANA.

Vintz [Vintzius, Wintz], **Georg** (*b* Halle, *c*1580; *d* Naumburg, *c*1635). German organist and composer. After serving two churches in Eisleben he was appointed organist of Naumburg Cathedral. His 20 short parody masses are skilful adaptations of motets by 13 prominent composers of his time, some involving reduction from eight to five voices. Several masses borrow little from their models and may be mostly the work of Vintz or (particularly in the case of the Marenzio mass) of the motet composers themselves. Questions of authorship remain to be resolved.

Vintz's instrumental dances are grouped according to type rather than into suites. More progressive are the elaborate figuration in the highest two parts, the presence of a figured continuo part and some sharp key signatures suggesting performance by violins; occasionally the lower voices imitate the figuration in the treble parts. The prevailing homophonic texture is matched by predictable phraseology and, except for the intradas, the brevity of the dances invites repetition with improvised variations.

WORKS

Missae [Ky, Gl] ad praecipuos dies festos accommodatae (Erfurt, 1630) [composer of parodied motet in parentheses]: 1 Lobe den Herren meine Seele, 5vv (H. Hartmann); 2 Jerusalem, gaude gaudio magno, 5vv (N. Zangius); 3 Ist nicht Ephraim mein thewer Sohn, 5vv (Hartmann); 4 Pater noster, qui es in coelis, 5vv (M. Vulpius); 5 Deus meus, quare me dereliquisti, 5vv (C. Erbach); 6 Surrexit Christus spes mea, 5vv (Zangius); 7 Cantate Domino canticum novum, 5vv (H.L. Hassler); 8 Dum complerentur dies Pentecostes, 5vv (Erbach); 9 Benedicta sit Santa Trinitas, 5vv (A. Gumpelzhaimer); 10 Dic nobis Maria quid vidisti, 6vv (G. Bassano); 11 Ascendo ad Patrem meum, 6vv (H. Praetorius); 12 Hodie completi sunt, 6vv (Valcampi); 13 Nun dancket alle Gott, 8vv (S. Scheidt); 14 Hodie nobis coelorum rex, 8vv (L. Viadana); 15 Iniquos odio habui, 8vv (L. Marenzio); 16 Domine Dominus noster, 8vv (Erbach); 17 Exultat cor meum, 8vv (anon.); 18 Misericordias Domini, 8vv (G. Gabrieli); 19 Jubilate Deo omnis terra, 8vv (anon.); 20 Laudate Dominum omnes gentes, 8vv (Hassler)

Intraden, Couranten, Galliarden, Balletten, Alamanden, und etliche Täntze auff Polnische Arth, 4–5 insts, bc (Erfurt, 1630); 3 ed in NM, lxxx (1932)

FREDERICK K. GABLE

Vio, Gastone (*b* Venice, 11 April 1921). Italian musicologist. He joined the priesthood in 1946 and in 1954 was named rector of the church of Spirito Santo, Venice. He became a notary for the Ecclesiastical Tribune of the region (1955–71), during which time he developed his archival skills. In 1971 he began studying the history of Venetian ecclesiastical life with a focus on the role of music. His knowledge of Venetian history and geography and his command of Venetian dialect enabled him to interpret and have a greater understanding than others of primary sources. Among his most important studies are those of Venetian organs, Venetian confraternities and the life of Vivaldi. He has actively advocated the restoration of organs and religious paintings and has been a mentor to scholars engaged in archival studies of Venetian music and music institutions, fine arts and ecclesiastical and social history.

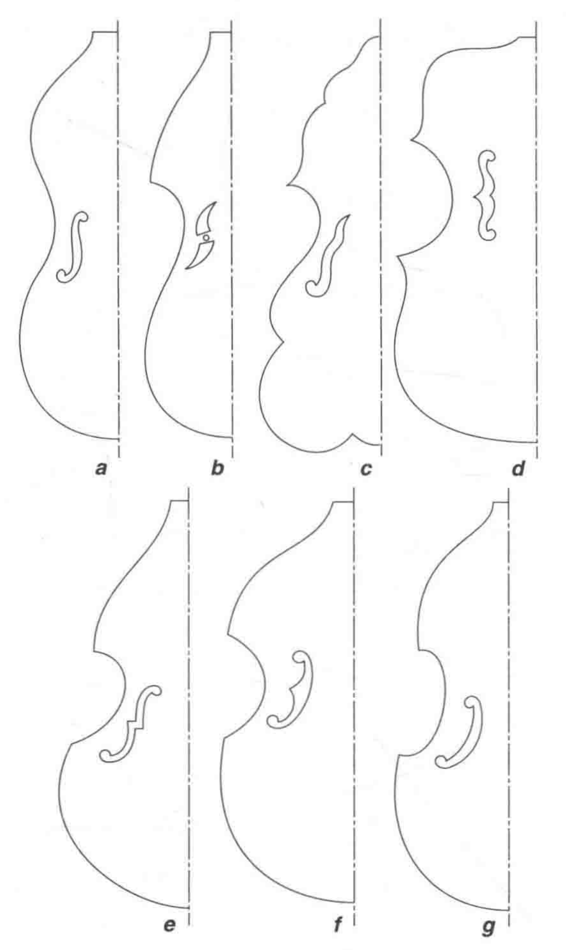
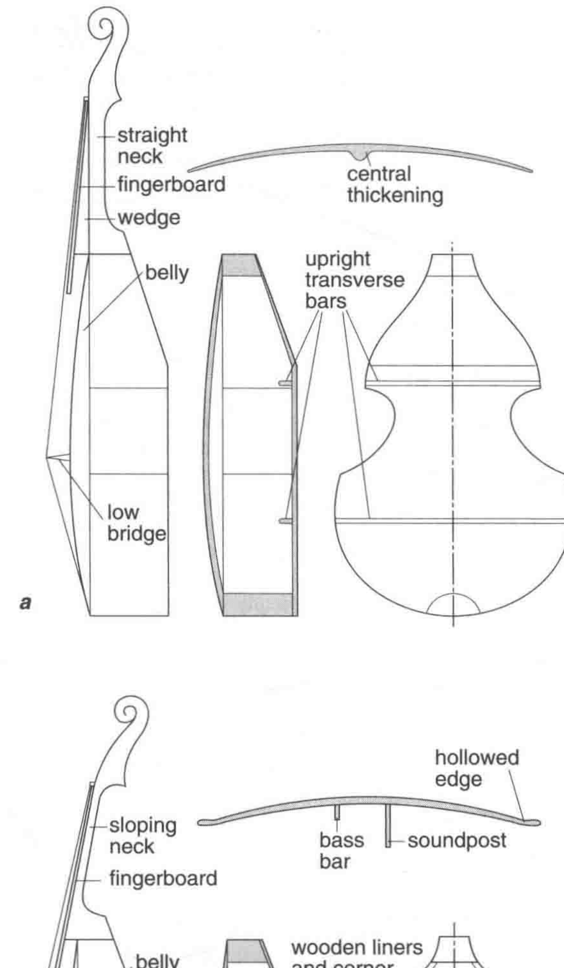
ELEANOR SELFRIDGE-FIELD



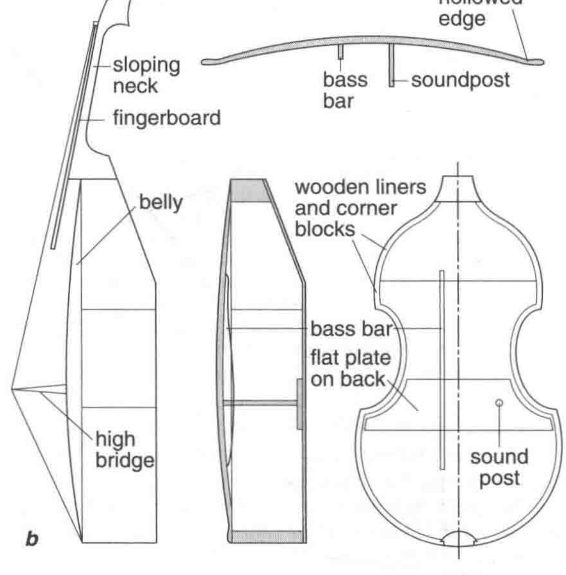
Viol [viola da gamba, gamba] (Fr. *viole*; Ger. *Gambe*; It. *viola*, *viola da gamba*). A bowed string instrument with frets; in the Hornbostel-Sachs system it is classified as a bowed lute (or fiddle). It is usually played held downwards on the lap or between the legs (hence the name 'viola da gamba', literally 'leg viol'). It appeared in Europe towards the end of the 15th century and subsequently became one of the most popular of all Renaissance and Baroque instruments and was much used in ensemble music (*see* CONSORT and CONTINUO). As a solo instrument it continued to flourish until the middle of the 18th century. In 18th- and 19th-century American usage the term BASS VIOL was applied to a four-string instrument of the violin family.

1. Structure. 2. 15th-century origins. 3. Continental Europe, *c*1500 to *c*1600. 4. England. 5. Italy from *c*1580. 6. France from *c*1600. 7. Germany and the Low Countries from *c*1600. 8. The modern revival.

1. STRUCTURE. During its history the viol was made in many different sizes: *pardessus* (high treble), treble, alto, small tenor, tenor, bass and violone (contrabass). Only the treble, tenor and bass viols, however, were regular members of the viol consort. The *pardessus de viole* did not emerge until the late 17th century, and the violone – despite its appearance in the 16th century – was rarely used in viol consorts. The alto viol was rarely mentioned by theorists and there is some doubt as to how often it was used. Two small bass instruments called 'lyra' and 'division' viols were used in the performance of solo music in England (*see* LYRA VIOL and DIVISION VIOL). A full-sized bass viol, however, was played by soloists on the Continent in the Baroque era.



According to Mace (A1676) a consort or 'chest' of viols should be 'all truly and proportionably suited' in shape, wood and colour, but especially in size. The string length from nut to bridge on the treble viol, for instance, should ideally be exactly half that on the bass viol, the treble being tuned an octave higher than the bass. Application of this principle to the tenor viol is aided by the downward *a gamba* playing position; if it were applied to the tenor member of the modern string quartet, the result would be a viola too large for comfort (*see* TENOR VIOLIN).



The shape of the viol was extremely variable during much of its early history. Some 16th-century instruments show the influence of the guitar family (fig.1*a*) or the violin family (fig.1*d*). A few have a festooned outline in the manner of an orpharion or bandora (fig.1*c*). By the 1540s a distinctive shape had evolved in Venice, which is characterized by steeply down-sloping shoulders and a narrow upper body (fig.1*e*). A significant number of examples by Francesco Linarol and Antonio and Battista Ciciliano have been preserved in collections in Vienna and Brussels, and the shape is also recorded in paintings

1. Body shapes of some Renaissance viols (after Harwood): (a) tenor, unknown 16th-century maker (Horniman Museum, London); (b) bass by Gaspar Tieffenbrucker, Lyons, 16th century (Gemeentemuseum, The Hague); (c) bass by ? John Rose, London, c1600; (d) bass, unknown 16th-century maker, Venice (both Ashmolean Museum, Oxford); (e) tenor by Hainrich Ebert, ?Venice, 16th century; (f) bass by Batista Ciciliano, Venice, 16th century (both Musée des Instruments de Musique, Brussels); (g) small bass (?lyra) by Richard Blunt, London, 1605 (Ashmolean Museum, Oxford)

by Titian, for example *Venus and Cupid with a Lute player*, *c*1565 (*GB-Cfm*). The most characteristic form of viol, however, with its deep ribs, sloping shoulders and middle bouts appeared early in the 16th century (fig.1*g*) and became fairly standard during the 17th and 18th centuries. The viol is very lightly constructed, both the belly and the back being made of very fine wood. The belly is gently arched, whereas the back is flat, except at the top, where it slopes in towards the neck (fig.2). A few crossbars are usually fixed to the back to reinforce it. The ribs of the viol are quite deep (often reinforced with linings of parchment or linen), and since neither the belly nor the back projects beyond them there are no 'edges'. The neck of the Renaissance viol and early 17th-century English viol was thick and rounded like that of the contemporary cello. In the course of the 17th century the neck became flatter, and on the later French instruments, it was sometimes very thin, resembling that of a lute. Jean Rousseau (A1687) described how the late French makers gave the viol its 'final perfection' by setting the neck at a

2. Comparison between body structures of (a) Renaissance and (b) Baroque viols (after Harwood)

greater angle, and also by reducing the overall thickness of the wood. Frets, made from pieces of stretched gut, are tied round the neck in a special fret knot. Normally, double frets are used (*see* FRET, fig.1*b*). There are usually seven frets placed at intervals of a semitone, but, according to Simpson (A1659), an eighth might be added at the octave. All frets can be finely adjusted to improve the tuning. Simpson said that the strings should lie close to the fingerboard 'for ease and convenience of Stopping'.

Most viols have six strings, but the solo bass viol played on the Continent during the Baroque era often had seven and the *pardessus* five. The standard tuning of the six-string viol was a sequence of 4th, 4th, major 3rd, 4th, 4th. Thus the three principal types of viol in a consort are tuned as follows: *d–g–c′–e′–a′–d″* (treble); *G–c–f–a–d′–g′* (tenor); and *D–G–c–e–a–d′* (bass). Players of the alto viol sometimes prefer a tuning in which the position of the major 3rd is altered: *c–f–a–d′–g′–c″*; English (and possibly some continental) bass viol players occasionally tuned their lowest string down to C. French bass viols of the Baroque era often had a seventh string (*A′*), an innovation attributed by Jean Rousseau in 1687 to Sainte-Colombe. This string, like the *D* and *G* strings, would be overspun with silver or another metal (*see* OVERSPUN STRING), all three preferably having the 'same covering', according to Jean-Baptiste Forqueray (who experimented also with half-covering on the *c* string). The 18th-century French PARDESSUS was usually tuned *g–c′–e′–a′–d″–g″*; from the 1730s the five-string *pardessus* was tuned *g–d′–a′–d″–g″*.

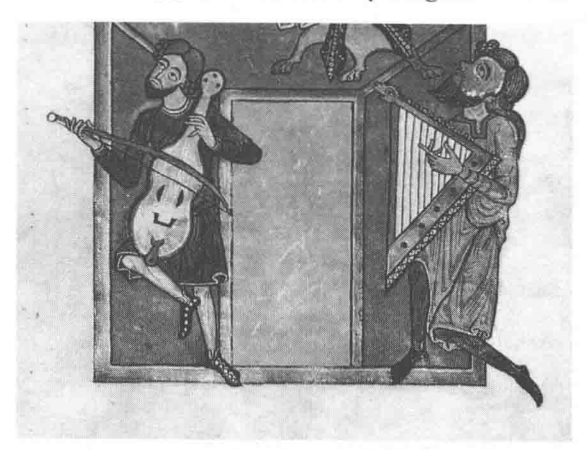
Like other fretted instruments such as the lute, the viol was usually tuned and played in equal temperament. According to Lindley (B1984), some 16th-century theorists such as Ganassi advocated a form of meantone temperament. This would have meant tuning the central third purer and enlarging slightly the four 4ths between remaining open strings. The frets would then have been adjusted to achieve at least some of the unequal tones and semitones that this temperament requires. The fact that any single fret determines the intonation for all six strings, however, must have imposed severe limitations on its use. Modern experiments suggest that meantone intonation on the viol is best reserved for pieces with a very limited range of key (*see* TEMPERAMENTS, §8).

All viols, whether supported on the calves (like the tenor and bass, see fig.10 below) or on the knees, are played in an upright, almost vertical, position. The bow is held in an underhand grip, the palm facing upwards. Simpson (A1659) wrote:

> Hold the Bow betwixt the ends of your Thumb and two foremost fingers, near to the Nut. The Thumb and first finger fastned on the Stalk; and the second fingers end turned in shorter, against the Hairs thereof; by which you may poize and keep up the point of the Bow.

The wrist should be relaxed, since quick notes 'must be express'd by moving some Joint nearer the hand; which is generally agreed upon to be the Wrist'. Heavy accents are not possible on the viol because the essence of both the up- ('forward-' or 'push-') and the down-bow ('back-bow' or 'pull-bow') is a movement across the string and not a movement downwards with the weight of the arm above the bow, as it is in violin bowing. Light accents, however, may be obtained by means of a small increase in pressure at the beginning of a stroke. This small pushing accent is more easily and naturally achieved with an up-bow. Thus viol bowing is the exact reverse of violin bowing and, as Simpson wrote, 'When you see an even Number of Quavers or Semiquavers, as 2, 4, 6, 8. You must begin with your Bow forward' (i.e. with an up-bow).

The early viol bow is characteristically convex (like an unstretched archer's bow) rather than concave like a violin bow. A concave design is found in some 18th-century French bows: this gives the advantage of a more sensitive response to nuance. The player governs tension by pressure with the middle finger directly on the hair (see figs.10 and 12 below); pressure on the stick itself would



merely cause the hair to bend towards the arc of the stick. According to Danoville (A1687) a viol bow 'must be of Chinese wood, and should not be too heavy, because it makes the [bowing] hand clumsy, nor too light, because then it cannot play chords [easily] enough; but a weight proportioned to the hand, which is why I leave that to the choice of the one who plays the Viol'. Rousseau, however, wrote: 'But it seems to me that one finds many other sorts of woods used to make Bows, which are no less good than Chinese wood'. Chinese wood is almost certainly snakewood, but Trichet (see Lesure, E1955–6) pointed out that Brazilwood (of which Pernambuco is a superior variety) was also known in France.

Because of the lightness of its body construction and the relatively low tension of its strings, the viol is an extremely resonant instrument and readily responds to the lightest stroke of the bow (*see* ACOUSTICS, §II). Its tone is quiet but has a reedy, rather nasal quality which is quite distinctive and makes it an ideal instrument for playing polyphony, in which clarity of texture is of the greatest importance. On the other hand the viol is less successful in music to be danced to, partly because its sound is rather restrained, but also because it cannot accent heavily enough.

The viol's capacity for resonance is enhanced by the way the left hand takes advantage of the frets. The finger presses the string down hard directly behind the fret and thereby produces an effect akin to that of an open string. A vital technique for achieving resonance – as well as for facility in fast passage-work – is the use of 'holds', whereby each finger, once placed behind a fret, remains there even after the note has been played, until it has to be moved to another position. This technique enables the instrument, in Simpson's words, 'to continue the Sound of a Note when the Bow hath left it'. For this, as for multiple stops, the fact that the placing of the frets guarantees stability of intonation enables the left hand to assume a greater variety of postures than would be possible on an unfretted instrument such as a violin or cello.

During the 16th and 17th centuries there were many highly skilled viol makers, particularly English craftsmen like John Rose, Henry Jaye and Richard Meares. Outstanding makers of the late 17th and 18th centuries included Barak Norman in England, Michel Colichon, Nicolas Bertrand and Guillaume Barbet in France, Jacob Stainer in the Tyrol and Joachim Tielke in Hamburg. Makers of the *pardessus* included Jean-Baptiste Dehay ('Saloman') and Louis Guersan.

2. 15TH-CENTURY ORIGINS. The characteristic playing position of the viol seems to have been known in Europe as early as the 11th century, when waisted fiddles were played like viols, resting on the lap or between the knees with the bow held above the palm. A 12th-century miniature (fig.3) depicts an unusually large instrument of this type, which is sometimes referred to as the medieval viol (*see* FIDDLE, §1). Rebecs were also played in this way, as is shown in the famous 13th-century *Cantigas de Santa María* (*see* REBEC, fig.2). By the early 14th century, however, this method of playing bowed instruments had almost completely disappeared from Europe. But in Aragon rebecs were played *a gamba* throughout the 14th and 15th centuries, as shown for example in a mid-15th-century Aragonese miniature of King David (*GB-Lbl* Add.28962, f.82; *see* REBEC, fig.5) and in a painting of St

3. Large waisted fiddle, or medieval viol, and harp: miniature from the Worms Bible, German, c1148 (GB-Lbl Harl.2804, f.3v)

Anthony Abbot by the Almudévar Master (Juan de la Abadía) (in *GB-Cfm*). The Aragonese rebec thus provides a link between the general disappearance of the *a gamba* playing posture at the end of the 13th century and its re-emergence two centuries later with the Renaissance viol.

Viols appear in late 15th-century paintings from the Aragonese province of Valencia. Fig.4 shows a painting of the Virgin and Child, by a follower of Valentín Montolíu, which comes from the Maestrazgo, a mountainous region to the north of the Valencian district of Castellón de la Plana. It is one of the earliest known representations of the Renaissance viol, dating from about 1475. By 1500 the viol was regularly depicted in angelic consorts by Valencian, Majorcan and Sardinian painters. In the Cagliari Museo Nazionale is a fine full-length picture of an angel viol player, painted in about 1500 by the Sardinian Master of Castelsardo (fig.5). This shows a fairly typical early Spanish viol with an extremely long

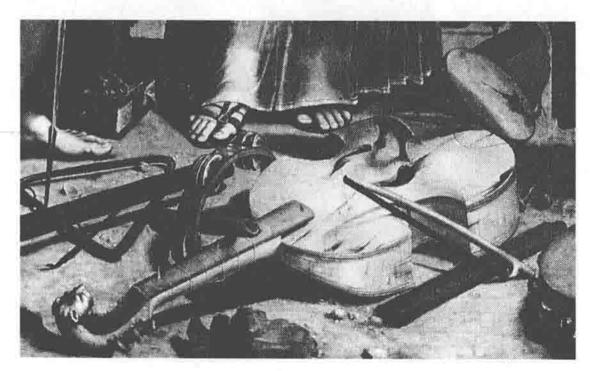
4. One of the earliest known representations of the Renaissance viol: detail from the 'Virgin and Child' by a follower of Valentín Montolíu, c1475 (Ermita de S Feliú, Játiva, Valencia)

narrow neck, frets, lateral pegs, central rose, very thin ribs and tenor-sized body with the characteristic viol shape, waisted but with marked corners. Like most other Valencian viols of this period it does not have a raised fingerboard, and instead of an arched bridge the strings pass over a low uncurved bar attached to the belly. In other paintings the strings are actually fixed to the bar as on a plucked instrument. The Castelsardo Master's viol with its long neck, thin ribs and generally slim outline appears to have been a tall instrument, quite distinct from the shorter, deeper-bodied viol that became standard in Italy during the 16th century. Later Valencian viols of the type pictured by the St Lazarus Master (fig.6) do, in fact, have shorter necks and wider, deeper waists, but still retain the thin ribs. On the belly of this particular instrument is a pattern of ornaments characteristic of the *vihuela de mano*. Iconographic evidence suggests that the viol was the result of applying the traditional Aragonese technique of rebec playing to a new bowed instrument whose size and body construction were essentially those of the plucked *vihuela de mano*. For such instruments, the term *vihuela de arco* seems appropriate.

The viol quickly spread across the Mediterranean through the Balearic Islands and Sardinia to Italy. Its advance was probably assisted by the Borgia family from Valencia, from whose ranks came two popes, Calixtus III and Alexander VI. It was during the pontificate of Alexander VI (1492–1503) that viols began to appear in Rome and in cities to the north, such as Urbino and Ferrara, that were dominated by the Borgias. Some of the earliest representations of viols in Italian art are by painters working in those areas: Costa in Ferrara, Francia in Bologna and Raphael (as well as Timoteo Viti) in Urbino and Rome.

The court of Isabella d'Este at Mantua seems to have been particularly receptive to new Spanish instruments of all kinds, which included the *vihuela de mano* and possibly a Spanish form of lute, as well as the viol. In the last decade of the 15th century Lorenzo de Pavia, Isabella's agent, was frequently involved in the purchase or repair of a range of instruments made 'in the Spanish manner':

5. Angel playing a viol: painting by the Master of Castelsardo, c1500 (Pinacoteca Nazionale, Cagliari)



6. Angel playing a viol: detail from the 'Coronation of the Virgin' by the St Lazarus Master, c1510 (private collection)

the 'viola spagnola', the 'viola a la spagnola', the 'liutto a la spagnola' and the plain 'spagnola'. It is probable that one of the earliest viol consorts ever made was the one provided for Isabella by Lorenzo from a workshop in Brescia.

In 1493 the chronicler Bernardo Prospero reported that some Spanish musicians had come from Rome to Mantua playing viols 'as tall as I am' ('viole grande quasi come me'). These Spanish players had probably come from Valencia to Rome with Rodrigo Borgia (Alexander VI). Their 'viole grande' may have been long-necked Spanish viols of the type pictured in fig.5. Tall, slim viols with long necks appear also in Italian paintings of this period, notably in Lorenzo Costa's *Virgin and Child Enthroned with Saints*, on an altarpiece dated 1497 (in S Giovanni in Monte, Bologna), and Timoteo Viti's painting of the same subject (Pinacoteca di Brera, Milan). In other early 16th-century Italian paintings the viol appears as a more fully developed instrument. Raphael in his *Allegory of St Cecilia* (*c*1513–16; Pinacoteca Nazionale, Bologna) depicted a tenor viol with a carved lion's head scroll and nearly all the characteristics of a typical 17th-century instrument: deep ribs, sloping shoulders, flat back bending in at the upper end towards the neck, two c-holes, frets, six pegs and a slightly arched belly (fig.7). This picture illustrates the most important single change that the viol underwent in Italy: the older flat-bridged Valencian type gave way to the instrument with an arched bridge and a fingerboard. In effect, Italian makers enabled the viol, which had hitherto probably had a melodic and a drone-playing capability only, to develop into an instrument fully equipped to play an individual line in a polyphonic ensemble. As a direct result of this fundamental change of identity, there was now the need to make viols of different sizes. At first, only two sizes, tenor and bass, were required. Ensemble music for which these sets of large viols were well suited included textless polyphony, and frottolas which could be performed by solo voice and instruments.

Although there is no iconographic evidence of any viol-like instrument in 15th-century German art, numerous references to groups of 'Geigen' players in archival sources led Polk (F1989) to propose that a tradition of string consort playing began to take root north of the Alps, and that German instrumentalists employed in the Italian courts played a significant role in the early development of the viol as an ensemble instrument. However, Woodfield (B1991) has argued that the term 'Geige' itself was a

7. Tenor viol, with tambourines, recorders and a triangle: detail from the 'Allegory of St Cecilia' by Raphael, c1513–16 (Pinacoteca Nazionale, Bologna)

generic one, which could with equal reason be taken to refer to other bowed or plucked instruments or to mixed ensembles. The first iconographic evidence that the viol had entered the domains of Maximilian I comes in the early years of the 16th century.

A bass viol is pictured in Grünewald's famous Isenheim altarpiece (1512/13–15), although the bowing technique of the player is obviously unrealistic. Martin Agricola in his *Musica instrumentalis deudsch* (A1529) hinted at the southern origins of viols by describing them as 'grosse welschen Geygen' ('large Italian fiddles'). The curious woodcuts of 'grosse Geygen' printed by Agricola, like some Valencian depictions of viols, show instruments without fingerboard, bridge or tailpiece; the strings pass over a rose and are attached to a bar on the belly. Woodfield noted that the large majority of extant depictions of this instrument come from Basle – Agricola's woodcut, for example, derives directly from that in Virdung's *Musica getutscht* (Basle, 1511). He suggested that the origins of its characteristic shape may lie in the flamboyant lira da braccio outlines the kind depicted by Cima da Conegliano, woodcuts of which were readily available in Basle.

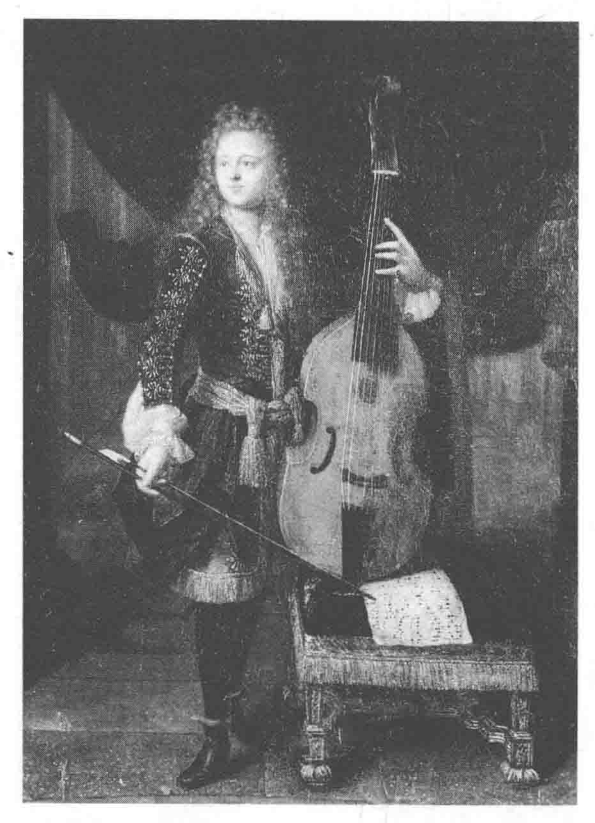
Early German theorists point to the closeness of the relationship between the viol and lute. Judenkünig, for example, equated the viol with the lute. Both instruments are pictured together on the title-page woodcut of his 1523 treatise, and in the introduction he stated that his instructions were for both. Yet the viol is scarcely mentioned in the text and all the musical examples are for lute, so it is not clear how the viol player was expected to use the treatise. Some early Renaissance writers classified bowed and plucked instruments together. Tinctoris (*De inventione et usu musicae*, *c*1487) wrote of two types of 'viola', 'sine arculo' ('without a bow') and 'cum arculo' ('with a bow'), as though they were members of the same family.

3. Continental Europe, *c*1500 to *c*1600. The terminology of the viol family during the 16th century was varied and at times extremely confusing. The generic word 'viola' (viol) included two quite different instruments, the viola 'da braccio' (i.e. 'arm' viol) and the viola 'da gamba' (i.e. 'leg' viol). Few writers before the middle of the century, however, used either modifying phrase. While some Italian and Spanish writers used the phrase viola 'da arco' or vihuela 'de arco' (i.e. bowed viol) in order to distinguish the viol from plucked instruments, the clarifying phrase 'de arco' was often omitted. Further confusion was caused by the widespread use of the word 'viola' to refer to the Lira da braccio. Some theorists, therefore, referred to the 'fretted' viol, the *lira* being unfretted. The title-page of Ganassi's viol tutor (A1542) is unusually specific in its reference to the 'violone d'arco da tasti' ('bowed fretted viol'). The terminology of viol consorts was at times equally inconsistent. Italian writers, for example, often described consorts in terms of the bass instrument, the violone. Thus, references to 'violoni' or 'violoni da gamba' do not necessarily imply a consort consisting entirely of bass viols. The term 'violoni', however, can easily be confused with 'violini' or 'violons', meaning violins. In fact, isolated references to viols in literary works, inventories and account books are often ambiguous.

Despite the confusing terminology, there is ample evidence that the viol was popular at many 16th-century

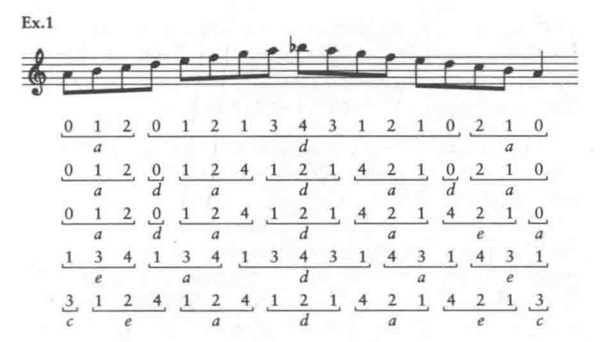
courts. Baldassare Castiglione wrote enthusiastically of the viol consort ('quattro viole da arco') in his *Il libro del cortegiano* (Venice, 1528; Eng. trans. by T. Hoby, 1561), a vivid description of life in an early 16th-century court: 'The musicke with a sette of violes doth no lesse delite a man: for it is verrie sweet and artificiall'. Theorists too commented on the upper-class status of the viol. Jambe de Fer (A1556), for example, wrote that the viol was played by 'gentlemen, merchants and other men of virtue' as a pastime, whereas the violin was usually considered a 'professional' instrument of the lower classes, often played in the streets to accompany dances or to lead wedding processions. Shakespeare attests to the viol's noble status; and Moll in Dekker and Middleton's *The Roaring Girl* (1611) is deeply indignant when her porter refers to her viol as a 'fiddle', although another character suggests that the viol is considered by many as 'an unmannerly instrument for a woman'. By the later 18th century the viol was seldom found outside the court music room.

It would be wrong, however, to suggest that the viol was played only by amateurs for their private enjoyment. Many courts employed professional viol players – sometimes complete consorts – to perform in the musical *intermedi* given at royal weddings or other special occasions. In 1502, at the wedding of Alfonso d'Este and Lucrezia Borgia at Ferrara, one of the *intermedi* included music played by six viols. Throughout the century, the viol consort remained an essential part of the Renaissance *intermedio* 'orchestra'. It was most frequently used with other consorts of instruments, such as flutes or trombones, and sometimes in even larger ensembles. Some of the viol players hired for these special occasions were doubtless skilled professionals able to perform elaborate ornamentation. The names of several celebrated violists have survived; Ganassi mentioned two in his treatise – Giuliano Tibertino and Lodovico Lasagnino. The popularity of the viol with amateur players resulted in the publication of several viol tutors. Many general treatises on music, too, included sections devoted to viol playing or viol music (the most significant are listed in the bibliography). These treatises, together with iconographic evidence, present a surprisingly complete picture of the viol and the way it was played.



Ganassi was the first writer to describe in detail the standard method of holding the viol – firmly between the knees, but with the knees not impeding the bowstroke. His method is illustrated on the title-page woodcut of *Regola rubertina* (fig.8). Yet iconographic evidence shows that viols were often played in positions other than those recommended in textbooks. Two of the famous viol players pictured by Paolo Veronese in his *Marriage at Cana* (1562–3) in the Louvre are holding their viols in an almost horizontal position. This posture was condemned by Ganassi. Bass viol players are sometimes pictured standing, with their viols either resting on the ground or supported on a small stool (as described by Jambe de Fer; fig.9), or even held against the body with no visible means of support at all. This last method, illustrated by the woodcut in Judenkünig (A1523), looks highly improbable since the player has to support the weight of the instrument while playing it. Jambe de Fer, however, described a device used by players of the bass *viola da braccio* to help take the weight of their instrument. This consisted of a small hook worn by the player which could be attached to an iron ring fixed to the back of his instrument – an

8. Playing position, with the viol held between the knees: woodcut from the title-page of Ganassi's 'Regola rubertina' (Venice, 1542)



arrangement which may on occasion have been adopted by bass viol players. But despite these and other unusual playing positions, the standard posture as described by Ganassi remained almost unchanged and was firmly advocated by later 17th-century English theorists.

In the second volume of his viol tutor (A1543) Ganassi described fingering techniques in some detail. He gave five different fingerings for a scale (shown in ex.1). It is clear from his fourth and fifth alternatives that he intended the viol player to make full use of high positions. Indeed, his ricercares for solo viol contain some quite extended high passages, up to a 9th above the open top string. Alternative fingerings avoid unnecessary string crossing

9. Viol player (probably Marin Marais) supporting his instrument on a stool: portrait attributed to Constantijn Netscher, c1690 (Château de Blois)

Ex.1

(ex.2). The ricercares for solo viol and the madrigal arrangement for voice and viol contain many chords, some of which are facilitated by Ganassi's use of the *barré* (one finger laid flat across two or more strings).

Ex.2

The characteristic 'underhand' viol bowing was described by Ganassi. He started with the basic techniques, such as the grip with the thumb and middle finger holding the bow and the index finger applying the required amount of pressure; the different types of bowstroke; the use of arm in sustaining long notes, and the wrist in playing fast passage-work; and the need to keep the bowing arm firm but flexible. The correct use of up- and down-bows is explained at great length. Moreover, some of the musical examples have bowing marks, a dot beneath a note or letter indicating a down-bow, and the absence of a dot an up-bow. There are no slur marks as such, but there are occasionally two consecutive up- or down-bows, both articulated. Ortiz's *Trattado* suggests that groups of two or three fast notes ('semiminimas') should be played in one bow. But the quick passage-work in Ganassi's ricercares for solo viol is fully bowed out, usually with up-bows on the strong beats.

Ganassi's most interesting comments concern the style of good viol playing and the variety of tone which a good viol can produce. In the section on bowing, for example, he wrote that the best place to bow is at a distance of four fingers' width from the bridge. But he also described the rougher sound of the strings near the bridge and their more restrained sound near the fingerboard. The viol player, it would seem, was completely at liberty to use these different sound qualities if he so desired. Ganassi also referred to a 'tremar' (shaking) of the bowing arm and the left hand, possibly an indication of tremolando and vibrato. These and similar passages all serve to emphasize Ganassi's view that viol playing should be above all else expressive, and that the best way to play expressively is to imitate the human voice. To illustrate this, one of his most important points, he compared the viol player to the orator, who expresses his meaning to his listeners by gestures of the hand and changes in the tone of his voice. In the same way, he wrote, the good viol player should aim at variety and be sensitive to the music that is being played; and should not, for example, bow with vigour in 'sad and afflicted' music.

The earliest printed source of viol tunings is Agricola's *Musica instrumentalis deudsch* (A1529), which gives the following tunings: *f–a–d′–g′–c″* (*discantus*); *c–f–a–d′–g′* (*altus*, *tenor*); *G–c–f–a–d′–g′* (*bassus*). These tunings are clearly based on a single sequence of intervals for the whole consort, and consequently the position of the third varies within the consort. Most later theorists gave tunings in which all viols have the same sequence of intervals.

Ganassi devoted a large section of his tutor to explaining four 'regole' (rules) for consort tuning. The first three are given in Table 1. The fourth rule, which according to Ganassi was used by most players, is rather different. Entitled 'Modo de sonar una quarta piu alta' ('how to play a 4th higher'), it consists of a tuning for five-string viols (Table 2). It seems that the purpose of this tuning was to enable the performer to play in a higher position on a viol tuned to a lower pitch. The tenor viol, for example, is tuned just like the bass viol of the first three tunings without its lowest string: [*D*–]*G–c–e–a–d′*. The note *g′*, therefore, which in the first tuning is the open top string, has to be played on the fifth fret above the top string. In other words, the fourth rule involves a change of position, not pitch. Gerle gave an identical tuning for viols with five strings. Unlike Ganassi, however, he implied that a sixth string could be added, a 4th below the other five. A six-string bass, therefore, would presumably be tuned [*A′*–]*D–G–B–e–a*, although Gerle did not actually give the low notes in any of his charts.

Theorists of the late 16th and early 17th centuries gave one of two tunings. Cerreto and Mersenne gave the normal 'd tuning' as in Ganassi's first and second rules. Zacconi, Banchieri, Cerone and Praetorius gave a 'G tuning', a 5th lower. Banchieri, for example, gave the tunings in Table 3. The problem of these two quite different tunings is partly one of confusing terminology. The 'tenor' viol of the low-pitched consort was the exact equivalent of the 'bass' viol of the high-pitched consort. Thus the name given to a viol depended more on its relative position in the consort than on its absolute size or pitch. Very little music appears to have been composed for the low *G*-tuned consort; almost all 16th- and 17th-century viol music is for the higher *d*-tuned instruments. It has therefore been suggested that the low-pitched viols were used in concerted music, doubling other instruments and voices. The origins of the low *G*-tuned viol consort remain something of a mystery. The relationship between the low-pitched viols of the late 16th century and the earlier five-string viols described by Gerle and by Ganassi in his fourth rule may be significant (Table 4).

Praetorius	*A′–D–G–B–e–a* (or *G′–C–F–A–d–g)*

An interesting regional variant in viol tunings was given by Jambe de Fer, who contrasted the tunings of Italy and France. His 'Italian' tuning follows the standard sequence of intervals (4th–4th–3rd–4th–4th). In France, however, it was apparently the custom to play on five-string viols tuned to a sequence of 4ths without the 3rd. This 'French' tuning is confirmed by Mareschall's *Porta musices* (Table 5).

The earliest printed collections of music for viol consort are the two editions of Gerle's *Musica teusch* (A1532, A1546), which contain transcriptions of vocal music – German Tenorlieder and Parisian chansons. These pieces are short and often quite chordal. There is a similar collection of German secular music transcribed for viols in an earlier manuscript dated 1524 (*D-Mu* 4° cod.718). But such collections are exceptional, since most 16th-century consort music was neither composed nor arranged for specific instruments. Instead composers usually gave a general direction such as 'da sonar' ('to be played'). There can be little doubt, however, that viol consorts regularly performed both vocal music – masses, motets, madrigals and chansons – and instrumental ricercares and fantasias. Several printed collections of ricercares by composers such as Willaert and Tiburtino (a violone player) were published during the mid-16th century. These would almost certainly have been used by viol players.

The first printed source of solo viol music is Ganassi's *Regola rubertina*, which includes several ricercares for viol and one madrigal arrangement for viol and voice. The ricercares are short 'improvisations' consisting of running scales, cadential flourishes and some double stopping. In the arrangement of the madrigal *Io vorei dio d'amor* the viol accompanies the voice with a series of chords. This most interesting piece was probably intended as an imitation of the chordal style of playing associated with the *lira da braccio*. *Regola rubertina* also includes three exercises for practising various intervals. Some similar exercises are given in Mareschall's *Porta musices*; like Ganassi's they are intended to help the student practise difficult intervals and awkward leaps.

The art of playing divisions (i.e. improvising ornaments) was an essential part of the musical education of all 16th-century musicians, and Ortiz devoted the whole of his treatise on viol playing to this subject. His musical examples include ornamented cadential patterns for viol consort, freely ornamented versions of vocal pieces for solo viol and keyboard, and 'improvisations' over well-known bass patterns like the folia and the romanesca. Ortiz's arrangements of Sandrin's chanson *Doulce memoire* and Arcadelt's madrigal *O felici occhi miei* are among the most beautiful 16th-century pieces for solo viol. The ornamentation is restrained but by no means confined to standard cadential patterns. Towards the end of the century a small bass viol, the VIOLA BASTARDA, was developed specifically to perform divisions.

4. ENGLAND. The viol was introduced into England some time early in the reign of Henry VIII, perhaps, as suggested by Holman (C1993), by members of the van Wilder family. In 1526 two viol players, Hans Hossenet and Hans Highorne, entered regular employment at a monthly salary of 33s. 4d. In contrast with Italy and Germany, where its impact was immediate, there is little evidence to suggest that the viol spread rapidly into English society, and not until the 1530s is there any significant evidence of ownership of viols outside the royal court. In 1540 the appointment of Henry VIII's 'newe vialles', who comprised a complete consort of string players from Venice, Milan and Cremona, provided a strong impetus to the growth of the viol's popularity in England. Despite their official Italian identities, Prior (C1983) has shown that Henry's viol players were in fact Jews from northern Italian sephardic communities. The rapidly increasing popularity of the viol at the Tudor court is reflected in the inventory of Henry VIII's great collection of instruments (*GB-Lbl* Harl.1419), compiled at the end of his reign in 1547. It includes an item 'xix Vialles greate and small with iii cases of woodde covered with blacke leather to the same'. A few years later, English viol players were employed: in 1549 Thomas Kentt was 'admitted to the Vialles in place of greate Hans deceased', and from 1554 Thomas Browne appeared regularly in the lists of players.

The introduction of the viol into the curriculum of London choir schools during the reign of Henry VIII marked a new era of growth in England. By the mid-century, selected choirboys at the Chapel Royal, St Paul's Cathedral and Westminster Abbey were receiving regular tuition. In 1582 Sebastian Westcote, the Master of the Children at St Paul's, bequeathed to the Almonry his 'cheste of vyalyns and vialles' for the use of the pupils. For a while in the 1560s the children viol players of St Paul's occupied an especially prominent place in the ceremonial and theatrical activities undertaken by their school. At the Goldsmiths' Annual Feast on 17 June 1560, for example, company members were regaled with musical entertainment during their meal: 'And all the dynner tyme the syngyng chyldren of Paules played upon their vialles & songe verye pleasaunt songes to the delectacion & rejoysynge of the whole companie'. Incidental music and song accompaniments were also provided for plays. The interlude 'Wyt and Science' (*c*1545) by John Redford, organist of St Paul's, calls for a viol consort on stage: 'Heere cumth in fowre wyth violes and syng'. The long-term influence of the choirboy viol players was considerable. Generations of trained musicians entered the wider musical community in young adulthood with their viol playing skills. Furthermore, musical genres which had some early association with the choir schools (the In Nomine, the consort song and the consort anthem) retained a prominent place in the English repertory for the instrument.

The extent to which viol playing was taken up by amateur players in 16th-century England has been the subject of some controversy. Doe (C1977) argued that the spread of the viol outside the immediate environs of the Tudor court was very limited indeed. It is clear from

10. English and French manners of playing the viol: (a) title-page from Simpson's 'The Division-Violist' (London, 1659); (b) engraving by Nicolas Bonnart, 1664; note the bow grips, and the 7th string of the French instrument

Woodfill's documentary evidence, however, that there was a steady increase in the ownership of sets of viols in large Elizabethan households. In 1537, to take an early example, the accounts of the Earl of Rutland show that 53s. 4d. was paid for 'four viols bought at London'. Neither this, nor the activities of the choirboy consorts, however, prove the existence of a strong tradition of amateur playing; not until the beginning of the 17th century did the viol consort achieve widespread currency. Even then, pictorial evidence of its popularity remains surprisingly scarce. The painting of Sir Henry Unton from shortly after 1596 (in the National Portrait Gallery, London; *see* MASQUE, fig.1) is exceptional. It depicts a domestic CONSORT of five viol players seated round a table. A typical 17th-century 'chest' of viols as described by North (see Wilson, C1959) included two trebles, two tenors and two basses.

With the instruments of the younger JOHN ROSE (*d* 1611), the English viol found its classic outline (although not all Rose's surviving instruments are to this pattern). His father, also named John (*fl* 1552–61), was well established as a viol maker by the mid-16th century and successfully exported his instruments to Italy. John Stow rated the son's gifts 'as a maker of Bandoras, the Voyall de Gamboes and other instruments' as 'far exceeding' those of his father (*Annales*, 1631). John Rose's viols in the elegant classical shape (fig.11) share the same basic features of the Venetian instruments of Ventura Linarol (*b* 1539/40): both are lightly built with sloping shoulders, deep ribs and a flat back with the bend and slope towards the neck, and the table and back meeting the ribs flush at right angles. A distinctive feature of English viol design, perhaps developed by Rose himself, was the use of five pieces of wood for the belly. A further characteristic of some of Rose's surviving instruments, which was used by the later English makers, is extravagant decoration using geometrical designs in purfling and cross-hatching etched out with a hot needle. The viols of Henry Jaye (*fl c* 1610–67) of Southwark were the most prized in the mid-17th century (fig.12). Two other makers of particular importance were Richard Meares and Barak Norman; the latter's surviving bass viols are generally of the smaller division size, which seems to have been preferred in the late 17th and early 18th century.

Instruction books on viol playing appeared during the 17th century. Robinson's *The Schoole of Musicke* (A1603) and Playford's *A Breefe Introduction* (A1654) were intended primarily for consort players. For viol players wishing to learn the solo techniques of the lyra and division viols there were Playford's *Musick's Recreation*

11. *Consort bass viol by John Rose, dated 1590–1600 (Victoria and Albert Museum, London)*

on the Lyra Viol (A1652), Simpson's remarkably comprehensive *The Division-Violist* (A1659) and Hely's *The Compleat Violist* (A1699). The existence of a flourishing school of solo viol playing led to some refinements of technique including the slur, the 'thump' or pizzicato (on the lyra viol), and the hold (see §1 above and Table 6). Hume even made use of the *col legno*, instructing the player to 'Drum this with the back of your bow'. On the more basic matters of posture, bowing and fingering, 17th-century writers mainly followed their 16th-century predecessors. The importance of a correct or 'decent' posture, however, was given particular emphasis. Simpson, for example, criticized the playing of fast notes with the whole arm, on the grounds that 'it will cause the whole body to shake, which (by all means) must be avoyded; as also any other indecent Gesture'. There was also controversy about how best to use the elbow joint in bowing. Some, like Simpson, preferred it rigid; others, like Mace, 'Something Plying or Yielding to an Agile Bending'.

TABLE 6

slur ⁄	thump	hold ✓

Consorts of viols continued to be popular in England longer than on the Continent. As North observed, 'the use of chests of violls, which supplyed all instrumental consorts, kept back the English from falling soon into the modes of forrein countrys, where the violin and not the treble viol was in use'. In fact it was the bass viol that lasted the longest, for despite North's comments the 'extraordinary jolly' violin had begun to rival the treble viol quite early in the 17th century. The popularity of the violin was finally established during the Restoration period. Charles II detested the contrapuntal fancies of viol consorts, preferring instead the 'brisk and arie' sound of violins. Yet the bass viol lingered on as an amateur instrument, particularly for playing basso continuo lines, because of its subtle tone and ease in executing fast passages. Samuel Pepys enjoyed evenings devoted to 'the vyall and singing'; the practice of singing to an improvised chordal accompaniment on the bass viol (as an alternative to the lute or theorbo) persisted throughout the 17th century.

The earliest source of English consort music is Henry VIII's songbook (*GB-Lbl* Add.31922; ed. in MB, xviii, 1962, 2/1969), which dates from the early 16th century. The short, textless 'consorts' contained in that manuscript were probably not composed with any particular instrument in mind. In the mid-16th century English composers began to write textless polyphony, some of which may well have been intended for performance on viols. The most characteristic form was the plainsong In Nomine, a cantus-firmus composition based on a short section of plainsong from the Benedictus of Taverner's Mass '*Gloria tibi trinitas*' (see Dart and Donington, C1949). The earliest settings by Tallis are very vocal in style with smoothly flowing melodic lines. Tye, the first prolific composer of In Nomines, gave many of his compositions titles like *Rachells Weepinge*, *Weepe no more Rachell* and *My death*. The In Nomine came to be regarded as a kind of test piece in which the composer tried to display contrapuntal skill or experimental ingenuity. Tye's In Nomine *Trust*, for example, is in 5/4.

Although few in number, William Byrd's works for viol consort are diverse and of uniformly high quality. They range from the exquisitely crafted and intensely polyphonic three-part fantasias to the large-scale six-part, multi-sectional works, which include popular tunes and dance-like sections (in one case a complete galliard). Some of the finest are *sui generis*: the famous 'Browning' with its astonishing ending exploring exquisitely controlled

12. Viols: (a) treble by Henry Jaye, London, c1640 (private collection); (b) small tenor by Henry Jaye, London, 1667; (c) bass, with bow, by Martin Voigt, Hamburg, 1726 (Victoria and Albert Museum, London)

false relations, and the very fine five-part canonic fantasia. Not least remarkable of Byrd's qualities as a composer for viols is the transparency of texture he achieves, even in the most complex polyphony.

With a new generation of composers led by Alfonso Ferrabosco (ii), the polyphonic fantasia became the favoured form of composition for viol consort. In some ways the early English fantasia resembled its continental model, but North's opinion was that English composers improved on their Italian predecessors by 'working more elaborately'. Of the many 16th-century dances the stately pavan was most popular with composers of viol consort music. Ferrabosco and Tomkins, in particular, wrote some remarkably sonorous five-part pavans. The influence of the fantasia on the pavan was sometimes marked. By the mid-17th century some pavans, such as those by Jenkins, had developed into quite extended contrapuntal compositions.

The most significant development in late 16th-century consort music was undoubtedly the growth of idiomatic writing for the viol. On the Continent ricercares, fantasias and canzonas were still being described as 'da sonar' ('to be played'). But in England instrumentation was often specified in more detail. Thus English composers were able to distinguish between the comparatively restricted range of the voice and the wider compass of the viol. Tomkins, for example, commenting on a series of fantasias by Ferrabosco (*GB-Lbl* Add.29996), wrote 'made only for the vyolls and organ which is the Reason that he takes such liberty of compass which he would have Restrayned; if it had bin made for voyces only'. Playing above the frets, therefore, became quite common as the viol's upper register was increasingly exploited. The solo viol repertory was also influential in the development of idiomatic consort music. Although the technique of playing divisions was well known, some early 17th-century composers wrote out the divisions they wanted rather than leaving them to be improvised by the performer. Two examples of this, from an In Nomine by Gibbons and a fantasia by Ravenscroft, are given in ex.3. Simpson (A1659) printed a table of ornaments or 'graces' for the solo viol player including 'beats', 'elevations', 'backfalls' and 'relishes'. Ornament signs, however, varied greatly at this period. Some ornaments could be performed 'by the bow'. Simpson mentioned 'a Shake or Tremble with the Bow, like the Shaking-Stop of an Organ' (?tremolo), but he did not recommend 'the frequent use thereof'.

The development of idiomatic writing is perhaps best seen in the 'broken' consorts of the early 17th century in which bowed, plucked, keyboard and wind instruments were combined. A typical instrumentation is found in Morley's *First Booke of Consort Lessons* (1599), which contains original compositions and arrangements for treble and bass viols, 'flute' (recorder), cittern, lute and bandora, each instrument with its own idiomatic part. During the 17th century many different instrumentations were tried, including both consort viols and solo lyra and division viols, as for example in the consorts for treble, bass and lyra viols by Ferrabosco and Hume, the consorts for violin, division viol, theorbo and harp by William Lawes, the duets for keyboard and bass viol published in *Parthenia In-Violata* (RISM *c*1614[23]) and the fantasia-suites for one or two violins, bass viol and organ by Ferrabosco and Coprario.

There can be little doubt that viols were often used in the performance of vocal music. Directions such as 'Apt for Viols and Voyces' or 'to be played on Musicall Instruments' are frequently found on the title-pages of late 16th- and early 17th-century publications. Moreover, printed vocal music was sometimes copied out without text and (in the words of Roger North) 'for variety used as instrumentall consorts, with the first words of the song for a title'. A large selection of Italian madrigals by Marenzio, Monteverdi, Ferrabosco and others was copied out in this way (*GB-Lbl* Add.37402–6). Unlike the madrigal, the English consort song, which dates from the mid-16th century, was written specifically for viols and solo voice or voices. The greatest composer of consort songs was undoubtedly Byrd, whose lament for his friend Tallis, *Ye sacred muses*, is a magnificent example of the genre. During the early 17th century the consort song continued to flourish and even influenced other forms: composers such as Orlando Gibbons used the viol consort in the verse anthem.

Ex.3

(a) Gibbons: In Nomine (MB, ix, 1955)

(b) Ravenscroft: Fantasia (*GB-Lbl* Add.19758)

By the mid-17th century newer forms such as the suite or 'sett', a flexible combination of fantasias and dances, were becoming increasingly popular. There were also some important changes in instrumentation. The 'whole' consort of three to six viols was often replaced by the 'broken' consort of violins, bass viols and organ. The organ, in fact, became a regular member of the viol consort. Parts for the organ varied from simple score reductions of the viol parts (as in the magnificent set of five-part fantasias by Jenkins) to completely independent parts, sometimes with quite extended solo sections (as in Jenkins's airs for two trebles, two basses and organ). The treble-bass polarity of these airs is indicative of the move towards trio sonata texture. In later trio sonatas (e.g. by Purcell) the viol continued to be given phrases independent of the keyboard; during the 18th century, however, the cello superseded the viol in this genre. Locke and other Restoration composers wrote much music for the new instrumentation of one or two trebles (viols or violins), bass viol and organ. Tempo and dynamic indications such as 'long tyme', 'away', 'drag', 'lowde' and 'verrie softe' became more common during this period. By the time of Purcell polyphonic fantasias and In Nomines were old-fashioned. Much of this kind of viol music was used, in the words of North, 'in the fire for singeing pullets'. Yet Purcell's compositions in these forms are among the finest ever composed, a fitting conclusion to the long tradition of consort music in England.

The post-Restoration repertory is small. It includes, besides the Purcell fantasias, several works by Simpson, among them 12 fantasias ('The Monthes') and four fantasia-suites ('The Seasons'), as well as the seven examples of divisions at the back of his influential tutor, *The Division-Violist*, which was highly admired by North and republished as late as 1712. Other late uses of the viol are by Gottfried Finger (for one or two bass viols with and without continuo – some of which use scordatura – and trios for violin, bass viol and continuo), Benjamin Hely (for unaccompanied bass viol, and duos with and without continuo) and William Gorton (*Never Publish'd Before a Choice Collection of New Ayres Compos'd and Contriv'd for Two Bass-Viols*, 1701). Virtuosic transcriptions for bass viol exist of Corelli's op.5 violin sonatas and also of vocal works in Walsh and Hare's publication *Aires and Symphonies for the Bass Viol* (*c*1710). As late as 1724 Handel supplied a bass viol part, making idiomatic use of chords and arpeggio patterns, in an aria from *Giulio Cesare*.

The bass viol remained popular with amateur musicians well into the 18th century, as both a solo and a continuo instrument, and the arrival in England during the 1758–9 season of Carl Friedrich Abel, the instrument's last famous virtuoso, stimulated a short-lived but significant revival of interest. Abel's playing, according to Burney 'was in every way complete and perfect' and his compositions 'easy and elegantly simple'. His works for viol include a large number of easy sonatas with continuo, an aria with viol obbligato and several virtuoso and highly idiomatic sonatas for unaccompanied bass viol. After his death in 1787 Burney remarked that Abel's 'favourite instrument was not in general use and will probably die with him'.

Gainsborough, an enthusiastic amateur, and a friend of Abel, wrote to a friend on 4 June 1772: 'I'm sick of Portraits and wish very much to take my Viol da Gamba and walk off to some sweet Village when I can paint Landskips and enjoy the fag End of Life in quietness and ease'. Another artist who studied 'viol di gamba' in his youth (*c*1766) was Thomas Jones. One of the aristocratic enthusiasts for the viol at this period was Lady Spencer. The Althorpe accounts in 1773 and 1774 (*GB-Lbl* Althorpe F 184) contain references to the purchase of two complete sets of viol strings, to the 'Puting a Viol da Gamba in order', and to the supply of a 'Bow for the Viola da Gamba'. Mrs Howe wrote to Lady Spencer on 29 December 1779 (*GB-Lbl* Althorpe F 45) that she was looking forward to 'hearing one of y[r] new pieces of musick upon y[r] Viol de gambo'. New and fashionable repertory was provided not only by Abel but apparently also by J.C. Bach, who in 1773 took legal action against Longman, Lukey & Co. for publishing an unauthorized edition of 'a new sonata' for keyboard and viola da gamba. A manuscript of three sonatas for viola da gamba and keyboard by Bach was auctioned at Sotheby's at the sale of 28–9 May 1992. The only 18th-century public performance with piano and viola da gamba so far recorded took place at Coopers' Hall in King Street, Bristol, on 17 January 1771. The programme included: 'a song by Miss Marshall, accompanied by the Piano Forte and Viol de Gambo' and 'a favourite Lesson on the Harpischord by Miss Marshall, accompanied by the Viol de Gambo'. It is likely that easy sonatas for other instruments were played by this last generation of English amateur viol players, as indeed was viol music by other string players. Sir William Hamilton (having taken up the viola) wrote to Lord Herbert from Naples: 'I should think some of Abel's Musick for Viol di Gamba wou'd do well on the Tenor if you cou'd get any old solos or pieces of his Musick copied for me out of Lady Pembroke's books'. The last work with a part for 'Viola di Gamba' to be published in England was perhaps no.7 of William Jackson's *Twelve Songs*, op.16 (*c*1790).

5. Italy from *c*1580. Virtuosity on the bass viol first reached spectacular heights with the Italian school of Viola bastarda playing, the seeds of which are found in the madrigal improvisations of Ortiz (1553). The fully-fledged *bastarda* style flourished from about 1580 to 1630; the first published compositions were by Girolamo Dalla Casa (*Il vero modo di diminuir*, 1584) and the last by Vincenzo Bonizzi (*Alcune opere di diverse auttori a diverse voci, passaggiate principalmente per la viola bastarda*, 1626). In addition to its solo role, the viol continued to be used in ensembles. Pietro de' Bardi, in a letter to G.B. Doni (1634), recalled Vincenzo Galilei's *stile rappresentativo* setting of Dante's lament of Count Ugolino (performed with the Florentine Camerata in 1582) as being 'intelligibly sung by a good tenor and precisely accompanied by a consort of viols'. Monteverdi's scoring of *Orfeo* (1607) includes three *bassi da gamba*. In this work, as in the *intermedi* of the previous century, the contrasting instrumental timbres have an important symbolic significance: the viol family was associated with the gods, the supernatural and the nobility, and the bass members were thus suitable for depicting the underworld (with trombones). Monteverdi later specified a *contra-basso da Gamba* in his *Combattimento di Tancredi et Clorinda* of 1624 (published 1638).

As the 17th century progressed the viols were gradually ousted by the violin family: already by the time of Monteverdi's *Orfeo* the treble had fallen to the brilliant and fashionable violin (though it continued to be used in Germany until the middle of the century and in England and France for even longer). By the second quarter of the century Italian string continuo parts increasingly demanded the new cello. Writing from Rome in 1639, the French virtuoso André Maugars lamented

> as for the viol, there is no one in Italy now who excels at it; and indeed it is very little played in Rome, at which I was greatly astonished, since formerly they had Horatio [Bassani] of Parma, who did marvellous things with it and left to posterity some very fine pieces.

Nevertheless the viol family did not die out. There is evidence that consorts of viols still persisted in cultural isolation, e.g. in Sicily and in convents, and the bass viol is specified in two Venetian operas of the 1670s, Petronio Franceschini's *Arsinoe* (1676) and Carlo Pallavicino's *Nerone* (1679). Ten patterns survive by Stradivari for a 'Viola da Gamba of the French Form' from 1701, and a number of fine Italian six- and seven-string instruments from the first two decades of the 18th century also exist. And despite its unpopularity at the time of Maugars' visit, it appears to have been particularly in Rome that an interest in the viol was rekindled in the early 18th century, notably by the patrons Benedetto Pamphili and F.M. Ruspoli. Pamphili employed a viol player named 'Monsieur Sciarli' and Ruspoli retained Bartolomeo Cimapane to play at his Sunday afternoon *conversazione*; and in 1708 the celebrated German virtuoso E.C. Hesse visited Italy, performing in Rome, Naples and Venice. The Roman lutenist Lelio Colista (1629–80) left a duet sonata for violin, bass viol and continuo and a further four (incomplete) sonatas which included the viol. Alessandro Scarlatti scored his cantata *Già sepolto è fra l'onda* for soprano, 2 violins, violetta, bass viol and continuo; the work was probably intended for a Roman patron. But the most significant compositions with bass viol are Handel's cantata *Tra le fiamme* (1707) for soprano, 2 recorders, 2 violins, bass viol and continuo and his sumptuous *Oratorio per la Resurrezione* (1708), composed for Pamphili and Ruspoli respectively. In the opening sonata of *La Resurrezione* the bass viol makes an arresting entrance as a member of the concertino group paired with the solo violin (played in the first performance by Corelli). Handel assigned to the viol melodic lines (commonly as the second part in a trio texture), Italianate arpeggiated figurations and figured bass; the choice of the viol for a Resurrection oratorio is in keeping with the German association of the viol representing the solace of the Resurrection.

6. France from *c*1600. There was a strong late Renaissance tradition of viol playing in France, encouraged by the Académie de Poésie et de Musique which, under the direction of Jacques Mauduit, included viol consorts in its concerts. At first, as in Italy, viols were used to accompany voices, but soon purely instrumental genres became popular. The fantasias by Du Caurroy and Le Jeune and later Métru, Roberday, Du Mont and Louis Couperin are evidence of this. These fantasias do not, however, exploit the resources of the viol as distinctively as their English counterparts. Indeed, many were played by viol consort, organ or other instruments according to the choice of the performers. Idiomatic English consort music was also known in France, and Mersenne chose a fantasia by Alfonso Ferrabosco (ii) as an illustration of viol music in his *Harmonie universelle* (1636–7). The viol was not only used in consort; Trichet recommended it as 'highly suitable for all musical ensembles'. Herouard recalled a group comprising 'a lutenist, a harpsichordist and violist named Pradel, an excellent player if ever there was' playing for Louis XIII in 1609.

Both Mersenne and Jean Rousseau (A1687) paid tribute to the skills of André Maugars (*c*1580–*c*1645) as the first great French virtuoso. Maugars worked in London as a musician to James I in the 1620s and acknowledged his debt to the English players, particularly Ferrabosco, regarding their use of chords. Mersenne marvelled at Maugars' ability to execute alone 'two, three or many parts on the bass viol, full of ornaments and with a rapidity of fingers which seemed to preoccupy him little'. Furthermore, Mersenne considered the viol to be the instrument which most perfectly imitated the human voice. He described the standard French viol as having six strings (tuned in 4ths with a 3rd in the middle) and his illustration of the modern viol portrays the classical English model. Rousseau named Nicolas Hotman (*d* 1663) as the next early player of distinction. On Louis Couperin's death in 1661, the position of viol player to the king was divided between Hotman and Sébastien Le Camus, 'the two best players of the viol and theorbo that the King had ever heard'. In the 17th century it was normal for players to double on the viol and theorbo; Robert de Visée is another example. Hotman was celebrated for his *pièces d'harmonie* with beautiful melodies imitating the voice, in the style of the *air de cour*. Hotman taught De Machy, Rousseau and the celebrated Sainte-Colombe, teacher of Marin Marais. Rousseau credited Sainte-Colombe with introducing silver-covered strings, adding the seventh, low A string and developing a left-hand position in which the thumb fell behind the second finger instead of the first, as was common practice on the theorbo. This gave the left hand greater flexibility, and Rousseau especially commended Sainte-Colombe for his ability to imitate all the vocal graces. Sainte-Colombe's new hand position was the one that survived into the 18th century but for a while it caused deep division between the old-fashioned players led by De Machy, who remained faithful to the theorbo hand position, and the progressives of Sainte-Colombe's school. 67 *Concerts a deux violes esgales* (*F-Pn*) and 180 pieces for solo bass viol survive by Sainte-Colombe; they reveal a highly idiomatic and mature style, rich with chords and ornamentation. He was unique among viol player-composers in his use of unmeasured passages.

From about 1675 to 1760 the French virtuoso bass viol school led the rest of Europe in viol playing. Foreign virtuosos such as Ernst Christian Hesse were sent to Paris by their employers to study with viol players like Marin Marais and Antoine Forqueray, and it was to Jean-Baptiste Forqueray that Prince Friedrich Wilhelm of Prussia looked for advice on viol playing. A large and important corpus of French viol music was also circulated in England, Germany and the Low Countries; Marais' *pièces de violes* were particularly widely known. The viol was often played in private concerts in the salons of the nobility, and professional players began to arrange recitals themselves; according to Titon du Tillet, Sainte-Colombe was known for 'concerts *chez lui*, where two of his daughters played, one on the treble viol and the other on the bass, thus forming a *concert* for three viols with their father, which was a great pleasure to listen to'.

Both Louis XIV and Louis XV employed a viol player among their *Musiciens ordinaires de la chambre du roy*, and a demand for teachers arose as the instrument came to be considered a fashionable one for the nobility themselves to play. Amateur players at court included the Regent, the Duke of Orleans and Louis XV's daughter Princess Henriette Anne (fig.13). Continuo playing constituted an important role for the viol in chamber music, and it was as a continuo instrument that it appeared in the *petit choeur* of the Académie Royale de Musique from the time of Lully until at least 1726, when Quantz heard Roland Marais and Jean-Baptiste Forqueray perform. But only rarely, as for example in the *air* 'Beaux lieux' added to the second version (1708) of Destouches' opera *Issé*, was the viol given an obbligato part.

Four important sources of information on viol playing were printed between 1685 and 1687: collections of *pièces de viole* (prefaced by long *avertissements*) by De Machy and Marais, and treatises by Danoville and Jean Rousseau containing comprehensive instruction on playing technique, the instrument and bow, tuning and ornamentation. 18th-century information is found in *avertissements* (particularly to the later collections by Marais), in Hubert Le Blanc's *Défense de la basse de viole* (A1740) and in a series of letters from Jean-Baptiste Forqueray to Friedrich Wilhelm of Prussia which discuss the construction and stringing of the instrument as well as its playing technique. In the late 17th century, taste dictated playing in the 1st or half-position whenever possible, but by the 18th century viol players began using the upper positions on the three top strings to avoid changing position unnecessarily. From 1717 Marais frequently used positions from the seventh fret upwards, known as the *petit manche*. Jean-Baptiste Forqueray developed this technique still further when, inspired by the mid-18th-century virtuoso violinists such as Leclair, he aimed to achieve a smooth and unified line by extensive use of the *petit manche*, on both high and low strings. This produced new and unusual tone colours and enabled him to obtain an exotic new range of chords (not only in the *petit manche* but also combined with open strings). The *pièces de viole* were often, when composed by a viol player, carefully marked with fingering, bowing and ornament signs. Ornaments played an essential rhetorical role in *pièces de viole*, just as in the *airs de cour* on which they were modelled. Rousseau described them as a 'melodic salt which seasons the melody and gives it taste'. Viol ornaments included the rare semitone glissando

13. Princess Henriette Anne playing the bass viol: portrait by Jean-Marc Nattier, exhibited 1755 (Château de Versailles)

(called by Marais the *coulé de doigt*) and a form of vibrato in which a finger is placed on the string, touching the one on the fret, beating lightly on the string 'with an even shaking movement'. This kind of vibrato, which Marais indicated by a horizontal wavy line, was often preferred to a one-finger vibrato (used on the modern cello and indicated by Marais with a vertical wavy line), except of course when the note itself was played by the little finger. Vibrato is regularly marked only in *tombeaux*, *plaintes* and suchlike pieces; the *coulé de doigt* was regarded as suitable for 'languishing melodies' (fig.14 and Table 7), generally on the second finger and ascending, though according to Rousseau it could be used descending as well.

Jean-Baptiste Forqueray drew special attention to the bowing hand: 'it should express all the passions . . . [the middle] finger presses on the hair to make more or less sound, and by pressing and relaxing imperceptibly this makes the expression both soft and loud'. By 1725 a variety of different bowstrokes had been developed, including enormous slurs of 24 notes and more, portato bowing on both single notes and chords, and the tremolo. Le Blanc (p.83) described the rich yet airy and resonant sound that the great French viol players made:

> Père Marais and Forcroi le Père . . . strove to make a sonorous sound, like the Great Bell of St Germain, which they achieved by playing on air just as they recommended, that is to say that having bowed a stroke they allowed time for the string to vibrate.

He went on, however, to distinguish between the 'old' style of Marais which resembled 'so much the plucking of the lute and guitar' and the 'new' mid-18th-century technique characterized by the imperceptible bow change 'which reproduces and multiplies the expression like the Sun's rays'.

The term 'pièce de viole' generally implies music for one viol and continuo, which was likely to consist of a second viol with harpsichord or theorbo (the latter was strongly recommended by Marais). There are also *pièces de viole* for two unaccompanied viols (notably Sainte-Colombe's *Concerts à deux violes esgales*) and for two viols and continuo (including pieces by Marais in his first and fourth books of *pièces de violes*); furthermore there are solo *pièces d'harmonie* for viol, among them four suites by Du Buisson of 1666 and pieces by De Machy. The latter's collection of 1685 is the first published set of *pièces de viole;* four suites are written in staff notation and four in tablature. From 1685 to 1748 a constant stream of *pièces de viole*, usually by viol players, were published; Marais, the outstanding and most prolific composer of this school, published five books (596 pieces) between 1686 and 1725; his works are remarkable for their exceptional craftsmanship and variety. Other important composers were De Machy, Caix d'Hervelois, Morel, François Couperin, Cappus, Roland Marais, Dollé and Jean-Baptiste Forqueray – all professional viol players except Couperin. *Pièces de viole* were normally arranged in suites; those of the late 17th century usually comprised a prelude and a conventional selection of dances, but 18th-century suites contained an increasing number of *pièces de caractère* (such as Marais' *Le tableau de l'opération de la taille*). The French style of virtuoso writing for the viol is characterized by an extensive use of

chords (see fig.14), which are particularly idiomatic to the viol because of its frets. De Machy likened writing for the viol without chords to playing the harpsichord or organ with only one hand.

Independent parts for the viol in chamber music appeared before the end of the 17th century in works such as Charpentier's *Sonate à 8* (*c*1686) and the *sonades* of François Couperin (early 1690s); and in scattered movements in works for violin (or flute) and continuo by Elisabeth Jacquet de La Guerre (1707), La Ferté (1707), Dornel (1711), Jean-Féry Rebel (1713) and Montéclair (1724–5) the viol is often freed from the bass. Violin, viol and continuo was a medium used by several composers including Marais, in his 1723 book *La gamme et autres morceaux* (where the *Sonnerie de Sainte-Geneviève du Mont de Paris* is found), Leclair (op.2 no.8, *c*1728) and Boismortier (1732, 1734); and Louis-Gabriel Guillemain included the viol in his *Sonates en quatuors* (1743, 1748). Several solo and trio collections were issued with a part for viol, cello or bassoon. Rameau's *Pièces de clavecin en concerts* (1741) for violin (or flute), viol and harpsichord contains some of the finest French Baroque chamber music; here the viol plays an independent part which generally lies above the bass line, sometimes even in the same register as the violin.

In the early decades of the 18th century, the secular *cantate* came into vogue and some composers, including Bourgeois, Bousset, Clérambault, Montéclair, Rameau and Stuck, used the viol there as a concertante instrument as well as for continuo. They did not attempt to write for the viol in the style of their player-composer contemporaries, but rather exploited the viol's tone quality, weaving a melodic line around that of the voice and often using the same motivic material for both parts. Occasionally the viol was offered as an alternative for a concertante flute part, for example in collections by Clérambault and Collin de Blamont.

TABLE 7

Symbol	Meaning
∿∿	two-finger vibrato
⸾ (vertical wavy line)	one-finger vibrato
ɔ	trill
×	mordent
t	tiré (down-bow)
✓	coulé de doigt
1, 2, 3, 4	1st, 2nd, 3rd, 4th finger
4 (with three dots above)	4th finger on 3rd string

The French bass viol was a large, lightly built instrument, which generally had seven strings though some survive with six. Le Blanc described its tone as like 'the voice of an Ambassador, delicate and even a little nasal, always being highly proper'. The internal workmanship was extremely delicate: the linings were of linen or parchment and occasionally a series of little cubes of wood was used between the table and ribs to increase the adhesive area. Michel Collichon (*fl* 1666–93) was highly regarded as a maker in the latter half of the 17th century. Nicolas Bertrand and Guillaume Barbey were the most celebrated of the next generation, their finest viols being valued at around 100 livres. Both Marin Marais and Antoine Forqueray possessed instruments by Barbey; nonetheless the outstanding viol in the inventory taken at Marais' death was 'une viole Anglaise fait par Robert Grille en mil six cens seize' valued at 600 livres. Jean-Baptiste Forqueray believed Barbey to be 'the best maker we have had for the shape, thickness, quality and dimensions' and explained that his father had two of Barbey's viols 'l'une pour les pièces, l'autre pour l'accompagnement'. He also wrote on the importance of setting up the viol correctly so as to obtain a free sound and promote ease of playing, and the necessity of the

14. Part of the tombeau for Sainte-Colombe from Marais' 'Pièces de viole' [2e livre] (1701)

strings being in true proportion to one another. He advocated that the lowest four strings be covered with the same covering (the C string half covered) and warned that too much rosin on the bow would make it liable to squeak and dull the tone. By the 1740s the 'pardessus de viole' was valued more highly than the bass; André Castagnery's bass viols were priced at 6 livres whereas his pardessus were estimated at between 10 and 12 livres in the inventory taken at his death in 1747. The finest pardessus of Jean-Baptiste Salomon (1713–48) and Louis Guersan were the most expensive instruments of their genre at up to 38 livres; some of Guersan's pardessus and quintons were still valued at between 30 and 36 livres in 1770.

Between the late 17th and mid-18th centuries the bass viol was gradually superseded throughout Europe by the cello as the string continuo instrument. In the early Baroque period, the bass member of the violin family had been less refined in tone than an 18th-century cello, so the viol was preferred for its beautiful sound and ease in playing fast passages. But as the cello and its stringing were improved, and instrument making in general was developed, the cello was favoured because it was better suited to supporting the louder 18th-century ensemble. It overtook the viol first in Italy, where fine cellos were made from the middle of the 17th century, and later in France as well as in England and Germany as the Italian innovations in cello making and playing spread to the rest of Europe. Le Blanc and Jean-Baptiste Forqueray fought a fierce rearguard action on behalf of the bass viol, but though Forqueray's talents were highly respected, Ancelet remarked in his *Observations sur la musique, les musiciens et les instrumens* (Amsterdam, 1757) that 'the Violoncello, which is without doubt one of the most beautiful instruments . . . is generally used everywhere . . . Only the Basse de Viole declared war on the Violoncello, which won the victory'.

In France, unlike the rest of Europe, treble viols remained popular long after the demise of the viol consort. Louis Couperin and Sébastien Le Camus were renowned treble players in the mid-17th century. Rousseau emphasized the vocal character of the instrument and the need to adopt 'la delicatesse du Chant' and 'to imitate all a beautiful Voice might do with all the charms of the Art'. He proceeded by stressing that 'one must not abandon the spirit of the instrument, which does not wish to be treated like a violin, with which it is correct to animate, in place of which it is correct for the *Dessus de Viole* to flatter'. Initially the treble viol largely played instrumental renditions of the fashionable *airs de cour*, although there are fine 17th-century obbligati for it, notably in sacred works by Du Mont and Charpentier, particularly the latter's *1ère leçon du vendredi* ('De lamentatione Jeremiae'). The first published music for the *dessus de viole* was Louis Heudelinne's *Trois suites de pièces à deux violles* (Paris, 1701). By this time the *dessus* had become popular among noble ladies; it was believed to be more appropriate for women to play a small viol on their lap rather than a violin on their shoulder.

As the vogue for the new Italian violin sonata grew, the six-stringed *pardessus de viole* was developed on which the low *d* of the treble viol was exchanged for a high g″, enabling players to reach top d‴, necessary for playing violin music, in 1st position. By the time Michel Corrette published his *Méthode pour apprendre facilement à jouer du pardessus de viole a 5 et à 6 cordes* (A1748) a new variant, the quinton, had been 'invented', strung with the bottom three strings like the lowest three on the violin and the top two in the manner of the pardessus: *g–d′–a′–d″–g″* (fig.15*b*). Corette described this 'new instrument' as having the refined 'flute-like treble of the *pardessus de viole* and the sonorous bass of the violin' adding that 'it sounds much better than the ordinary *Pardessus*'; he recommended it unreservedly for 'violin sonatas and concertos'. Corette, Ancelet and Brijon praised the playing of Mlle Levi, who rendered 'her instrument equal to a violin by the beauty of her playing'. By the 1760s a third type of pardessus, with four strings tuned like a violin, had emerged. The celebrated violinist L'abbé *le fils* mentioned it on the title page of his *Principes* (1761): 'Those people who play the four-string *Pardessus* can use these Principes, they only have to remember to give the opposite significance to the bowing signs'. And Brijon remarked in his *Méthode nouvelle et facile pour apprendre à jouer du par-dessus de viole* (A1766) that 'in Paris lots of people play the *pardessus* with four strings'. Interestingly Brijon, who was a violinist, suggested using an overhand bowing on the pardessus. About 20 volumes of *pièces* and *sonates* were published specifically for the *dessus* and pardessus. Some of the finest music is by Dollé and Barthélemy de Caix; other composers include Thomas Marc, Jean Barrière, C.H. de Blainville, and Louis de Caix d'Hervelois. Villeneuve transcribed over 200 of Marais' *pièces* and published them under the title *Pièces de viole ajustées pour le pardessus de viole à cinq cordes* (Paris, 1759). There is also a wealth of duos for two pardessus, flutes, violins or *vielles*. The pardessus' popularity outlived that of the bass viol; as late as 1783 the *Almanach musical* advertised 'trois Maistres du pardessus de viole'.

7. Germany and the Low Countries from *c*1600. During the late 16th century and the first half of the 17th a number of English musicians took up employment in Germany, Denmark, Austria, the Low Countries and Spain. Among them were six virtuoso violists: William Brade, Thomas Simpson, Walter Rowe, Daniel Norcombe, Henry Butler and William Young. They had a major effect on the development of continental viol playing, Rousseau declaring that it was the 'English who were the first to compose and play chordal pieces on the viol, and who exported their knowledge to other Kingdoms'. Brade and Simpson both published collections of consort music; Simpson's volumes include many dances by his English contemporaries, e.g. Robert Bateman, John Dowland, John Farmer (i), Alfonso Ferrabosco (ii), Robert Johnson (ii), Peter Philips and Thomas Tomkins, as well as works by German composers. The pavan was the form that particularly attracted Anglo-German composers to display their most sustained and complex musical ideas, corresponding to the role held by the fantasia in England. German composers such as Valentin Haussman and Melchior Franck published instrumental music which began to show idiomatic string characteristics. Other volumes of dance music, such as Schein's *Banchetto musicale* (Leipzig, 1617), group the dances into suites (Padouana, Gagliarda, Courente, Allemande and Tripla). The viol is designated in some of the progressive three- and four-part *Canzoni e concerti* (1627) by the Polish violinist Adam Jarzebski. In 1649 Johann Hentzschel published a canzona for eight bass viols and continuo in a solemn, contrapuntal Venetian style using double choir writing. David Funck's *Stricturae viola di gambicae, ex*

15. French viols: (a) bass by Nicolas Bertrand, Paris, 1720; (b) pardessus de viole by François Le Jeune, Paris, 1753 (Musée de la Musique, Paris)

sonatis, ariis, intradis, allemandis (Leipzig, 1677) for four bass viols exploits the viol's full three-octave range. The divisions composed by Daniel Norcombe and Henry Butler, who worked in Brussels and Spain respectively, were warmly commended by Christopher Simpson as models 'worthy to be imitated'. Butler's 13 surviving sets are of grand proportions, exploring the range of the instrument with taxing virtuosity and developing up to 49 variations. The first published sonatas by an Englishman were William Young's *Sonatae à 3, 4, e 5* for two to four violins, obbligato bass viol and continuo (Innsbruck, 1653). The virtuosity displayed by the British expatriates was taken up by their continental pupils, most notably Johann Schop (i), Nicolaus Bleyer and Gabriel Schütz.

An indication of the viol's high profile in 17th-century Germany is its frequent appearance in the scoring of the new Lutheran church music. The German predilection for consorts of low instruments is clearly evident in the many sacred works scored for multiple bass viols, both alongside other instruments and as a consort of their own. Ensembles consisting of three viols with two violins superimposed were common, as was a consort of four viols. Often the inner parts of 17th-century cantatas are simply marked 'viola' and it is uncertain whether they were intended for violas *da gamba* or *da braccia*; in the middle of the century it seems that whichever instrument was more readily available took the part, but later the violas *da braccia* increasingly ousted the violas *da gamba*. An early use of a consort of viols in German sacred music is Heinrich Schütz's *Historia der . . . Auferstehung . . . Jesu Christi* (1623), in which Schütz used four bass viols to accompany the Evangelist. Thomas Selle wrote for two obbligato bass viols in his *St John Passion* (1641–3), Johann Sebastiani used four in his *St Matthew Passion*

16. German consort of viols: detail of 'Duke August the Younger and Family' by Albert Freyse, c1645 (Landesmuseum, Brunswick)

(1663), and Johann Thiele used two for the inner parts of his *St Matthew Passion* (1673), employing dramatic tremoli to depict an earthquake. Idiomatic bass viol parts appear in eight of Buxtehude's cantatas; his *Jubilate Domino* for alto, viol and continuo demands a range of three and a half octaves (*D* to *a''*) and begins with a 'sonata' for viol and continuo; both *Laudate pueri* and *Ad cor: vulnerasti cor meum* are scored for five bass viols. This last cantata is an eloquent and deeply felt Lutheran *lamento* and a fine example of the 17th-century German use of viols to express that affect. The final section incorporates tremolo quavers for the viols (embellishing the return of the opening material), a device which Buxtehude reserved for particularly expressive phrases. Many other sacred German works are scored for viols, including Franz Tunder's wonderful chorale prelude for five viols and soprano, *An Wasserflüssen Babylon*, whose disturbed chromaticism anticipates Bach. In central and southern Germany the viol continued to be used in sacred compositions until the 1680s, after it had fallen from favour in the north. Viols were not, however, the exclusive preserve of Protestant music. Roman Catholic Austria maintained a tradition of viol playing, despite the prevailing taste for Italian music, from the time of John Price (i) and William Young until the 1730s. Here as in north Germany viols were associated with the affect of *lamento*, and were used in the uniquely Viennese Passiontide genre, the *sepolcro*. A.M. Bononcini, Antonio Draghi and G.B. Pederzuoli all wrote for the viol as did Emperor Leopold I.

With the universal acceptance of the Italian four-part string quartet as the core of the 18th-century orchestra, the viol lost its position in the instrumental ensemble of Protestant church music. However, 18th-century composers occasionally chose to employ its unusual timbre for special effect, particularly in Passions and funeral compositions. Telemann used two in his funeral cantata *Du aber, Daniel, gehe hin* and C.P.E. Bach also employed two in his *St Mark Passion*. The outstanding composer of 18th-century sacred music for viol was J.S. Bach, who scored for it in three sacred cantatas (BWV76, 106 and 152), the *Trauer Ode* (BWV198) and three Passions. His most famous arias with obbligato viol are 'Es ist vollbracht' in the *St John Passion* and 'Komm süsses Kreuz' in the *St Matthew Passion*; the latter is preceded by an arpeggiated recitative and features a virtuoso chordal obbligato (originally conceived for lute) – Bach's only truly idiomatic writing for the viol in the French virtuoso style. In these arias Bach, following the 17th-century tradition, used the viol to symbolize the lament for and the kingship of the person of Christ. Parallel with its role in sacred vocal music, the viol was also used in secular continuo lieder by Heinrich Albert, Georg Neumark and Thiele. Viol obbligatos are found in Viennese operas by Antonio Cesti, Fux and Ziani, and the instrument features in secular cantatas by Christian Geist, J.G. Graun and J.A. Hasse. Bach also used it in his cantata *Äolus*.

The German-Netherlandish virtuoso viol school had its roots in the English division style, as exemplified by Nicolaus a Kempis's divisions on Philips's *Pavana dolorosa* (Antwerp, 1642), but towards the end of the 17th century it came under the influence of the latest virtuoso techniques of the thriving Italian-inspired Austro-German violin school. The marriage of ideas was facilitated by the fact that many 17th-century German string players, such as Schop, Nicolaus Bleyer and Biber, played both the violin and the viol. Thus bold passages of showy scales and arpeggios are increasingly found alongside the more rhythmically intricate English figurations, which in turn

17. Lady playing the treble viol: portrait by Caspar Netscher, c1670 (private collection)

virtually disappear after August Kühnel (1645–*c*1700). German viol player-composers also assimilated ideas from the improvisatory *stylo phantastico* of the north German organists; this is manifest in a taste for abrupt tempo changes, exciting chordal passages (often marked arpeggio) and dramatic pause marks, the latter occurring not only in preludes but also in the middle of dance movements. Finally some of these virtuosos, notably Johannes Schenck, introduced elements of the French dance suite and the delicate *style brisé* technique. German and Netherlandish viol players and composers generally did not finger their music (unlike the French), although Kühnel gave some guidance in this respect, and as regards ornamentation they did no more than mark the occasional trill with a cross (+). The Netherlands school included Carolus Hacquart and Jacob Riehman, who were both employed by the nobility. Schenck was the most prolific composer of the school producing ten collections of music between 1685 and 1710; his four surviving viol publications are the most important legacy of the German and Netherlandish tradition. Schenck's first publication of viol music, *Tyd en konst-oeffeningen* (Amsterdam, 1688), comprises 15 sonatas for viol and continuo of a breathtakingly virtuosic nature. In marked contrast to his outstanding French contemporary Marais, Schenck relished virtuosity as an end in itself. Multiple stopping, polyphonic writing and the use of high positions are hallmarks of his style. This cultivation of virtuosity finds a parallel in the brilliant violin sonatas of J.J. Walther. Schenck sometimes required the continuo viol to depart from its normal role and become an obbligato instrument (ex.4). Kühnel's *Sonate ô partite* (Kassel, 1698) consist of six works for two viols and continuo followed by eight for a single viol and continuo; the final four may be played unaccompanied. Some movements take the form of virtuosic divisions on Lutheran chorale melodies. The virtuosic obbligatos in the sacred works of J.P. Krieger were presumably written for the viol player Konrad Höffler, with whom Krieger had a lifelong association. Gottfried Finger was unique among the later viol players in using scordatura tunings, a technique that he probably acquired from Biber. Telemann wrote one work in the German virtuosic tradition, his unaccompanied sonata in D. Carl Friedrich Abel was the last member of the German school; his 27 brilliantly virtuosic unaccompanied pieces employ the gamut of virtuoso string techniques such as resonant arpeggiated passage work and large slurs of up to 30 notes, some of which are marked staccato.

Ex.4 Johannes Schenck: *L'echo du Danube*, op.9 no.2 (Amsterdam, 1704)

The viol was also incorporated in Austro-German chamber music, although the parts were generally less idiomatic. In the second half of the 17th century, there was a vogue for writing trio (and occasionally four-part) sonatas for one (or two) violins, obbligato bass viol and continuo. This seems to have originated in Austria with Young and J.H. Schmelzer, and swiftly reached the southern German states where such compositions were published by Matthias Kelz (ii), J.M. Nicolai, Johann Rosenmüller, J.P. Krieger and others. The Hamburg musicians Dietrich Becker and J.A. Reincken also published works of this type but the crowning achievements of this fashionable genre were Buxtehude's two collections (Hamburg, ?1694 and 1696), which, with the funeral music for his father, were the only major compositions published during his lifetime. In the 18th century, diversity of scoring became a feature of north German composers and the viol was frequently paired with the flute or recorder. The most prolific composer of trios and quartets incorporating viols was Telemann, but there are also works by J.C. Schickhardt, Antonio Lotti, J.C. Pepusch, J.M. Molter and Theodor Schwartzkopff; these last two composers both include a treble as well as a bass viol. When Telemann visited Paris in 1737, he played his celebrated Paris Quartets (for flute, violin, viol and cello with continuo) with J.-B. Forqueray among others; Telemann recalled how the exquisite playing of the artists 'made the ears of the court unusually attentive, and won me, in a short time, an almost universal honour, which was accompanied with increasing politeness'. Telemann also wrote three sonatas for viol and continuo, which, though sensitively written for the instrument, do not exploit it idiomatically. Abel's tuneful sonatas for viol and keyboard make few technical demands (unlike his

unaccompanied works) and seem intended for amateurs. A distinctive north German genre was the sonata for solo instrument with obbligato keyboard; early works for the viol survive by J.M. Leffloth and Johann Pfeiffer but the most penetrating and expressive examples are the three sonatas by J.S. Bach. Surviving evidence suggests that they were written late in his career at Leipzig, possibly for C.F. Abel. Bach arranged the G major sonata from a trio sonata for two flutes; the D major sonata concludes with a lively cadenza-like episode and like the *St Matthew Passion* calls for a seven-string viol; the G minor sonata is conceived in three movements in a grand concerted manner. Bach also used a pair of viols in the ripieno group in his Sixth Brandenburg Concerto, where they support and contrast with the two solo violas.

There were three distinct German schools of viol making, emanating from Austria and south Germany, Saxony and central Germany, and north Germany and the Baltic. Of the Tyrolean school, viols survive by Busch, Hiltz and Kögel from the first half of the 17th century, some of which use a festoon outline. The most celebrated maker was Jacob Stainer, who modelled his viols on those of William Young. He generally built a traditional flat back and shoulders, although the influence of the Italian violin is equally apparent in his characteristically strongly contoured, carved table and, latterly, his use of f-holes. Hawkins praised Stainer's instruments for their 'full and piercing tone'. In the Saxon area of central Germany, Hoffman was a leading maker, working in Leipzig. Viols of the north German and Baltic tradition demonstrate a strong influence from English makers and used bent fronts in two, three, four, five or seven pieces until about 1710. Joachim Tielke was Germany's most renowned viol maker, securing commissions for his highly prized instruments from the nobility and royalty. About 50 of his viols survive; all of them are basses. As a gifted and creative craftsman, Tielke developed the Anglo-German model he inherited. In about 1683 he largely forsook the traditional flat back and began to carve a solid gently arched back without bent shoulders; his viols from that date thus became heavier than their English and French counterparts, and he also favoured a thicker two-piece front. Until 1685 he maintained the north German tradition of carving rosettes in the belly of his viols but after that date they only occur on his most extravagantly ornamented instruments. By 1696 he had settled for a neck of 30·5 cm although three sizes of bass viol are found. Tielke is particularly renowned for his consummate powers of decoration. All his extant viols have carved heads (most commonly women's or lions' heads). Vine leaves and blossoms are his favoured form of motif; they appear in relief on the sides and back of the pegbox and in white (ivory) and black (ebony) inlay on the fingerboard and tailpiece. Tielke also worked with tortoiseshell and, in his most elaborate designs, silver and gold.

At the same time as the bass viol was losing popularity in France, it enjoyed a final flowering at the court of Frederick the Great in Berlin, where there had been a strong tradition of viol playing since the time of Brade and Rowe. The court viol player Ludwig Christian Hesse (1716–72), described by Hiller as 'incontestably the greatest viol player in our time in Europe', inspired sonatas, trios and concertos in the remarkably virtuosic 'Berlin' style from composers such as J.G. Graun, C.P.E. Bach, Christoph Schaffrath and J.G. Janitsch. Many of the sonatas (a number of which have obbligato keyboard) are technically highly demanding. The most unusual form was the concerto, of which at least eight were written by J.G. Graun (two of which are for more than one instrument). In these works the viol comments on the orchestral tuttis using rich double stops and chains of 3rds, a notable feature of this late style. Concertos by Johann Pfeiffer, Telemann (both for solo viol and multiple instruments) and Tartini also survive. Hesse arranged 72 French operas (including works by Rameau) for performance by Prince Friedrich Wilhelm and himself on two viols (sometimes with other instruments) and at least a further three by C.H. Graun. Interest in the viol in Berlin finally faded when Friedrich Wilhelm switched his allegiance to the cello in the early 1770s.

Further south, viol playing lingered on. Burney reported that Elector Maximilian Joseph III of Bavaria played the viol until his death in 1777 adding that 'next to Abel, [he] was the best performer on the viol da gamba I have ever heard'. The Austrian baryton virtuoso Andreas Lidl also played the viol; Burney commended his playing for its 'exquisite taste and expression'. Both Lidl and Franz Xaver Hammer wrote some highly virtuosic duos in an early Classical style for bass viol accompanied by the cello. Lidl also left six sonatas for violin, bass viol and cello. Joseph Fiala served the Archbishop of Salzburg as a viol player and oboist between 1778 and 1785; on his return to Germany in 1790 he performed on the viol before King Friedrich Wilhelm II in Prague, Breslau and Berlin. His extant compositions include a trio for viol, violin and cello. Simon Truska (1743–1809), who played, composed music for and built viols, is listed in 1796 among the important musicians in Prague. Dictionary articles around the turn of the century affirm the viol's demise; Gerber declared that 'if you wanted a viola da gamba, you would have to dig up a stringless, worm-eaten example from some court music room' (*GerberNL*).

8. THE MODERN REVIVAL. Not long after the viol finally died out in Austria and Bohemia, the French, notably Fétis, considered it ripe for revival and included it in a series of 'concerts historiques' in the 1832–3 season. A reviewer in the *Neue Zeitschrift für Musik* pointed out that Fétis's viol was tuned like a cello, but added that it sounded a little more 'tender'. In 1859 the viol featured prominently in Julius Rietz's opera *Georg Neumark und die Gamba*. Rietz, a cellist, conductor and musicologist, was a close friend of Mendelssohn and deeply involved in the revival of 18th-century music. For the performances of the opera the court library loaned an instrument by Tielke, which was played by the virtuoso cellist Bernhard Cossmann.

From the mid-1870s the pursuit of resurrecting the viol was taken up predominantly by cellists curious about the ancestry of their instrument (the viol was then considered to be the precursor of the cello). The distinguished cellists Auguste Tolbecque and Paul de Wit acquired bass viols and stimulated interest by playing them in public. At first they played Tartini, Boccherini and Mendelssohn but they soon focussed their attention on the riches of the bass viol literature. Tolbeque performed one of Rameau's *Pièces de claveçin en concerts* in April 1880 with Saint-Saëns and the flautist Paul Taffanel; the reviewer in *Le ménestrel* observed that the performance would have been improved had Saint-Saëns played a harpsichord instead of the piano. In 1889 the *Musical Times* reported that a Société des

Instruments Anciens had been formed in Brussels by Louis van Waefelghem, Louis Diémer, Jules Delsart (bass viol) and Laurent Grillet 'for the study and practice of instruments once in general favour but now almost unknown to our concert rooms, such as the clavicembalo, the viola da gamba, the viol d'amore . . . members of this body have already given historical concerts with much success'. This society disbanded within a decade, but was followed in 1901 by the Société des Instruments Anciens Casadesus, formed by Henri Casadesus with encouragement from Saint-Saëns, in which Henri's sister-in-law Lucette played the viol (*see* CASADESUS (2)).

Most performers on the bass viol in the late 19th century and first half of the 20th played the viol like a cello, with an endpin, a cello-like thin and rounded neck and fingerboard, a cello bow and no frets. In addition the viol was fitted with a thick, cello-like bass bar and soundpost, and heavily reinforced with thick linings to support its unnatural set-up. Arnold Dolmetsch was intuitively aware that the viol was being misunderstood, despite his initial scanty knowledge of the instrument and its music. In the 1890s, after considerable research into music and instruments of the 16th to 18th centuries, he began to give concerts on original instruments including viols. *The Times* reported in 1892 how 'Mr Dolmetsch brought forth several interesting concerted works for the viols – among them a beautiful "Dovehouse Pavan" by Alfonso Ferrabosco . . . Miss Dolmetsch displayed her remarkable skill on a viola da gamba in a long chaconne by Marin Marais, a composer whose revival is entirely due to Mr Dolmetsch'. These concerts won the recognition of the Bloomsbury circle, and Bernard Shaw speculated prophetically:

> If we went back to old viols . . . I suppose we should have to begin to make them again; and I wonder what would be the result of that . . . if our fiddle-makers were to attempt to revive them, they would probably aim at the sort of 'power' of tone produced by those violins which ingenious street-players make out of empty Australian mutton tins and odd legs of stools.

In 1938, the year before Dolmetsch's death, Percy Scholes wrote that the viol was played by 'a small (but growing) body of devoted students'. Many of these were in fact pupils of Dolmetsch, but Paul Grümmer's *Viola da Gamba-Schule* (Leipzig, 1928) shows that a parallel revival was taking place in Germany, pioneered by the scholar Max Seiffert and the instrument maker Peter Harlan. Grümmer encouraged his pupil, the young Swiss cellist August Wenzinger, to nurture his interest in the bass viol, and in 1933 Wenzinger was one of the founders of the Schola Cantorum Basiliensis (the first institution for the research, performance and teaching of early music), where he taught the viol. Viol playing was uncommon in America until after World War II. However, in 1929 the American Society of Ancient Musicians was founded in Philadelphia by Ben and Flora Stad, who were inspired by the playing of Casadesus with whom they had both studied in Paris in the early 1920s. The Stads' group included three sizes of viol, and by the time Ben Stad died in 1946 his ensemble's concerts, recordings and festivals had brought the viol's sound to many East Coast Americans. The viol made slow but sure progress in the 1950s. It was not without provocation that Vaughan Williams wrote to Michael Kennedy on 9 May 1957:

> With regard to that aria in the Matthew P. about bearing the Cross. I was told that at the first performance under Mendelssohn this was the hit of the evening – apparently they used to encore things they liked at those early performances. I have an idea that I will put it in my next performance. But it will have to be rearranged for three cellos. I will not have a viola da gamba inside the building.

The viol's postwar renaissance is marked by three distinctive styles of playing: English, German and Netherlandish. The English school stems from Dolmetsch and has been closely associated with the performance of English consort music. In 1962 Francis and June Baines founded the Jaye Consort of Viols (named after the 17th-century English maker Henry Jaye, whose instruments they primarily used). Their distinctive playing style, which exploits the viol's natural resonance to the full, has similarities with the use that English choirs (particularly that of King's College, Cambridge) make of their highly resonant chapels. Furthermore both groups of musicians present their musical points in a sweet, relaxed and undriven manner, which gives the feeling of floating. The viol consort Fretwork, founded in 1985 (perhaps the most vibrant group of their time) has adopted a more rhythmically defined, rhetorical and conversational style. Besides recording most of the classic English consort music from Byrd to Purcell, Fretwork has broadened the viol's repertory by commissioning works from a wide range of contemporary composers, including George Benjamin (*Upon Silence*, 1990), Tan Dun (*A Sinking Love*, 1995), Barry Guy (*Buzz*, 1994), Thea Musgrave (*Wild Winter*, 1993) and Peter Sculthorpe (*Djilile*, 1995). Laurence Dreyfus's consort Phantasm and the Rose Consort have also received critical acclaim. The German school of playing was originally centred on the work of Wenzinger in Basle. Although his style was derived from the same primary sources as the English school, his manner of playing might be seen as its antithesis. It is true that Wenzinger's repertory focussed more on 18th-century French and German solo music, but his performance was characterized by an intense, rhythmically animated manner, driving forward to the cadence in long sustained melodic lines. Wenzinger's playing style has been disseminated all over the world by his many pupils. His influence on American playing is particularly significant; as early as 1953 he spent a term lecturing and teaching at Harvard and in the 1970s he made frequent visits to the Oberlin summer school. The Netherlands school of viol playing is the youngest of the three and has its origins in the playing of the Belgian Wieland Kuijken. His intense, yet restrained style with exquisite sensitivity to the smallest nuance lends itself to the performance of Marais, yet he is a player of catholic tastes whose performances of Ortiz, Simpson, Bach and Abel are no less satisfying. Many of the leading viol players of the late 20th century studied with Kuijken – Jordi Savall, Christophe Coin, Laurence Dreyfus, Sarah Cunningham and Susanne Heinrich – and his approach has greatly influenced European playing. Jordi Savall has recorded much of the solo viol repertory and has been a highly influential teacher at Basle; his Italian pupil Paolo Pandolfo has delighted audiences with his fresh, wildly inventive, improvisatory approach, not least as regards viola bastarda music.

The American John Hsu is a player of distinction who has developed his own independent style. Hsu is particularly solicitous to the influence that Baroque gesture had on contemporary performing practice; this has led him to develop an intensely subtle bowing technique which moulds the melodic line into a series of gestures, which he expounds in his *Handbook of French Baroque Viol Technique* (E1981). Alison Crum's *Play the Viol* (B1989)

primarily addresses the amateur market. In 1998 Paolo Biordi and Vittorio Ghielmi published a more advanced and comprehensive tutor entitled *Methodo completo e progressivo per viola da gamba*. Since World War II interest in the viol has also been fostered in England by the Viola da Gamba Society (founded in 1948) and in the USA by the Viola da Gamba Society of America (1963), both of which publish journals with scholarly articles as well as notices of current activities. German-speaking countries are served by the Viola da Gamba Mitteilungen of Switzerland, which keeps players informed of concerts and has short features concerning the viol. By the late 1970s interest in viol playing had spread throughout the English-speaking world, Europe and Japan. Universities and music colleges purchased consorts of viols; adults took up the instrument as amateurs; and children were introduced to it without first having developed a modern violin or cello technique. In 1991 Marais became a household name in France after the success of the film *Tous les Matins du Monde*, loosely based on the lives of Sainte-Colombe and his pupil.

In the late 20th century many excellent instruments have been built based on classical models by makers such as Jane Julier, Dietrich Kessler and David Rubio in Britain, François Bodart in Belgium, Pierre Jacquier and Guy de Ra in France, Pilman Muthesius and Ossenbrunner in Germany, and Paul Reichlin in Switzerland. Fine copies of Baroque bows are made by Boumann (Netherlands), Landwehr (Germany), Fausto Cangelosi (Italy), Patigny (Belgium), Hans Reiners (Germany) and Luis Emilio Rodriguez (Netherlands). The viol's unusual sound has inspired works from many contemporary composers, including Peter Maxwell Davies, Peter Dickinson and David Loeb, in addition to those mentioned above.

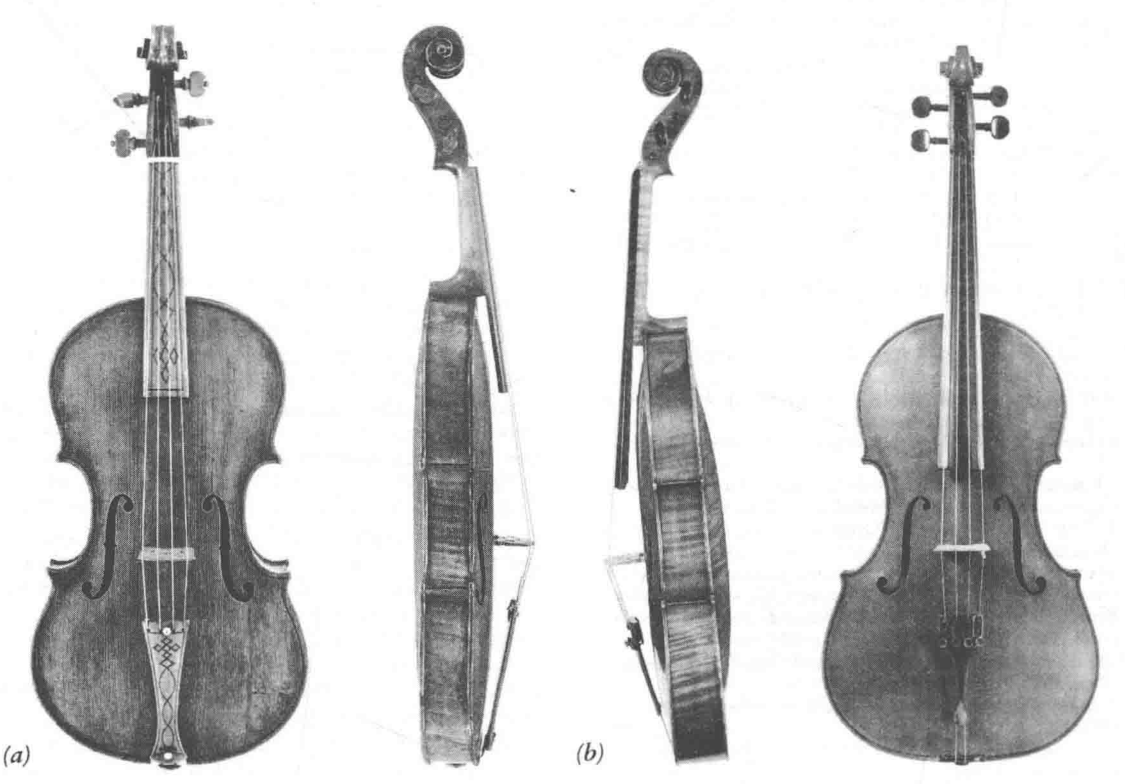
Viola (Fr. *alto*; Ger. *Bratsche*). The term 'viola' now refers to the alto (or, more properly, to the alto-tenor) member of the violin family (for earlier meanings, see §2 below). The viola came into being in northern Italy at about the same time (not later than 1535) as the other members of the new violin family.

1. The modern instrument. 2. Earlier meanings of the term 'viola'. 3. Violas as 'instruments of the middle'. 4. Viola construction in the 19th and 20th centuries. 5. Repertory: (i) To 1800 (ii) From 1800.

1. THE MODERN INSTRUMENT. The viola, in general, has the darker, warmer, richer tone qualities of the alto voice as opposed to the lighter, more brilliant soprano of the violin. The strings are tuned to *c–g–d′–a′*, a 5th below the violin. Its highest string (*a′*) may produce something of a contrast in timbre to the other strings: on some violas more piercing and nasal. The lowest string (*c*) of a fine viola is capable of a clear, beautiful, resonant and powerful tone eagerly sought by both makers and players. Viola tone, however, can be less assertive, more mellow, even subdued at times. To produce optimum strength of tone and, especially, beauty and depth on its lower strings, the ideal size for a viola would make it too long for the player's arm.

Viola size has never been standardized as to length of body, depth of ribs or width of bouts. To replicate the acoustical results of the violin (whose length is standardized at an average of 35·5 cm), the viola would require a body half as long again as the violin's (approximately 53 cm). Full-sized violas can range in size from 38 to more than 48 cm. However, while the smallest viola can rarely produce a truly powerful and resonant C-string sound, the largest are virtually impossible for most players to handle. Differing sizes of violas are best explained by a maker's intention to produce an instrument basically alto or tenor in tone quality although the differing lengths of players' arms and the demands of the repertory are certainly still considered pertinent factors. For practical reasons the most utilized violas probably have body lengths in the 41 to 43 cm range.

Just as the length of the viola varies from instrument to instrument, so, naturally, does the sounding length of the strings (i.e. the open string measured from inside the nut to the inside of the top of the bridge). On the modern violin this length is standardized at about 33 cm. On a typical modern viola with a fairly substantial body length (for instance, 42·5 cm, as on the 'Tertis' viola; see §4



below), the corresponding open-string length is about 38·5 cm (see fig.1*b*). An extant specimen of a large viola of the late 16th century (made by Gasparo da Salò and now in the Ashmolean Museum, Oxford; fig.1*a*) has a 44·5 cm body, but the open-string length is only 36·2 cm because the instrument still has its original short neck.

The strings of the viola were originally gut, but a wound C string must have been used in the 18th century and probably also a wound G string in the 19th. In modern practice, wound strings (i.e. with metal wound over gut, synthetic or metal cores) are often used for all four strings to aid their capacity to 'speak', to improve their evenness of tone and response from string to string, to stabilize intonation and to reduce breakage. The fingering and bowing techniques of the viola are similar in principle to the violin's, and many technical studies (e.g. Kreutzer, Ševčík) are simply transposed down a 5th for the viola. Differences in technique are related to the viola's larger size. For one thing, its weight and size suggest that it be held with its scroll slightly lower than is common on the violin. Viola fingering, while similar to that of the violin, utilizes more half-position playing and demands greater left-hand expansion. The vibrato is generally somewhat wider and less intense on the viola than on the violin. While viola bowing is in principle similar to that of the violin, the viola player uses somewhat greater energy on the viola's thicker strings to make them 'speak' properly, while the bow itself is generally heavier and slightly shorter.

2. EARLIER MEANINGS OF THE TERM 'VIOLA'. By 1535 the alto-tenor violin (the modern viola) was established as one of the three principal members of the new violin family (*see* VIOLIN), but it was not called 'viola' because at that time the term had a variety of meanings both general and specific. Around 1500 'viola', in the most general sense, might mean any bowed string instrument. From this general sense, the Italian term *viola* (Fr. *vielle*; Ger. *Fidel*) was modified in various ways to describe a specific family or a specific instrument. Examples from the 16th and 17th centuries are the *viola da braccio* ('arm viola'; a member of the violin family), *soprano di viola da braccio* (violin), *viola da gamba* ('leg viola'; a member of the viol family) and *basso di viola da gamba* (bass viol). Later instances are the VIOLA D'AMORE and VIOLA POMPOSA.

When used before approximately 1550, 'viola' may also have the specific meaning of a Renaissance FIDDLE or a *lira da braccio* (but not generally a rebec). Frequent statements to the contrary notwithstanding, the unqualified term 'viola', used alone, rarely if ever means violin. However, the converse is sometimes true: in Venetian usage around 1600, 'violino' may mean viola (alto violin) as well as violin proper (for example in Zacconi, *Prattica di musica*, 1592; G. Gabrieli, *Sonata pian e forte*, 1597).

In the 17th and 18th centuries 'viola' is often used with adjectives to denote different registers (but not change of tuning, which, whatever register was involved, moved invariably upwards in 5ths from *c*). In Albinoni's *Sinfonie e concerti a cinque* op.2 (1700), for example, two of the partbooks are labelled 'Alto Viola' and 'Tenor Viola' for what are respectively viola I and viola II parts, one playing in the alto register and the other in the tenor; Handel's op.3 no.1 concerto has one part marked 'Alto Viola' and another 'Tenor' in the Walsh edition of 1734 (*see also*

1. Comparison of (a) viola by Gasparo da Salò, Brescia, late 16th century (Ashmolean Museum, Oxford), and (b) Tertis model viola (made from 1937) by Saunders, Nottingham (private collection)

2. *Tenor viola by Andrea Amati, Cremona, 1574 (Ashmolean Museum, Oxford)*

TENOR VIOLIN). Similarly, in the five-part French ensembles described by Mersenne (1636–7) the three 'parts of the middle' are all violas (all with the customary *c* tuning), but of differing sizes and playing in different registers. Hence the 24 Violons du Roi included *haute-contre* or *haute-contre taille* (contralto or contralto-tenor: viola I), *taille* (tenor: viola II) and *quinte* or *cinquiesme* (fifth: viola III).

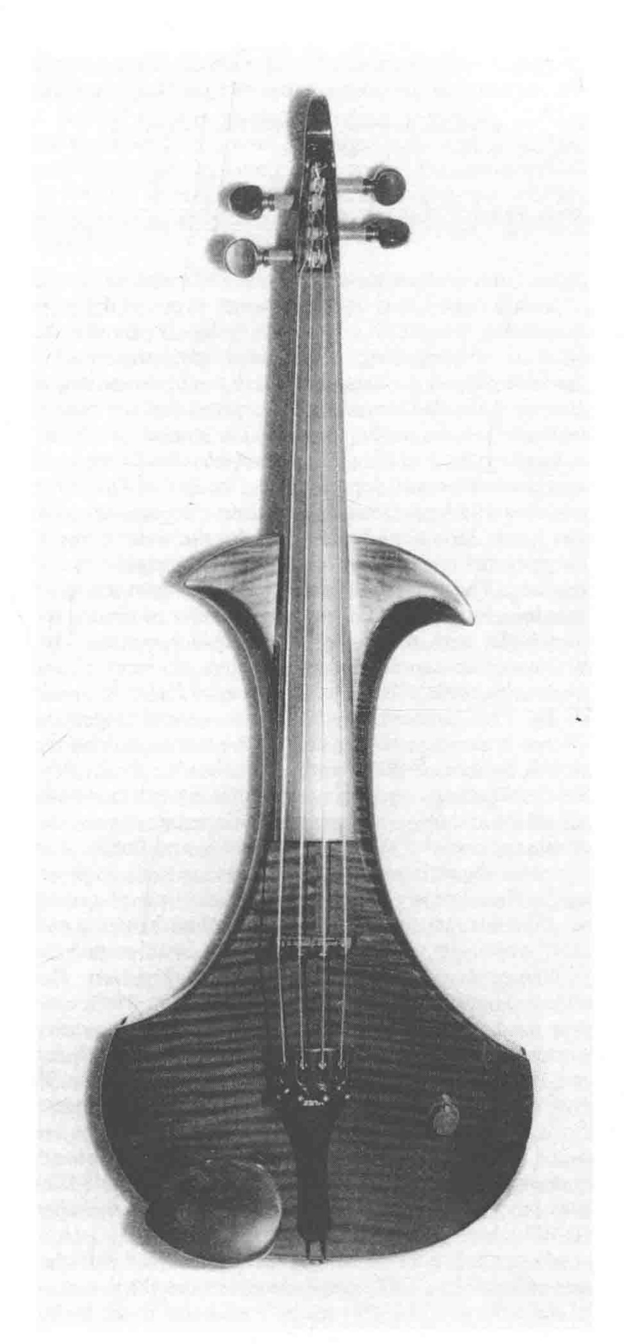
By the 18th century 'viola' (alto violin) was equated with *viola da brazzo* (*braz.*), from *viola da braccio* (see above); hence *Bratsche*, the modern German term for viola (alto violin). Brossard's *Dictionaire* (Paris, 1703) ties the two sets of meanings together, equating *braz. I* with *haute-contre* (alto viola or viola I), *braz. II* with *taille* (tenor viola or viola II) and *braz. III* with viola III. Brossard also mentioned 'viola IV', but said it was not used in France. The term 'violetta', used in the 16th century to mean 'violin' or even 'viol' in certain contexts, often refers in the 18th century to the viola (alto violin). Adjectives may also alter the meaning: *violetta marina*, for instance, is a species of viola d'amore.

3. VIOLAS AS 'INSTRUMENTS OF THE MIDDLE'. Historically, the viola was 'the instrument of the middle', being used for both the alto and tenor registers: in the 16th and 17th centuries, a four-part ensemble might use two violas; and a five-part ensemble, three violas (see references to Mersenne, §2). This distribution accounts for the relatively large number of violas produced in these two centuries by makers of the time, including such famous ones as the various members of the Amati family in Cremona and, in Brescia, Gasparo da Salò and Maggini. The distribution of parts explains also why the sizes of violas varied from very large models, needed to play in the deep tenor register, to small models for playing in the higher alto register.

Some of the tenor violas are so large as to be barely playable on the arm. The huge Andrea Amati tenor viola of 1574 (fig.2), now in Oxford, has a body length of 47 cm. That of the Stradivari 'Medici' tenor viola of 1690 (now in Florence) is 48 cm. With regard to such very large violas, the late viola virtuoso William Primrose once remarked: 'The viola is difficult enough without having to indulge in a wrestling match with it'. Few of these large tenors still exist. Besides expected attrition over the years, a number were later altered and shortened to make them easier to manage for viola players of a later period.

This was one reason why few violas were made in the first part of the 18th century; instruments were already in plentiful supply in varying sizes from the past, and, in addition, the large tenors were cut down to the prevailing requirements of a smaller model that became favoured after 1700. Also, violas were in less demand for musical reasons. The typical ensemble texture of the early 18th century was four parts, the usual orchestral distribution becoming two violin parts, one viola part and one cello-bass part, as opposed to as many as three viola parts in certain five-part ensembles in the 17th century. Moreover, two of the prevailing forms of chamber music, the solo violin sonata and the trio sonata, rarely used a viola part at all. (For usage of the viola in concertos of the early 18th century, see §5 below.) It is therefore not surprising that, although 600 or so Stradivari violins, violas and cellos survive, Beare cites only ten Stradivari violas in existence, and some of them were made in the 17th century.

4. Viola construction in the 19th and 20th centuries. With the perfecting of the modern (Tourte) bow around 1785, a new era in string playing began. Around 1800, the viola, like the violin, went through various alterations to increase string tension and carrying power and to facilitate technique, especially left-hand fingering and shifting (*see* Violin, §I, 5). Such changes involved a lengthened and thrown-back neck and fingerboard, a longer and heavier bass-bar, somewhat heavier strings (the lowest being wound; see §1), and a somewhat higher bridge. New violas made in the 19th and 20th centuries conformed to these specifications, and earlier instruments were altered as needed to fit the new conditions. The new-model (Tourte) bow was ideally suited to drawing out the increased power and fuller tone inherent in the new-model viola.



3. Pellegrina viola by David Rivinus, Newberg, Oregon, USA, 1995

Some 19th-century makers were possessed with the notion of improving the viola acoustically by lengthening or enlarging the body. In the middle of the century, Villaume experimented making a viola with extremely wide bouts and Charles Henri of Paris built a viola with the entire left side larger than the right. In 1876, Hermann Ritter introduced a *viola alta* (built by K.A. Hörlein); Wagner was interested enough to use this instrument in the orchestra at Bayreuth. However, while Ritter's viola, which was about 48 cm in body length, was acoustically desirable, it was effective only in proportion to the length of the player's arms.

Beginning in 1937, the English viola virtuoso Lionel Tertis (1876–1975), after long experience and experiment, began collaborating with the violin maker Arthur Richardson to create a model viola intended to combine fullness, depth and beauty of tone in a full-size viola still manageable by the player. This 'Tertis' model (see fig.1*b*), first heard in concert in 1939, has since been produced by a number of craftsmen around the world, and is illustrated and described in Tertis's autobiography (1953).

Other novel approaches to viola construction, inspired by musical and acoustic considerations, have continued to the present time. In the 1960s, Carleen Hutchins, after earlier research by Frederick Saunders (*see* Acoustics, II), designed and built a whole new violin family of eight instruments, acoustically scaled to the violin as the ideal. Of the eight instruments of this new family (including two pitched above the present violin and one below the present double bass), four are new and three are re-scaled instruments. Among the latter is the 'viola', re-scaled to a body measurement of over 53 cm, and played like a cello, using an endpin, although some viola players have chosen to play this instrument in the traditional way. In the 1990s, David Rivinus developed his ergonomic Pellegrina viola (fig.3) with expanded upper left and lower right bouts, tilted fingerboard, and off-centre neck. This viola, with a standard body-length measurement of 40 cm but an acoustic length of 50·8 cm, has attracted considerable attention and favour particularly from orchestral viola players.

This turn-of-the-century discussion of the viola is not complete without mentioning the electric (fig.4) and MIDI violas, including five- and six-string 'violins' (*c–g–d′–a′–e″* and *F–c–g–d′–a′–e″*, respectively), produced in a variety of shapes and sizes by an increasing number of makers around the world. Although an acoustic viola may achieve amplification with a microphone pick-up attached near the bridge or the f-hole, a dedicated electric viola will use built-in piezo or magnetic pickups located in or under the bridge. Some of these built-in pickups (the best known are made by Barbera Transducer Systems and Zeta Music Systems), with appropriate pre-amplification systems, produce a remarkably beautiful tone quality scarcely distinguishable from a fine acoustic viola sound.

4. Strados viola (SVA 0111) Zeta Music, Oakland, California, USA, 1998

5. Repertory.

(i) To 1800. The best viola makers have often been successful in minimizing the inherent acoustical difficulties discussed above and a fine viola, played by a true artist, is therefore capable of a beauty and variety of tone and effects of virtuosity that are thrilling and moving in the alto-tenor register. However, the viola has always suffered as a solo instrument by comparison with the greater brilliance of the violin and the strength and depth of the cello. Both violin and cello can compete more successfully with the symphony orchestra in concertos, and this explains why, over the years, composers have written innumerable violin concertos, a fair number for cello and until recently comparatively few for viola. Before 1740 the viola was seldom treated as a soloist in any context, generally being banished to the decent obscurity of the accompaniment, realizing the harmony of the middle parts. At the low point of its fortunes the instrument was described by J.J. Quantz (*Versuch*, 1752):

> The viola is commonly regarded as of little importance in the musical establishment. The reason may well be that it is often played by persons who are either still beginners in the ensemble or have no particular gifts with which to distinguish themselves on the violin, or that the instrument yields all too few advantages to its players, so that able people are not easily persuaded to take it up. I maintain, however, that if the entire accompaniment is to be without defect, the violist must be just as able as the second violinist.

From such stuff are splendid inferiority complexes born and bred in viola players! Yet it was true that before 1740 there were no known outstanding viola players and virtually no repertory requiring them. (The Viola Concerto in B minor ascribed to Handel is a 20th-century forgery, 'realized' and 'orchestrated' by Henri Casadesus and probably written by him.) Virtuoso music composed before 1740 exists for 20th-century concert viola players mostly in the form of arrangements or transcriptions – transposed down from the violin or up from the cello (for example the Bach solo violin sonatas and the cello suites) or transcribed from the viol, viola d'amore or other instruments. On the other hand, there is a fair amount of viola music in ensemble that is musically fascinating to play, especially in fugues and other pieces found in the concertos of such composers as Corelli, Bach, Handel and Vivaldi. Geminiani promoted the viola to the role of soloist in the concertino of his concerti grossi. There are viola parts of genuine musical interest in the 'orchestras' used in the sacred and secular works of Bach and Handel, especially when contrapuntal textures or descriptive effects (as in opera from Monteverdi to Gluck and Mozart) are involved. Sometimes a melody was given to the inside voices, as in the second passepied of Bach's Suite no.1 in C, where the melody is played by the second violins and violas in unison. Occasionally the viola was used for special colouristic or sonorous effects: for instance, as a true bass of an accompaniment (there being no bass part or figured continuo), in Vivaldi's Violin Concerto in A minor op.3 no.6, whose slow movement features an aria-like violin solo accompanied by two violins and a viola. In Purcell's soprano aria 'See, even night herself is here' (from *The Fairy Queen*, 1692), the accompaniment comprises two muted violins and (evidently unmuted) a viola which acts as the true bass to an imitative-counterpoint trio. However, in spite of the many musical beauties discoverable in the ensemble use of the viola in early music, the viola part in the orchestra seldom exploited the technical potential of the instrument, even within the limits of 3rd position.

After about 1740 the viola began to enjoy a new lease of life though less noticeably in its orchestral role than elsewhere. It was treated increasingly as a solo instrument in concertos. According to Ulrich Drüner (1981), the history of the viola concerto begins with that of Telemann (probably written shortly before 1740) and is represented by only three other concertos from the Baroque period, those of J.M. Dömming, A.H. Gehra and J.G. Graun. The early classical viola concerto is represented by Georg Benda, Zelter in Berlin, Vanhal in Vienna, and the Stamitz

family in Mannheim. The Concerto in D by Carl Stamitz, one of the virtuoso viola players of his day, is one of the standard works in the modern repertory. A description of the viola in J.N. Forkel's *Musikalischer Almanach für Deutschland* of 1782 concludes: 'But would anyone who has heard Stamitz play the viola with a taste for majesty and tenderness, which appears to be peculiar only to him, not then declare himself for the viola, would he not then accept it among his favourite instruments'. In 1792 E.L. Gerber wrote of him: 'With what extraordinary art and facility he plays the viola'. Among the better known classical viola concertos are those of J.A. Amon, Friedrich Benda, F.A. Hoffmeister, Roman Hofstetter, Ignace Pleyel, Josef Reicha, G.A. Schneider, Joseph Schubert and, above all, Alessandro Rolla.

During the lifetime of Haydn, Mozart and Beethoven a good many changes took place in the treatment of the viola in chamber music, especially in quartets and quintets and occasionally in string trios and duos (e.g. those of Mozart; his Trio for viola, clarinet and piano K498 should also be mentioned). The changes came about partly because a basic concept of late 18th-century chamber music was that a single player played each part (thus setting chamber music apart from the orchestra where each string part, at least, was played by several players). In this context a viola player of any attainment would become increasingly impatient simply playing the harmonic filler 'parts of the middle' while the first violin was playing the main melodies. Except for fugues, where the musical interest was equally distributed, composers of early quartets, like Haydn, saw that the inner parts of string quartets would have to be made more interesting by giving them thematic motifs or even, from time to time, main melodies, obbligato parts or virtuoso figuration (as in Haydn, op.33 and later). This factor in turn animated the solo player to greater mastery of the technique of his instrument.

A greater equality of part-writing and a notable advance of viola technique can be observed in the mature chamber music, especially string quartets, of Mozart and Beethoven. For instance, in Mozart's last string quartet (K590, 1790), the part-writing is equalized, solos are given to the viola and a considerable degree of virtuosity is demanded of the instrument, especially in any chromatic passages. Similar remarks may be made about Beethoven's chamber music, which also makes additional use of special devices or colouristic effects. A melody might be emphasized or reinforced, for example, by playing it in octaves, as in the viola and first violin parts in the first movement (bars 42ff) of op.18 no.4. More unusual at this time is the exploiting of the colour possibilities of the higher register of the C string in the fugal last movement of op.59 no.3, where from bar 160 the viola player is required to play on the C string in the 5th position. Beethoven treated the viola in somewhat comparable fashion in the orchestra, but not to the same degree. Even when the orchestral violas are heard playing melodic material they are often doubled with the second violins (as in the Ninth Symphony, slow movement D major theme) or with the cellos.

Mozart, in his concerto for violin and viola (Sinfonia concertante K364/320*d*, 1779), treated the violin and viola as equal partners, even sharing the same degree of difficulty in the written-out cadenza. He thus made technical demands of the viola quite unprecedented at that time, requiring the player to reach the 7th position at the end of the last movement (bar 439; ex.1). Mozart was

Ex.1 Mozart: *Sinfonia concertante*, K364/320*d*, finale, bars 437–40
As written (sounds a semitone higher)

himself an excellent player on both violin and viola, and in certain respects his double concerto is one of the most fascinating pieces ever written for viola – if played as he wrote it. For one thing, he provided subtle supports for the viola player, the details of which might escape casual attention. He also scored the concerto so that the natural brilliance of the violin is somewhat muted, while the natural reticence of the viola is somewhat brightened and amplified. This was done by using the key of E♭ for the concerto and by writing a scordatura part for the viola. The key of E♭ is not a brilliant one for the violin (none of the open strings serves to reinforce the principal notes of this key). The same is normally true of the open strings of the viola, but Mozart followed the practice of writing the part in D, with the strings tuned up a semitone. This 'transposition scordatura' means that the viola player fingers the music as if it were in the key of D, but it sounds in E♭. This particular retuning has several important effects: it increases the tension on the strings making the viola a bit more brilliant and slightly louder; three of the four viola strings – now tuned to what is enharmonically *d*♭, *a*♭, *e*♭′ and *b*♭′ – reinforce the tonic, subdominant and dominant notes of the main key of E♭; and finally, it is easier for the viola player to play in D than in E♭. In short, by the choice of key and by this particular way of writing for the viola, Mozart managed to equalize the violin and viola physically, as well as musically, with respect to brilliance, carrying power and ease of execution. The technique of tuning the viola up a semitone or whole tone was used in several late 18th- and early 19th-century pieces, including Vanhal's concerto in F (written in E♭ for the viola), Carl Stamitz's viola and piano sonata in B♭ (written in A for the viola) and his Symphonie concertante for violin and viola, in which both solo instruments are tuned up a semitone. Two versions of the Sinfonia concertante exist in manuscript copies. In one (US-Wc) the orchestra is in E♭ and the soloists are in D; in the other (D-BFb), both orchestra and soloists are in D.

Mozart's Quintet in G minor for two violins, two violas and cello (K516, 1787) amply demonstrates the potential of the viola as a chamber music instrument in the hands of a master. Particularly noteworthy is the practice, possibly learnt from Michael Haydn, of highlighting the first violin and first viola as soloists on an equal footing, while at the same time ensuring that each instrument in the ensemble has an interesting part to play. Also worthy of remark is the way that Mozart made the first viola serve as either a treble or a bass: that is, as a bass to the trio of the upper three instruments or – a marked contrast in tone-colour – as the treble to the lower three. The resulting dark–light colour contrast of trio combinations is illustrated by the opening bars of the work. Finally, in the slow movement, the contrasted key of E♭ is subdued still more by Mozart's direction to use mutes on all the instruments (mutes being rarely called for in 18th-century chamber music). The second subject is worked out in a glorious duet between violin I (bar 27) and viola I a few

bars later. Even viola II has a moment or two of dramatic comment (e.g. bar 19) on the musical action.

Several viola methods, somewhat analogous to those for violin and cello, were published at the end of the 18th and the beginning of the 19th centuries; they include those by Michel Corrette (1773), Michel Woldemar (*c*1800), François Cupis (attributed, 1803) and M.J. Gebauer (*c*1805).

(ii) From 1800. Early in the 19th century an outstanding method by A.B. Bruni (*c*1820) and viola studies by Bartolomeo Campagnoli and J.-J.-B. Martinn were published. In the 20th century the viola began to share in the technical advances of the violin (most viola players having begun their training as violinists). The trend towards virtuosity became much more pronounced in the 20th century, when, for instance, players were obliged to cultivate the highest positions on the lower three strings. The average orchestral viola player around 1900 was still regarded as a cast-off from the violin section, but in the 20th century the viola was increasingly called upon, especially the viola soloist in chamber music, to perform special effects such as *col legno* bowings (e.g. Schoenberg), rebounding pizzicatos (Bartók), glissandos, harmonics and so on. Developments in fingering were similar to those for the violin (*see* FINGERING, §II, 2(ii)) and are enshrined in the methods of Dolejši (1939) and Primrose (1960) as well as in the 20th-century repertory.

Berlioz had already shown (1834) how magical a *sul ponticello* could sound in an arpeggio passage for solo viola against muted orchestral strings (in 'Marche des pèlerins' from his *Harold en Italie*). These demands by composers meant that an efficient technique was slowly being acquired by viola players in all types of instrumental music. After Beethoven, the string parts in the music of such composers as Berlioz, Brahms, Verdi and Tchaikovsky gradually increased in difficulty. In Wagner and Richard Strauss and later in Mahler and Ravel, and of course 12-note compositions, the demands made on viola players are greater still, tending at times to equal those on the other strings. In much 20th-century chamber music, for instance, the technical demands on the viola are often as great as on the other parts, notably in Schoenberg's String Trio or Bartok's string quartets (particularly nos.3–6). In the case of modern concertos the viola soloist is normally called on for an imposing array of accomplishments of the left and right hand – in the relatively rare (though increasingly frequent) viola recital, one may occasionally hear such a *tour de force* as a transcription of a Paganini caprice.

While 19th-century composers seldom called on the viola soloist for the same degree of pyrotechnics as the violin, they became more appreciative of the viola's potential with respect to tone-colour and sonority. Brahms is a good example. In the Agitato movement of his String Quartet in B♭ op.67, he assigned the opening solo to the viola accompanied by muted violins and cello – a remarkable essay in the colouristic use of the viola ranging over all four strings. In his Serenade op.16 Brahms omitted the violins, featuring the violas as a treble part as he did also in the first movement of the *German Requiem*.

Treated mainly as a tenor in early times, the viola had also been used occasionally as an alto or even, for special effect, as a bass (see examples of Vivaldi and Purcell cited in §(i) above). The cultivation of tone-colour of different registers after 1800 led composers to use the viola as any voice-part of the ensemble for momentary effect. To increase power and sonority, special violas such as Hermann Ritter's *viola alta* were introduced into the orchestra. Since sonority and colour of the string section were important components of Romantic music in achieving its effect, some later composers who disliked this type of music – Stravinsky, for example – sought to use the strings more drily or even percussively rather than melodically or colouristically, or did not use them at all (his *Symphony of Psalms* is scored without violins or violas).

For reasons already suggested, there are dozens of violin concertos for every one for the viola (Drüner lists 141 between 1740 and 1840, knows of none between 1840 and 1870, and finds a gradually increasing number after 1870). Indeed it would be difficult to call to mind more than one 'famous' viola concerto in the 19th century: namely, Berlioz's *Harold en Italie*, and that a viola concerto disguised as a programme symphony. Even this work originated through a special set of circumstances. Paganini, having acquired a fine Stradivari viola, commissioned Berlioz to write a viola concerto for him. *Harold en Italie* was the result, but Paganini declined to play it because, as he told Berlioz, 'I am not given enough to do'. Berlioz, however, was by no means uninterested in the viola. 'Of all the instruments in the orchestra', he stated, 'the viola is the one whose excellent qualities have been longest ignored'. In *Harold* (and elsewhere) Berlioz wrote marvellously for the instrument, not only for the solo part but also for the orchestral violas – consider the main 'Harold' melody, the cadenza at the end of the first adagio, or the whole of the 'Marche des pèlerins'.

In the 20th century compositions featuring the solo viola have become more numerous because, among other reasons, the presence of such outstanding players as Lionel Tertis, William Primrose and Paul Hindemith has encouraged composers. Tertis, in particular, inspired a number of pieces by British composers, including (though indirectly through Thomas Beecham) the Walton Viola Concerto, one of the best in modern times. (This work was offered to Tertis for its first performance but was actually first played with Hindemith as soloist, 3 October 1929.) The posthumous Bartók Viola Concerto ('prepared for publication by Tibor Serly' in 1950, with a revised version by Nelson Dellamaggiore and Peter Bartók in 1995) was commissioned by and written for Primrose, who first performed it. Hindemith, equally distinguished as composer and viola player, wrote a number of solo works for viola, which, in the older tradition of the composer-performer like Mozart, he played himself. Among these are four viola concertos, six pieces for viola and piano and four for unaccompanied viola. Many other distinguished composers might be mentioned for their viola compositions, including Berio, Bloch, Britten, Henze, Milhaud, Penderecki, Piston, Rochberg, Schnittke, Shostakovich and Vaughan Williams.

In spite of the relatively numerous 19th- and 20th-century pieces originally written for the viola as a soloist in one capacity or another, perhaps the instrument is most at home (and treated in the most congenial fashion by composers) in chamber music. Among the many chamber-music combinations, composers have evidently written for the viola the most frequently and with the greatest devotion in that most perfect of musical mediums, the string quartet, as a number of the finest works of the most

celebrated composers attest: among them Beethoven, Schubert, Dvořák, Brahms, Debussy, Ravel, Bartók, Dohnanyi, Shostakovich, Prokofiev, Schoenberg and Webern. The viola is common in quartets and quintets with piano, and has fared well in string quintets and sextets (two violas), some of which approach orchestral sonority (e.g. those of Brahms).

Composers tended, conversely, to shy away somewhat from the viola as a solo instrument in works involving fewer instruments, where each became more prominent to the whole. Thus the string trio of violin, viola and cello is much less commonly used by composers than the piano trio (violin, cello, piano). Similarly, there are few sonatas in the 19th century originally written for viola and piano: even the two by Brahms (op.120, 1895), arranged by the composer from his clarinet and piano sonatas, do not have quite the verve and freshness of the original versions. The same might be said of several other Brahms chamber works in which he substituted viola for clarinet. The viola is, however, sometimes used with marked success in song accompaniments, as in Brahms's *Geistliches Wiegenlied*, where the singer is accompanied by piano and viola obbligato.

In any case, the literature available to the modern viola player is very considerable, ranging from simple ensemble parts to concertos of great difficulty, and the instrument may be said to have progressed immensely since 1750 in realizing its potential of tone and technique.

Viola, Francesco. *See* DALLA VIOLA family, (2).

Viola, Giovanni Domenico (*b* ?Naples, *c*1540–55; *d* Naples, before 1602). Italian composer. He was *maestro di cappella* at the royal church of S Giacomo degli Spagnoli, Naples, a church praised by contemporary writers for its choice music. He may have been appointed before 4 September 1573, when the archives record that 'Reverendo' G.D. Viola bought a consort of six viols for six ducats. Cerreto mentioned him as an excellent composer, then (in 1601) deceased. Viola's *Delli responsorii* (Naples, 1622), for four voices, were printed posthumously, edited by Marcello Magnetta who also provided a basso continuo part. The volume also includes Fabrizio Dentice's famous *falsobordone* settings of the *Miserere* and *Benedictus*, ornamented with *passaggi* for all four voices in turn.

KEITH A. LARSON

Viola, Orazio della. *See* BASSANI, ORAZIO.

Viola bastarda. A style of virtuoso solo bass viol playing favoured in Italy from about 1580 to about 1630, which condensed a polyphonic composition (madrigal, chanson or motet) to a single line, whilst retaining the original range, and with the addition of elaborate diminutions, embellishments and new counterpoint (*see* DIMINUTION (i)). The bastarda technique was not exclusive to the viol: Francesco Rognoni (1620) explained that it could be performed on 'organs, lutes, harps and similar instruments'; however, the viol's agility and three and a half octave range made it 'the queen' of the bastarda style.

In 1584 Girolamo Dalla Casa (*d* 1601) published his *Il vero modo di diminuir*, the earliest treatise to use the term 'viola bastarda'. Dalla Casa gave ten examples of diminutions for viola bastarda (five based on madrigals and five on chansons) of progressive difficulty starting with diminutions in quavers and moving on to semiquavers, demisemiquavers and triplet demisemiquavers over a range of *D*-*f*″. The other important treatise on viola bastarda playing is Rognoni's *Selva de varii passaggi* (Milan, 1620). He cautioned players against improvising more than six sequences in succession 'because it would then be tedious and offensive', to avoid 'making parallel octaves and 5ths with any of the parts', and he finally reminded them 'that it is of greater worth to sustain one note with grace or a sweet and gentle stroke of the bow than to make so many diminutions beyond that which is required'.

Dalla Casa wrote that 'you can [also] play these madrigals in company', and suggested the lute as a possible supporting instrument (playing the original composition). Sometimes viola bastarda diminutions were accompanied by viol consort. However, in 1591 Giovanni Bassano recommended the accompaniment of a 'plucked instrument' (lute or harpsichord) with a second instrument on the bass line. The later bastarda compositions by Oratio Bassani [della Viola] (*d* Parma 1615) and Vincenzo Bonizzi (*d* 1630) were provided with a continuo bass.

39 viola bastarda compositions survive; the ten by Dalla Casa are the earliest. Riccardo Rognoni's four pieces, published eight years later in *Passaggi per potersi essercitare*, were the first to be truly idiomatic to the viol, employing syncopated leaps and taking the instrument up to *b*″ on the *d*′ string. However, the most innovative settings of the school are the two by Oratio Bassani on Lassus's *Susanne un jour* and Wert's *Cara la vita mia* (both in *GB-Lbl* Add.30491). In these works Bassani uses the simple bass part of his chosen madrigal as a foil for breathtakingly virtuoso embellishments, generally freed from any further relationship to the original composition. Bassani delights in bold dissonance and striking syncopation; and the 'pasaggi d'imitationi' found in Riccardo Rognoni's pieces are now developed within the sequence. Indeed these are perhaps the most virtuoso viol pieces ever to be written. Bassani's nephew and pupil Francesco Maria Bassani kept a pedagogic notebook, *Regole di contrapunto*, which contains eight pieces, seven of which are probably by Oratio. Whilst they do not make the same technical demands as the two in Add.30491, they display a stylistic likeness; interestingly, two are toccatas over a free bass-line, possibly intended as a prelude to the more extended madrigal settings. The later compositions by Francesco Rognoni (son of Riccardo) and Bonizzi return to the conservative method of embellishing the whole contrapuntal work. Francesco Rognoni's publication contains some 'essempi per sonar alla bastarda' which give suggestions of how to divide a bass line.

All viola bastarda music is written for the standard viol tuning, of 4ths with a 3rd in the middle. It most commonly uses the lowest string tuned to *D* (i.e. like the modern bass viol) but sometimes the lowest string is a *G* (i.e. using the range of a modern tenor) or an *A*; the later players of the early 16th century, such as Bassani and Bonizzi, also used a tuning based on a low *A*′ or *G*′. Regarding the instrument's size, Francesco Rognoni, whose compositions use the D tuning, stated: 'The viola bastarda . . . is

an instrument which is neither a tenor nor a bass viol, but which is between the two in size'. However, the term in 16th-century descriptions seems to refer to the instrument's function rather than to its size; in addition, the wide pitch range of the lowest note for surviving works indicates that viols of different sizes were used as appropriate (or as available).

During the 50 years that the viola bastarda flourished the technique developed from one that found its roots in the *prima pratica* to the latest *seconda pratica* style, experimenting with highly virtuosic and rhetorical improvisation over a supporting continuo bass. The legacy of the viola bastarda technique can be seen in the new idiomatic violin music of Monteverdi and Marini, and also in the English lyra viol music and the practice of divisions on a ground. There are two examples of viola bastarda music outside Italy. In London in 1613, the Italian, Angelo Notari, who worked at James I's court, published diminutions in bastarda style on the tenor and bass parts of Cipriano de Rore's madrigal *Ben qui si mostra il ciel*, and the dulcian player in Vienna, Bartolemeo de Selma y Salaverde, included three bastarda settings in his *Primo libro* of 1636.

References to the viola bastarda by Praetorius and Adam Jarzębski are misleading. Praetorius, in his *Syntagma musicum*, ii (1618, 2/1619), gave a variety of tunings that would appear to be more appropriate to the lyra viol than the viola bastarda. Jarzębski used the title 'viola bastarda' for the bass viol part in his trio and quartet sonatas, which are of a modest range and only occasionally ornamented with divisions. (Jarzębski's misnomer may have arisen because he worked at the court of Sigismund III of Poland where Francesco Rognoni had also been employed.)

LUCY ROBINSON

Viola da braccio (It.). A 16th- and 17th-century term for a member of the VIOLIN family. 'Da braccio' ('on the arm'), as opposed to 'da gamba' ('on the leg'), was one of the ways the generic word *viola* was qualified in 16th-century Italian to distinguish the violin from the viol. At this stage it was usually applied to the complete family: in the printed score of Monteverdi's *L'Orfeo* (1609) five-part passages evidently intended for two violins, two violas and bass are collectively labelled 'Viole da braccio'. Later in the century it became customary to restrict the term to the alto, tenor and bass parts of string consort music while the soprano parts were given the more precise label 'violino'. The first setting of 'Beatus vir' in Monteverdi's *Selva morale e spirituale* (Venice, 1641) calls for '6. voci concertato con due violini & 3 viole da brazzo ouero 3 Tronboni', while a sonata by Clemens Thieme (1631–68) composed about 1660 (*S-Uu*) is said to be for two 'Violini', two 'Trombetti' and four 'viole di Braccio' – the last being parts in alto, tenor and bass ranges. By then it was becoming more common to restrict 'viola da braccio' (or sometimes just 'braccio') to viola parts. *Bratsche*, the most common German word for viola, preserves a form of this usage in modern terminology.

PETER HOLMAN

Viola da gamba. An Italian term for the VIOL (literally, 'leg viol'). During the 16th century bowed string instruments were sometimes classified according to the way in which they were held during performance, the viol being designated 'leg viol' and the violin 'arm viol' (VIOLA DA BRACCIO). From the mid-17th century the bass instrument of the viol family was most regularly used, and 'viola da gamba' gradually assumed its modern specific meaning of bass viol. By the time of the final phase of the viol's popularity in England, in the 1770s and 80s, corrupt forms of the original Italian term, occasionally found since the early 17th century, had become the norm, e.g. 'Viol de Gambo'; 'viol-de-gamba'; 'Viol di Gamba'; 'Viol da gamba'; 'Viol di Gambo'. The abbreviated form 'gamba' is now frequently used.

IAN WOODFIELD

Viola da Gamba societies. Societies exist in Britain, Switzerland and the USA to promote the playing and the study of viols. The British society was founded in 1948; its presidents have been Jack Westrup and Nathalie Dolmetsch, and Gordon Dodd was prominent in its organization. In 1998 the president was Alison Crum. The society has indexed sources and supervised an edition of Jenkins's consort music. It holds lectures and discussions and issues a newsletter and an annual journal, *Chelys*. The American society, founded in 1963, has several chapters, sponsors a large national workshop each summer (the Conclave), and publishes a newsletter and a valuable annual journal. The Swiss society, the Viola da Gamba-Gesellschaft, was founded in Winterthur in 1992 under the presidency of Manfred Harras. It publishes a quarterly magazine, *Viola da-gamba Mitteilungen*.

□

Viola d'amore (Fr. *viole d'amour*; Ger. *Liebesgeige*). A kind of viola popular during the late 17th and 18th centuries; also a stop on the Romantic organ that imitates its timbre. Normally the viola d'amore is about the size of a viola but with the physical characteristics of a viol: flat back, wide ribs flush with the top and back, sloping shoulders and a carved head at the top of the pegbox (fig.1). The soundholes are commonly in the shape of a 'flaming sword' and there is usually an additional rosette. The instrument is held under the chin and played like a

1. *Front and back views, with detail of pegbox, of a viola d'amore by Johann Ulrich Eberle, Prague, 1731 (private collection)*

Ex.1 Schmidt: Sinfonia for viola d'amore, violin, and basso

violin; it is unfretted. Its tone, though not as brilliant or powerful as that of the violin or viola, is singularly sweet. Usually there are 14 strings: seven playing strings, which cross the top of the bridge, and seven sympathetic (resonating) strings, which run through the bridge and under the fingerboard into separate pegs in the pegbox. Various instruments, however, may have various combinations of playing and sympathetic strings.

1. History. 2. Repertory.

1. History. The use of Sympathetic strings and the 'flaming-sword' soundhole (symbolic of Islam) on the viola d'amore suggest a Middle Eastern influence, and many Indian chordophones, such as the *sāraṅgī, dilrubā, esrāj*, *sitār* and *sarod*, have sympathetic strings. In western Europe sympathetic strings were applied to the viol in England in the early 17th century, and also (at various times) to other instruments including the violin, kit, baryton (*see* Baryton, (i)), trumpet marine and Norwegian Hardanger fiddle, as well as the viola d'amore.

The first known mention of the name 'viol d'amore' appeared in John Evelyn's diary (20 November 1679):

I dind at the Master of the Mints with my wife, invited to heare Musique which was most exquisitely performed by 4 of the most renouned Masters, *DuPrue* a *French-man* on the Lute: Signor *Batholomeo* Ital: on the Harpsichord: & Nicolao on the Violin: but above all for its swetenesse & novelty the *Viol d'Amore* of 5 wyre-strings, plaied on with a bow, being but an ordinary Violin, play'd on *Lyra* way by a *German*, than which I never heard a sweeter Instrument or more surprizing…

Extant instruments and early writings show that two types of viola d'amore have existed: a small, shallow-ribbed, viol-shaped 17th-century type with metal playing strings and no sympathetic strings, and a later, larger type that prevailed during the 18th century – of viola body-length but viol-shaped and equipped with sympathetic strings. Some extant late 17th-century violas d'amore have sympathetic strings, although the earliest known explicit reference to them is in Joseph Majer's *Museum musicum* (1732). Other 17th- and 18th-century writers who described the instrument include Speer (*Grund-richtiger … Unterricht*, 1687, rev., enlarged 1697), Brossard (*Dictionaire de musique*, 1703), Mattheson (*Das neu-eröffnete Orchestre*, 1713), Walther (*Musicalisches Lexicon*, 1732), Eisel (1738) and Rousseau (*Dictionnaire*, 1768). Mattheson extolled its 'tender and languishing effect' and regretted that 'its use should not be greater'. Leopold Mozart (*Versuch*, 1756) wrote that the viola d'amore was 'a special kind of violin that sounds lovely in the stillness of the night' and emphasized that it permitted many different tunings. Albrechtsberger (1790) called it a 'pleasant chamber instrument'.

The abundance of extant 17th- and 18th-century violas d'amore shows that the instrument was in great demand, particularly in Austria, Germany, Bohemia and Italy. Some of the more notable craftsmen who made violas d'amore were J.A. and Mathias Albani, Lorenzo and Tomaso Carcassi, J.U. Eberle, four members of the Gagliano family, Matteo Gofriller, Giovanni Grancino, G.B. Guadagnini, C.F. Landolfi, Vincenzo Ruggieri, Jacob Stainer, Lorenzo Storioni and P.A. Testore. Plans by Antonio Stradivari from 1716 exist, but no corresponding instrument has been found.

For the greater part of the 18th century the viola d'amore was tuned in the key of the individual composition it was to be used to play. Mattheson and Walther wrote that the instrument was tuned in either C minor or C major: *g–c′–e♭′(e′)–g′–c″*. In addition to the C (minor or major) tuning Eisel offered another: *F–B♭–d–g–c′–g′–b♭′*. Extant compositions from the first half of the 18th century show a wide variety of scordatura tunings. Majer listed 16 for the viola d'amore in 1732. By the end of the 18th century, however, the standard tuning was in the tonality of D major: *A–d–a–d′–f♯′–a′–d″*. The sympathetic strings were tuned in unison with the playing strings.

18th-century music for the viola d'amore was sometimes notated to sound as written (as in the music of J.S. Bach and Graupner), but more often in scordatura, whereby the composer would write *g–d′–a′–e″* for the four highest open strings, which were tuned to and would sound *d′–f♯′–a′–d″* in the D major tuning (or other pitches in different tunings). Fingered notes were indicated accordingly. Notes written in the bass clef (when it was used for the three lower strings) sounded an octave higher. Ex.1 illustrates typical viola d'amore notation. Attilio Ariosti in his 'lessons' for viola d'amore and continuo used a unique notation system, placing the alto clef in its usual position and the soprano clef on different leger lines to indicate hand position rather than actual pitch.

2. Repertory. Among the earliest known works that use the viola d'amore are J.C. Pezel's cantata *Des Abends, Morgens und Mittags* (MS, 1690, *D-F* Ms.Mus.449), Wilderer's *Il giorno di salute* (1697), Ariosti's *Marte placato* (1707), Giovanni Bononcini's *Turno Aricino* (1707), Fux's *Gli ossequi della notte* (1709), Keiser's *Desiderius* (1709) and *Kayserliche-Friedenspost* (1715), Mattheson's *Boris Goudenow* (1710) and *Henrico IV* (1711), Alessandro Scarlatti's *Il Tigrane* (1715), Stölzel's *Brockes-Passion* (1712), Telemann's 1716 Passion *Der sterbende Jesus* and his cantata *Herre, lehre uns bedenken*, 1720 – all with obbligato viola d'amore; and Biber's Partita no.7 for two violas d'amore and continuo from the *Harmonia artificiosa-ariosa* (1712).

The viola d'amore was used to great effect by J.S. Bach (the cantatas *Schwingt freudig euch empor* BWV36c, *Tritt auf die Glaubensbahn* BWV152 and *Der zufriedengestellte Äolus* BWV205, and the *St John Passion*), Telemann (a concerto for flute, oboe d'amore and viola d'amore with strings and harpsichord, and a trio sonata), Christoph Graupner (nine concertos, 12 overtures, one sinfonia, six trio sonatas and 14 cantatas) and Vivaldi (eight concertos, *Juditha triumphans* and *Nisi Dominus*). Attilio Ariosti, one of the first virtuosos on the

Ex.2 Carl Stamitz: Sonata pour la viole d'amour avec accompagnement d'un violon ou d'une alt viole, 1st movt

instrument, composed six 'lessons' for viola d'amore and continuo (1724/*R*), 15 sonatas for viola d'amore and continuo, and a cantata *Pur al fin gentil viola* for soprano, viola d'amore and continuo.

During the second half of the 18th century the viola d'amore was frequently used in both solo and chamber compositions. Carl Stamitz (*see* STAMITZ family, (2)), a virtuoso on the instrument, wrote two concertos, sonatas and a quartet with viola d'amore. Hoffmeister composed four quartets in which the viola d'amore is the leading instrument. F.W. Rust wrote demanding and musically superior works that made dramatic use of the instrument's technical possibilities, including sonatas with bass or harpsichord, a sonata with violin, a duet with viola, an *Aria con variazioni* for viola d'amore and bass and a trio for viola d'amore and two flutes. Other 18th- and early 19th-century composers who wrote solo or chamber works for viola d'amore include Albrechtsberger, F. Benda, Eybler, Farinelli, Giránek, Haydn, Heinichen, Locatelli, Pepusch, Pez, Pezold, Quantz and J.C. Toeschi.

Baroque composers, primarily interested in the special timbre of the instrument, tended to ignore its multiple-stop and chordal possibilities. Late 18th-century composers, however, made abundant use of double and multiple stops (ex.2) as well as arpeggios and harmonics.

The popularity of the viola d'amore declined during the 19th century, despite its effective use in Meyerbeer's *Les Huguenots* (1836), Ferenc Erkel's *Bánk bán* (1861), Gustave Charpentier's *Louise* (1900), C.M. Loeffler's *La mort de Tintagiles* (1900), Massenet's *Le jongleur de Notre-Dame* (1902), Puccini's *Madama Butterfly* (1904), and Pfitzner's *Palestrina* (1917). Interest was revived in the late 19th and early 20th centuries owing to a general growth of interest in old instruments, the work of outstanding players such as Louis van Waefelghem,

2. *Viola d'amore player: engraving from J.C. Weigel's 'Musicalisches Theatrum' (c1722)*

Walter Voigtländer and Carli Zoeller, and the efforts of the performer-composers Paul Hindemith and Henri Casadesus. Hindemith's *Kammermusik* no.6 for viola d'amore and chamber orchestra (1927) and *Kleine Sonate* for viola d'amore and piano (1923) and Frank Martin's *Sonata da chiesa* for viola d'amore and organ (1938) were the first major works for viola d'amore in the 20th century. Hindemith's viola d'amore works, though thoroughly 20th-century in content, extend the typical viola d'amore techniques of the 18th century (ex.3). Other 20th-century composers who have written works with viola d'amore are A. Arcidiacono, Siegfried Borris, York Bowen, Hans Gál, G.F. Ghedini, Ginastera (*Don Rodrigo*, 1964; *Bomarzo*, 1967), Janáček (*Kát'a Kabanová*, 1921; *The Makropulos Affair*, 1926; the original versions of the Sinfonietta, 1926, and the String Quartet no.2, 1928), A. Kaufman, V. Nelhybel, Dika Newlin, Prokofiev (*Romeo and Juliet*, 1938), K.G. Roger, Cyril Scott, Mátyás Seiber and H.W. Henze (*We Come to the River*, 1976, and in his edition of Monteverdi's *Il ritorno d'Ulisse in patria*, 1985).

MYRON ROSENBLUM

Viola da spalla [violoncello da spalla] (It.). An 18th-century name given to a bowed string instrument, possibly a cello or a smaller variant of it, played at shoulder height with the instrument held across the player's chest by a strap over the shoulder (It. *spalla*).

Zaccaria Tevo (1706) mentions the viola da spalla as an instrument that plays bass parts in an ensemble. Musicians from the Veneto, such as Tevo, frequently referred to the bass member of the violin family as a *viola*, and his *viola da spalla* is probably an equivalent of the *violoncello da spalla* mentioned by Bartolomeo Bismantova, who gives its tuning as *D* or *C*, *G*, *d*, *a*. Johann Mattheson followed Tevo's usage, but added considerable detail – including the playing position and the use of a strap to keep the instrument in place – in his account of the *viola da spalla*, which he described along with the violoncello and *bassa viola* as a small bass violin. J.F.B.C. Majer, *Museum musicum* (1732), added that the *viola da spalla*, taken now as an equivalent of the cello, may also be held between the legs. Jacob Adlung, *Anleitung zu der musikalischen Gelahrtheit* (1758), simply equated the *viola da spalla* with the cello.

Iconographic evidence – formerly taken as bizarre or incompetent renditions of violins or violas – confirms the use of a shoulder-held cello during the period reported by these writers. An illustration in the cello music of Giuseppe Torelli's *Concertino per camera* op.4 (1688), for example, shows a standing figure with just such an instrument. Significantly, the engraver of this publication, Carlo Buffagnotti, was himself a cellist who held the rank of *suonatore* in the Accademia Filarmonica of Bologna.

See VIOLONCELLO, §II, 1(ii); and BASS VIOLIN.

GREGORY BARNETT

Viola di bardone [viola di bordone]. A term used by Brossard (*Dictionaire*, 1703) for the baryton; *see* BARYTON (i).

Viola di fagotto (It.; Ger. *Fagottgeige*). A bowed string instrument of south German/Austrian origin, in use from 1670–1782. It was probably the bass equivalent of the treble *schalmei geige* (see Spielmann), and most likely was also the *viola piffero* encountered in instrumental pieces by J.H. Schmelzer. Its gut strings were wound with silver or copper wire, thereby producing a buzzing sound like a bassoon, an effect most probably caused by the strings striking the fingerboard when bowed. Leopold Mozart wrote that some people inaccurately called the instrument *Handbassel* (apparently the same as VIOLA DA SPALLA).

HOWARD MAYER BROWN/STEPHEN BONTA

Violão (Port.). *See* GUITAR.

Viola pomposa (It.). A five-string viola, tuned either *c–g–d′–a′–e″*, i.e. like a regular viola with an additional *e″* string, or possibly *d–g–d′–g′–c″* as Galpin suggested. It was in use from about 1725 to about 1770 and was played on the arm. Some writers (for example H.C. Koch and J.G. Graun) also called it *violino pomposo*.

The only surviving music for the instrument comprises two duets for flute and viola pomposa or violin by G.P. Telemann (from *Der getreue Music-Meister*), a double concerto by J.G. Graun, two *sonate da camera* by J.G. Janitsch, and a solo sonata with continuo by C.J. Lidarti. The invention of the instrument was erroneously ascribed to J.S. Bach by several late 18th-century writers, apparently because they confused the viola pomposa with the violoncello piccolo which J.C. Hoffmann of Leipzig made for Bach and for which Bach occasionally wrote.

See VIOLONCELLO, §II, 1(ii).

HOWARD MAYER BROWN/R

Viole (Fr.). *See* VIOL.

Viole, Rudolf (*b* Schochwitz, 10 May 1825; *d* Berlin, 7 Dec 1867). German composer. Originally trained to be a teacher, he studied music with R.J. Hentschel in Weissenfels and was also a pupil of Liszt; but he never achieved prominence as a concert pianist and, after his student days, lived in Berlin as a piano teacher and occasional contributor to the *Neue Zeitschrift für Musik*. Among Liszt's early pupils he occupies an important position; his first sonata (1855), which caused a sensation, is greatly varied within a coherent single-movement form, and achieves something of the harmonic boldness and rhapsodic power, the almost bombastic tumult of the climax of Liszt's own Sonata. Bülow, the dedicatee, described it as 'sweepingly innovatory, music of the future in the highest degree', which offered, he added, an example for 'the artistic emancipation from formalism'. His ensuing, less stormy sonatas, particularly in the slow movements, represent a skilful development of his formal principles, despite their conflicting stylistic elements. Beside these achievements his other works, written primarily for his own instrument and now virtually forgotten, are of little significance. Liszt contributed a valuable set of fingerings to Viole's *Die Gartenlaube*, a collection of studies more important pedagogically than aesthetically.

Viole d'amour (Fr.). *See* VIOLA D'AMORE.

Viole d'orchestre. *See under* ORGAN STOP.

Violet. *See* ENGLISH VIOLET.

Violeta (Sp.). *See under* ORGAN STOP (*Violetta*).

Violetta (It.). (1) A word used at various times to mean VIOL, VIOLIN, VIOLA or VIOLONCELLO.

G.M. Lanfranco (*Scintille di musica*, Brescia, 1533) wrote about 'violette da arco senza tasti' (small bowed violas without frets), which may be rebecs but are more probably violins. Tuned in 5ths with the higher members of the family having only three strings, they are the equivalent of the *kleine Geigen* described by Martin Agricola (1529) and other 16th-century German writers. This usage also appeared in other 16th- and 17th-century sources, for example in Pietro Cerone's *El melopeo y maestro* (Naples, 1613), 1057.

Zacconi (*Prattica di musica*, 1592) called the treble viol a VIOLETTA PICCOLA, a term Praetorius (*Syntagma musicum*, 2/1619) used both for treble viol and for violin. Sebastiano Cherici, observing the Venetian usage of his time (wherein the term 'viola' was used for the larger size of the bass violin, 'violetta' for the smaller), applied the term 'violetta' to the small bass violin or VIOLONCELLO in his *Inni Sacri* (1672). The compass of Cherici's part for the instrument was *D–e′*. Banchieri (*L'organo suonario*, Venice, 2/1611, p.97) discusses a *basso violetta da brazzo*, which is tuned in 5ths, one octave below the violin.

In the 17th and 18th centuries *violetta* commonly meant 'viola'. On the other hand, J.G. Walther, in his *Musicalisches Lexicon* (1732), defined it as a bowed string instrument that played a middle part, either a viola or a small viola da gamba ('eine Geige zur Mittel-Partie, sie werde gleich auf Braccien, oder kleinen Viole di Gamben gemacht'). Telemann may have been observing this practice when he called for the 'violetta' as an alternative to the 'violin' in several orchestral parts for two of his violin concertos (*Musikalische Werke*, xxiii, no.6 in F and no.8 in G). Given the range of the parts, either viola or bass viola da gamba would serve as suitable substitutes.

The ENGLISH VIOLET is a kind of viola d'amore; see also VIOLETTA MARINA.

HOWARD MAYER BROWN/STEPHEN BONTA

Violetta marina (It.). A bowed string instrument with sympathetic strings. Structurally it probably resembled the viola d'amore. It was developed by Pietro Castrucci (*b* Rome, 1679; *d* Dublin, 29 Feb 1752), leader of Handel's opera orchestra in London for over 22 years. A pair of obbligato parts inscribed 'violette marine per gli Signori Castrucci' occur in the hero's sleep aria in Handel's *Orlando* (1733) and a part for one instrument is included in *Sosarme* (1732); the 'violetta' in *Ezio* (1732) and *Deborah* (1733) might refer to the same instrument. A brief passage by Burney (*History*, ii, 1782, p.698) is the chief source of information about the violetta marina, though it is possible that it was identical with the ENGLISH VIOLET.

STEPHEN BONTA

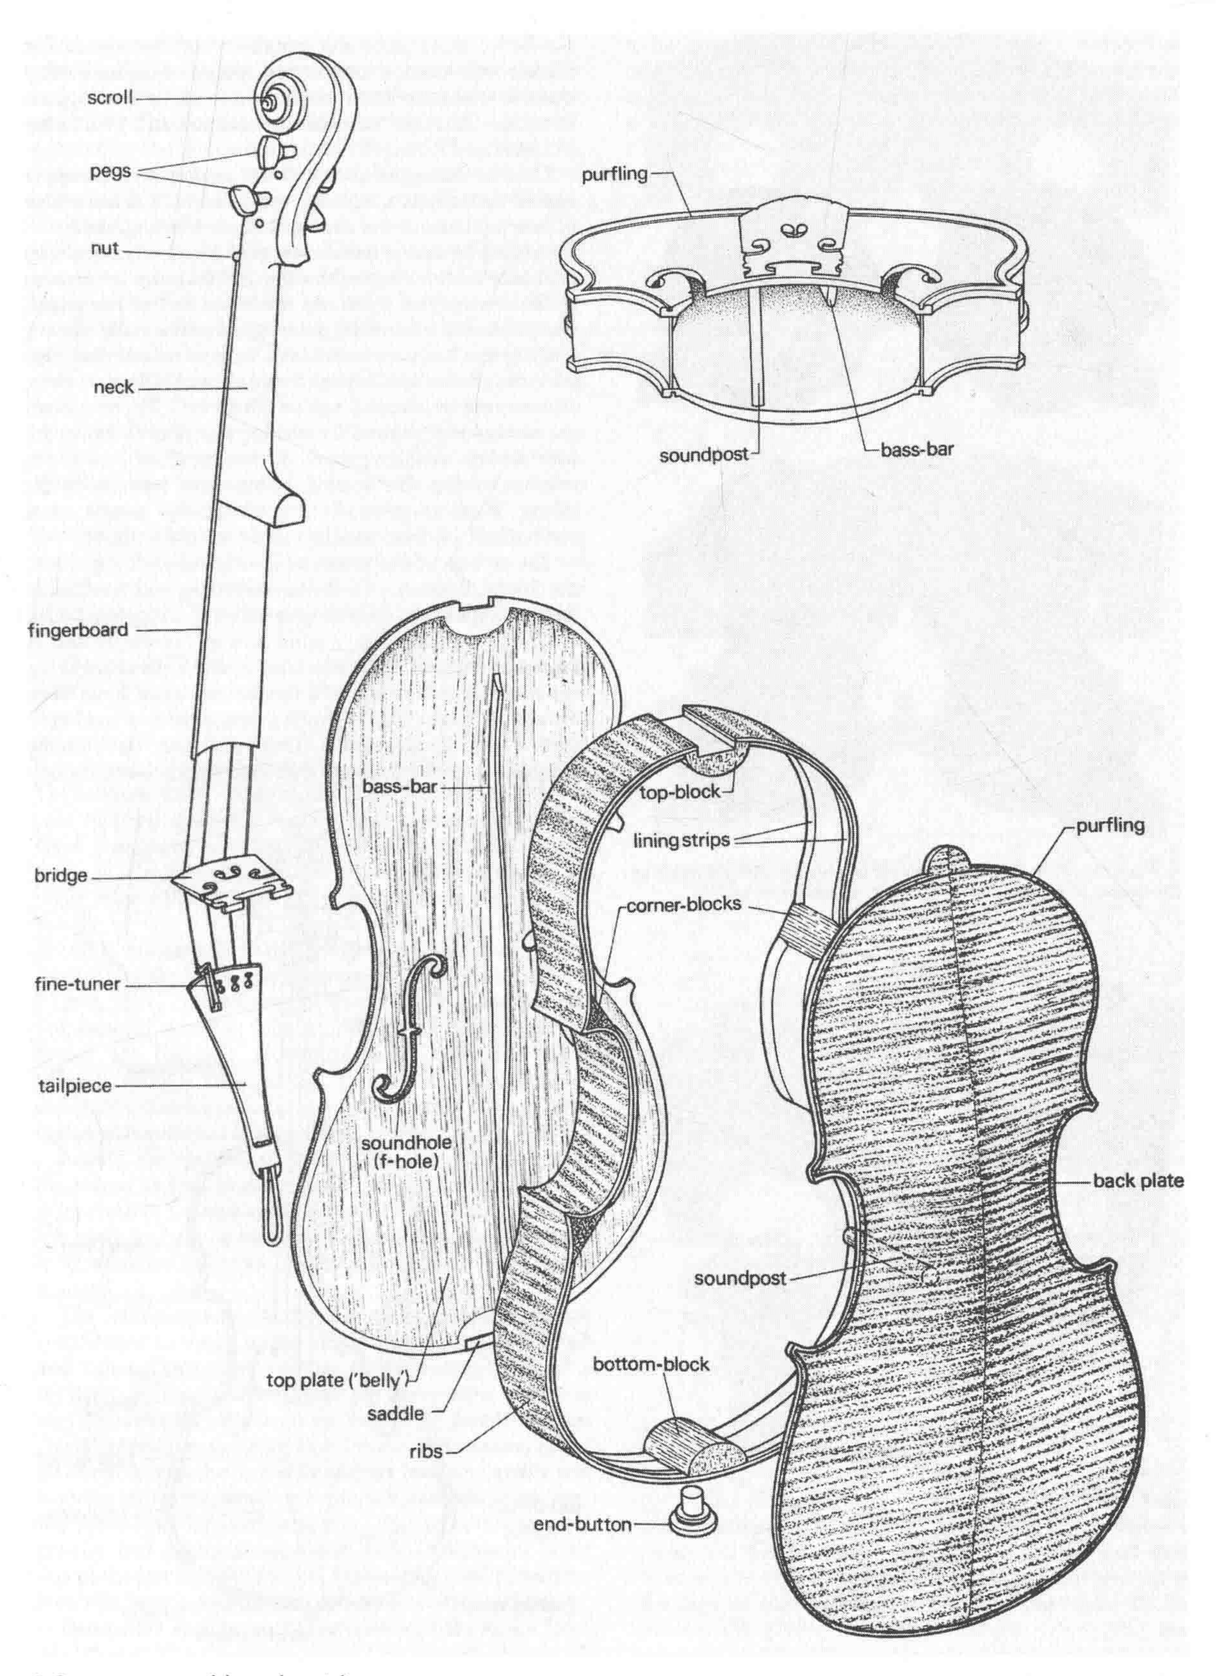
Violetta piccola (It.). According to Lodovico Zacconi's *Prattica di musica* (Venice, 1592), book 4, chap.56, a descant VIOL. Praetorius, in *Syntagma musicum*, ii (2/1619) used the term to mean either descant viol or VIOLIN.

Violette, Wesley La. *See* LA VIOLETTE, WESLEY.

Violin (Fr. *violon*; Ger. *Violine, Geige*; It. *violino*; Sp. *violín*). Soprano member of the family of string instruments that includes the viola and cello (the DOUBLE BASS is also usually considered to be a member of the violin family though in some of its features – all explicable in terms of the practicalities of playing such a large instrument – the influence of the VIOL family is apparent: it is tuned in 4ths rather than 5ths, historically had a variable number of strings and normally has sloping shoulders and a flat back that is 'broken' so that the upper section slopes inward towards the neck). In the Hornbostel-Sachs system the violin is classified as a CHORDOPHONE: bowed lute (or fiddle).

I. The instrument, its technique and its repertory

1. INTRODUCTION. The violin is one of the most perfect instruments acoustically and has extraordinary musical versatility. In beauty and emotional appeal its tone rivals that of its model, the human voice, but at the same time the violin is capable of particular agility and brilliant figuration, making possible in one instrument the expression of moods and effects that may range, depending on the will and skill of the player, from the lyric and tender to the brilliant and dramatic. Its capacity for sustained tone is remarkable, and scarcely another instrument can produce so many nuances of expression and intensity. The violin can play all the chromatic semitones or even microtones over a four-octave range, and, to a limited extent, the playing of chords is within its powers. In short, the violin represents one of the greatest triumphs of instrument making. From its earliest development in Italy the violin was adopted in all kinds of music and by all strata of society, and has since been disseminated to many cultures across the globe (see §II below). Composers, inspired by its potential, have written extensively for it as a solo instrument, accompanied and unaccompanied, and also in connection with the genres of orchestral and chamber music. Possibly no other instrument can boast a larger and musically more distinguished repertory, if one takes into account all forms of solo and ensemble music in which the violin has been assigned a part.



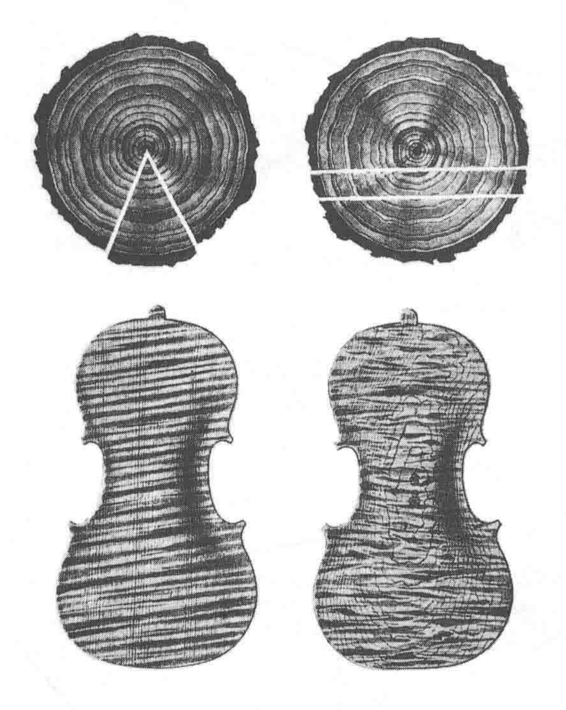
The most important defining factor of the Western orchestra, ever since it emerged during the 17th century, has been the body of 'strings' (i.e. violin-family instruments) playing together with (usually) more than one player to a part. The violin (and violin family), however, had originated well before the 17th century – the three-string violin was certainly in existence in the 1520s and perhaps even earlier – and by the early 17th century the reputation and universal use of the violins were such that Praetorius declared (*Syntagma musicum*, ii, 2/1619): 'since everyone knows about the violin family, it is unnecessary to indicate or write anything further about it'.

The present article concerns the violin as part of the heritage of Western art music.

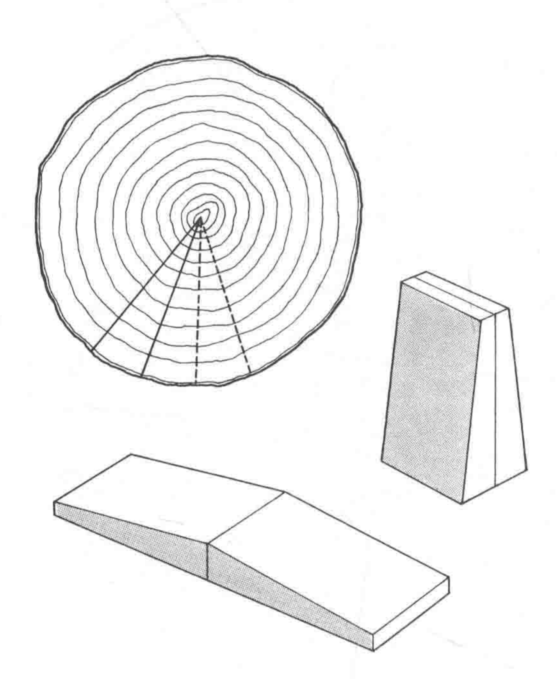
2. STRUCTURE.

(i) Components of the modern violin. The violin gives an appearance of deceptive simplicity to the eye, but is in fact constructed of some 70 parts, which require the skill of a master craftsman to cut and assemble. Acoustically it is one of the most complex of instruments (see §2(ii) below). The body is a hollow box (fig.1) about 35·5 cm long, consisting of an arched top plate ('belly') and arched back plate, joined by sides ('ribs') of slightly varying heights (a typical Stradivari measurement is 2·8 cm at the top end of the instrument and 3·2 cm at the bottom). The edges of the belly and back are not flush with the ribs as is usual in a viol, but project beyond, overhanging the ribs slightly. The belly is made of softwood, generally European spruce, and the back and sides are fashioned of hardwood, usually maple. The neck, pegbox and scroll are also customarily of maple. The fingerboard runs along the neck and extends over the belly towards the bridge; it is now normally made of ebony. It is unfretted, a feature that distinguishes the violins from the viols.

Both top and back may be made of one piece of wood, or (much more usually) of two pieces joined. The wood may be cut either radially 'on the quarter' (fig.2*a* and *b*) or in layers ('on the slab'). One-piece backs (either quarter- or slab-cut; see fig.2*c* and *d*) are not uncommon but one-piece slab-cut tops are rare because for acoustical reasons they seldom give satisfactory results. Radial cutting is generally favoured, especially for tops, because the properties of the various radial sections are about the same from one piece to another. Fig.3 shows how a radial section is split from the top and the resulting two sections then glued base to base. In this way the resulting piece of wood will have the same properties relative to the join in the middle. The appearance of the wood surface depends on which of the two methods of cutting is used. The 'waves' in the veined wood are generally called 'curls', and in the one-piece back shown in fig.2*c* these are seen to run continuously upwards from left to right. In two-piece backs the curls (if there are any) would not be continuous because they would be interrupted by the join in the middle (as in the 'Messiah' Stradivari violin; *see* STRADIVARI, fig.2). The pattern of curls is referred to as 'figure'. Highly-figured wood looks very beautiful, but it is not necessarily acoustically better than plainer maple (which has often been used by the great makers). Figure is distinct from 'grain', the latter being the arrangement of the fibres of the wood which are distributed in alternating strata of impacted resin (summer growth when the sap is rising) and paler wood (winter carbohydrate growth). In a cross-section of a tree trunk the grain is seen as annular rings, but in radial sections used for violin backs and bellies they appear as parallel lines running longitudinally from pegbox to tailpiece. The grain is generally more prominent in the spruce of the belly than in the back where the eye tends to be distracted by the figure in the maple. The distance between the parallel grain lines varies, sometimes being narrow ('close' grain),

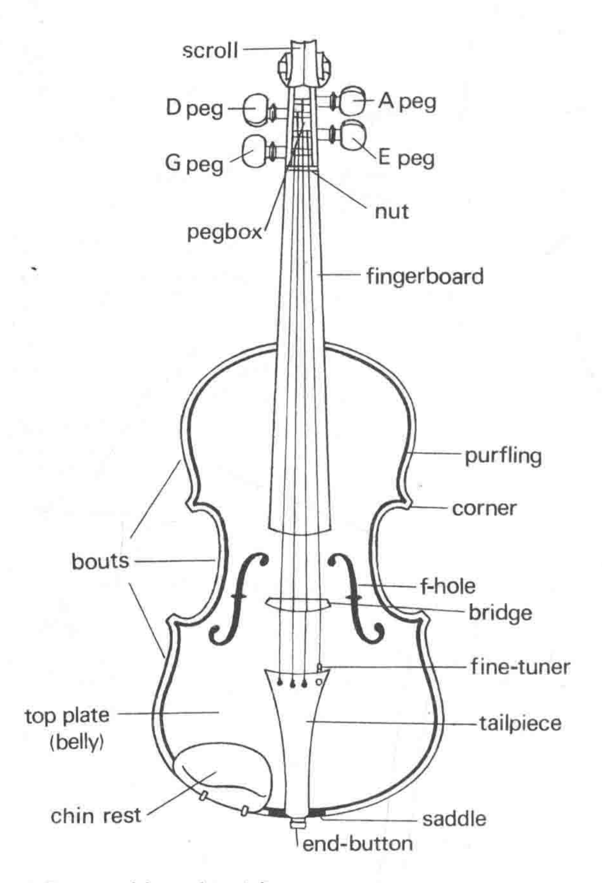


1. *Component parts of the modern violin*



sometimes wider ('open' grain); for violins the ideal range is between 1 and 2 mm. In a typical belly the spacing of the grain lines widens symmetrically from the centre join. Grain is important acoustically since the resin lines conduct sound while the carbohydrate growth acts as a damper; the balance of these two features, especially in the belly, determines the suitability of the wood. For further information on cutting, preparation and other matters with respect to wood used in violin making, see Drescher (*MGG2*, 'Streichinstrumentenbau', §A), Leipp (A1965) and Rubio (B1984).

The four strings of the violin are anchored in the upper end of the tailpiece, strung over a carefully fitted bridge of maple, then carried over and above the fingerboard to the ebony (or ivory) nut and secured by the pegs of ebony (or rosewood) in the pegbox (fig.1). The latter is crowned by an ornamental scroll. At the lower end of the violin, the tailpiece is secured by the tailgut (traditionally a heavy piece of gut but now sometimes wire or nylon) that runs over the ebony saddle (figs.1 and 4) and is looped over, and secured by, the end-button ('end pin'). The tension of the strings is regulated by turning the pegs to bring the four strings to their proper pitches: *g*, *d′*, *a′* and *e″*. In modern violins the steel E string (and sometimes the others also) is generally fine-tuned by means of a mechanical adjuster attached to the tailpiece (fig.4).



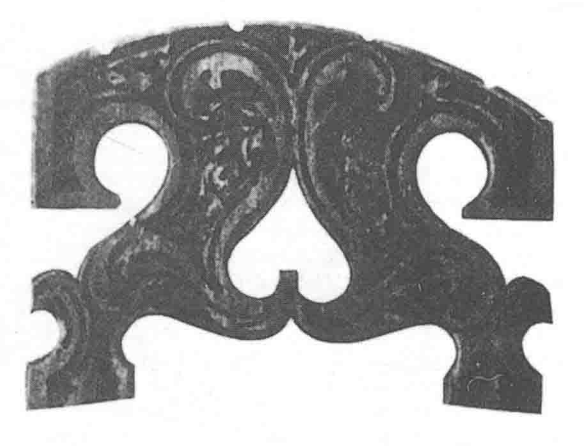
The strings of the violin were originally all gut. From the 1660s, however, the lowest (G) string was commonly wound with silver wire to give a better response. Today violinists generally use wound strings for the D and A strings as well and also use a steel E string, the latter being far more durable. Other kinds of stringing have been developed in the 20th century; strings with a steel core (overwound with, usually, silver) or a core of synthetic material (e.g. nylon). Both types are widely used, though

2. Wood cut (a) on the quarter, and (b) on the slab, with the resulting appearance of one-piece violin backs (c, d) made from each

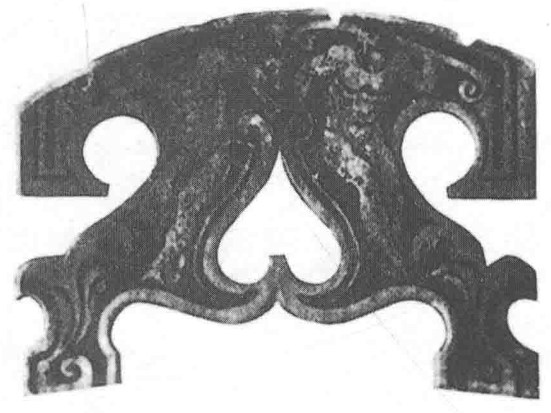
3. Radial section split (cut on the quarter) and glued base to base

4. Features of the modern violin

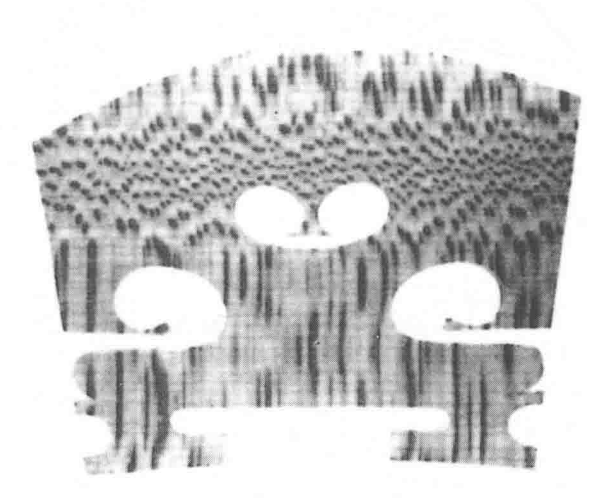
neither has displaced the gut-core string as the preferred choice of most professional players.



Inside the violin, the top-, bottom- and corner-blocks and the side linings (see fig.1) strengthen and stabilize the structure. The soundpost and bass-bar give additional support for the interior of the instrument. The soundpost, ordinarily of spruce, stands vertically between back and belly and is located under the right foot of the bridge – not directly under the bridge's foot but on a line with it, slightly towards the tailpiece. The position of the soundpost is a critical factor in producing the best sound from the instrument. The bridge too must be fitted exactly to the contours of the belly and is positioned in line with the notches of the f-holes. The BASS-BAR, also normally of spruce, is glued to the undersurface of the belly, running under the left foot of the bridge. Like the soundpost, the bass-bar helps support the top and also serves an acoustical purpose (see §2(ii) below). The CHIN REST is made of wood (usually ebony) or vulcanite. Many players also attach a shoulder rest to the underside of the instrument. These devices, the first invented by Spohr in about 1820 (though much improved since) and the second a 20th-century development, make it possible for players to support their instruments without any assistance from the left hand.



The beautiful design and shape of the violin are not merely ornamental but are functional to a considerable degree. The vaulting of the back and the belly is essential for strength and for acoustical reasons, the whole body being designed to furnish the best amplification of sound. The narrow waist – that is, the 'middle bouts' – permits ease of playing on the highest and lowest strings. The scroll is decorative, although the instrument may be hung up by it. The line of PURFLING which runs just inside the outer edge of back and belly not only emphasizes the beauty of the outline but also minimizes cracks and prevents any damage to the overhanging edges from going further into the body. Some acoustical experts (see Backus, B1969, 2/1977) think that purfling may be a factor in the fine tone of a violin. The soundholes (f-holes) and the bridge are basically acoustical in function (see §2(ii) below), though their actual forms are influenced by decorative considerations. In any case, early bridges vary in design somewhat from modern bridges (fig.5).



Finally, the varnish, so beautiful in the finest violins, is functional as well as decorative, being indispensable as a preservative. Varnish cannot improve the tone, but if it is too hard, too soft or badly applied it may prevent the best tone qualities inherent in the instrument from being realized.

The composition of the Cremona varnish, which contributes so much to the visual beauty of a Stradivari and other Cremonese violins, remains something of a mystery, although there could not have been anything very mysterious about it in its time. Jacob Stainer (?1617–1683) in the Austrian Tyrol, for instance, knew all about it, and the Venetian makers used an equally fine varnish. However, easier and quicker methods of varnishing were later applied, and by 1750 or 1760 the old process had nearly disappeared, G.B. Guadagnini being one of the last (*c*1780) to use Cremona varnish. Nevertheless, excellent varnishes are once again being used today.

Distinctive structural characteristics of the violin from *c*1600 to *c*1785 ('Baroque violin') are described in §4(ii) below.

5. Back and front views of the bridge of Stradivari's 'Tuscan' viola compared with a modern viola bridge (below)

(ii) Sound production and acoustics. Any violin has a certain potential of volume, whose realization depends partly on 'accessories' – the type of strings and their tension, the type of bridge, the quality of the bow, even the type of chin and shoulder rests – and partly on the skill of the player. Fingering, vibrato, bow speed and pressure, and the relative placing of the bow between the bridge and the end of the fingerboard all have a direct

bearing on the dynamic and tonal characteristics of the sound.

When the bow sets the string or strings in motion, the vibrations are transmitted to the belly and the back via the bridge and the soundpost. The soundpost renders the right foot of the bridge (the nearest to the E string) effectively immobile, leaving the left one relatively free to transmit vibrations to the bass-bar and belly (which functions as the soundboard of the instrument) and thence, through the sides to the back (whose primary function, however, is as a reflector). The total area of the soundbox then further amplifies the vibrations and transmits them eventually to the ear of the listener. The soundholes operate as a secondary and complementary acoustical system, adding considerably to the resonance.

The quality and character of the tone depend on the vibrating string and how well its fundamental pitch frequency and upper partials are received and transmitted by the wood of the violin's body. The string vibrates (for any given pitch) not only as a whole – that is, as stopped between nut and bridge by the player's finger – but also in various parts of its length so as to produce the other harmonics of the fundamental, thus giving richness and complexity to the timbre. Some individual tones are the result of the complex interaction of as many as 20 upper partials in addition to the fundamental.

The role of the violin body is to amplify and project the string vibrations to the outer air. What makes a particular violin good is the degree to which it transmits the string vibrations of the fundamental and its harmonics with equal response over the whole register of the instrument. The tone of the violin, then, depends initially on the capacity of the many resonance frequencies of the wood to respond to the string vibrations. Many makers, when adjusting the final thicknesses of the back and belly of a new violin, tap the plates (or fix them in a clamp and bow their edges) to tune them. The notes produced are known as 'tap tones'. (The natural resonance of the interior air space – the so-called 'air tone' – has a frequency normally in the area of the D string in superior violins.)

Many experiments have been made, especially in the last 50 years, to determine which factors affect the timbre of a single note or of all the notes of a particular violin, thus distinguishing one violin from another. Modern acoustics, using electronic equipment, has shown that some previously accepted theories, including the 'formant' theory, will have to be modified or even discarded. There are still major questions regarding the acoustics of the violin (not to mention related areas in the physiology of hearing) that are not yet completely or satisfactorily answered – for example, what makes a violin a 'good' one, and whether old violins are better than modern ones (at present, the best available answer to the second question is 'Not necessarily').

Since its origins, the violin has undergone a considerable evolution of detail to meet the changing requirements of successive generations of performers and composers. The first century and a half of the 'true' violin culminated in the magnificent 'classical' model of Antonio Stradivari shortly after 1700. But this was not the end of the instrument's evolution; in the early years of the 19th century it was altered in a number of respects to attain greater power and a more mellow tonal quality (see §5 below). It was in this era, too, that the Tourte bow gained universal acceptance. Today the violin is a more powerful instrument, supporting greater tensions and pressures thanks largely to the move away from gut strings described above. These changes in the violin (and bow) were occasioned by new styles of music and new techniques of playing. Fig.6 juxtaposes the radically different approaches to violin playing in the 17th and 20th centuries. Whether we regard these changes as improvements is an entirely subjective matter. Many musicians now take the view that a particular repertory will be served best by performing it with instruments set up (and played) in the way the composers of the time expected. It is in response to this approach that so many violinists have now acquired 'Baroque', 'Classical', or even 'Renaissance' violins (while some, too, perform Romantic literature on violins strung as they would have been in the 19th century).

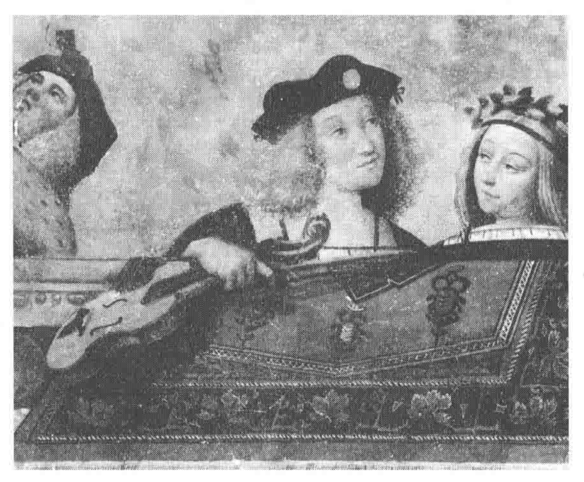
See also ACOUSTICS, §II, 1; for an account of attempts to make mechanically self-playing violins, *see* VIOLIN PLAYER, AUTOMATIC.

3. HISTORY AND REPERTORY TO 1600.

(i) Antecedents and origins. As with many instruments, the violin has traditionally been defined mainly by its shape. However, it came into being at a period of rapid change and adventurous experimentation in instrument making, and the 'classic' outline only became standard in Italy around 1550; in northern Europe non-standard variants were still in use well after 1600. For this reason studies of the early violin need to take into account the way it was played and how it was used as well as its appearance, and need to be informed by a wide understanding of the development of instruments and instrumental music in the late Middle Ages.

15th-century pictures show two main types of bowed instrument: the alto-range medieval fiddle, usually with five or more strings (one of which could be a bourdon running off the fingerboard), and the small pear-shaped rebec, with two or three strings. Both are routinely depicted with a flat bridge or no bridge at all, which means that they must have been used essentially to play monophonic music in chords – the way folk survivals such as the Greek *lira* and the Norwegian Hardanger fiddle are still played today. To play single-line polyphonic music on them would have required arched bridges of the modern type, and there is no convincing evidence of these before the second half of the 15th century, when polyphony played on pairs of soft, or *bas* instruments became fashionable. Johannes Tinctoris (*De inventione et usu musice*, *c*1481–3) described a bowed *viola* with strings 'stretched in a protuberant manner so that the bow ... can touch any one string the player wills, leaving the others untouched' and reported a recent performance in Bruges of polyphonic songs played on fiddles by the brothers Jean and Charles Fernandes.

The instruments played by the Fernandes brothers probably had three strings tuned in 5ths – the most usual tuning by that time, according to Tinctoris – and must have been similar to the earliest alto/tenor members of the violin family. However, there is no indication that they, or any other bowed instrument, had been developed in more than one size as early as the 1480s. The idea of creating instruments in sets or consorts of several sizes to make them suitable for polyphonic music was first developed in the 14th century with the *bombarde*, a tenor-range shawm, and was subsequently applied to the flute, the recorder and the *douçaine*, all apparently made in sets in the 15th century. This 'consort principle', as we might



(a)

(b)

6. (a) French violinist using the typical 17th-century breast position and thumb-under-hair grip: lithograph after a painting (1665) by Gerrit Dou; (b) Jascha Heifetz playing in a high position

call it, does not seem to have been applied to bowed instruments until the 1490s, when the earliest viol consorts were apparently developed on the orders of Isabella d'Este, wife of Francesco Gonzaga of Mantua, from a large, single-size, guitar-like drone instrument recently imported into Italy from Catalonia. Isabella ordered three viols of two sizes from an unnamed maker in Brescia in March 1495, and a letter dated 19 March 1499 reveals that her brother Alfonso was in Venice and wanted to order five 'viole da archo' made 'in all the possible sizes [modi] in the world', which suggests that the third size, the soprano, had been developed by then.

The consort principle was apparently applied about a decade later to the fiddle, producing the violin family. Circumstantial evidence suggests that it happened in Ferrara, Isabella d'Este's home town. A three-string violin-like instrument and a large four-string viola-like instrument are depicted in Ferrarese wall paintings executed between about 1505 and 1510 (fig.7), and two Ferrarese court documents suggest the existence of a violin consort by 1511. References to 'Una viola, zoè un basso' and 'Una

7. Musician with violin: fresco by Garofalo, c1506, in the Aula Costabiliana, Palazzo di Ludovico il Moro, Ferrara

viola, zoè un tenore' in an inventory of that year can be identified as violins by a process of elimination: 'Viole da gamba', 'lauti' and 'violoni alla napolitana' (vihuelas) are also listed. On 20 December 1511 'maestro Sebastian da Verona' was paid to look for timber for making 'violette' for the Ferrara court, and for repairing its 'viole e violoni'. In 16th-century Italian, violins were usually distinguished from the larger-bodied viols by the addition of the descriptive phrases 'da braccio' and 'da gamba' to the generic term *viola*, or by qualifying it with the diminutives *violette* and *violini* and the augmentative *violoni*. It should be emphasized that these terms applied to violins and viols as a class, irrespective of the size of particular instruments. *Violino* did not specifically mean a soprano violin, or *violone* a contrabass viol, until much later.

The viol and violin families seem to have been developed as part of a humanist cultural agenda that preferred 'noble' strings to 'ignoble' winds. Isabella d'Este commissioned a cycle of allegorical paintings for her *studiolo* in which string instruments are consistently associated with virtue, spiritual love and harmony, while wind instruments are associated with vice, sensual love and strife. Isabella also followed the traditions of female patronage of music in preferring soft string instruments to loud winds, with their indecorous warlike and phallic associations. The two families should therefore be seen as complementary, and were usually played as alternatives by professional musicians in the 16th century, though the viol was also played by amateurs. The viol, soft, sonorous but rather lacking in attack, was suitable for serious contrapuntal music and for accompanying the voice, while the sprightly violin was quickly recognized as the ideal vehicle for the new composed polyphonic dance music that developed soon after 1500.

The Ferrarese wall paintings show instruments that conform surprisingly closely to the later standard shape of the violin, with four corners. However, the earliest Brescian violins may have had only two corners, connecting a broad lower half to a narrower upper half. The shape can be seen in several early pictures of viols, as well as a vihuela and a *lira da braccio* depicted in an intarsia panel made between 1506 and 1508 for the door of one of Isabella d'Este's cabinets at Mantua (*see* MANTUA, fig.2). We know nothing of the earliest violin makers apart from Sebastian of Verona (assuming he was the person who made the Ferrarese violin consort), although G.M. Lanfranco (*Scintille di musica*, 1533/*R*) mentioned the Brescians Giovanni Giacobo dalla Corna and Zanetto da Montichiaro as makers of 'Liuti, Violoni, Lyre & simili'. Zanetto's son Peregrino [Pellegrino] Micheli, Girolamo di Virchi, Gasparo da Salò [Bertolotti] and G.P. Maggini continued to make stringed instruments in Brescia, though a rival tradition was established in Venice by Francesco Linarol and his son Ventura. With Andrea Amati and his sons Antonio and Girolamo [Hieronymus] (i), the centre of Italian violin making moved to Cremona.

(ii) Sizes and tunings. According to the first detailed description of the violin family, in Lanfranco's *Scintille di musica*, there were four sizes of 'Violette da Arco senza tasti' (also called 'Violetta da Braccio, & da Arco'), 'Soprano', 'Contraalto', 'Tenore' and 'Basso', with three tunings; the alto and tenor were tuned in unison. In other words, the consort consisted of a single violin, two violas of different sizes, and a bass violin. This disposition, confirmed by later treatises, was the standard one for 16th-century violin consorts, though a third viola was added when five-part dance music became common after 1550. Scorings with two violin parts were gradually adopted in most countries during the 17th century, though the French court orchestra, the 'Vingt-quatre violons', retained the old layout until after 1700. The earliest violin consorts probably consisted entirely of three-string instruments. Sylvestro di Ganassi dal Fontego (*Lettione seconda*, 1543/*R*) gave the sizes pitched a 5th apart, as in wind consorts of the period: the bass was tuned *F–c–g*, the violas *c–g–d′*, and the violin *g–d′–a′*.

This simple and logical arrangement was soon complicated by the addition of a fourth string. Lanfranco's system of specifying the intervals between the strings rather than absolute pitches implies the use of a three-string violin and viola tuned as in Ganassi, but with a four-string bass tuned *B♭′–F–c–g*. This tuning, with the fourth string at the bottom extending the range downwards, is the one given by the majority of 16th- and 17th-century sources; given the limitations imposed by the plain gut strings of the time, it must have been used on large instruments with long string lengths, such as the two in an illustration of the banquet for the marriage in 1568 of Duke Wilhelm to Renée of Lorraine. *C–G–d–a*and *F–c–g–d′* were specified by Praetorius (*Syntagma musicum*, ii, 1618, 2/1619/*R*), while Adriano Banchieri (*Conclusioni nel suono dell'organo*, 1609/*R*) specified *G–d–a–e′*. *F–c–g–d′* and *G–d–a–e′* were evidently arrived at by adding the fourth string at the top rather than the bottom, and were probably used on instruments made small enough to be played standing or walking along, supported, in the words of Philibert Jambe de Fer (*Epitome musical*, 1556), 'with a little hook in an iron ring, or other thing, which is attached to the back of the said instrument quite conveniently, so it does not hamper the player'.

Jambe de Fer was the first writer to record four-string violins and violas, with the fourth string placed at the top as in the modern tunings. It extended their ranges in 1st position to *c‴* and *f″* respectively, their normal top notes in ensemble music throughout the 16th and 17th centuries. However, Lodovico Zacconi (*Prattica di musica*, 1592/*R*), copied by Daniel Hitzler (*Extract aus der Neuen Musica oder Singkunst*, 1623), gave *F–c–g–d′* as an alternative for the viola, adding the fourth string at the bottom, and this has given rise to the modern notion of the 'tenor violin'. Large violas tuned in this way may have existed around 1600, but they are not required by the inner parts of 16th- and 17th-century violin consort music, which never go below *c*, the lowest note on the ordinary viola.

(iii) Dissemination.

(a) Italy. Little is known about how the violin consort spread outside the Este-Gonzaga circle, for there are few reliable references to it prior to the second quarter of the 16th century, by which time it was widely distributed both sides of the Alps. Northern Italy, repeatedly invaded and fought over by French and imperial armies at the time, was not a promising environment for the creation and survival of documents, and, according to Jambe de Fer, 'few persons are found who make use of it [the violin] other than those who, by their labour on it, make their living'; it was not played by the literate classes, who might have discussed it in correspondence or literature. We also have no means of knowing whether some of the many unqualified references to *viole* – such as the 'quattro suonatori di liuto, viole e altri strumenti' who appeared

in a Bolognese triumphal car in 1512, or the *viole* heard in a play during the Roman carnival of 1519 – were to violins rather than viols.

The French language is less ambiguous in this respect, since the terms *viole* and *violon* seem to have been used consistently to distinguish between the viol and violin from the beginning. It is not surprising, therefore, that the largest body of unambiguous early references to the violin is in the French-language accounts of the dukes of Savoy, who ruled Savoy and Piedmont from Turin. There was a payment to a group of 'vyollons' from Vercelli as early as 1523, and dozens of professional groups across northern Italy were evidently using violins by the 1540s and 50s, often in small towns such as Abbiategrasso, Desenzano, Rovereto and Peschiera. A large town such as Milan might support several groups: one day in December 1544 four violinists entertained the Duke of Savoy during the day, and four others in the evening. In general, the Savoy accounts give the impression that by then the violin consort was the most popular choice of professional groups – wind instruments are rarely mentioned – and was being used by quite humble classes of musician.

The violin spread with remarkable rapidity during the first half of the 16th century, in part because it was often cultivated by independent, mobile family groups, who recruited their own personnel, composed or arranged their own music, often made their own instruments, and were prepared to travel great distances to work for the right patron. The largest courts employed enough musicians to allow groups to specialize in particular instruments, though most groups had to be versatile: the six-man Brescian group which Vincenzo Parabosco recommended to the Farnese court in January 1546 played *viole da brazo* as well as seven types of wind instrument. The normal practice of the time was to use the various instrumental families as alternatives on a musical menu rather than ingredients in a single dish, choosing them according to circumstances: violins were suitable for dancing, viols for serious contrapuntal music and for accompanying the voice, loud wind instruments for playing outdoors, and so on. However, mixed ensembles became more and more common in the second half of the 16th century: Parabosco particularly recommended 'the combinations of these instruments, one type with another, and combined in various ways with vocal music' because it was 'something unusual and so new'.

(b) France and England. A Parisian woodcut dating from 1516 shows that consorts of bowed instruments were known in France in the second decade of the century, however unlikely the situation (the players are Plato, Aristotle, Galen and Hippocrates) and fanciful the details (fig.8). A six-man group described variously as 'viollons, haulxboys et sacquebuteurs' and 'violons de la bande françoise' was already established at the French court by 1529. The musicians all have French names, so they may have come into contact with the violin while accompanying the French court on its forays south of the Alps. But several groups of Italian violinists served in Paris during the 1530s and 40s, and in about 1555 a violin consort led by Balthasar de Beaujoyeux is said to have arrived there from the Milan area.

It is not clear when an orchestral violin band was established at the French court, for a number of received 'facts' seem to be no more than hearsay. For instance, the idea that Andrea Amati made a complete set of 38 instruments for Charles IX (reigned 1560–74) seems only to go back to a statement in Jean-Benjamin de La Borde's *Essai sur la musique ancienne et moderne* (1780/*R*), and Moens (B1998) has recently challenged the authenticity of the surviving instruments decorated with devices relating to Charles IX (see §V below). In any case, they include small- as well as large-pattern violins, which were probably made for different pitch standards and are unlikely to have been played together in a single band. However, legal agreements between members of the Paris musicians' guild, the Confrérie de St Julien-des-Ménétriers, show that groups of orchestral size were formed in the middle of the 16th century – there are instances of nine players in 1547, eight in 1551 and 11 in 1552 – and violins are always given as one of the options, usually as an alternative to cornetts, when particular instruments begin to be mentioned in the 1580s.

The violin was apparently brought to England by a group of six Jewish string players from Milan, Brescia and Venice that arrived at Henry VIII's court in the spring in 1540; the institution they founded served successive monarchs up to the beginning of the Civil War in 1642, and during the Restoration it formed the basis of the 24 Violins (*see* LONDON, fig.11). Surviving documents suggest that violins began to appear in English aristocratic households in the 1560s, and began to be taken up by town waits, theatre groups and the more humble classes of musician around 1600. Most violins played in 16th-century England were probably imported or made by the instrumentalists themselves. Members of the Lupo family, who served in the court violin consort between 1540 and 1642, are known to have made instruments, though the earliest English violin maker so far identified is the Cambridge University wait Benet Pryme: an inventory drawn up at his death in 1557 includes 'vii vyalles & vyolans' valued at £3, as well as 'a nest of unp[er]fyte vyall[e]s' and 'unp[er]fytt regall[e]s & oth[e]r lu[m]ber' – evidently the contents of a workshop.

(c) Germany and Poland. The same pattern was repeated in German-speaking areas of Europe. The violin consort at Munich was founded by four members of the 'Bisutzi' family in the 1550s, and was enlarged around 1568, probably for Duke Wilhelm's marriage with Renata of Lorraine (*see* MUNICH, fig.1). The five newcomers, who included three members of the Morari family, may have been part of Renée's entourage; the court at Nancy acquired a set of violins as early as 1534. Italian violinists (including three members of the Ardesi family from Cremona) were at the Viennese court by the 1560s, at Weimar in 1569, at Innsbruck in the 1570s and 80s, and at Hechingen in the Black Forest from 1581. Italian instruments mentioned in inventories include a set of Brescian 'geig' at Augsburg (1566), 'Ein Italinisch Stimwerckh von Geigen, darinn ein discant, drey tenor und ein Bass' at Baden-Baden (1582), and 'Funf venedische geugen' at Hechingen (1609).

The use of the term 'Geige' presents another thorny terminological problem. Around 1400 it seems to have been used in opposition to *Vedel* to distinguish the rebec from the medieval fiddle, just as it was used around 1600 in opposition to *Phyolen* or *Violen* to distinguish violins from viols. Early 16th-century German writers such as Sebastian Virdung (1511), Hans Gerle (1532) and Martin Agricola (1529, 5/1545) used the term *Geigen* for both instruments, qualifying it with *grossen* and *kleinen* as in

8. Plato, Aristotle, Galen and Hippocrates playing bowed instruments: woodcut (Paris: Jodocus Badius Ascensius, 1516)

Italian terminology of the period. These treatises illustrate *kleinen Geigen* with instruments shaped like rebecs, so it is not clear when the term began to be used for the violin. In 1545 Agricola described a third type, the 'Polischen Geigen'; there are no illustrations but the instrument was apparently played without frets, using fingernails to stop the strings. It had three strings; there was also a four-string bass version. Several violin makers, including Mateusz Dobrucki, Bartłomiej Kiejcher and Marcin Groblicz the elder, are known to have been active in 16th-century Poland, and some apparently 16th-century Polish violins survive, often with non-classic shapes, though not enough research has been done into them (or contemporary German instrument making for that matter) for us to be sure at present what relationship they had with Italian violin-making traditions.

By 1600 the violin consort must have been one of the most familiar sounds in the courts and towns of northern Europe (fig.9). But in the northern Italian courts, its cradle, it seems to have been in decline. Regular violin consorts do not seem to have been employed at the Mantuan and Ferrarese courts in the late 16th century – Mantua hired *violini* from Parma and Casalmaggiore in 1588, presumably because it had no group of its own – and in 1608 the Florentine court recruited 12 violinists from France. Vincenzo Giustiniani wrote in about 1629 that consorts made up of a single type of instrument, 'with the uniformity of sound and of the consonances, became tiresome rather quickly and were an incentive to sleep rather than to pass the time on a hot afternoon'. He associated shawms and 'bands of violins' with unfashionable milieus such as 'festivals in small towns and country districts, and also in the great cities at the festivals of the common people'. As discussed below, the fashion in advanced musical circles in Italy was for mixed ensembles, in which the violin was often used without the other members of its family. The lead in the development of violin consorts passed to northern Europe, and it was more than half a century before Italy recovered it.

(iv) Usage.

(a) Consort dance music. It cannot have been an accident that the violin consort developed at a time of profound change in courtly dance and dance music. Soon after 1500 the pavan and its related saltarello or galliard replaced the old basse danse. The new dance music was composed rather than improvised, and was usually written in simple block chords in four, five or six parts with the tune in the soprano rather than the tenor. There are no sources of this repertory earlier than *Six gaillardes et six pavanes* and *Neuf basses dances deux branles* (both Paris, 1530), the first two books in the series of *Danceries* published by Pierre Attaingnant, though they contain italianate pieces that were probably fairly old by the time they were published; a similar repertory with slightly more antique features survives in *D-Mbs* Mus.ms.1503h.

9. *Violin consort: detail from the title-page of Andreas Hammerschmidt's 'Missae' (Dresden: C. Bergen, 1663)*

As an increasingly popular vehicle for courtly dancing, violins must be regarded as a principal option for these and later collections of consort dance music, such as those published by Jacques Moderne (Lyons, *c*1542), Tylman Susato (Antwerp, 1551), Giorgio Mainerio (Venice, 1578) and Pierre Phalèse (ii) and Jean Bellère (Antwerp, 1583), though the repertory continued to be written in a neutral style, with limited ranges so that it could be played on as many different types of instruments as possible. Composers only began to specify particular instruments when they began to write in idioms that favoured one rather than another, and that did not happen until after 1600. The odd exception, such as the five-part dances printed in Beaujoyeux's *Balet comique de la Royne* (Paris, 1582/*R*; ed. in MSD, xxv, 1971), proves the rule: the accompanying text mentions that they were played on violins in the original performance, though there is nothing intrinsically violinistic about them.

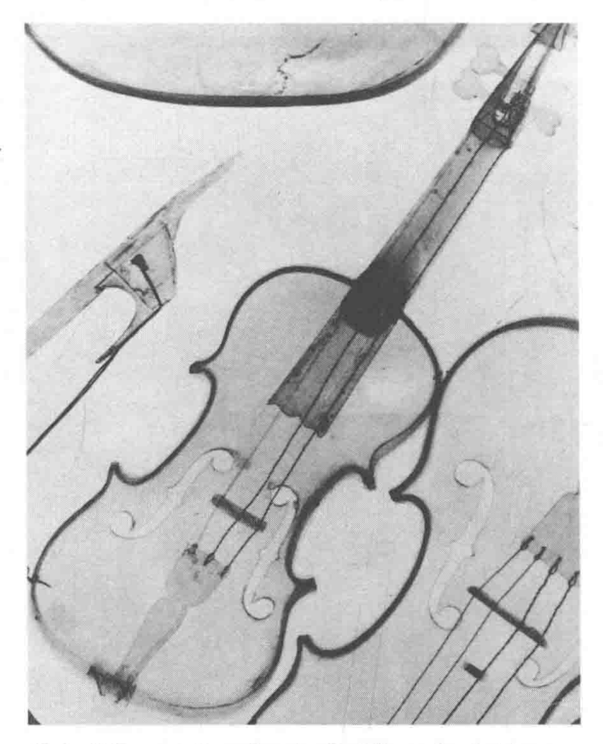
(b) New roles. The violin family was particularly associated with dance music throughout the 16th century, though it acquired a new role and a new repertory when it began to be used in churches. There are references to Brescian *violini* playing in church as early as 1530 and 1538, and the Venetian Scuola Grande di S Rocco employed 'sonadori di lironi' (probably violins rather than viols, for viols could not be played on the move) in 'masses and processions' from at leat 1550, when the governors ordered them to play motets and *laudi* rather than canzoni and love songs. References to instrumentalists in Italian churches become common from the 1560s, and some of them were violinists: Giuseppe Maccacaro, for instance, was given a post at Verona Cathedral in 1566. They probably initially played instrumental versions of French chansons and motets – a Venetian print of motets by Gombert mentions *lyris* and *tibijs* as early as 1539 – but a repertory of ensemble canzonas soon developed. Significantly, two of the earliest composers of canzonas, Marc'Antonio Ingegneri and Florentio Maschera, were violinists, and served respectively as *maestri di cappella* at the cathedrals in Cremona and Brescia.

The four-part ensemble canzonas of the 1570s and 80s were doubtless played mostly by conventional monochrome consorts, though the development of polychoral music in the 1590s inevitably involved the creation of ensembles mixing cornetts and trombones with violins – which usually involved detaching particular sizes of violin from the rest of the consort. Most of the canzonas and sonatas in Giovanni Gabrieli's *Sacrae symphoniae* (1597) are for unspecified instruments, though an alto-range *violino* is specified with cornetts and trombones in two pieces, and there are similar specified parts in two motets of his posthumous *Symphoniae sacrae* (1615); there are also a number of soprano-range violin parts in Gabrieli's *Canzoni et sonate* (1615).

Violins were also used in secular mixed ensembles, such as the ones mentioned in the description of the 1568 Munich wedding, or the ones that accompanied *intermedi* at the Florentine court. In the 1589 *intermedia* five-part sinfonia by Luca Marenzio was played by 'dua Arpe, due Lire, un Basso di viola, due Leuti, un Violino, una Viola bastarda, & un Chitarrone', while a chorus by Cristofano Malvezzi was accompanied by 'quattro leuti, quattro

viole, due bassi, quattro tromboni, due cornetti, una cetera, un salterio, una mandola, l'arciviolata lira, un violino'. A third type of mixed ensemble involving the violin was the sets of *passaggi* or variations on the soprano parts of vocal music, intended to be accompanied by a keyboard reduction of the original vocal lines; examples were published by Girolamo Dalla Casa (1584) and Giovanni Bassano (1591). This viruoso repertory, the ancestor of the early Baroque violin sonata, was doubtless partially conceived for the agile, expressive violin, though Dalla Casa only specified 'fiato, & corda, & di voce humana' while Bassano used the standard formula 'con ogni sorte di stromenti' for the solo part.

Histories of instrumentation have traditionally focussed on Italian ad hoc ensembles, though the English mixed or broken consort was arguably more significant, since it was the first to have a scoring that was sufficiently standardized to attract a sizeable repertory that exploited its peculiar characteristics. It was developed in the 1560s and 70s, possibly at Hengrave Hall near Bury St Edmunds, and consisted of violin or treble viol, flute or recorder, bass viol, lute, cittern and bandora. The treble viol is mentioned in some of the early descriptions of the group, and is called for in the collections of mixed consort music published by Thomas Morley (1599, 2/1611) and Philip Rosseter (1609), though all the surviving pictures show a violin, and one of the manuscripts of mixed consort music at *GB-Cu* has pages headed 'Treble violan' and 'The treble violan parte'. Furthermore, there is some evidence that the word 'viol' in Elizabethan English could mean a violin.



(v) Authenticity and surviving instruments. The study of the early violin relies on written and iconographical sources, as well as on surviving instruments. Dozens of instruments from the violin family preserved in museums and private collections are attributed to 16th-century makers such as Zanetto di Montichiaro, his son Peregrino, and Gasparo da Salò, all from Brescia, the Venetian Ventura Linarol, the Cremonese Andrea Amati, Dorigo Spilmann from Padua, and Gaspar Tieffenbrucker from Bologna and Lyons, as well as to anonymous makers. Attributions to Tieffenbrucker and a number of obscure builders are no longer taken seriously, but other instruments are still used as trustworthy evidence material. Current knowledge on the early violin is based on instruments attributed to about six Italian builders, on some anonymous examples and on a few, mainly Italian, iconographical representations. Surviving instruments of primitive (or 'rustic') form are given dates mainly in the first half of the 16th century, while instruments resembling modern violins are said to be from the second half of the century.

These widely accepted views on the early violin need to be questioned. Thorough critical examination of the instruments at stake has cast doubt on their authenticity: signatures on instruments attributed to a single maker usually differ greatly and are often poorly forged; several instruments said to be from the same maker may show substantial differences of design or construction; some components of an instrument have been shown to have different origins or to have been heavily adapted or restored, whether or not with fraudulent intent. The signature, shape and construction of many of these instruments are thus unreliable and therefore useless as evidence material for the study of the 16th-century violin. Proven historical facts uphold this conclusion. For example, while it is true that a Paris account dating from 1572 mentions a 'violin façon de Cremone', it is almost certain that the long-held belief that Andrea Amati made an extensive range of instruments for King Charles IX of France is false: close investigation of preserved instruments bearing the arms of Charles IX uncovers too many inconsistencies for them to be from a single maker.

We therefore have no clear picture of the violins made by the early famous masters. *Lire da braccio* and viols attributed to 16th-century makers have the same problems of authenticity and therefore are also unreliable as reference material.

However, a small number of little-known instruments from the 16th century or the early 17th have been preserved practically in their original form: considered together with iconographical sources and folk instruments with archaic forms from later periods, these can shed new light on the construction and shape of a representative part of late 16th-century violin making. Perhaps the most remarkable of the surviving instruments are a group of five instruments attributed to members of the Klemm family from Randeck, near Freiberg in Saxony, and now in Freiberg Cathedral (where they are held by a group of angel musicians in the roof of one of the chapels; for a detailed description, see Heyde and Liersch, B1980). The group is a rare example of an complete violin consort, consisting of a small three-string discant violin (or VIOLINO PICCOLO; fig.10), a treble violin, a tenor violin and two bass violins (all with four strings).

These instruments share characteristics that are at variance to those of the violins attributed to famous 16th-century makers, but which often recur in regional varieties of fiddle that persisted in later periods (and in some cases are still played), including the 17th-century

10. Small discant violin attributed to Paul Klemm, Randeck (near Freiberg): x-ray taken by Herbert Heyde (1969)

*Allemannische*violin (then common in the Black Forest and German-speaking districts of Switzerland and France; see Adelmann, B1990), the Norwegian Hardanger fiddle, the Swedish *nyckelharpa*, the Sorbian *Klarfidel* (Cz. *skřpsky*) of the jihlava district of the Czech Republic (*see also* HUSLA), the Polish *mazanki*, and 18th- and early 19th-century violins from North and South America. These shared characteristics include the following: a strongly curved belly and back; long and pointed bevelled corners to the ribs; an entirely or partly flat pegbox back; a deeply-cut scroll clearly separated from the pegbox; painted inlaid decorations on the belly and back; lobe and brace forms on the tailpiece and fingerboard; the belly carved with a thickening in the inside (instead of separate bass-bar); the neck fitted directly into the body rather than into a top-block; the absence of a bottom-block; and the ribs anchored into grooves cut into the back and belly.

4. HISTORY AND REPERTORY, 1600–1820.

(i) The instrument.

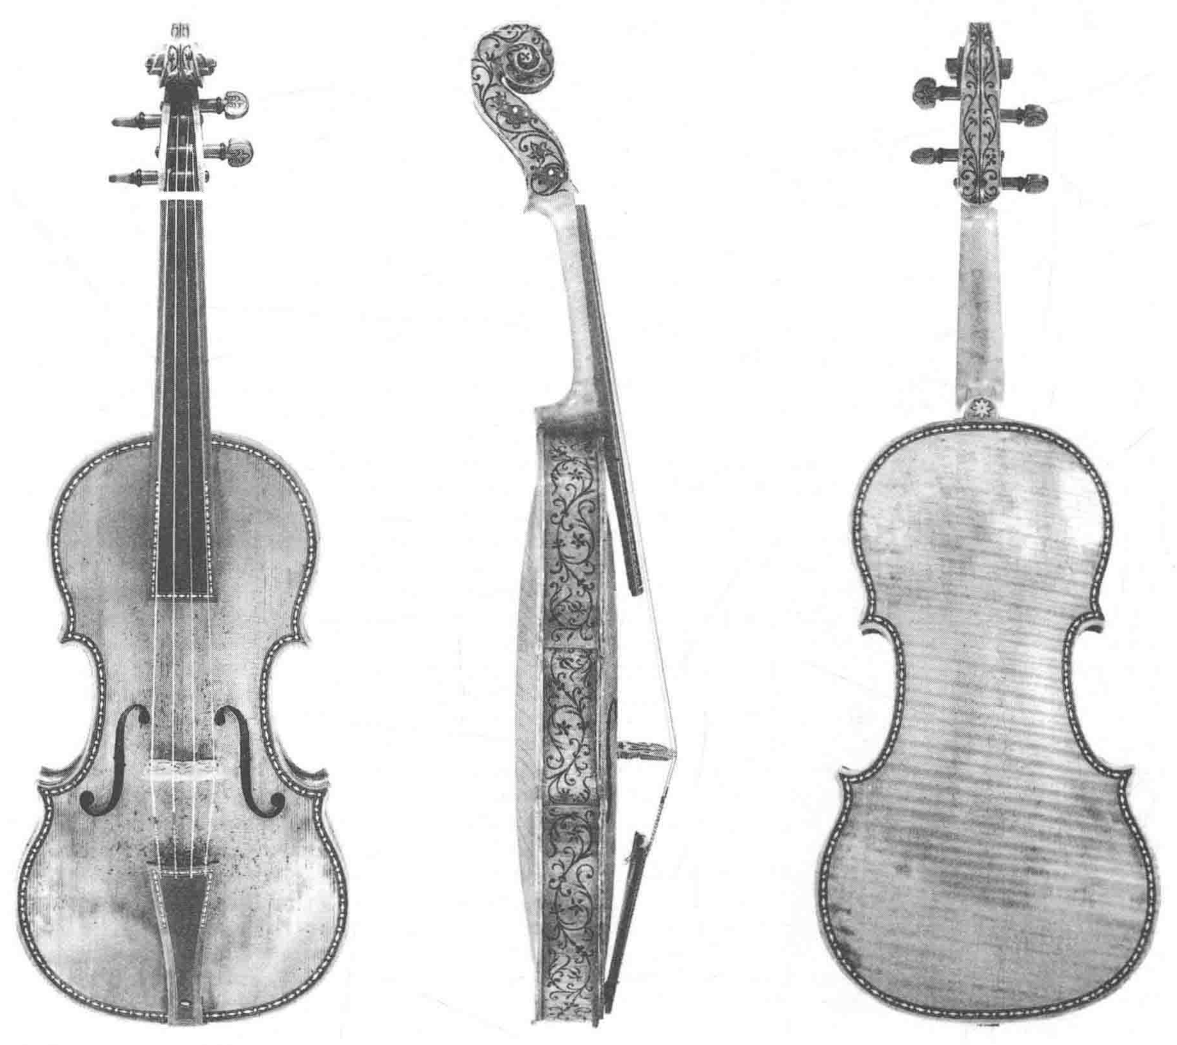
(a) Violin makers. At the dawn of the 17th century, the violin was beginning to develop a role as an expressive and virtuoso solo instrument. New idiomatic repertory appeared at a rate which suggests an almost feverish excitement in its possibilities. Already two towns, Brescia and Cremona, had emerged as pre-eminent in the manufacture of the instrument. Brescia had been known for its string instruments since early in the 16th century; its reputation as a centre for violin making was established principally by two makers, Gasparo da Salò (1540–1609) and Gio Paolo Maggini (bap. 1580; *d* ?1630–31). Cremona's fame was due at first to Andrea Amati (*b* before 1511; *d* 1577) and his descendants. In the early 17th century his sons Antonio and Girolamo (i) were making superb instruments, working together as 'the brothers Amati'. The violins made by Girolamo's son Nicolò are generally considered the pinnacle of the Amatis' achievement. Although the family's traditions were carried into the next generation by Girolamo (ii), Nicolò's mantle passed to more illustrious pupils outside the family, most notably Antonio Stradivari (*b* 1644–9; *d* 1737) but also Andrea Guarneri (1623–98). Guarneri in turn founded a dynasty, the most distinguished member being his grandson Giuseppe Guarneri ('del Gesù') (1698–1744). The latter has for the past two centuries been regarded the greatest maker after Stradivari. His contemporary Carlo Bergonzi was followed into the trade by a son and grandsons. Numerous references in writings of the period point to the prestige of acquiring a Cremona violin. English court records from 1637 onwards distinguish between the purchase of Cremona and other, by implication more ordinary, violins. In the early 18th century Roger North observed that so many fine instruments had been imported 'that some say England hath dispeopled Itally of viollins'.

Distinguished violin makers in other parts of Italy in the late 17th century and the 18th included Matteo Goffriller, Sanctus Seraphin and Domenico Montagnana in Venice, David Tecchler and Michael Platner (*fl* 1720–50) in Rome, the Gagliano family in Naples, Giovanni Grancino and the Testore family in Milan, Camillo Camilli and Thomas Balestrieri in Mantua, Giovanni Tononi in Bologna and his son Carlo in Bologna and Venice.

11. Detail from 'Vanitas Still-life with the Spinario' by Pieter Claesz, 1628 (Rijksmuseum, Amsterdam); note the double purfling (characteristic of Maggini instruments), the shape of the bridge and tailpiece, and the short fingerboard (the bow is typical of the mid-17th century)

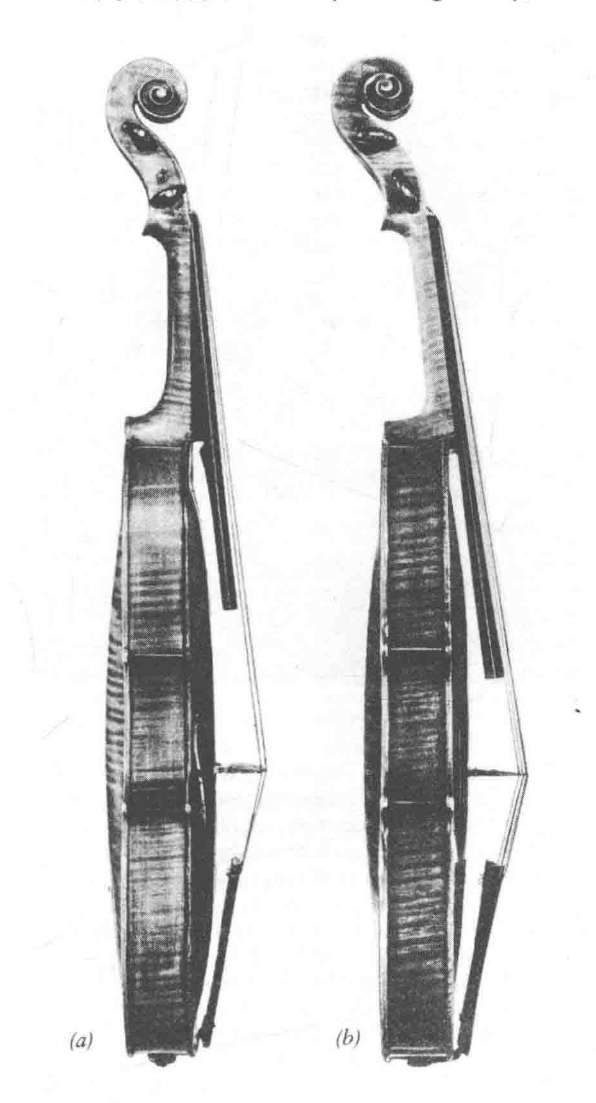
One non-Italian maker was of cardinal importance in the 17th century: namely Jacob Stainer, who worked in Absam in the Tyrol. His characteristically high-arched violins are easily distinguished from Cremonese models and were greatly prized (and imitated) in the 17th and 18th centuries (for illustration *see* STAINER, JACOB; see also fig.13*a* below). Two other centres were the source of a large number of well-made, though not especially sought-after, violins. Mittenwald in Germany became identified with violin making in the 17th and 18th centuries through the work of Mathias Klotz and his descendents, and to this day it has sustained a reputation as a centre for violin making (and for the teaching of the craft). Mirecourt in France had similar associations in the 17th and 18th centuries, though many makers who learned their skills there moved on to Paris. (The last and most famous of these was Jean-Baptiste Vuillaume, who left in 1818.) By the early 19th century Paris had in fact taken over as the violin-making capital of the world; Nicolas Lupot, especially, was thought to have absorbed the principles of Stradivari better than the makers still working in Cremona. Fine instruments were produced by his friend and business associate François-Louis Pique and by his apprentice Charles-François Gand. (Paris was also identified with bows of the most advanced design and superb craftsmanship thanks to the work of the Tourte family.)

Preferences in the late 18th century do not match up with the modern view that Stradivari represents the doyen of violin makers. The 1785 edition of the *Encyclopédie Méthodique* names Jacob Stainer as the maker of 'greatest reputation' followed by the Amatis (and principally Andrea and the brothers Amati rather than Nicolò). 'Among the skilled makers of more recent date', Stradivari is singled out as having made 'a very large number of good violins; the merit of his instruments consists in their masculine, powerful, and melodious tone'. This hierarchy was endorsed in the later 18th century by the violin makers Antonio Bagatella (1786) and Giovanni Antonio Marchi (1786) and, in a less clear-cut way, the theorist Francesco Galeazzi (1791). The change in fashion is thought to have started in France, thanks to G.B. Viotti's persuasive playing in the 1780s on Stradivari and Guarneri instruments. Michel Woldemar expressed a preference for



Stradivari and Guarneri over Amati and Stainer because of their more vigorous sound but also because he considered the less pronounced arching more convenient for holding the violin when playing virtuoso music. A history of violin making written by the Abbé Sibire (1757–1827), *La Chélonomie, ou Le parfait luthier* (Paris, 1806), culminates in a paean to Stradivari:

I prostrate myself in front of the patriarch of violin makers. . . . If in his century a competition had been staged in which all the great violin makers had been judged by their best works, the five Amatis would have obtained honourable mention, Stainer would have been runner-up, but without hesitation and unanimously, Stradivari would have been awarded the prize. . . . The first six are simply admirable, each one in a particular aspect of the art, while the last is perfection itself.



That reputation remains intact: 'Stradivari' has become a byword for perfection and value.

(b) Characteristics of 'Baroque' and 'Classical' violins. Violins of the Baroque period are distinct in a number of basic features from their modern counterparts. The neck, usually shorter than on modern instruments, projects straight out from the body so that its upper edge continues the line of the belly's rim (fig.13). The neck is fixed by nails (or occasionally screws) through the top-block rather than mortised into it as in modern instruments. The fingerboard is wedge-shaped and, again, shorter than the modern fingerboard. Bridges were cut to a more open pattern and were very slightly lower. The bass-bar was shorter and lighter and the soundpost thinner. Violins (and violas) lacked chin rests. The tone of these instruments is brighter, clearer, less loud and less 'mellow' than that of their modern counterparts.

Such a summary, necessarily peppered with inexact comparative adjectives, may be useful enough; but getting beyond it is no easy matter. Throughout the period all these instruments underwent change, which took place unevenly in different parts of Europe. To acknowledge this is to recognize the term 'Baroque violin' as merely a serviceable generalization. Instruments which have never been altered are scarce and may be of dubious value as models: their survival intact may be attributable to their lack of appeal to discriminating players. Contradictions and approximations in other sorts of evidence create difficulties. The James Talbot manuscript of around 1695 (*GB-Och* Music MS 1187) gives measurements for a whole range of wind and string instruments but its laconic notes are sometimes tantalizingly inconclusive. Another

12. Three views of an inlaid violin by Antonio Stradivari, Cremona, 1683 (Ashmolean Museum, Oxford); the fingerboard and tailpiece are not original and the neck has been modernised

13. (a) Violin by Jacob Stainer, Absam, 1668 (restored to original condition); note the arched belly and back, short fingerboard with wedge, and short, straight neck; (b) violin (Stradivari model) by J.-B. Vuillaume, Paris, 1867; note the comparatively flat belly and back, more elongated fingerboard with no wedge, and the somewhat longer, tilted neck (private collections)

late 17th-century manuscript, the violin method attributed to Sébastien de Brossard (*F-Pn* Rés.Vm), contains a few apparently detailed measurements, but these are surprising. The bridge, for example, seems thinner rather than thicker than modern bridges: 'about a *demie-ligne*' (1:125 mm) for the base, and the top should be 'thin, but not too much so or it will cut the strings'.

The term 'Classical violin' is another convenient generalization. The key features of violins that were used in the second half of the 18th century and the early years of the 19th were the size of the soundpost and bass-bar and the length of the neck and fingerboard. (Chin rests and shoulder rests still did not exist.) Not surprisingly, these dimensions on Classical instruments lie mostly somewhere between 17th-century and modern averages. This is not to say that the Classical violin should be regarded as a 'transitional' instrument, at least not without acknowledging that the violin has always been and continues to be in a state of transition.

Hardly any extant soundposts can be positively identified as late-18th-century, but the manuscript treatise on violin making completed by the Bolognese violin maker G.A. Marchi (*fl* from *c*1755) in 1786 suggests that some makers must have been inserting soundposts as large as the modern standard (6·5 mm), with a diameter 'such that it can only just pass through the f-holes'. More substantial bass-bars were used as the century progressed – but the picture is far from simple. Surviving examples show great variation within an overall trend towards increase in mass. Compared with Baroque period models, original necks from the later 18th century tend to be longer and slightly tilted back.

Fingerboards show considerable variation in length (and besides, some late-18th-century players were using instruments built long before). Mozart owned an early-18th-century Mittenwald violin which still has its original fingerboard (long enough to play up to *d'''*). An unaltered 1783 violin by Antonio Gragnani (Smithsonian, Washington, DC) allows for a range of a 12th above the open string, that is, up to *b'''*. Marchi noted that it was better to copy longer fingerboards 'because some players today are so good that they can exploit the whole length'. Galeazzi advised that fingerboards should be long enough to produce the note two octaves above the open string.

Throughout the 19th and 20th centuries, the most sought-after violins were those made in the previous two centuries, especially Cremonese instruments. But virtually all of these have been altered to bring them into line with later ideas about tonal quality and strength in a violin. Quite a lot of updating must have taken place as an incidental by-product of repairs and more drastic alterations. Many over-confident makers and repairers took it into their heads to adjust the thicknesses of backs and bellies on instruments that came into their workshops. By Marchi's own account, he made comparatively few new instruments since he was kept very busy repairing and 'improving the quality and strength of tone' of old instruments. (He mentions in particular reducing cellos to smaller forms.)

Antonio Bagatella, in his *Regole per la costruzione de' violini* (Padua, 1786), said that he got his break as a violin maker because Tartini sent many violins to him for adjustment. He described altering a great many old violins to give them either a 'voce humana' (suitable for solos) or a 'voce argentina' (for orchestral playing). The essay gives dimensions for the neck (virtually modern length) and bass-bar (puzzingly small), and describes in detail how the soundpost should be fitted; but it never even hints that those found in older instruments would need altering. Bagatella described a gadget he had invented for ensuring that the neck is correctly aligned, and from this it is clear that he was still using the traditional way of fixing the neck to the body with nails through the top-block.

The Hills, in their pioneering study of Stradivari (B1902), quoted from the journal of Dom Vicenzo Ascensio who described alterations he made to the quintet of Stradivari instruments at the Spanish court in the 1783. In the interests of what he called 'improving the tone' Ascensio almost certainly modernized the dimensions of neck and bass-bar (though claiming to be following Stradivari's principles). But this was all mixed up with

more barbaric acts; Ascensio, too, 'corrected' thicknesses, as shown by his description of repairs to the violoncello:

I pieced the centre, replaced the bar by one adjusted to mathematical proportions based on that of Stradivari. I corrected the thicknesses, pieced the four corner-blocks, took the back off and inserted a piece in the centre, as it was too thin. I had to replace the neck, which I did in the most careful manner. I then adjusted the instrument, the tone of which was rendered excellent by all these changes.

Marchi, Bagetella and Ascensio were among many craftsmen working in the second half of the 18th century who participated (at least piecemeal) in what we now see as something of a revolution: the adaptation of old instruments to modern requirements. The nonchalance with which they write about what would now be considered fundamental transformations in an instrument suggests that much of the modernization must have been carried out with no other aim than to apply current best practice in the craft. It was only from the early 19th century onwards that the practice of replacing bass-bars and resetting necks was explicitly acknowledged. In 1806 the Abbé Sibire wrote at some length on the subject in *La Chélonomie*. He described these structural changes as a response to changes in musical expression:

I shall confine myself hereafter to a daily occurrence . . .. It is a kind of restoration (loosely called) which is purely accessory and yet at the same time crucial. This is a process which does not imply the slightest deterioration and yet which virtually every old violin, no matter how well preserved it is in other ways, could not avoid: REBARRING. The revolution which music has experienced needs to be replicated in instrument making; when the first has set the style, the other must follow. ... Formerly it was the fashion to have necks well elevated, bridges and fingerboards extremely low, fine strings, and a moderate tone. Then the bass bar, that necessary evil in the instrument, could be short and thin because it was sufficient for it to have enough strength to sustain the weight of five to six pounds which the strings exerted on it. But since then music, in becoming perfect, has placed a demand on violin making. The tilting back of the neck, the raising of the bridge, of the fingerboard, and the amplification in sound, necessitate increasing by a full third the resistant force. Repairers have only one choice: strengthening the old bar, or replacing it with a new one.

Vincenzo Lancetti (*Notizie biografiche*, Milan, 1823) suggested that the process of replacing necks was in full swing by the late 18th century and implied that this started in Paris: 'About 1800 the Brothers Mantegazza were restorers of instruments who were often entrusted by French and Italian artists to lengthen the necks of their violins, after the Paris fashion, an example which was followed by amateurs and professionals all over North Italy'.

Violin strings in the 17th and 18th centuries were usually gut, although metal stringing was known and liked for a short time at the beginning of the Baroque period. In his *Syntagma musicum*, ii (2/1619) Praetorius expressed the opinion that 'when brass and steel strings are used on these instruments they produce a softer and lovelier tone than other strings'. There were various types of gut string. Exactly what 17th-century musicians understood by such terms as 'minikins', 'gansars', 'catlines', 'Lyons' and 'Pistoy basses' is not absolutely clear, but the vehemence with which these were variously recommended or condemned indicates that the distinctions were important. The invention in the late 20th century of strings made of roped gut to which the term 'catline' has been appropriated is not based on secure historical evidence, although they can sound good. By the early 18th century gut strings wound with silver were being used on various instruments. These appear to have been invented in Bologna in the mid-17th century (see Bonta, B1977). They must have reached England by 1664 since John Playford (i) advertised them then as a 'late invention . . . which sound much better and lowder than common Gut Strings, either under the Bow or Finger'. Because they allowed for an increase in mass without an increase in diameter (and consequent loss of flexibility), covered strings could produce good-sounding bass notes from a shorter vibrating length than pure gut strings of the same pitch. For the violin this meant a more resonant and refined-sounding G string. There is, however, evidence that in parts of Europe (notably Italy and Germany) violinists continued using pure gut G strings until well into the 18th century. French sources mention strings which are half covered ('demi-filée' i.e. wound with a single open spiral of metal thread). The manuscript treatise attributed to Brossard recommends them for the D string. Such strings are extremely resonant and mediate well between the covered G string and a pure gut A. (*See also* STRING, §3.)

For discussion of bows of the period *see* BOW, §I, 3 and 4.

(ii) Violinists and repertory.

(a) Italy. If violin making was virtually an Italian preserve at the beginning of the 17th century, so too was the development of an idiomatic soloistic repertory for the instrument. It is, of course, coincidence that the greatest *stile moderno* composer, Monteverdi, came from Cremona – though his realization of the violin's rhetorical power and his exploration of its technical resources in such works as *Orfeo* (1607) or *Il combattimento di Tancredi e Clorinda* (1624) may owe something to his origins. Works by other composers of the period also seem to be born of excitement at the possibilities of the instrument: notably, Tarquinio Merula, also Cremonese, G.P. Cima from Milan; Salamone Rossi from Mantua, one of Monteverdi's colleagues there; Biagio Marini, a Brescian composer and instrumentalist who also worked under Monteverdi, this time in Venice; Marco Uccellini from Modena; Maurizio Cazzati, associated primarily with Bologna; Giovanni Legrenzi, whose career took him from Bergamo to Ferrara and elsewhere; and Carlo Ambrogio Lonati, who played throughout Italy. Their contributions to the repertory, and many others, are surveyed in Apel (F1983). Their works poured from the presses in Venice (which dominated Italian music publishing in the first 60 years of the century), and then also from Bologna and, to a lesser extent, other Italian cities. Allsop (D1996) noted that the paucity of surviving manuscripts means that we are hugely dependent on printed sources for our knowledge of 17th-century Italian violin music, which may give us a distorted view of the technical achievements of these composer-violinists. It is possible that Italian violinists were just as adept at multiple stops, for example, as their German confrères; but the limitations of movable type ensured that, if this was so, it has not been recorded.

In the early part of the century the terms 'canzona', 'sonata' and 'sinfonie' were largely interchangeable. Many pieces were based on popular songs (and were often given titles which point to their origin); others (with titles like 'Sonata sopra l'aria di Ruggerio') were variations on stock themes or bass lines (the numerous *ciaccone* and *passacaglias*). Single-movement pieces, in which contrasting sections initiated by new thematic material or different metre run on one into the next, gave way in the 1620s to single-movement sonatas with sections separated by full

14. 'Young Man Playing a Violin' attributed to Pietro Paolini, c1620 (Elvehjem Museum of Art, Madison, WI; gift of the Samuel H. Kress Foundation)

cadences. In the early 1640s the first sonatas divided into distinct movements appeared. (*See also* SONATA, §§I–II.)

Almost all publications were miscellanies for different combinations of instruments, often unspecified ('per ogni sorte d'istrumenti') and often, at least until around 1640, naming cornett as an alternative to the violin. Hindsight, moulded by the way these genres developed in the early years of the 18th century, has encouraged the notion that two combinations were especially important in the violin repertory of the Baroque era: the trio sonata and the sonata for solo violin and continuo. Any examination of the full range of violin music of the period, particularly before 1650, gives a rather different picture: these were only two possibilities in a wide range of dispositions. It was not until the later 17th century that collections of pieces for any one standardized combination involving violin appeared. Corelli's orderly arrangement of *Sonate a tre* in opp.1–4 (Rome, 1681–94) was a new development in the 1680s. The inadequate modern term 'trio sonata' is used to describe music written both for two treble instruments and basso continuo and for two treble instruments with a more thematically significant bass part plus, often, a continuo part which may be identical to, or a simplification of, the melodic bass. Italian practice in the 17th century (even then not properly understood outside Italy) was to designate pieces *a2*, *a3* etc. by the number of melodic lines, disregarding any basso continuo part. A sonata *a2* may well involve two violins and basso continuo while a sonata *a3* might also require only three players, not four.

Italian virtuosity was exported as violinists and composers for violin moved around Europe. G.B. Buonamente left Mantua to work at the Viennese court. Biagio Marini spent long periods in Düsseldorf between 1623 and 1645, and Carlo Farina worked in Dresden with Schütz. The Florentine G.B. Viviani spent substantial periods between 1656 and 1676 at the court at Innsbruck. It is in the eccentricities of these composers that the connections are most easily seen; virtually every special effect (see §(iii) (e) below) in Farina's *Capriccio stravagante* (1627) is matched in J.J. Walther's *Hortulus chelicus* (1688), except *col legno*, which was, however, used by H.I.F. von Biber. However, these are obviously symptoms of a more general cross-fertilization, a shared enthusiasm for the violin's potential. Other Italian composers of violin music, not necessarily violinists themselves, who spent part of their careers north of the Alps include G.M. and G.F. Cesare, Tarquinio Merula, Massimiliano Neri, Antonio Bertali and P.A. Ziani. The violinist and composer Giuseppe Torelli, most closely associated with the orchestra at S Petronio in Bologna, was from at least 1698 to the end of 1699 *maestro di concerto* for the Margrave of Brandenburg in Ansbach.

The steady stream of musicians into Italy was another way in which the Italian style was disseminated. Schütz had two periods of study in Venice, first with Gabrieli and then with Monteverdi. Johann Rosenmüller spent more than 20 years working in Venice. As a young man Johann Jakob Walther entered the service of Cosimo III de Medici in Florence. The influx of foreign musicians seeking instruction, inspiration and good instruments in Italy reached flood proportions by the later 17th century, especially after Corelli came to prominence; notably, Georg Muffat, N.A. Strungk and J.G. Pisendel all studied in Rome.

Arcangelo Corelli had an extraordinary influence. To him more than to any other composer of the central Baroque period may be attributed the acceptance of certain instrumental genres as deserving of composers' attention: what we now call trio sonatas, continuo sonatas and concerti grossi. He thus had a classicizing role; and this extended beyond the broader structures into musical detail of all kinds. Sir John Hawkins was later to comment that 'Men remembered, and would refer to passages . . . as to a classic author' (1776). Corelli's reputation as a violinist was already well established by 1686 when the Roman agent of Francesco II d'Este reported that 'There is much doubt that he would leave Rome because he is so highly esteemed, cherished, and paid here'. The op.5 violin sonatas, published in Rome in 1700, were eagerly awaited by a European-wide audience. The collection went through a prodigious number of editions in the course of the 18th century. The edition published in Amsterdam by Roger in 1710 purporting to contain embellishments for the Adagio movements 'as M. Corelli himself plays them' (for an illustration from the third edition of 1715, *see* ROGER, ESTIENNE), was controversial from the outset; whether or not the ornamentation was supplied by Corelli (which seems likely), the publication provides evidence of the performing practice expectations surrounding Italianate slow movements in the period.

Corelli's op.5 provided a model for many other sonata collections. Francesco Geminiani's op.1 sonatas (London, 1716), though technically more advanced than Corelli's op.5, acknowledge a debt to them in the opening sonata, which has a first movement alternating between short *adagio* passages and brilliant *allegro* passage-work. Other works also take their points of departure from one or another of Corelli's sonatas. Tartini's *L'arte dell'arco* (1758) is a set of 38 variations on the Gavotte from op.5 no.10. The *Dissertazioni . . . sopra l'opera quinta del*

Corelli by Francesca Maria Veracini is a more back-handed compliment since, as J.W. Hill (*The Life and Works of Francesco Mária Veracini*, Ann Arbor, 1979) demonstrated, it consists of reworkings of the op.5 sonatas to enhance the compositional structures (tightening up the counterpoint etc.). Telemann's *Sonate metodiche* (Hamburg, 1728 and 1732) provide models (rather different in approach from the Roger edition) for playing Corelli-style Adagios, while the *Sonates corellisantes* (Hamburg, 1735) represent a more general tribute.

The violinists who either learned from Corelli or acknowledged his influence were legion. According to Roger North, 'divers young gentlemen [travelled] into Italy, and after having learnt of the best violin masters, particularly Corelli, returned with flourishing hands; and for their delicate contour of graces in the slow parts, and the *stoccata*, and spirit in other kinds of movements, they were admired and imitated'. Many Corelli disciples (both pupils and other violinists who were perceived as wearing his mantle) made their careers outside Italy. Giovanni Steffano Carbonelli (*d* 1752), Pietro Castrucci and his brother Prospero all, like Geminiani, ended up in London, Michele Mascitti in Paris, and P.A. Locatelli in Amsterdam. Locatelli's *L'arte del violino*, 12 concertos with written-out cadenzas and 24 virtuoso caprices for unaccompanied violin, have earned him the title 'the Paganini of the 18th century'. Corelli's pupil Giovanni Battista Somis taught Jean-Marie Leclair *l'aîné*, Louis-Gabriel Guillemain and Gaetano Pugnani, who, in turn, was Viotti's teacher. Geminiani's pupils included Matthew Dubourg, Michael Christian Festing and Charles Avison. Many of these musicians seem to have regarded the ability to perform a Corelli sonata as the touchstone of musical sensitivity. Hubert Le Blanc wrote that 'one of the most beautiful things to hear was an Adagio of Corelly played à la Geminiani'. Though Locatelli was famous primarily for the strength of his playing, his rendering of the opening Adagio of Corelli op.5 no.4 was, according to Blainville, enough to make a canary fall from its perch in a swoon of pleasure.

Unlike Corelli, Antonio Vivaldi died in reduced circumstances, and his music fell out of fashion within a few decades. Yet he had been both prolific and popular. He had a formidable technique: in 1715 Uffenbach heard him play a cadenza in which 'he brought his fingers up to only a straw's distance from the bridge, leaving no room for the bow – and that on all four strings with imitations and incredible speed'. Two enduringly important Vivaldi collections were published in Amsterdam during his lifetime: *L'estro armonico* in 1711 and *Il cimento dell'armonia e dell'inventione* (the collection which includes the 'Four Seasons' concertos) around 1725. The first is an orderly presentation of four concertos each for four, two and one solo violins (some also with cello obbligato). Forkel asserted that Bach studied these works as models, and Bach transcribed several of them as harpsichord concertos or solo organ works. Quantz (in his autobiography of 1754–5) also said that 'the magnificent ritornellos of Vivaldi served me as excellent models'. Certainly Vivaldi established a three-movement template for the solo concerto which was to become the norm during the 18th century. The 'Four Seasons' concertos prompted imitations (G.A. Guido's *Le quattro staggioni dell'anno* op.3) and arrangements (Nicolas Chédeville's *Le printems ou Les saisons amusantes*, 1739). They became a standard part of violinists' repertory; Michel Corrette (*c*1782) gave fingerings for some of the more difficult passages (this is not the only work by Vivaldi to have received his attention in this way).

Giuseppe Tartini was a figure of immense importance. His early biographers insist that, after hearing F.M. Veracini play in Venice (probably in 1716), Tartini went into seclusion for several years in order to perfect his technique (which, as his more than 125 concertos reveal, was prodigious). In 1721 he became first violinist at the basilica of S Antonio in Padua. In about 1728 he founded what became known as the 'School of Nations', attracting students from all over Europe, including Pietro Nardini. Some of his teaching principles are encapsulated in the *Traité des agréments de la musique* (Paris, 1771), which also survives in various manuscript versions copied by his pupils and in the letter to Signora Maddelena Lombardini, published in Venice in 1770 and then in English (1771), French (1773) and German (1784) translations. Quantz, who had heard him in Prague around 1723, recorded his impressions in his autobiography:

> Tartini is a violinist of the first order; he produces very beautiful sounds. His fingers and bow obey him equally well. He executes the greatest difficulties with ease. He does trills and double trills with all his fingers perfectly and he plays in high positions a great deal. But his performance has nothing moving about it; his taste is not noble and often it is absolutely contrary to good style.

Tartini's favourite and most illustrious pupil was Nardini, known particularly for the beauty of his tone and his expressive performance of Adagio movements. Nardini, in turn, taught or influenced many others who were to affect the development of violin performance and repertory: Thomas Linley (ii), Antonio Lolli, Pollani (the teacher of Pierre Baillot), Bartolomeo Campagnoli (whose violin method was influential) and Cambini (another author of a violin method). Nardini and Lolli were both employed at the Stuttgart court in the 1760s; Lolli subsequently toured throughout Europe.

Gaetano Pugnani was similarly influential. His playing was characterized by power and richness. He is said to have adopted a straighter, longer bow and used thicker strings. Viotti, who came to prominence at the end of a two-year European tour with his teacher, described himself as 'pupil of the famous Pugnani'.

(b) England. In the first half of the 17th century, expert playing of the violin (as distinct from the viol) in England seems largely to have been confined to the court. The major strides in the development of violin technique in England seem to have been prompted by players from Europe. The best performers, at least until the 1630s, were such French imports as Jacques Cordier (also known as Bocan) and Stephen Nau (who was appointed composer for the violins, and effectively leader of the violin ensemble, early in the reign of Charles I). Davis Mell, one of the violinists under Nau, was the composer of twelve 'suites' (*GB-Och* Mus. 433) and various pieces in Playford miscellanies (notably *The Division Violin*, 1684). These require good left-hand facility (though never extending beyond 3rd position) and agile bowing for rapid division work. There was a new wave of French fashion after the Restoration when Charles II (who had spent his formative years in France) reconstituted the court violin band as an ensemble of 24 violins under the directorship of Louis Grabu. Foreign influences were not exclusively French. About 1656 the German violinist Thomas Baltzar came

to England after the dissolution of Queen Christina's Swedish court, and about 15 years later the Italian Nicola Matteis (i) arrived. These two virtuosos revolutionized English attitudes to violin playing. The diarist John Evelyn recorded that the English had considered such players as Mell 'as excellent in that profession as any were thought in Europe' until Baltzar came on to the scene. 18 years later, he described Matteis's virtuosity with a sense of wonder, saying that he 'seem'd to be so *spiritato'd* & plaied such ravishing things on a ground as astonished us all'. A group of solo violin pieces by Baltzar (*GB-Ob*, Mus. Sch. F.573) require considerable facility in chordal playing and string crossing. Matteis's four books of airs (1676 and 1685) demonstrate a highly developed technique and a fiery imagination.

By the end of the century Italian violin composition had an enormous impact on English taste. Purcell three times acknowledged the importance of Italian models for his own work: in the prefaces to the *Sonnata's of III Parts* (1683) and *Dioclesian* (1691), and in the section on composition he contributed to the 12th edition of Playford's *An Introduction to the Skill of Music* (1694). In the 18th century London, as the largest and most cosmopolitan city in Europe, became a mecca for foreign virtuosos, many of whom (Geminiani, F.M. Veracini, Felice Giardini and Viotti) settled there at least for a time. Native English violinists seem not to have been able to hold their own against this sort of competition. Had he not died in a boating accident at the age of 22, Thomas Linley (ii) might have been an exception to this trend. Linley, an able composer, studied with Nardini in Florence (and struck up a warm friendship with Mozart whom he met there).

(c) Germany and Austria. German violin playing in the first half of the 17th century seems, on the basis of the surviving repertory, to have been comparable to that in England. In fact, such English expatriates as Thomas Simpson and William Brade had a significant influence in the first quarter of the century, though their published works consisted essentially of non-virtuoso consort dance arrangements. Brade knew Johann Schop (i) and taught Nicolaus Bleyer, whose variations on *English Mars* (*c*1650) are among the earliest German pieces for violin and bass. It was the next generation of Germans who, inspired by Italian violinists, emerged as virtuosos. The progression from technically-modest consort repertory to extremely demanding soloistic showpieces can be traced through the works of a succession of violinists employed at the court of the Elector of Saxony at Dresden. J.W. Furchheim (in Dresden by 1651), J.J. Walther and J.P. von Westhoff (both there from 1674), N.A. Strungk (from 1688) and J.G. Pisendel (from 1712) might well be considered a 'Dresden school'. Of these, Walther, Westhoff and possibly Pisendel take their place alongside J.H. Schmelzer and H.I.F. von Biber in the first rank of violinist-composers of the 17th century. Schmelzer seems to have been playing at the Viennese court from around 1635, though he had to wait until 1649 (the year in which Antonio Bertali was appointed Kapellmeister) for an official appointment. In 1679 Schmelzer was himself promoted to Kapellmeister. He was the first non-Italian to hold the post, and his *Sonatae unarum fidium* (1664) were the first published sonatas for solo violin and continuo by a non-Italian. His music is extrovert and technically demanding. In 1660 Schmelzer was described by J.J. Müller as 'the most famous and nearly most distinguished violinist in all Europe'. Biber (1644–1704) may have studied with Schmelzer and was certainly well aware of his achievements; the opening of Biber's sonata 'La Pastorella' is a transcription using double stops of Schmelzer's trio sonata of the same name. A penchant for multiple stops and chordal playing (evident in both the 'Rosary' or 'Mystery' Sonatas (*c*1676) and the *Sonatae violino solo* of 1681) distinguish Biber's writing from Schmelzer's.

Walther seems to have taken a somewhat competitive attitude to Biber. His preface to *Hortulus chelicus* (1688) claims that the collection is based on a sound orthodox technique rather than ostentatious virtuoso tricks such as 'squeaking on two or more strings falsely tuned *ad nauseam*' – a barb clearly aimed at Biber's fondness for scordatura writing (see §(iii) (e) below). For all that, *Hortulus chelicus* and the earlier *Scherzi da violino solo* (1676) provide a compendium of virtuoso devices; they represent the technical summit of German violin playing at that time.

As a composer of violin works, J.S. Bach neglected the main genres of his age. The solo violin concertos (BWV1041 and 1042) and the concerto for two violins (BWV1043) are in the Vivaldian mould, though they far outstrip their models in musical content (especially in harmonic complexity). But with the exception of that contained in the *Musical Offering* there are no authentic trio sonatas involving violin, and there are just two continuo sonatas, dating from early in Bach's career. He did, though, invent new genres of his own. The six sonatas for harpsichord and violin (BWV1014–19) are the earliest such compositions, effectively trio sonatas in which the harpsichord acts as both second violin and bass. There is a significant repertory of unaccompanied violin music before Bach's (1720): by Thomas Baltzar (in *GB-Ob* Mus. Sch. 573), J.P. von Westhoff (a suite for violin 'sans basse', 1683, and six partitas, 1696), Biber (Passacaglia, *c*1676) and J.G. Pisendel (unaccompanied sonata, ?1716). But nothing approaches the Bach solo violin sonatas and partitas (BWV1001–6) either for musical architecture or for a comprehensive exploration of the technical and expressive capabilities of the violin.

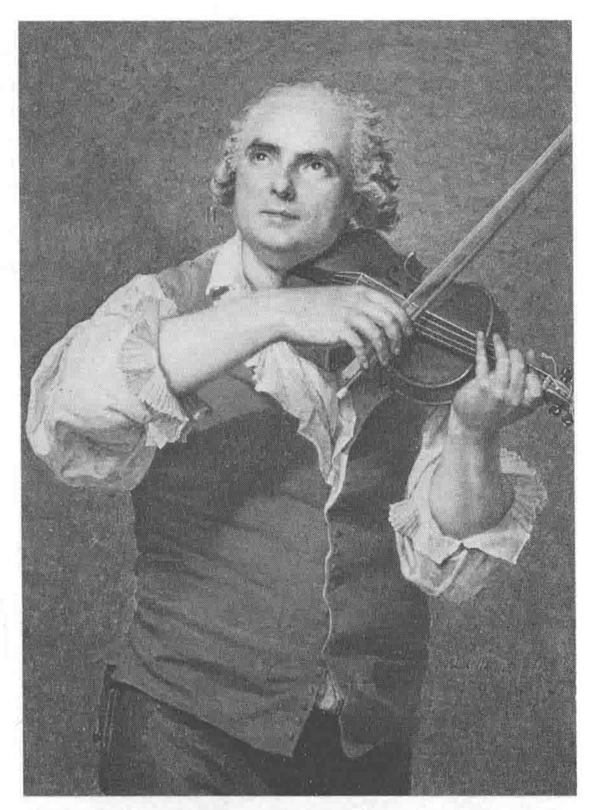
Pisendel was a pivotal figure in the history of the violin in 18th-century Germany. A pupil of Giuseppe Torelli (at Ansbach) in his youth, Pisendel travelled in the entourage of the Elector of Saxony to both France and Italy where, in 1716, he took lessons from Vivaldi. His seven violin concertos show his indebtedness to this composer. Pisendel was influential in what is sometimes referred to as the Prussian school. Quantz paid tribute to his playing of Adagio movements; it may well be Pisendel's practice which is codified in Quantz's systematic account (*Versuch*, 1752) of how to decorate such movements. Pisendel taught Johann Gottlieb Graun, who in turn taught Franz Benda, a prolific composer for the violin who was also famous for his affecting performance of Adagios (some of his ornamentations survive).

The four great composers of the classical Viennese School all studied the violin. Joseph Haydn did so at St Stephen's in Vienna during his childhood, and though he was to describe himself later as 'no conjuror on any instrument', his writing for the violin shows a player's understanding. W.A. Mozart doubtless began his instruction on the instrument with his father, whose *Versuch*

einer gründlichen Violinschule (1756) was the most comprehensive work on violin playing yet to have been published. Mozart's abilities as a violinist were exceptional, even though after he settled in Vienna in 1781 he chose to concentrate as a performer on the piano (he continued to play the viola in informal chamber music gatherings). From 1789 to 1792 Beethoven was employed as a viola player in the Bonn court orchestra; Schubert, during his years as a pupil at the Imperial and Royal City College in Vienna, became leader of the first violins in Josef von Spaun's student orchestra. All four wrote works for violin and orchestra. The last three (K216, K218 and K219) of the violin concertos Mozart wrote in Salzburg in 1775 give cause to wonder what masterpieces might have ensued had he contributed to this genre during his Vienna years. The Beethoven violin concerto (op.61, 1806), a work driven by musical rather than virtuoso imperatives, has been a cornerstone of the repertory ever since Pierre Baillot and Joseph Joachim rescued it from near oblivion in the mid-19th century. Perhaps the greatest contribution of the Viennese composers to violin repertory is in chamber music. The string quarters of all four are of exceptional importance. In his violin and piano sonatas Mozart transformed the accompanied sonata into the duo sonata. This development was consolidated and extended in the ten great sonatas by Beethoven, whose 'Kreutzer' sonata (op.47, 1803) establishes a new register both technically and musically for the genre; Beethoven described it as being 'written in a very virtuoso style like a concerto'.

(d) France. The link between dance and violin playing dominated the history of the instrument in 17th-century France. French dancing masters, for whom violin playing was essentially an ancillary skill, were in demand all over Europe and in England. The music they composed was simple, often little more than an assemblage of stock melodic formulae subsequently scored for five-part string ensemble. In this form, though, the music and their performances became the envy of Europe. The *Ballet de la délivrance de Renaud*, performed at the French court in 1617, mentions 24 violins playing together (a number which may owe less to any musical rationale than to an allusion to the courtly ensemble of 24 musicians surrounding the throne in *Revelation* v.8). Exactly when this became a fixed ensemble (as distinct from a group assembled for a particular occasion) is unclear but there seems no particular reason for specifying 1626, the date so often given. By the time Lully came to prominence at the French court, the 24 Violons du Roi were an established court orchestra; they remained an important institution into the 18th century, although under Lully the élite 'Petits Violons' (*c*1656–*c*1664), otherwise known as 'La Petite Bande', soon surpassed them.

The next generation began writing music which made virtuoso demands on performers. Elisabeth Jacquet de la Guerre composed two sonatas for violin, bass viol and continuo (*c*1695) which contain the first documented use of double stops in French violin music. In 1704 Michele Mascitti, who had recently settled in Paris, published the first of nine collections of violin sonatas and François Duval his first book of *Sonates*; in 1705 Jean-Féry Rebel published his *Pièces de violon avec la basse continue*. Both Rebel and Duval were members of the court orchestra, but both were influenced by Italian practices. Michel Corrette (1753) claimed that Rebel heard and was inspired by the first Paris performance of Corelli's sonatas. He also asserted that these works seemed too difficult at first for French violinists and that Duval and Baptiste, who studied with Corelli in Rome, were among the first to master them.



In the next generation of violinists two figures stand out: Jean Baptiste Senaillé and Jean-Marie Leclair *l'aîné*. Senaillé, who is thought to have studied with G.A. Piani, published five books of violin sonatas between 1710 and 1727. Senaillé's music exploits a wide range of bowstrokes and requires a well-developed left-hand technique (reaching 7th position on the fingerboard). In 1738 the *Mercure* credited him with the development of violin playing in France, claiming that his music was so attractive that violinists were keen to master its technical difficulties. Senaillé taught other important violinist-composers, notably Jacques Aubert and Louis-Gabriel Guillemain.

J.-M. Leclair *l'aîné* began as a promising dancer and violinist in Lyons. But after publishing his op.1 violin sonatas in Paris in 1723 he went to Turin, where he studied with Giovanni Battista Somis. He performed with Locatelli in Kassel in 1728 before returning to Paris where, for the next eight years or so, he was a frequent performer at the Concert Spirituel. His sonatas are demanding by any standards, ranging up to 8th position and requiring an agile left hand with such devices as double trills in combination with a wide vocabulary of bowstrokes. His younger brother, Jean-Marie Leclair *le cadet*, spent most of his career in his native Lyons, but his set of violin sonatas, op.1 (1739) require a sophisticated technique.

Two other brothers associated with the coming-of-age of violin virtuosity in France were Louis and François Francoeur, both members of the 24 Violons. Jean-Joseph Cassenéa de Mondonville further extended the technical demands of the French violin sonata, especially in his sonatas for violin and continuo (1733) and *Les sons harmoniques* (1738). His *Pièces de clavecin en sonates avec accompagnement de violon* (1734) are among the earliest examples of the accompanied sonata, and, at least from the violinist's point of view, the most musically satisfying.

While in the late 17th century and the early 18th French virtuoso violin playing and composition were dependent on Italian teachers and Italian models, by the 1740s an independent French violin school was thoroughly established. The key figures had been taught by their compatriots. L'abbé *le fils* studied with J.-M. Leclair, and at the age of 14 made his debut at the Concert Spirituel playing a Leclair duo with the 13-year-old Pierre Gaviniés. Gaviniés's *Vingt-quatre matinées* (pieces for solo violin in all keys) indicate an advanced technique. He had a huge influence on the next generation of violinists in France; he taught Marie-Alexandre Guénin, Abbé Robineau (who went on to study with Lolli in Naples), Simon Leduc and Nicolas Capron.

In the last 20 years of the 18th century Paris could lay claim to being the violin capital of Europe; the greatest makers worked there and the greatest performers gave concerts there. Most importantly, in 1782 G.B. Viotti made a spectacularly successful dêbut at the Concert Spirituel. Viotti, who made Paris his base for ten years (until political developments forced him to leave for England), had a profound influence. His preferences for the bows of François Tourte and the violins of Stradivari

15. Louis Guéné, the King's violin: miniature by François Dumont, 1791 (Musée du Louvre, Paris); note the classical-style bow and the under-the-chin hold

made them the most sought-after. His playing was an inspiration for Rodolphe Kreutzer, Pierre Baillot and Pierre Rode. These three great violinists were professors at the Paris Conservatoire from its founding in 1795, and together in 1803 they produced the Conservatoire's official *Méthode de Violon*, which provided the basis for Baillot's encyclopedic *L'art du violon* (1834).

(iii) Technique and performing practice.

(a) Treatises. Roger North wrote of techniques 'which may be knowne but not described'. Some subtleties are indescribable, and some, particularly in the 17th century, may have been kept as mysteries of the trade. For all that, the most obvious sources of information on technique and performing practice are treatises. A great deal of fascinating information is contained in two great encyclopedic works, Praetorius's *Syntagma musicum* and Mersenne's *Harmonie universelle* (1636–7). With these outstanding exceptions, however, most 17th-century treatises were written by generalists and directed at amateur players, and confine themselves to rudimentary matters. This tradition of what Boyden (1965), picking up on the title of a 1695 publication, called 'self-instructors' continued throughout the first half of the 18th century.

Many tutors addressed to amateurs do little more than sketch the topography of the fingerboard and provide a few simple tunes. Speer (1697) concluded his instructions for the violin with the frustrating comment: 'a true teacher will be sure to show his student what remains: how to hold the violin properly, how to place it on the breast, how to manage the bow, and how to play trills, mordents, slides and tremolos combined with other ornaments'. Where these writers did venture into technical matters their advice may be suspect. Some, like Prinner (1677) and Berlin (1744), are manifestly non-specialist since they were probably not string players and set out (like Speer) to give instruction in a whole range of musical instruments. Such volumes are, however, not entirely without interest. John Lenton's *The Gentleman's Diversion, or the Violin Explained* (London, 1693), for example, manages – despite its quite explicit targeting of hobbyists – to give us some tantalizing glimpses of the practices of advanced players in turn-of-the-century England. Even such a publication as Robert Bremner's *Compleat Tutor for the Violin* (London, after 1761) helps in an oblique way to fill out the picture. Addressed to beginners, its eight pages of instruction contain almost nothing useful about violin technique. But it includes a charming frontispiece of a violinist with portraits behind him of Corelli and Handel (an indicator of taste), a revealing one-page dictionary of musical terms, and a fascinating advertisement for musical accessories (e.g. 'mutes or sardines') sold by Bremner.

The picture changed markedly in the mid-18th century with an explosion of treatises written by real violinists for those aspiring to be real violinists: Geminiani's *The Art of Playing on the Violin* (London, 1751), Leopold Mozart's *Violinschule* (Augsburg, 1756), Herrando's *Arte y puntual explicación del modo de tocar el violín* (Paris, 1756) and L'abbé *le fils*'s *Principes du violon* (Paris, 1761). Two other manuals should really be included in this group: Quantz's *Versuch einer Anweisung die Flöte traversiere zu spielen* (Berlin, 1752), since it contains a great deal which is specifically relevant to violin playing, and Tartini's *Traité des agréments*, published posthumously in 1771 but circulating in manuscript for some years before that. Of the many later 18th-century manuals, probably the most significant are G.S. Löhlein's *Anweisung zum Violinspielen* (1774), the French publications of C.R. Brijon (1763), T.-J. Tarade (*c*1774) and Antoine Bailleux (1798), and the first volume (on violin playing) of Francesco Galeazzi's *Elementi teorico-pratici di musica* (1791).

All of these treatises must be approached with a sense of context (and hence of the limits of their applicability). Quite apart from broad differences in stylistic orientation, performers obviously had diverse ideas, then as now, on matters of technique and interpretation. Geminiani, the pupil of Corelli, is often regarded as an exponent of an Italian violin tradition, but by 1751 he had become fascinated with French music. The hybrid character of his style led John Potter to observe in 1762, 'his taste is peculiar to himself', and even his great admirer, Sir John Hawkins, doubted 'whether the talents of Geminiani were of such a kind as qualified him to give a direction to the national taste' (1776). Hence he should be regarded as a rather idiosyncratic guide to Baroque practice. It is difficult even to establish a context for some volumes. Giuseppe Tartini's precepts were published in the *Traité des agréments de la musique* (Paris, 1771) shortly after his death, but it is generally assumed that at least some of it must have been written before 1756 since Leopold Mozart referred in his *Violinschule* (1756) to Tartini's remarks on the augmented-2nd trill, and virtually plagiarized Tartini's notes on vibrato. It is not known when exactly this work was compiled or how much of it was

written by pupils; nor is it clear how to reconcile, for example, Tartini's advice (in the letter to Signora Maddalena Lombardini) to 'make yourself a perfect mistress in every part of the bow' with his puzzling injunction (in the 'Rules for Bowing') never to play near the point or heel. As sources of information on performing practice, treatises must take their place alongside other invaluable (but often also equivocal) forms of evidence such as paintings, observers' accounts of performances, records of payment for instruments and musical services – and, most importantly, the music itself.

(b) Holding the violin. Where exactly on the upper body the violin rested was not completely standardized until late in the 18th century. In the early Baroque era, violinists might hold their instruments almost as low as their waists (as some traditional fiddlers still do). When Nicola Matteis arrived in England in the 1670s, observers were struck by the way he held the violin against 'his short ribs'. Many players preferred to support the violin against their chests just beneath the collar-bone. John Playford (i) (1654), addressing amateurs, advocated this breast position (fig.16), but so too did Geminiani writing nearly a century later with much more accomplished players in mind. Even in the later 17th century some chose to rest the violin on the collar-bone with the option of using their chins to steady the instrument, particularly when shifting. Lenton (C1693) advocated resting the instrument on the collar-bone but without chin pressure:

> I would have none get the habit of holding an Instrument under the Chin, so I would have them avoid placing it as low as the Girdle, which is a mongrel sort of way us'd by some in imitation of the *Italian*. . . . The best way of commanding the Instrument will be to place it something higher than your Breast your fingers round and firm in stopping.

Obviously, none of these positions can be regarded as standard. G.B. Rangoni's essay on Nardini, Lolli and Pugnani published in 1790 argues that:

> Just as each person is differently built, it follows that the position of the instrument shouldn't be the same for all; and that making anyone hold the violin in a way contrary to their natural bearing (which is always related to the constitution of their limbs) would introduce obstacles in a student's progress and prevent the development of their talent.

As early as 1677, however, Prinner asserted that the violin should be held 'so firmly with your chin that there is no reason to hold it with the left hand – otherwise it would be impossible to play quick passages which go high and then low or to play in tune'. Corrette (C1738) and Berlin (C1744) both regarded chin support as essential when shifting (advice repeated by Bailleux in 1779). In 1756 Leopold Mozart offered violinists a choice between a chest-high hold (elegant, he thought, but inconvenient for shifting) and an under-the-chin method (comfortable and efficient). In the same year, Herrando stated simply that 'The tailpiece must come under the chin, being held by it there, turning the head slightly to the right' (fig.17).

Various other methods in the second half of the 18th century describe the violin as being held on the collar-bone without specifying whether or not to stabilize it with the chin. In 1761 L'abbé *le fils* proposed that the chin should be on the G-string side of the instrument, but this practice was apparently still not completely accepted by the end of the 18th century. In 1796 Francesco Galeazzi attacked the idea of playing with the chin on the E-string side, and his vehemently defensive tone makes it clear

16. Man playing a violin; painting by Peter Lely, c1640 (private collection); note the instrument is supported against his chest

that this must still have been an issue; he claimed that it looked ridiculous, necessitated unwieldy movements with the bow and numbed the left ear because of the proximity of the instrument. The Paris Conservatoire *Méthode* of 1803 states quite unequivocally that 'the violin is placed on the collar-bone, held by the chin on the left-hand side of the tailpiece, and inclined a little to the right'. By the late 18th century chin pressure on one side or the other must have been standard; but this meant something quite

17. Frontispiece to Joseph de Herrando's 'Arte y puntual explicación del modo de tocar el violín' (Paris, 1756)

different from modern practice. Bartolomeo Campagnoli's treatise of 1824 stresses that the pressure exerted by the chin on the tailpiece must be light and that the head should be held as upright as possible. The inventor of the chin rest, Louis Spohr, listed among its advantages the fact that it makes it easier to hold the head upright. He claimed in his *Violinschule* (1832) that in the ten years since he had invented it, the chin rest had found favour with many violinists; but the *Méthode de violon* (1858) by the great Belgian violinist Charles-Auguste de Bériot fails to acknowledge its existence.

With the exception of Herrando, all of these writers identified shifting as the principal reason for applying pressure with the chin (*see* FINGERING, §II, 2). Yet it is obvious that many skilled violinists who held the instrument beneath the collar-bone (and probably others who held it on the collar-bone but without chin support; for illustration *see* VERACINI, FRANCESCO MARIA) were capable of playing virtuoso repertory requiring an advanced shifting technique. Even Prinner, the earliest and most vehement advocate of chin-on playing, conceded (1677): 'I have known virtuosos of repute who irrespective of this put the violin only against the chest, thinking it looks nice and decorative'. Pictorial evidence from the 17th and 18th centuries seems to reflect what must have been a genuine diversity in ways of holding the violin. A number of paintings, in fact, depict several violinists, each holding his instrument differently, playing in a single ensemble. For all that, the vast majority of violinists depicted in the art of the period use holds in which the chin could not be used to stabilize the instrument. Geminiani's instructions for shifting (described in FINGERING, §II, 2(i)) are predicated on such a hold and we can only assume that many virtuosos had mastered such a technique (as, in fact, a good number of period instrument players did in the later 20th century).

It may be that chin stabilization was disdained by 17th-century virtuosos but adopted by amateurs as a stratagem that got them around the most perplexing technical problem: that of shifting. In the course of the 18th century the situation reversed itself; by around 1800 professional players were unanimous in resting the chin (however lightly) on the tailpiece, while chin-off methods (especially ways of holding the violin lower than the collar-bone) were the preserve of tavern and traditional fiddlers. (There is a parallel with the adoption of the end-pin on the cello, recognized as a possibility by the early 18th century but spurned by advanced players for almost two centuries thereafter.)

For discussion of bowing technique and other aspects of performing style on the violin in this period, *see* BOW, §II; COL LEGNO; ORNAMENTS, §§5–9; PIZZICATO; SCORDATURA, §1; and VIBRATO.

5. SINCE 1820.

(i) The instrument.

(a) The violin. Most violins made before about 1800 have been modified to yield greater tonal power and brilliance. The flat-model Stradivari flourished as concert instruments, while the highly arched, smaller-toned Stainers and Amatis lost their former popularity. The main body of the violin remained unaltered despite further attempts at 'acoustical improvement', ranging from the construction of instruments from metals, glass, leather, plastics and ceramics to experiments with various shapes, notably Félix Savart's trapezoidal violin with straight sides and straight slits for soundholes (1817) and François Chanot's guitar-shaped model with small crescent soundholes (also of 1817).

During the 1960s and 70s, Carleen Hutchins and her associates developed a 'concert violin', with a longer, revamped body and larger f-holes, and a string octet, compromising mathematical, acoustical and violin-making principles to produce instruments in different frequency ranges that possess the dynamic power and timbre of the violin family (see NEW VIOLIN FAMILY). These instruments range from the contrabass violin (body length 130 cm, tuned *E′–A′–D′–G*) to the small treble (or 'sopranino') violin (tuned an octave above the normal violin).

Experiments with building electric instruments based on the violin family, often with solid bodies and amplified usually by means of one or more sets of electromagnetic pickups or contact microphones (*see* PICKUP), have continued since the 1920s (*see* ELECTRONIC INSTRUMENTS, §I, 2(i)(c)). The kit-like Raad violin was developed in the late 1970s to dispense with the earlier primitive arrangement of surface pickups and to cultivate a more sophisticated sound. By allowing the instrument's signal to be amplified, modified or altered through changes in frequency response, rapid changes in amplitude, harmonic alteration (of overtones), echo and reverberation effects, and distortion, it has served a wide range of classical and popular musical styles.

(b) Makers. The burgeoning concert activity and educational opportunities of the early 19th century increased demand for instruments, especially for cheaper 'factory fiddles', mass-produced in France at Mirecourt and in Germany at Mittenwald and Markneukirchen. Mirecourt is still a centre for specialist craftsmen, having a violin-making school and a small factory which produces high-quality instruments at reasonable prices by implementing some mechanized processes. Similar schools have been established in recent years in Britain (especially in London and Newark-on-Trent), the USA, Italy (Cremona), Switzerland (Brienz), Poland (Poznań) and many other countries.

Although there were some significant 19th-century Italian makers such as G.F. Pressenda (1777–1854), Giuseppe Rocca (1807–65) and Gaetano Chiocchi (1814–81), the leadership in violin making passed to the French, notably Nicolas Lupot (1758–1824), F.-L. Pique (1757–1822) and Lupot's pupils C.-F. Gand (1787–1845) and S.-P. Bernardel (1802–70). Most influential was JEAN-BAPTISTE VUILLAUME (1798–1875), who worked for François Chanot and Simon Lété in Paris before establishing his own business in 1827. In 1855 he purchased Luigi Tarisio's collection of fine Italian violins. His talented workforce copied these instruments, including the 'Messiah' Stradivari, producing many high-quality violins. Most of these bear Vuillaume's label and brand, serial number and the date of manufacture. Among skilled craftsmen who worked for Vuillaume were Paul Joseph Bailly (1844–1907), Honoré Derazey (1794–1883) and Hippolyte Silvestre (1808–79).

J.F. and J.B. Cuypers, the sons of J.T. Cuypers (1724–1808), continued their father's work in The Hague, but to a lesser standard. Central to the British violin market was the firm of W.E. Hill & Sons, formally established in 1835, as well as the family businesses of J.T. Hart, the younger Georges Chanot, Edward Withers and John Beare. Several skilled foreign luthiers also lived

and worked in Britain, among them the younger B.S. Fendt (1800–52), George Craske (1795–1888) and J.F. Lott (1776–1853).

Leading 20th-century makers include C.G. Becker (1887–1975), Sergio Peresson (1913–91), Dario D'Attili (*b* 1922), David Burgess (*b* 1953) and Luiz Bellini (*b* 1935) in the USA; Annibale Fagnola (1866–1939), Giuseppe Fiorini (1861–1934), Cesare Candi (1869–1947), Fernando Sacconi (1895–1973), Vittorio Bellarosa (1907–79), Francesco Bissolotti and Giovanni Battista Morassi (*b* 1969) in Italy; Joachim Schade and Eugen Sprenger (1882–1953) in Germany; Pierre Gaggini (*b* 1903), Etienne Vatelot (*b* 1925) and Frédéric Becker in France; the Portuguese Antonio Capela (*b* 1932); and the Czechs Přemysl Špidlen (*b* 1920), Vilém Kužel, and Tomáš and Vladimír Pilař, as well as several fine Japanese craftsmen. In the postwar resurgence of violin making in Britain the work of William Luff (1904–93), Thomas Earle Hesketh (1866–1945), Geroge Wulme-Hudson (1862–1952), Arthur Richardson (1882–1965), Maurice Bouette (1922–92), Wilfred Saunders (*b* 1927), Clifford Hoing (1903–89), Lawrence Cocker (1912–82), Roger Hargrave (*b* 1948) and Gimpel Solomon (*b* 1934) is outstanding. The early music revival has encouraged craftsmen such as Ronald Prentice (*b* 1932), Derick Sanderson (*b* 1932), Colin Irving (*b* 1945), Rowland Ross and David Rubio (*b* 1934) to make reproduction instruments to Baroque dimensions.

(c) Strings and accessories. A report by François-Joseph Gossec presented to the Institut national, later published in *Procès-verbaux de l'Académie des beaux-arts*, i (1937), 156–61, puts forward some of the perceived disadvantages of gut stringing: the need to keep them moist; their tendency to unravel; their sensitivity to variation in atmospheric temperature and the common incidence of knots. Yet despite the increased preference for overspun D strings and these well-publicized disadvantages of gut stringing, H. Welcker von Gontershausen strongly advocated all-gut stringing (*Neu eröffnetes Magazin musikalischer Tonwerkzeuge*, Frankfurt, 1855). However, the combination of plain gut E and A, high-twist gut D and a G with copper, silver-plated copper or silver round wire close-wound on a gut core was the norm throughout the 19th century. The gut E was gradually replaced by a more durable and responsive steel variety, and the metal adjuster for greater facility in fine tuning, championed by the violinists Willy Burmester (1869–1903) and Anton Witek. Only a few performers, most notably Fritz Kreisler, persevered with a gut E string as late as 1950. Flesch (C1923) documents the use of an overspun A string, while the high-twist D was replaced by gut with aluminium winding. By the mid-20th century, flat-ribbon and flat-ground round windings (with interleaved plastic) were applied to roped steel and plastic as well as gut, for A, D and G strings; the development of more flexible woven core led to the introduction of metal strings, which have the advantages of longer wear, easier tuning with adjusters (usually on specially designed tailpieces), minimal stretching, and precise moderation of thicknesses for true 5ths. However, their perceived tonal inferiority and the additional pressures they place on the instrument have encouraged a preference for metal-wound strings with a gut or nylon core. Early music specialists employ gut strings almost exclusively; this revival of interest is prompting research into, and attempts at reconstructing, the manufacturing techniques of the late Renaissance period and the Baroque.

Mutes of various types and weight have been employed. The three-pronged clamp model (sometimes two- or five-pronged) made from wood, metal, ivory or, latterly, bakelite remained virtually unchallenged until the mid-19th century, when Vuillaume, J.F.V. Bellon and others attempted (with little success) to introduce models which could be applied more quickly and conveniently. In the 20th century, designs for mutes which are stored between the bridge and the tailpiece, notably the 'Tourte', 'Heifetz' and 'Roth-Sihon' models, have gained preference (*see* MUTE, §1).

The CHIN REST has become a standard accessory, ensuring the stability of the instrument and increased left-hand mobility. Invented by Spohr in about 1820, it was originally of ebony and placed directly over the tailpiece, not to the left side as later became customary. The chin rest only gradually achieved general approbation but has come to be adopted by most violinists. It is normally made from wood (usually ebony or rosewood) or vulcanite, and is available in numerous forms and sizes.

Pierre Baillot (1834) was the first to recommend 'a thick handkerchief or a kind of cushion' for the correct and comfortable support of the instrument. The production of shoulder rests has been a growth industry since the 1950s, designs ranging from wooden models made in various sizes, to pads affixed to metal frames which grip the instrument with feet covered with rubber protectors, and to inflatable cushions. Late 20th-century pedagogical trends have largely discouraged their use, due to their perceived adverse effect on tone-quality and their causing unwanted body tensions for many violinists.

(d) The bow. Apart from some minor 19th-century additions and unsuccessful attempts to improve the bow, Tourte's standardized design has remained unsurpassed. The most significant of his French successors worked in Paris or Mirecourt, notably Jacques Lafleur (1757–1833) and his son Joseph René (1812–74), Jacob Eury (1765–1848), Etienne Pajeot (1791–1849), Nicolas Maire (1800–78), Jean Dominique Adam (1795–1865) and his son Grand-Adam (1823–69), and François Lupot (1775–1838); their bows are generally more heavily wooded and slightly shorter than Tourte's. Lupot adopted a narrower outline for the head and probably added (*c*1820–30) the metal underslide to prevent wear on the nut caused by friction with the stick.

Vuillaume trained and hired countless bowmakers (among them Dominique Peccatte, Joseph Fonclause, Pierre Simon, J.P.M. Persoit and F.N. Voirin) in his workshops and disseminated the best qualities of Tourte's work, publishing in 1856 a theory that the taper of Tourte's sticks generally corresponded to a logarithmic curve. Among Vuillaume's inventions were: a tubular steel bow, which was championed by C.-A. de Bériot and Alexandre Artôt, but generally lacked the resiliency of its wooden counterpart, was deficient in balance, and kinked, dented or bent easily; and the 'self-hairing' bow with fixed frog. His other experiments achieved more lasting approbation, notably the round-edged frog or curved ferrule combined with the stepped bottom plate for a good spread of hair at the heel, the indentation of the channel and track of the frog, and the combination of rear and upper heel plates into one right-angled metal part.

Peccatte (1810–74), Joseph Henry (1823–70), Simon (1808–81) and Voirin (1833–85) also challenged the supremacy of Tourte's legacy, striving for a lighter, more elegant product. Particularly characteristic were the slimmer and less-square profile of the head and the different camber, the progression of which was moved closer to the head for additional strength in the stick. The balance was redressed by a reduction in the diameter of the lower end of the stick, with the frog appropriately in proportion.

Outstanding among Voirin's successors were Louis and Claude Thomassin and Eugène Sartory. The Thomassins were trained by Charles Bazin (1847–1915), himself an imitator of Voirin. Louis later worked for Voirin and succeeded to his business (1885), while Claude worked for Gand & Bernardel, Caressa and Caressa & Français in Paris, before opening his own workshop there (1901). Sartory's predominantly round sticks are indebted to Voirin and A.J. Lamy but are characterized by their smaller heads and greater strength and weight. Among other leading makers of the fortified Voirin model were J.A. Vigneron, Victor and Jules Fétique and E.A. Ouchard (1900–69).

French bowmaking declined during the two World Wars, but the products of André Chardon (1867–1963), Louis Gillet (1891–1970), Jacques Audinot (*b* 1922), Jean-Paul Lauxerrois (*b* 1928), Jean-Jacques Millant (1928–98), B.G.L. Millant (*b* 1929) and André Richaume (1905–66), most of whom returned to the style and hatchet head of Peccatte and Tourte, are well respected. The Mirecourt bowmaking tradition was revived with the establishment of a school (1971–81) under the direction of Bernard Ouchard (1925–79) and, later, Roger-François Lotte (*b* 1922). Among its distinguished 'graduates' are Stéphane Tomachot, Jean Grunberger, Pascal Lauxerrois, Benoît Rolland, Christophe Schaeffer, Martin Devillers, Sylvie Masson and Jean-Yves Matter. Along with Didier Claudel, Masson and Matter are among France's principal makers of reproduction pre-Tourte bows.

Bowmaking in 19th-century Britain was founded on the work of the Dodd and Tubbs families, who favoured functional durability over artistic craftsmanship. John Dodd (1752–1839) experimented with various weights, shapes of head, lengths and forms of stick and mountings on the nut, his somewhat crude product approximating to the Cramer type, which, together with the bows of his father Edward Dodd (1705–1810), most likely served as his model. Many of his bows are slightly shorter and lighter than Tourte's, and his early examples lack a metal ferrule. William Tubbs (1814–78) and his son James (1835–1921) retained the robust qualities of the Dodds but softened the angularity of the earlier English style. William was the first significant maker to use silver or gold (as opposed to ivory or ebony) facings for the head.

Samuel Allen (1848–*c*1905) was the chief inspiration behind the 'Hill bow'. Preserving the robust English tradition, this model was developed by makers in the workshops of W.E. Hill, notably W.C. Retford (1875–1970), William Napier (1848–1932), Sydney Yeoman (1876–1948), Charles Leggatt (1880–1917) and Frank Napier (1884–1969). Among other talented trainees in Hill's workshops were Arthur Barnes (1888–1945), Edgar Bishop (1904–43), Albert Leeson (1903–46), W.R. Retford (1899–1960), Berkeley Dyer (1855–1936), A.R. Bultitude (1908–90), Malcolm Taylor (*b* 1933) and William Watson (*b* 1930). Garner Wilson (*b* 1930), Brian Alvey (*b* 1949), Michael Taylor (*b* 1949), John Stagg (*b* 1954) and John Clutterbuck (*b* 1949) have since become leading British makers, while history reserves a niche for Lawrence Cocker's cane bows. Matthew Coltman (*b* 1955) and Brian Tunnicliffe (*b* 1934) are among the prominent British makers of reproduction pre-Tourte bows.

Germany became known during the 19th century for the mass-production of bows made from a cheaper and harder substitute for Brazil wood, sometimes called 'Braziletta'. There were few specialist bowmakers of international repute, but the work of Nikolaus Kittel (1839–70), Ludwig Bausch (1805–71), and the Knopf, Nürnberger, Pfretzschner and Weidhaas families, is well respected. Siegfried Finkel (*b* 1927) continued the Weidhaas tradition in Switzerland and his son Johannes (*b* 1947) worked in London and the USA. The roll of distinguished 20th-century American bowmakers includes John Bolander jr, William Salchow (*b* 1926), José da Cunha (*b* 1955), John Lee (*b* 1953) and Charles Epsey (*b* 1946). Christophe Landon (*b* 1959) is renowned for his reproduction pre-Tourte bows, as are the Netherlanders Luis-Emilio Rodriguez and Gerhard Landwehr.

20th-century inventions include the highly arched Vega (or 'Bach') bow. Promoted in the 1950s by Emil Telmányi and Albert Schweitzer to address the misconception that Bach's polyphonic violin music should be sustained precisely as written, it enabled all four strings to be sounded individually or in combination, its hair tension being controlled by a mechanical lever operated by the thumb. It had no precedent in the Baroque and made little impression. With supplies of pernambuco dwindling, bows of fibreglass, metal, graphite fibre and other materials have been introduced, but without ousting the conventional pernambuco from its favoured position.

Traditionally, bowhair comes from the tails of white horses, but some players use black horsehair or synthetic substitutes such as nylon, arguably to coarser tonal effect. Bronislaw Huberman (1882–1947) made experiments with fine-gauge wire which also yielded mixed tonal results.

(ii) Repertory.

(a) The solo concerto after Beethoven. The violin concerto developed in three main directions during the 19th century. Spohr, Mendelssohn, Schumann, Bruch, Brahms and Saint-Saëns among others stressed traditional musical values; Paganini, Bériot, Vieuxtemps, Wieniawski and Ernst followed the virtuoso path. Some composers introduced a new type of 'national' concerto (Joachim, *Konzert in ungarischer Weise*; Lalo, *Symphonie espagnole* and *Concerto russe*; Bruch, *Schottische Fantasie*; and works by Dvořák and Tchaikovsky).

Spohr's 18 concertos are indebted to the French school in their lyrical, expressive slow movements, dramatic qualities and bravura passage-work; but their structure, texture, thematic integration and development demonstrate a Beethovenian symphonic breadth. Most characteristic is his concerto no.7. No.8, the most popular of the 18, is subtitled 'in modo di scena cantante'. Its one continuous movement comprises an instrumental da capo aria framed by dramatic recitative, with a virtuoso cabaletta-like finale. Spohr was both attracted and repelled by Paganini, rejecting his performing 'tricks' at a time when violinists all over Europe wished to acquire

them. He now seems a bulwark against the trivialization of musical taste, a man of the highest musical standards who salvaged the traditions of Corelli and Tartini and handed them down to his pupil Ferndinand David and to Joachim.

David composed five violin concertos, but he is better known as adviser for (and the first performer of) Mendelssohn's E minor Concerto op.64. More experimental in structure and symphonic in scope than his D minor Concerto (1822), it is remarkable for the soloist's entrance in the second bar, the central placement of the cadenza before the recapitulation, and the transitional section, played by the bassoon, from the first movement into the Andante. The bridge to the finale results in a through-composed design similar to that of Mendelssohn's two piano concertos.

Mendelssohn's influence on succeeding generations was made more potent through the achievements of his protégé (and David's pupil) Joseph Joachim, who became the greatest violinist-interpreter of the second half of the 19th century, and to whom concertos and sonatas were dedicated by Schumann, Bruch, Brahms, Dvořák and others. Schumann composed two concertante works for Joachim in 1853: the Concerto in D minor and the *Phantasie* op.131. Joachim's misgivings about the violin writing in the concerto along with its structural weaknesses, uneven content and miscalculations of orchestration, account for its neglect until 1937, when Schumann's great-niece Jelly d'Arányi gave its first performance. Joachim was also the catalyst for Bruch's unconventionally structured Concerto in G minor. Its large-scale Prelude comprises three principal thematic elements punctuated by solo recitatives and linked to an expressive Adagio. The finale contrasts noble melodies with virtuoso figuration. Among his other music for violin and orchestra, Bruch composed two more concertos, neither of which is often played today, and the *Schottische Fantasie* (1880).

The greatest work inspired by Joachim was Brahms's concerto, which was conceived in deliberate opposition to the virtuoso trend of the Romantic concerto. Hubert Foss described the opening Allegro as 'a song for the violin on a symphonic scale'. In the Adagio (substituted for the two original central movements) the soloist largely extends and elaborates upon an expansive oboe melody. Brahms sent Joachim a few sketches of the final rondo, which has a strong Hungarian character, so that he could 'prohibit the awkward passages right away'. Joachim answered 'It is all playable, some of it even violinistically original – but whether it will be enjoyable to play in a hot concert hall is a different question'. Even after their joint first performance of the work in 1879, Brahms urged his friend to make further changes in the violin part, but despite a considerable correspondence the composer ultimately rejected as many suggestions as he accepted. Hence the unusual difficulty of the solo part is due not to an ignorance of the instrument but to broader musical factors. Brahms's Double Concerto for violin and cello, written for Joachim and Robert Hausmann, demonstrates similar national characteristics in its finale; the first two movements give little scope for virtuoso display.

Among Russian composers only Tchaikovsky seriously pursued the concerto genre. His concerto outshines those of Anton Rubinstein (1857), Arensky (1891) and Conus (1896). Its opening movement and trepak-like finale are technically challenging, but virtuosity is subservient to musical effect. The central Canzonetta was originally published as 'Méditation' in Tchaikovsky's *Trois souvenirs d'un lieu cher* for violin and piano. Despite a disastrous criticism by Hanslick after the première in Vienna, the Tchaikovsky concerto has become a standard repertory piece. Of lesser significance are the concertos of Franz Berwald, Dvořák, Saint-Saëns, Lalo, Karl Goldmark, Richard Strauss, Chausson, Enescu and Busoni.

Paganini, whose playing became known to audiences outside Italy in 1828, was the inspiration for virtuoso concertos by Bériot, Vieuxtemps, Wieniawski, Ernst, Bull and Lipiński. A gifted melodist and a phenomenal technician, Paganini is believed to have written eight concertos, of which only six have survived. Their opening movements reveal the influence of the Viotti school, while their central slow movements are of simpler, aria-like construction with cadenzas; popular melody generally infiltrates their finales.

At the turn of the century there was a consolidation of concerto traditions, and many of the more radical composers deliberately eschewed the genre. In Scandinavia, the concertos of Sibelius, Carl Nielsen, Valen, Larsson, Saeverud, Sallinen and Tuukkanen, and Saariaho's *Graal théâtre* (1994) are most significant. Sibelius's rhapsodic opening movement, with its unusual tonal relationships and a cadenza substituting for formal development, represents a reappraisal of the traditional form.

Much early 20th-century Russian music was broadly national in spirit, but Glazunov's concerto displays his affinity with Western European idioms, and Stravinsky's inspiration for his concerto emanated largely from J.S. Bach. Although Stravinsky enlisted the help of Samuel Dushkin in shaping the violin part, the violin writing is craggy and not very idiomatic, challenging the soloist to find solutions to new technical problems. Prokofiev's two violin concertos display various influences, ranging from the impressionistic opening movement of no.1 to the Russian rondo finale of no.2. Kabalevsky's absorption of the Russian popular song tradition is exemplified in the second movement of his concerto, while Khachaturian's concerto features Armenian folk material, and Eshpay's two concertos reflect his interest in Mari folk music. Shostakovich's two concertos represent distinct phases in his development. No.1, completed in 1948 but withheld by the composer until 1955 because the political climate was thought to be unfavourable for a work of such modernity, is a complex four-movement work with a passacaglia (including solo cadenza) as its kernel. No.2 (1967), which was received with considerable approval, is a more intimate, three-movement design with a prominent part for solo horn. Other Russian concertos of note include those of Myaskovsky, Khrennikov, Karayev, Schnittke and Sil′vestrov (*Widmung*, 1990–91).

In Germany, Reger and Pfitzner perpetuated the Romantic tradition, while Hindemith's fourth *Kammermusik* and Violin Concerto look back respectively on Bach's Brandenburg Concertos and the 19th-century symphonic concerto. The concertos of Blacher and Fortner are similarly retrospective, while those of Weill (for violin and wind orchestra), Zimmermann, Henze and H.K. Gruber (*Nebelsteinmusik*, 1988) are more experimental. Henze's Concerto no.1 dabbles with serialism, while no.2 borders between concert music and Expressionist music theatre. Schoenberg's op.36, which he said required a 'six-fingered violinist', extracts remarkable lyricism from

its fundamentally serialist language, as does Berg's memorial concerto for Manon Gropius. Intended as a biographical portrait of the young woman, Berg's work concludes with a moving Adagio based on the choral *Es ist genug* in Bach's own harmonization.

German Romanticism gripped many Hungarian composers, notably Dohnányi, Hubay and Weiner. Bartók's First Concerto adopts the two-movement structure (slow–fast) of a rhapsody, but his Second, incorporating six variations on a 'Magyar' theme, represents the composer's mature style. Ligeti's five-movement concerto (1989–93) adopts a Bartókian symmetry, incorporating two slow movements, the second of which is a passacaglia on a chromatic idea. Its first movement also involves experiments with tunings, requiring one violin and one viola from the small body of orchestral strings each to adopt a different scordatura tuning, and harmonics are employed to striking effect.

Szymanowski's First Concerto (1916), which follows the programme of Miciński's poem *A Night in May*, has an oriental flavour and gives the impression of an improvisation, while the more concise no.2 incorporates Polish folk materials. Other major Polish contributors to the repertory include Panufnik, Bacewicz, Penderecki and Lutosławski (*Chain II*).

In France, Milhaud, Martinon, Françaix, Jolivet and Dutilleux (*L'arbre des songes*, 1979–85) have made significant contributions. Italy is represented chiefly by the neo-classical works of Respighi, Casella, Rieti, Pizzetti and Bucchi; however, composers such as Riccardo Nielsen, Malipiero, Donatoni, Peragallo, Maderna, and Aldo Clementi turned with varying strictness to 12-note technique.

In the USA composers cultivated a range of styles, from Austro-German dodecaphony (Krenek, Ross Lee Finney), Expressionism (Sessions) and neo-classicism (Piston) to neo-romanticism (Barber, Bloch, Korngold, Menotti) and home-cultivated jazz and spirituals (Gruenberg, Harris). Significant works have been written by Ben Weber, William Schuman, Peter Mennin, Benjamin Lees, William Bergsma, George Rochberg and Elliott Carter. More experimental have been Diamond, Lou Harrison (for violin, percussion and orchestra), Kirchner (violin, cello, ten wind instruments and percussion), Wuorinen (amplified violin), Schuller, Glass and John Adams. In Latin America, Allende, Chávez, Mignone and Ginastera represent their respective national styles; the microtonal experiments of Carrillo are also noteworthy.

Elgar's is in the vanguard of 20th-century British violin concertos; as with those of Delius, Walton and Britten, its unity is achieved by thematic cross-reference and recall. The works of Harty, Vaughan Williams, Bax, Moeran, Gerhard, Rawsthorne, Hamilton, Leighton, Bliss, McCabe, Rubbra, Berkeley, Goehr, Wood, Blake, Richard Rodney Bennett, Stevenson, Maxwell Davies, Holloway, Patterson, Heath, Casken and Maw demonstrate the wealth and diversity of the British concerto repertory. Heath's *Alone at the Frontier* is a concerto for electric violin and orchestra in which the solo part is entirely improvised.

Other notable contributions to the literature include those of Henk Badings (four concertos; two double concertos for two violins, one double concerto for violin and viola), Arthur Benjamin, Martinů (two concertos; two double concertos), Skalkottas, Saburo Moroi, Rodrigo, Frank Martin, Michio Mamiya (two concertos), Akira Miyoshi, Malcolm Williamson, Don Banks, Toshi Ichiyanagi (*Circulation Scenery*, 1983), Maki Ishii (three concertos, including *Lost Sounds*, 1978), Takemitsu (*Far Calls, Coming Far!*, 1980) and Joji Yuasa.

(b) Sonata. Between the violin sonatas of Beethoven, Schubert's three compact sonatas ('sonatinas') of 1816 and Schumann's two sonatas of 1851, Germany produced only minor works by Spohr, Weber and Mendelssohn. Schumann's op.121, which incorporates variations on the chorale melody *Gelobt seist du Jesu Christ*, is more ambitious than his op.105, in which the melancholy opening melody is recalled in the coda of the toccata-like finale. Schumann's Third Sonata evolved from a collaboration with Albert Dietrich and Brahms in honour of Joachim and based on Joachim's motto, 'F.A.E.' ('frei aber einsam'). Schumann originally contributed the second and fourth movements, but later composed two further movements to replace those of his collaborators.

Brahms discarded four sonata attempts before composing his op.78 in G major; much of its thematic material was inspired by his songs *Regenlied* and *Nachklang* (op.59 nos.3 and 4). His Second Sonata op.100 is more concise, its central movement serving as both slow movement and scherzo, while op.108 in D minor is of broader design, comprising four movements of symphonic proportions.

Other German works in the genre include Raff's five sonatas, and sonatas by Richard Strauss and Busoni. Busoni's Second Sonata makes extensive use of thematic cross-reference and concludes with variations on a chorale melody. Strauss's work, conceived in orchestral terms, incorporates numerous quotations, notably from Beethoven's 'Pathétique' Sonata, Wagner's *Tristan* and Schubert's *Erlkönig*. Schubert's three sonatas, published posthumously as 'sonatinas', are compact, fully developed sonatas; the first comprises three movements, but the others are four-movement structures (the third movement being a minuet). His Duo in A (1817) lacks the varied experimentation of the sonatinas but is broader in scope and more mature.

Lalo and Alkan apart, French composers showed little interest in the sonata until the establishment, after the 1870–71 war with Prussia, of the Société Nationale de Musique and various private societies devoted to chamber music performance. Fauré's two sonatas contrast in style and expression, the second being texturally less opulent and musically more concise, employing cyclical treatment of its initial motive. Of Saint-Saëns's two published sonatas, the first features thematic cross-reference, while the second is more polyphonic. The sonatas of Franck and Lekeu also exploit the cyclical principle. Franck's, which utilizes four main recurrent themes, is outstanding for its melodic inspiration and thematic integration.

Apart from the works of Pixis, Fibich and Novák, the Czech lands are represented only by Dvořák's sonata and sonatina (1893). The sonata's finale is perhaps most indicative of its Czech origins, while the sonatina blends the native music of the Americas with Dvořák's Czech heritage.

Grieg's three sonatas represent the main periods of his stylistic development: the first naive and rich in models; the second nationalistic; and the third more dramatic and cosmopolitan. Sinding's *Sonate im alten Stil* op.99 (1909) is essentially a suite in five short movements; his three

other sonatas are broadly conceived three-movement works which intermingle the influences of Wagner, Liszt and Strauss with nationalistic traits. Danish interest in the genre is represented chiefly by Gade and Nielsen. Grieg's voice is predominant in Sibelius's modest sonata and sonatine.

Like much early 20th-century French chamber music, d'Indy's cyclical, four-movement sonata op.59 suffers from a somewhat stultifying intellectual approach. D'Indy's dogmatic instruction is reflected in the first of Roussel's two sonatas, while the works of Koechlin, Milhaud, Tailleferre, Françaix (Sonatine) and Poulenc are of lesser significance. Debussy's sonata combines his impressionistic vocabulary with a rediscovered classicism and some jazz influences. Ravel's second sonata (1923–7) also incorporates jazz elements, especially in the central 'Blues', as well as bitonality.

Foremost among Russian sonatas in the early 20th century were Stravinsky's *Duo concertant* (1931–2), written in collaboration with Dushkin, and Prokofiev's two works, the second of which is an arrangement, made with the help of David Oistrakh, of his Flute Sonata. Works by Gnesin, Aram Khachaturian, Myaskovsky, Karen Khachaturian, Medtner, Rakov, Ustvol'skaya, Golubev, Shebalin and Shostakovich are also noteworthy, along with Slonimsky's response to the microtonal inflections of Russian peasant vocal style. Schnittke wrote two sonatas, the first of which he described as 'a tonal world with atonal means' including citations from popular music and Shostakovich's Second Piano Trio.

Reger's admiration of Bach, Beethoven and Brahms is reflected in most of his seven full-scale sonatas, and in his two *Kleine Sonaten* op.103b. His influence is also evident in the first two of Hindemith's four sonatas for violin and piano. Korngold (op.6), Toch (opp.23, 44), Krenek, Rathaus (opp.14, 43), Blacher, Fortner, Henze, Zimmermann, Stockhausen (Sonatine) and Klebe also made significant contributions, as did the Austrian Gottfried von Einem.

Czech national elements were perpetuated by Nedbal (op.9), Janáček and Martinů (five sonatas). Janáček's work has motivic affinities with his opera *Kát'a Kabanová*, most stemming from the germ announced in the opening violin 'improvisation'. Hába's early sonata is atypical of his mature style. German influence permeates the sonatas of the Hungarians Dohnányi and Weiner. Effects suggestive of cimbalom and gamelan feature in Bartók's First Sonata, but, apart from the driving dance rhythms of the finale, this is among his least folk-orientated works. The more compact, restrained Second Sonata is a continuous two-movement structure, its rondo-like second movement adopting variation procedures and including several melodic references to its predecessor.

Foremost among the 'Young Poland' group of composers was Szymanowski, whose Romantic sonata has close affinities with Franck's. Górecki's Sonatina takes after Bartók, and Bacewicz's five sonatas are in neo-Baroque style. Skalkottas's four sonatinas and two sonatas and Enescu's three sonatas constitute the core of their violin output. Enescu's Third Sonata, composed 'dans le caractère populaire roumain', is the most individual, including parlando-rubato style and other folk influences; the violin part occasionally incorporates quarter-tones and gypsy-style music. Enescu's contemporaries Lazăr, Andricu, Drăgoi and Jora were similarly strongly influenced by Romanian folk idioms in their sonatas, while Constantinescu and Dumitrescu adapted folk material to contemporary international musical trends.

Each of Ives's four surviving sonatas incorporates hymns, popular tunes or dance melodies, the Fourth Sonata (*Children's Day at the Camp Meeting*) is based entirely on hymn tunes. Antheil's Second Sonata includes much percussive violin writing, as well as a part for tenor and bass drums. Bloch, Moore, Thomson, Piston, Harris and Copland (two sonatas) also made their mark, along with Quincy Porter (two sonatas), Finney (three sonatas, Duo), Sessions, Kirchner (Duo, Sonata concertante), Robert Ward, Lees (two sonatas), Samuel Adler (four sonatas), Robert Palmer, Mennin (Sonata concertante) and Bernard Rogers. More progressive were the works of Weber (two Sonatas), Diamond (two sonatas), Cowell, Riegger (op.39), Wuorinen (Duo) and Carter (Duo).

Works by 20th-century British composers range from Elgar's passionate Sonata to Bridge's dramatic, through-composed Second Sonata and the rhapsodic, lyrical works of Delius (three sonatas) and Ireland (two sonatas). Moeran's and Vaughan Williams's sonatas are inflected by English folk idioms, whether directly through melodic quotation or indirectly in phrasing, rhythm and tonality. Walton's Sonata bows towards serialism in its second movement, while Seiber's is a true serial piece and Rawsthorne's experiments with bitonality. Bax (four sonatas), Howells (opp.18, 26, 38), Rubbra (three sonatas), Lennox Berkeley (opp.1, 17), Reizenstein, Robin Orr (two sonatas), Fricker (opp.12, 94), Arnold Cooke (no.2 in A), Malcolm Arnold (opp.15, 43), Mathias (two sonatas), Hoddinott (op.63, op.73 no.1, op.78 no.1, op.89), Richard Rodney Bennett and Robert Simpson also contributed to the resurgence of the genre in Britain. Maxwell Davies's Sonatina for violin and cimbalom is an interesting novelty.

Honegger's two sonatas lean towards French idioms, while Martin's First Sonata, influenced by Franck, contrasts with his more progressive and cosmopolitan Second Sonata. German influence is paramount in the sonatas of Conrad Beck (two sonatas), Burkhard (opp.45, 78) and Schoeck (*Albumblatt*, two sonatas). Sjögren (opp.19, 24, 32, 47, 61), Stenhammar (op.19) and Rosenberg (two sonatas) are among the principal Swedish sonata composers; Vagn Holmboe (opp.2a, 16, 89) succeeded Nielsen as the leading Danish contributor. Turina's *Sonata espagnola* and Rodrigo's *Sonata pimpante*are the most notable Spanish contributions. In Latin America the most significant works were written by Guarnieri (six sonatas), Villa-Lobos (four), Uribe Holguín (five) and Ficher (three). Pizzetti, Respighi and Malipiero have been among the most prominent Italians. Notable among Australians are Sutherland, John Hart (opp.7, 42, 142), Arthur Benjamin and Don Banks. In Japan, Kishio Harao and Akira Miyoshi have written important works.

(c) Unaccompanied violin music. 19th-century composers showed little interest in writing for unaccompanied violin. Apart from various concert études, only Romberg's three *Etudes ou sonates* op.32, Jansa's *Sonate brillante*, Bull's Quartet for solo violin (1834), David's Suite and the numerous caprices and variations of Paganini are noteworthy. One of Paganini's principal successors in the 20th century was Ysaÿe, who composed imaginative variations on Paganini's 24th Caprice and six sonatas op.27, each written in the style of a celebrated violinist

(Szigeti, Thibaud, Enescu, Kreisler, Crickboom and Quiroga). Kreisler composed his *Recitative and Scherzo Caprice* op.6 in homage to Ysaÿe.

Reger's 11 sonatas (op.42, op.91) and numerous short works in neo-Baroque style were imitated by Hindemith in his two sonatas op.31 and by Jarnach. Notable serialist composers who have written for unaccompanied violin include Hauer (seven *Stücke*), Klebe (opp.8, 20), Jelinek (Sonata) and Gruber (*Vier Stücke* op.11).

Bartók's sonata, commissioned by Yehudi Menuhin, represents the culmination of the genre in the 20th century. Its opening sonata-form Tempo di ciacona is followed by a free fugue and a muted ternary-form movement, its reprise subjected to variation procedures. The mute remains in place for the beginning of the final Presto, originally written in quarter-tones, and is only removed for the contrasting parlando Hungarian melody.

Notable Russian contributions include works by Prokofiev, Stravinsky, Shebalin, Kabalevsky and Schnittke; the latter's charismatic *Prelude in Memoriam Dmitry Shostakovich* for violin and tape employs the musical monograms D–S–C–H and B–A–C–H. In the USA significant works have been written by Bloch, Krenek, Thomson, Persichetti, Sessions, Finney, Diamond, Perle (two sonatas), Harrison, Wuorinen, Rochberg, Lazarof, Carter and Kirchner. In a more experimental vein, Reich's *Violin Phase* was inspired by the sounds produced by multiples of the same instrument, either 'live' or in a mixed 'live-recorded' context. Cage's collaboration with Paul Zukofsky (*Freeman Etudes*, 1977–80, 1989–90) proved especially progressive, involving unconventional notation, microtonal inflections and specific performance directions. Glass's *Strung out* for amplified violin exposes his minimalist principles in their purest form. Xenakis's *Mikka* and *Mikka 'S'* are outstanding, the latter venturing into the language of quarter-tones. Nono's fruitful collaboration with Gidon Kremer produced *La lontananza nostalgica utopica futura* for violin and tape. Other works of note include those by Petrassi, Maderna, the ninth of Berio's *Sequenze*, von Einem, Henze (Sonata, *Etude philharmonique*, Serenade) and Gehlhaar.

(d) Other solo repertory. The works of lasting significance from the 19th-century French and Belgian schools emanated from Berlioz (*Rêverie et caprice*), Saint-Saëns (*Introduction et rondo capriccioso* op.28; *Havanaise* op.83), Bériot (*Scène de ballet* op.100), Vieuxtemps (*Fantasia appassionata* and *Ballade et polonaise*) and Chausson (*Poème* op.25). Schubert's Rondo D438, Konzertstück D345 and Polonaise D580, all for violin and orchestra, are more idiomatic than the Rondo D895 and *Fantasie* D934 for violin and piano. Sinding's *Légende* op.46 and *Romanze* op.100, and Svendsen's Romance op.26, are representative of the Scandinavian input, while British composers such as Mackenzie, Coleridge-Taylor and Delius also made worthy contributions.

The *air varié* was a popular vehicle for virtuoso display in the 19th century; notable examples were written by Bériot, Vieuxtemps, Ernst, Wieniawski, Boehm, Hubay, Lipiński, Georg Hellmesberger, Pixis, Bull and Joachim. Most of Paganini's works are based on operatic themes, 'national' tunes, dances or other popular melodies. Many fantasias on operatic themes were written by pairs of eminent virtuosos such as Lafont and Moscheles, Vieuxtemps and Anton Rubinstein, and Ernst and George Osborne. Rimsky-Korsakov's Fantasia on Two Russian Themes and Nápravník's Fantasia on Russian Themes are somewhat awkward attempts at 'nationalizing' the concerto. Szymanowski's Three Paganini Caprices op.40, Messiaen's *Thème et variations* and Milstein's *Paganiniana* (1954) are rare examples of independent 20th-century variation sets for violin.

The various editions and transcriptions of 17th- and 18th-century masterworks by violinists such as David (*Die Hohe Schule des Violinspiels*, Leipzig, 1867–72) were a valuable source of repertory in the 19th century, as were the exemplary arrangements by Joachim of Brahms's Hungarian Dances, the Schubert-Wilhelmj *Ave Maria*, the Schubert-Ernst *Erlkönig*, the Bach-Wilhelmj *Air on the G String*, the Wagner-Wilhelmj *Träume*, Wilhelmj's selections from Wagner's operas and his concert paraphrases on *Siegfried* and *Parsifal*. By the end of the century, however, abuse of the genre resulted in a glut of inferior arrangements and even falsifications. Although some of Kreisler's 'transcriptions' were genuine, many were pseudo-Classical pieces that he wrote himself and ascribed falsely to composers such as Pugnani. Similarly, Dushkin arranged pieces for his own concert use, some of which were actually original compositions attributed to earlier composers. His collaboration with Stravinsky spawned a transcription from *Petrouchka* (entitled *Danse russe*) as well as more substantial works in other genres. Auer and Heifetz were also renowned for their transcriptions.

The composition of a large number of short genre pieces (with orchestra or piano) widened the repertory during the 19th century. Outstanding examples include Wieniawski's *Légende* op.17 and *Scherzo-tarantelle* op.16; Hubay's *Concertstück* op.20; Dvořák's Romance op.11 and Four Romantic Pieces op.75; Sarasate's *Zigeunerweisen* op.20; Bruch's Romance op.42 and Swedish Dances op.63; Paganini's *Moto perpetuo* op.11; Bazzini's *La ronde des lutins*; Suk's Four Pieces op.17 and Fantasy op.24; and Tchaikovsky's *Trois souvenirs d'un lieu cher* op.42. Some composers promoted their patriotic feelings, notably Lipiński (*Rondos alla polacca*), Wieniawski (Polonaises opp.4 and 21 and Mazurkas opp.12 and 19), Hubay (*Szenen aus der Czarda* opp.12, 30 and 60, and *Hejre Kati* op.32), Smetana (*Fantaisie sur un air bohémien* and *Z domoviny*), Dvořák (*Mazurek* op.49) and Sarasate (Spanish Dances opp.21–3, 26, 27, 29).

In the 20th century the virtuoso concert rhapsodies by Ravel (*Tzigane*) and Bartók were particularly significant. *Tzigane* comprises a long, unaccompanied violin cadenza, full of heavy Magyar accents, expressive portamenti and rubati, and a traditional series of gypsy improvisations. Bartók's two rhapsodies follow the Hungarian *csárdás* plan of an introductory *lassu* followed by a more vigorous *friss*; the First Rhapsody includes a cimbalom in its orchestration. Nationalistic in another sense, Vaughan Williams's *The Lark Ascending* (1921) incorporates a folk-like episode in its evocative canvas inspired by Meredith's verse, while James MacMillan's *After the Tryst* was suggested by William Soutar's love poem, and his *Kiss on Wood* (1993) is a meditation on the Good Friday versicle 'Ecce lignum crucis'. Other notable British works include two by Britten, his dazzling *Reveille* and his larger-scale Suite op.6, a series of fantasies on a four-note motto, as well as Gerhard's complex *Gemini* and Holloway's *Romanza*. Rihm's *Lichtzwang* is a moving

piece of modern impressionism, while his *Time-Chant* exploits the violin's higher registers.

The vast repertory of 20th-century 'character' pieces includes Sibelius's *Humoresques* opp.87 and 89, Prokofiev's *Cinq mélodies* op.35 bis, Reger's neo-Baroque *Suite im alten Stil*, Schnittke's neo-classical *Suite in the Old Style*, Schoenberg's *Phantasy* op.47, Bloch's *Baal Shem*, and Webern's Four Pieces op.7. Copland's Two Pieces are jazz-inspired; other progressive American impulses came via the experiments of Cowell (*Homage to Iran*; *Hymn and Fuguing Tune* no.16) and Cage (Nocturne, Six Melodies, *Cheap Imitation*). Szymanowski's works include the three *Mythes* op.30, inspired by Greek mythology, and *Notturno e tarantella*. Penderecki's *Capriccio* and Three Miniatures, Baird's *Espressioni varianti* and Lutosławski's microtonal *Partita* and *Subito* represent the more prominent later Polish contributions.

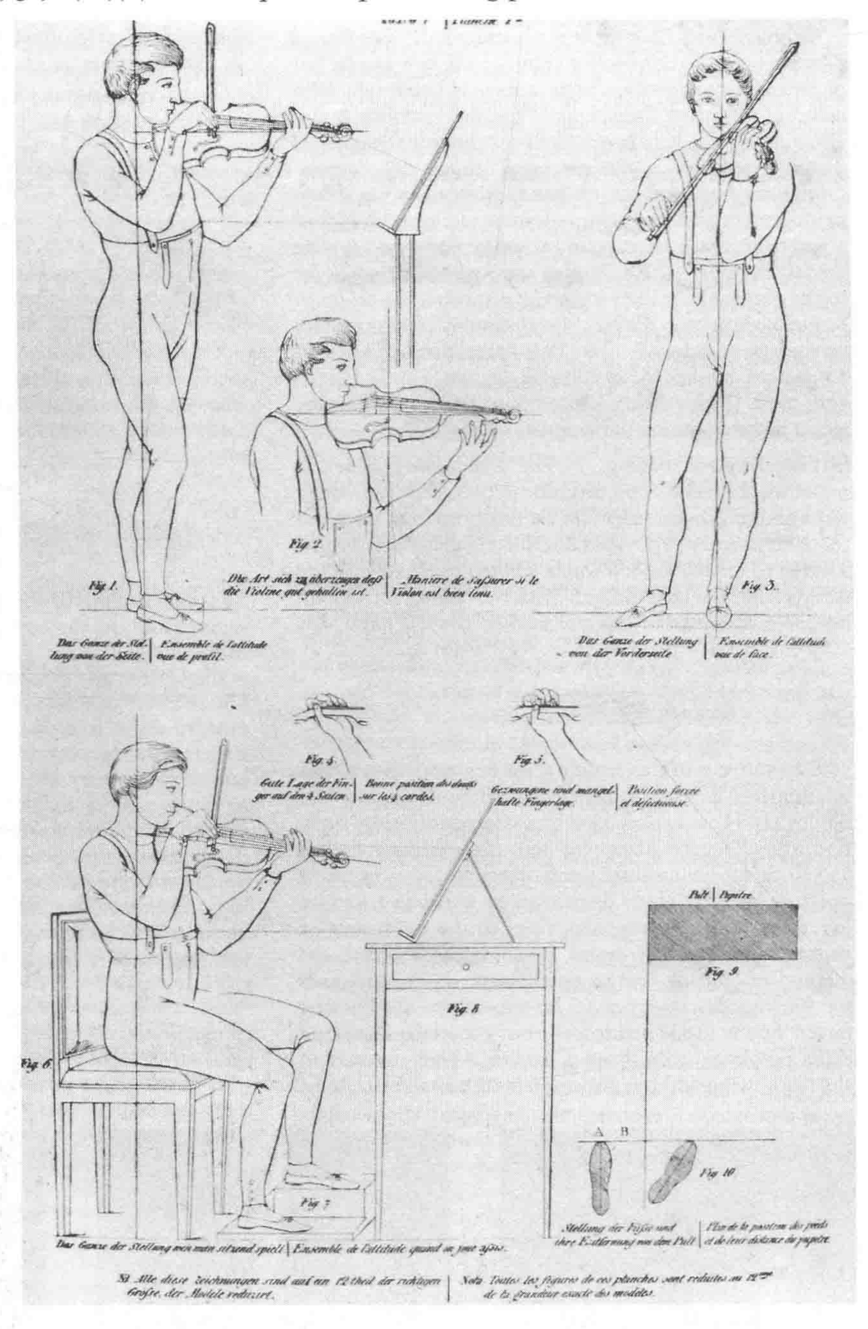
(iii) Technique and performing practice.

(a) Historical outline. Giovanni Battista Viotti, the 'father of modern violin playing', was trained in the classical Italian tradition by Pugnani and first went to Paris in 1782. There he taught or inspired the founders of the French violin school (Baillot, Rode and Kreutzer), who exerted an immense influence on violin playing in the 19th century. Viotti's cantabile was based on Tartini's maxim 'per ben suonare, bisogna ben cantare'. He was also one of the first to appreciate the specific beauties of the lowest (G) string, including its high positions; and his concertos unite the singing style, the brilliance of passage-work, and such specialized bowings as the 'Viotti' stroke (see §(f) below). In addition, Viotti persuaded the Parisians of the beauty of the Stradivari violins; and he may have assisted Tourte in creating the modern bow.

The Italian school reached its final flowering in Nicolò Paganini, who aroused audiences to hysterical enthusiasm by the technical perfection and verve of his playing and by the intense projection of his hypnotic personality. His music uses practically all known technical devices in a grand, virtuoso and frequently novel manner, including glissandos, harmonics of all types, pizzicatos of both right and left hand, octave trills, the solo on the G string alone (a speciality of his), multiple stops, extensions and contractions of the hand, and the scordatura. Staccato, ricochet and mixed bowings of all sorts were also among his stock in trade.

Paganini and Pierre Baillot set the technical standard of the early 19th century. A school of violin playing similar to the Paris school was founded in Brussels in 1843 by Charles-Auguste de Bériot, who, like the Parisians, was heavily indebted to Viotti. Among Bériot's illustrious successors were Hubert Léonard, Henry Vieuxtemps, Henryk Wieniawski and Eugène Ysaÿe; the latter's bowing facility, energetic personality and golden tone became legendary.

The Germans were generally more conservative in technique and more serious in musical attitude than the French, whose virtues included great technical facility, elegance and imagination. Spohr was astonished by the accuracy of intonation of Paganini and Ole Bull but was unimpressed with such virtuoso devices as their elaborate harmonics, intense vibrato, bounding bow and the air played solely on the G string. Spohr's pupil Ferdinand David made an important contribution to the violin repertory in his *Hohe Schule des Violinspiels* (1867–72). Among David's pupils was Joseph Joachim, whose editions of such works as the Mendelssohn and Beethoven violin concertos reveal much about the technique of the 19th century and the implied ideas of expression (including the deliberate portamento slide in shifting).



Sharp distinctions in schools of instruction became less clear in the course of the 19th century. There was a strong tendency to mix the teachings of various schools, to amalgamate their styles and, under outstanding teachers, to select the best from all methods. The old Italian training was grafted on to the newer precepts in France and Belgium, and the results, in turn, to various teachings in Vienna, Prague, Leipzig and Budapest. Leopold Auer upheld the Franco-Belgian tradition at the St Petersburg Conservatory, while in Prague, Kiev and Vienna Otakar Ševčík revolutionized and systematized basic technique, especially of the left hand, by a system of numberless exercises based on the semitone system (rather than the diatonic system, as previously). Among the most distinguished teachers to appear in the course of the 20th century were Carl Flesch, Max Rostal, Lucien Capet, Pyotr Stolyarsky, Louis Persinger and Ivan Galamian.

(b) Sources of information and pedagogical literature. Baillot's *L'art du violon* (Paris, 1834), perhaps the most influential violin treatise of the 19th century (see fig.18 below), easily surpasses in detail Baillot, Rode and Kreutzer's *Méthode de violon* (Paris, 1803), previously adopted by the Paris Conservatoire. Baillot's influence was perpetuated by his pupils François-Antoine Habeneck (*Méthode*, Paris, *c*1835, incorporating extracts from Viotti's unfinished treatise), Delphin Alard (*Ecole du violon*, Paris, 1844) and Charles Dancla (*Méthode élémentaire*, Paris, 1855). The celebrated études of Rode, Kreutzer and Gaviniés helped to consolidate the teachings of the French violin school. The principal contributions of the Belgian school are Bériot's *Méthode de violon* (Paris, 1858) and Léonard's *Méthode* (Paris, 1877).

Karl Guhr's *Über Paganinis Kunst die Violine zu spielen* (Mainz, 1831) focusses on specific aspects of Paganini's performing style, while Spohr's *Violinschule* (Vienna, 1832) and David's *Violinschule* (Leipzig, 1863) are more comprehensive. The important three-volume *Violinschule* (Berlin, 1902–5) of Joachim appears to have been written largely by Joachim's pupil Andreas Moser.

Flesch attributed the development of technique and pedagogy in the late 19th century principally to Dont, Schradieck, Sauret and Ševčík, although the works of Kayser and Courvoisier are also noteworthy. Flesch's *Kunst des Violin-Spiels* (Berlin, 1923–8) is a synthesis of the techniques and artistic priorities of the principal schools of violin teaching in the 19th and early 20th centuries. His *Urstudien* (1911) also contributed to the systematic development of left-hand technique, and his *Hohe Schule des Fingersatzes auf der Geige* (first published in Italian, Milan, 1960) significantly loosened traditional concepts of fingering.

Other notable 20th-century pedagogical literature includes Capet's *Technique supérieure de l'archet* (Paris, 1916), Auer's *Violin Playing as I Teach it* (New York, 1921), Demetrius Dounis's *Künstlertechnik* (Vienna, 1921), Elma and Erich Doflein's *Geigenschulwerk* (Mainz, 1931), Galamian's *Principles of Violin Playing and Teaching* (Englewood Cliffs, NJ, 1962) and various works by Menuhin and Bronstein. Kato Havas and Paul Rolland have focussed on developing relaxation, control and coordination. The 'Suzuki method' has revolutionized

18. Posture and the manner of holding the violin when standing up and seated: from Pierre Baillot's 'L'art du violon' (Paris, 1834)

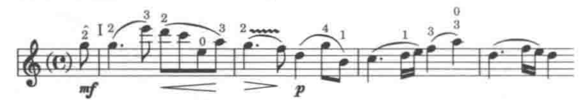
violin teaching in some areas, allowing pupils to develop artistic potential simultaneously with technical skills (*see* SUZUKI, SHIN'ICHI). However, most 20th-century sources are based on traditional methods; few account for the extended harmonic language, diversity of styles and the resultant technical and rhythmic demands of much contemporary music. Exceptions include Galamian and Neumann's *Contemporary Violin Technique* (New York, 1966) and Zukofsky's *All-Interval Scale Book* (New York, 1977), which are essentially modern approaches to scales and arpeggios, and study books by Hindemith, Adia Ghertzovici and Elizabeth Green.

(c) Posture and manner of holding the violin. Not until the early 19th century was there general agreement on the optimum posture and manner of holding the violin (fig.18). A 'noble' and relaxed position was recommended, with head upright, feet normally in line but slightly apart, and body-weight distributed slightly towards the left side. The seated position preserved the erect trunk but required the right leg to be turned inward slightly to avoid 'fouling' the bow. 20th-century attitudes have generally been more flexible, emphasizing comfort and ease while prohibiting exaggerated body movement; but Flesch (1923) stressed the importance of feet placement, recommending a 'rectangular' leg position in which the feet are close together; an 'acutangular' position in which the feet are separated, with either right or left foot advanced and the body-weight on the rear foot; and his favoured 'spread-leg' position.

Although Spohr's chin rest was originally positioned directly over the tailpiece, a chin-braced grip on the left of the tailpiece gained universal approval by the mid-19th century, affording firm support for the instrument and allowing it to be held horizontally at shoulder height and directly in front of the player at almost 90 degrees. Optimum freedom of left-hand movement and bow management was thus achieved; some violinists employed a pad to increase security and comfort and avoid raising the left shoulder. The right arm adopted a position closer to the player's side than formerly, requiring the violin to be inclined more to the right for optimum bowing facility on the lowest string. Baillot (1834) prescribed an angle of 45 degrees, Spohr (1832) 25 to 30 degrees. Flesch, Suzuki and most 20th-century teachers recommend that the violin be held parallel to the floor.

(d) Fingering and shifting. The 'Geminiani grip' (ex.1) remained the most common guide to correct elbow, hand, wrist and finger placement (in 1st position) until well into the 20th century. The hand and fingers generally formed a curve to enable the top joints of the fingers to stop the strings from the same height. With the chin-braced violin hold, shifting proved less precarious, the left hand was

Ex.1 The 'Geminiani grip'

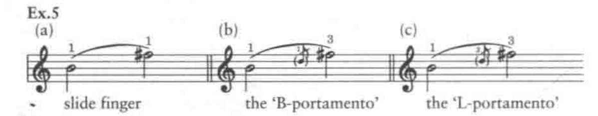


able to move more as a unit than before, and a closer relationship developed between shifting and phrasing. Baillot (1834) acknowledged this interrelationship, demonstrating Kreutzer's frequent shifts for brilliance of effect and Rode's more uniform tonal objectives, incorporating *ports de voix*. Baillot's discussion of *ports de voix* and expressive fingering provides clues to the mechanics of shifting. Anticipatory notes (unsounded) indicate the method of shifting, the stopped finger sliding forwards (or backwards) in order to be substituted by another finger. Spohr (1832) endorsed this, especially for rapid shifts involving leaps from a low to a high position in slurred bowing without glissando (ex.2), and illustrated a fast shift in which the highest note is a harmonic (ex.3). A sliding effect is clearly intended in another Spohr

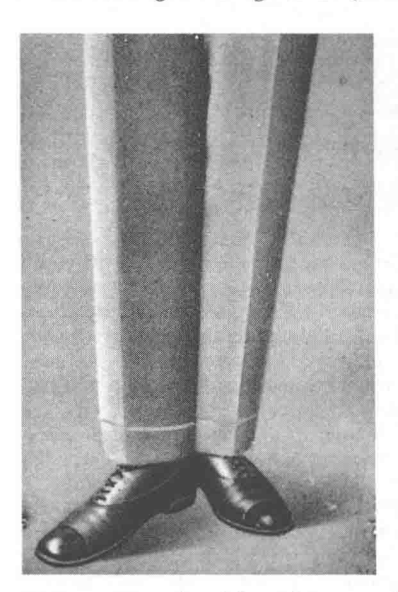
Ex.2 L. Spohr: Violin Concerto no.10 op.62, 2nd movt.

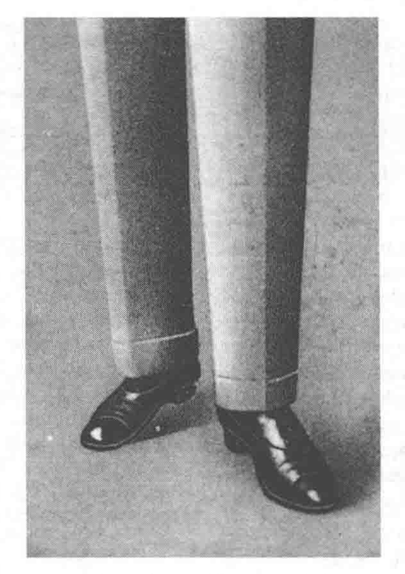
Ex.3 P. Rode: Violin Concerto no.7, 2nd movt

example (ex.4), and Habeneck (*c*1835) and Baillot (1834) allowed the tasteful introduction of portamento, especially in slow movements and in sustained melodies when

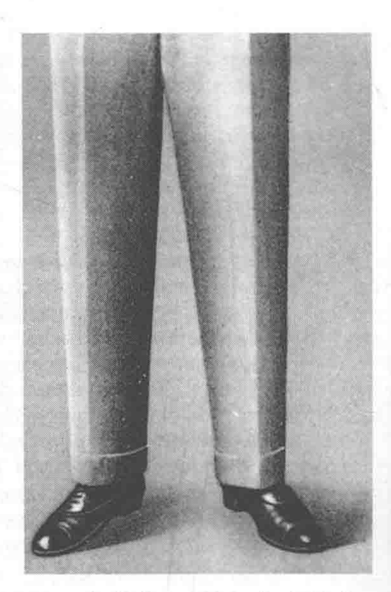


Ex.4 L. Spohr: *Violin schule* no.45 (6th portion), bar 58





a passage ascends or descends by step. Bériot (1858) used signs to indicate three types of *port de voix*: *vif*, *doux* and *traîné*.



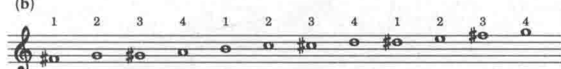
Exploitation of portamento as an 'emotional connection of two tones' (commonly in slurred bowing and with upward shifts) to articulate melodic shape and emphasize structurally important notes became so prevalent in the late 19th century that succeeding generations reacted strongly against the false accents it created, its slow execution and its use for convenience in shifting rather than expressive purpose. Flesch (1923) distinguished three portamento types: a straightforward one-finger slide; the 'B-portamento', in which the beginning finger slides to an intermediary note; and the 'L-portamento', in which the last finger slides from an intermediary note (ex.5). The

Ex.5

19. Leg positions, (from left to right) rectangular, acutangular and spread-leg: from Carl Flesch's 'Die Kunst des Violin-spiels' (Berlin, 1923–8)

first two types were commonly employed in the early 20th century, but the L-portamento was rarely used until the 1930s. Broadly speaking, the execution of portamento became faster, less frequent and less prominent as the century progressed.

In shifting, the odd-numbered positions began to be emphasized, and an increased use of semitone shifts facilitated achievement of the prevalent legato ideal. The higher positions were exploited more frequently for expressive reasons, particularly of sonority and uniformity of timbre. The fingered-octave technique, first discussed by Baillot (1834), gradually gained favour for its greater clarity and accuracy, and less frequent displacements of the hand. Geminiani's fingering for chromatic scales, largely ignored by his contemporaries and successors, achieved more positive recognition in the 20th century when re-introduced by Flesch (1923), due to its greater evenness, articulation and clarity. However, the diversity of systems used in 20th-century methods and studies confirms that fingering is a matter for individual decision rather than textbook regulation.



Ex.6 from Baillot: *L'art du violon* (Paris, 1835) [Haberneck's *Fantaisie pastorale* for viola and orchestra, bars 217–21]

(a)

from Geminiani: *The Art of Playing on the Violin* (London, 1751)

(b)

Many 19th-century violinists opted for a more advanced thumb-position to achieve greater mobility and facility in extensions, sometimes avoiding formal shifts between positions. Some of Paganini's fingerings, for example, anticipate the flexible left-hand usage of 20th-century violin technique, in which contractions, extensions and 'creeping fingerings' liberate the hand from its customary position-sense and the traditional diatonic framework. In 20th-century music this was demanded by increased chromaticism, whole-tone, microtone and other scale patterns, and non-consonant double and multiple stopping. The increased use of glissandos (by, for example, Xenakis: *Pithoprakta*, 1956; *Syrmos*, 1959; and *Aroura*, 1971) and Feldman's experiments with intonation systems are also significant (e.g. Violin Concerto, 1979; *For John Cage*, 1982; *Piano, Violin, Viola, Cello*, 1987). The general application to violin fingering of Cage's concept of a 'gamut' of sounds, in which a specific string is assigned for a specific pitch (e.g. *Six Melodies for Violin and Keyboard*, 1950), has revealed new possibilities of structural and timbral organization.

(e) Vibrato. Up to the early 20th century vibrato was employed sparingly as an expressive ornament linked with the inflections of the bow. It served to articulate melodic shape and assist in cantabile playing and was employed particularly on sustained or final notes in a phrase, at a speed and intensity appropriate to the music's dynamic, tempo and character.

Spohr (1832) described four kinds of vibrato: fast, for sharply accentuated notes; slow, for sustained notes in impassioned melodies; accelerating, for crescendos; and decelerating, for decrescendos. Like Baillot (1834), he emphasized that deviation from the note should be scarcely perceptible. Baillot expanded the vibrato concept to include three types of 'undulated sounds': left-hand vibrato; a wavering effect caused by variation of pressure on the bowstick; and a combination of the two. He recommended that notes should be begun and terminated without vibrato to achieve accuracy of intonation and provided examples of Viotti's vibrato usage, some of which link the device with the 'swell' effect.

Joachim (1902–5) and Auer (1921), among others, recommended selective use of vibrato; Ysaÿe's vibrato, though more perceptible, was restricted to long notes. Flesch (1923) attributed the reintroduction of continuous vibrato (previously practised in the second half of the 18th century; *see* VIBRATO, §3) to Kreisler, though it should probably be accredited to Lambert Massart, Kreisler's teacher. By the late 1920s vibrato was considered more a constituent of a pleasing tone than an embellishment. Most theorists advocated a combination of finger, hand and arm movements for optimum vibrato production, but Rolland also included the shoulder.

Several 20th-century composers prescribed extreme applications of vibrato, even reversing traditional usages by demanding intense, fast vibrato in soft passages, or a slow, wobbly vibrato in loud passages; others employed the ornamental vibrato-glissando in which the finger slides up and down the string, creating a siren-like sound (e.g. Penderecki, String Quartet no.1). By contrast, the *senza vibrato* indication has been used increasingly for contrast or special effect.

(f) Special effects. Universal acceptance of harmonics was slow to materialize, but interest was eventually aroused by virtuosos such as Jakob Scheller and Paganini. Paganini introduced the technique of artificial harmonics (*see* HARMONICS, §3) in double stopping, and, by using harmonics, extended the range of the G string to at least three octaves. Chromatic slides, single trills, trills in double stopping, double trills, all in harmonics, and some pseudo-harmonic effects were incorporated into his vocabulary.

The use of the index finger for pizzicato was customary in the 19th century, but the right-hand thumb was occasionally employed, the instrument sometimes being held guitar-fashion for sonorous arpeggiation of chords or for soft passages. Berlioz (1843) recommended the second finger for most pizzicatos but suggested using the thumb and first three fingers in appropriate rapid passages. Left-hand pizzicato was employed by Paganini and later composers such as Bartók and Penderecki, sometimes in combination with right-hand pizzicato or simultaneously with bowed notes (e.g. Bartók's *Contrasts*). Paganini's Introduction and Variations on Paisiello's 'Nel cor più non mi sento', for example, employs left-hand pizzicato in accompanying, melodic and decorative roles, and the 15th variation of his *Carnaval de Venise* involves pizzicato for both left and right hands. Sculthorpe also employs left-hand pizzicato extensively (e.g. in *Requiem*).

Pizzicato techniques demanded by composers in the 20th century included the prescription of various pizzicato locations (e.g. mid-point of the string, at or behind the bridge, or either side of the stopping finger) or specific plucking agents (e.g. with the nail or the fleshy pad of the finger), requiring strings to be stopped with the fingernail for pizzicato, perpendicular strumming and oblique strumming of chords, or specifying pizzicato with alternating fingers (e.g. Crumb, *Four Nocturnes*). A 'scooping'

technique was developed to obtain mellow, resonant pizzicatos in single and double stopping. Other effects involved 'flicking' the string with the nail, pizzicato glissando using the finger or peg (Crumb), pizzicato tremolo (Bartók), 'snap' pizzicatos (introduced by Biber but popularized by Bartók), pizzicato natural harmonics (Crumb) and pizzicato with vibrato in varying degrees.

Scordatura gradually lost popularity during the 19th century, although it never became obsolete; Mazas, Spohr, Paganini, Bériot, Prume, Winter, Baillot, Bartók, Mahler, Scelsi and Ligeti are among those who have employed it. Ligeti's *Ramifications* (1968–9) for 12 solo strings, which requires half the ensemble to be tuned a quarter-tone higher than normal pitch, reflects 20th-century interest in microtones, initiated by Julián Carrillo's experimental 'sonido 13' system (of equal-tempered quarter-tones) of the 1890s. Among others who experimented with microtonal effects for expressive purposes or as an integral compositional device were Ives (*Quarter-tone Chorale* op.36), Bartók (Sonata, 1944), Hába, Vïshnegradsky, Penderecki, Cage, Boulez, Husa, Szymanowski, Takemitsu and Crumb.

Sculthorpe and other 20th-century composers have prescribed unconventional violin sounds, including tapping on various parts of the instrument or on the strings with the fingers or with a wood, metal, glass or plastic beater. Others have exploited sounds extraneous to the violin, using percussion, sounds such as floor stamping or finger snapping, or vocal sounds in combination with violin playing. Pre-recorded tape has further expanded the range of texture and effect, notably in Reich's *Violin Phase*.

6. Jazz and blues.

(i) Jazz. The earliest use of the violin in a jazz-related context was as a solo instrument in the ragtime orchestras of the early 20th century. Most orchestral arrangements of ragtime included parts for one or two violins, which were of equal melodic and structural importance to that of the clarinet or trumpet, but gradually the violin became subservient to the brass and woodwind instruments in the ensemble. A recording such as A.J. Piron's *Lou'siana Swing* (1924, OK) provides a late example of the violin being employed as a full and equal member of the front line. Territory bands often included a violin in their instrumentation; most notably Stuff Smith developed an innovative horn-like approach and experimented with acoustic and electric amplification while with Trent in the late 1920s. Eddie South first rose to prominence in the 1920s in Chicago as musical director of Jimmy Wade's orchestra. Multi-instrumentalist Juice Wilson, by all accounts an accomplished violinist, worked with South in Freddie Keppard's band and later recorded with Noble Sissle in London in 1929 before drifting into obscurity. Other early multi-instrumental pioneers were Darnell Howard and Edgar Sampson. Howard first recorded as a member of a three-violin section with W.C. Handy's Orchestra of Memphis in 1917 and later as a soloist with Earl Hines. Some big bands of the mid-1920s incorporated violin sections, the principal example being that of Paul Whiteman, where the section was led by Matty Malneck.

Gradually the violin reasserted its position as a solo instrument, particularly owing to the work of four musicians – Joe Venuti, Eddie South, Stephane Grappelli and Stuff Smith. Venuti established his reputation through his duet recordings with the guitarist Eddie Lang in the mid-1920s. Similarly, Grappelli formed an association with the guitarist Django Reinhardt in the Quintette du Hot Club de France (fig.20). Smith played an important role from the mid-1930s as a leader and risk-taking soloist in small swing groups. South, a classically trained swing musician with a fine technique, was influenced by gypsy music (he recorded with Reinhardt and Grappelli).

Other significant violinists of the swing era were Svend Asmussen, Ray Perry and the rhapsodic Ray Nance. Nance's best work was as a member of Duke Ellington's orchestra. During the 1940s Perry became a transitional figure between the harmonic invention of Smith and the new bop style. But despite the influence exerted by Smith on the bop trumpet virtuoso Dizzy Gillespie, bop violin lacked solid representation on record until the work of Dick Wetmore and Harry Lookofsky in the 1950s. Lookofsky, who had played in the NBC Symphony Orchestra under Toscanini for 12 years, recorded brilliant bop in which his solos, as well as his multitrack section work, bear all the hallmarks of convincing improvisation but were executed almost entirely from written arrangements. Inspired by Smith, the early explorations of the Frenchman Jean-Luc Ponty and the Polish Michał Urbaniak in the 1960s were in a bop vein, before they turned to free jazz and fusion. The classically trained Hungarian, Elek Bacsik, recorded virtuoso bop improvisations in the USA in the 1970s. In the 1980s Max Roach developed convincing bop arrangements for strings in his double quartet.

Different approaches to violin technique have led to a wide range of styles among jazz players: some have drawn on the techniques of classical and traditional music players, while others have invented original methods. Grappelli retained the tonal aesthetic of the classical violin tradition, and his precise, light sensitivity was itself an influence on virtuoso concert violinists such as Paul Zukofsky. Venuti and Asmussen made more use of the instrument's harmonic resources and employed the bow in a percussive manner. Smith revolutionized the vocabulary of jazz violinists with his wild, biting attack, wide vibrato, unorthodox fingerings and expressive intonation. Venuti devised a novel bowing technique that involved wrapping the bow hair around all four strings, and holding the stick of the bow beneath the body of the violin. Perry introduced the idea of singing in unison with the violin, a device quickly taken up by several double bass players and by Asmussen.

The acoustical and musical demands of many types of modern jazz and rock have led to modifications in the way in which the violin is played. Jazz musicians have always found that the relatively quiet sound of the instrument has placed them at a disadvantage. Following early acoustic-amplified designs, such as the Stroh violin, Smith from the late 1930s and Perry in the 40s favoured conventionally built, electrically amplified violins, while Ginger Smock recorded in 1946 on a solid-bodied electric instrument. Since the 1980s the majority of jazz violinists have relied on amplification, making use of a microphone, a transducer or a purpose-built instrument with integral transducer. Electronic enhancement devices are also common.

Players have shown great stylistic flexibility in jazz. Zbigniew Seifert, for example, executed fast trills as a substitute for vibrato, while Lookofsky and Ponty virtually abandoned vibrato altogether. Others, such as

20. *Stephane Grappelli and Django Reinhardt with the Quintette du Hot Club de France*

Michael White and John Blake, have experimented with non-Western tonal systems or have made extensive use of sliding pitch. Early free-jazz violinists, often classically trained, such as Michel Sampson and Ramsey Ameen, took their cue mainly from the explorations of Ornette Coleman. Coleman is self-taught on the instrument, and performs in an intense, percussive manner using unorthodox fingerings and bowing positions, but uses the violin mainly for colouristic purposes. Two violinists who came to the fore in the immediate wake of Coleman are Leroy Jenkins and Billy Bang, both of whom consistently play outside the equal-tempered system. Bang traces his lineage to Stuff Smith while Jenkins traces his primarily to Eddie South, bringing to the idiom a virtuoso classical technique. Coleman and Jenkins have both written concert pieces for string quartets.

A resurgence of interest in the improvisational possibilities of the violin has spawned a number of exceptionally gifted violinists who have successfully combined free playing and organized structures in individualistic ways during the 1990s. India Cooke displays lyrical sensitivity and imaginative strength, free from cliché. Mat Maneri's enquiring work is by turns pointillistic and arching, on a variety of acoustic and electric instruments. Jim Nolet displays wonderfully controlled dynamics and stylistic shifts. Examples of more conventional approaches to improvisation are heard in the playing of Mark Feldman and Regina Carter. Feldman epitomizes what might be termed a flash-classical approach. Malcolm Goldstein is an example of a radical improvising violinist who has recorded works by such composers as Ornette Coleman and John Cage.

Efforts by non-improvising concert violinists to record as soloists with jazz musicians have almost invariably resulted in violinistic compromise and musical failure. An exception might be made for the *Suite for Violin and Jazz Trio* released in 1977 by Pinchas Zukerman with the composer Claude Bolling. Similarly, the French, classically trained jazz violinist Michel Warlop recorded some of his best playing in his ambitious *Swing Concerto* (1942), parts of which are Gershwin-inspired. A number of 1940s recordings by Heifetz of pieces by Gershwin and others are successful examples of jazz-tinged performances by a virtuoso concert violinist.

Some musicians have sought ways of expanding the range of the violin downwards. Ponty, Urbaniak and Bacsik played the violectra, an electric instrument sounding an octave below the conventional violin. Ponty and Urbaniak later took up a five-string electric violin (the lowest string on which was tuned to *c*) and Urbaniak performs on a six-string model (with the addition of a string tuned to *F*). The acoustic tenor violin, pitched an octave below the violin, has been used in jazz to best effect by Lookofsky. Leroy Jenkins and Jim Nolet double on viola. Lakshminarayana Shankar plays a ten-string

violin with two necks, an instrument that he designed himself.

(ii) Blues. During the 1920s and 30s many African-American violinists, either self-taught or legitimately trained, played obbligatos on Chicago and New York recordings by blues and vaudeville vocalists and, to a lesser extent on intrumentals. These included Leon Abbey, Clarence Black, Leroy Parker with Mamie Smith, Leroy Pickett, Robert Robbins with Bessie Smith, and Cordy Williams. The remarkable classically trained Angelina Rivera was the first black woman to record in the genre, with Josephine Baker in Paris in 1926. This tradition differed somewhat from the raw blues of string band fiddlers such as Eddie Anthony or Will Batts. Nevertheless, urban as well as country styles may trace their origins to 19th-century plantation fiddling, often on home-made instruments. Several guitarists, most notably Lonnie Johnson, doubled on violin, as did the electric blues guitarist Clarence Gatemouth Brown from the 1940s. Later electric blues violinists included Papa John Creach and Don Sugarcane Harris, both of whom enjoyed second careers in rock bands. Remo [Ray] Biondi, who doubled on swing guitar and violin, is a rare example of a white American violinist who recorded raw, authentic blues with black Americans, such as Roosevelt Sykes and Jimmy Reed, in the 1950s. Like many jazz musicians, the urbane Eddie South recorded a number of blues instrumentals, while Stuff Smith frequently turned his attention to the form to incisive effect. From the 1970s, Leroy Jenkins, in particular, has used the structure and emotion of the blues in several of his improvisations and compositions.

II. Extra-European and folk usage

1. Europe: (i) Scandinavian and western Europe (ii) Eastern and south-eastern Europe. 2. Middle East and South Asia. 3. South-east Asia. 4. The Americas.

1. Europe. From Praetorius's time the violin rapidly penetrated throughout Europe finding favour among all strata of society wherever there was already a native tradition of bowed string playing (rebecs, fiddles, viols, bowed zithers etc.); this was probably because of its greater dynamic range and more flexible tone. Nevertheless, use of indigenous predecessors of the violin persisted for centuries making it hard to be precise about the chronology of the diffusion of the violin. Alexandru (1983) remarked on three aspects of the transfer to the violin: firstly, wherever this happened there was a tendency to apply to the violin a playing technique learnt from earlier indigenous instruments; secondly, despite its perfection of form, there were often modifications to the structure of the violin (e.g. adding sympathetic strings in the case of the Norwegian Hardanger fiddle); thirdly, different tunings were adopted to facilitate the execution of the characteristic repertory of each region.

(i) Scandinavia and western Europe. In this region cheap instruments were readily imported because they proved ideal for dance music, but numerous native variants also appeared. The violin often retained the name of the older instrument, for instance, in the British Isles the term 'fiddle' or variants of it is still used synonymously for the violin, though often a difference in the status of the music or the performer is implied in use of one term or the other: fiddlers play indigenous airs and dance music, violinists play a 'classical' European repertory. In these regions the instrument was often used solo, the playing style making much use of the open strings as variable drones to enrich the musical texture and help with rhythmic accentuation. Until the middle of the 20th century, most musicians rarely played outside the 1st position; they used the left hand to hold the fiddle along the arm and against the chest rather than under the chin.

Less is known about traditions of fiddling in England than elsewhere in the British Isles. This is probably because there were few, if any, English publishers over the centuries who were interested in fiddle music specifically, compared with those in Scotland and Ireland. But fiddlers' tune books have been discovered from several areas of England, especially the north, which suggest that the fiddle was popular in the countryside, even if the pipe and tabor and, from the 19th century onwards, free-reed instruments such as the concertina were more frequently favoured by musicians attached to morris and sword dance groups. By contrast, the popularity of the fiddle in both Scotland and Ireland is attested by large collections of the repertory both printed and manuscript, and the proximity of the two traditions by a considerable overlap in the repertory. By the late 18th century a semi-classical influence was discernible in the repertories of fiddler-composers such as William Marshall and Simon Fraser, but found its chief exponent in the flamboyant person of James Scott Skinner (1843–1927). His influence has been considerable in Scotland, causing many humbler fiddlers to try to emulate his style and technique (*see* Scotland, §II, 6(ii)).

Since the mid-19th century in Scotland, Ireland and Scandinavian countries the custom of concerted playing has developed along with fiddlers' societies. The building of community halls and specialized dancing venues led to the single dance fiddler being joined by other players, notably of the accordion, piano and drums. One outcome of the folk revivals in all these countries has been the growth of importance of the 'session': usually taking place in public houses, small informal groups of instrumentalists, often including a fiddler, meeting together to play for their own enjoyment (and not usually for dancing).

In Wales, the fiddle (*ffidil*) superseded the bowed lyre (*crwth*) during the 18th century as the principal bowed folk instrument and was eventually to challenge the harp as the main accompanying instrument for popular dance (although both instruments frequently performed together in that capacity). From the 18th century onwards, however, dance was vigorously condemned by puritanical nonconformist religion; whereas during the 19th century the harp was retained as a symbol of nationality and granted a respectable place within the eisteddfod, the *ffidil* was doomed to be associated almost solely with taverns and wild celebrations. By the end of the century it was almost extinct, and played only by gypsy families until around World War I. More lately it has been revived by Welsh folk-dance and song groups.

In Portugal the violin has kept the older name *viola*; indigenous bowed instruments are distinguished by the name *rebecca* (from 'rebec'). The Portuguese played a major role in the dispersal of the violin throughout the world; they took it with them to their trading posts and colonies in the East, e.g. Goa, India and the port of Melaka in Malaysia, as well as along the coast of Angola in Africa.

(ii) Eastern and south-eastern Europe. As the violin displaced indigenous instruments, it became a favoured instrument of gypsy musicians (*see* Hungary, §II, fig.8). Sarosi reported (1978) that as early as 1683, 'nearly every nobleman has a gypsy who is a fiddler or locksmith'. Two violins, a string bass and a plucked instrument make a typical dance ensemble in central Europe, Romania and the Balkans.

The violin is the most popular folk instrument in Poland. The *skrzypce* is made by villagers themselves out of a single piece of wood, apart from the soundboard, and has three or four strings. The *skrzypce podwiązane* or *skrzypce przewiązane* is an ordinary violin with a match or small stick placed under the strings and then bound, so that it can be played as in the 1st position but in a higher register; in the 19th century this instrument began to replace the *mazanki*, a small fiddle with three strings that was played along with the bagpipe (*dudy*). The *skrzypce* is played chiefly as the melody instrument in folk bands. In Slovakia the *oktávka* (octave-violin) and the *shlopcoky* (scuttle-shaped violin) are used as well as the standard violin. Instruments are played solo, in combinations such as bagpipe and violin, or in diverse ensembles of bowed string instruments.

In Romania the *vioară* (violin) is known under several different local names. Players, particularly in Oltenia and Muntenia, use a wide range of scordatura to facilitate the playing of certain tunes, to obtain unusual sounds and to imitate other instruments, such as the bagpipes. The *contră* of Transylvania has only three strings (tuned *g–d′–a*), which are stretched over a notched bridge and bowed simultaneously to obtain chords. The violin in

south-west Moldova usually has seven sympathetic strings, probably a relic of the Turkish *kemençe*, with sympathetic strings. The Stroh violin, called *vioră cu goarnă* ('bugle violin') or *higheghe* in Bihor, became widespread between the two World Wars (it was invented in London for use in gramophone recording studios at the turn of the 20th century). *Lăutari* (professional folk musicians) make the instrument themselves, replacing the soundbox with a metal bell and resting the strings on a small mica sheet. In Romania and Moldova the violin repertory also includes the virtuoso instrumental *doina*, a largely improvised genre in rhapsodic style and free metre.

The *smuikas* of Lithuania is also often made by the musicians themselves and accordingly is found in a great variety of sizes and forms, of varying quality. The back and sides are made of maple, apple or ash, the belly of fir or pine and the bridge and tuning-pegs of oak, hornbeam, beech or ash. The instrument may have three, four or more strings, usually tuned in 5ths, but in bands the tuning is adapted to suit the concertina and the clarinet. The player sometimes places a small piece of wood on the soundboard to muffle the timbre; experienced musicians adorn dance melodies with melismata and double or triple stopping. Similar traditions of violin playing are also found in neighbouring countries such as Estonia, where the instrument is known as the *viiul*, and Belarus, Moldova and the Ukraine, where the *skripka* has its own folk technique. The instrument is usually tuned in 5ths, but higher and lower tunings are used depending on the genre of music. Players use mainly the bottom two strings, more rarely the third. Fiddle playing has been an established profession in many Belarusian towns since the 17th century and the instrument maintains a strong role in rural musical life.

2. MIDDLE EAST AND SOUTH ASIA. The violin has been adopted in a wide range of indigenous art music, from North Africa to South India, and each culture has adapted the holding position to meet its own requirements. In many cases the first introduction of the instrument to these countries was in European-influenced, popular music contexts, such as café music of the Middle East. The violin has shown its flexibility and power as an accompanying instrument, especially where a voice sets the model in timbre and phrasing, as well as for solo playing. In Morocco, one or more violins take a leading part in the vocal-instrumental *nawbā* suites played by traditional orchestras. In North Africa and Turkey it is usually called *keman* (from the generic term *kemençe* or *kamānche*, the latter used for spike fiddles) and is often played in an upright position, resting on the seated player's thigh. In Iran, the violin is the only Western instrument to be admitted without reservation into traditional music because it is possible to play the whole of the *kamānche* repertory on it when technique and articulation are suitably adapted. Its great success at the beginning of the 20th century threatened the existence of the *kamānche*, and it has now quite eclipsed the traditional instrument.

In India, where it was introduced in the 17th century, the violin became prominent in the classical music of the South from about 1800 after B. Dīkṣitar and his pupil Vadivelu adopted it for accompanying vocalists at the court of Travancore. It is usually played with the scroll resting on the right foot of the player, who sits cross-legged; the other end is wedged against his left shoulder. The player's left hand is thus free for the complex *gamaka* of Karnatak music (*see* INDIA, §III, 3(i)(b)). The strings are tuned to tonic and 5th of the lower and middle octaves at a pitch nearer that of the Western viola pitch. At this pitch level it gives, in the view of Bandyophadaya, 'a deep and melodious sound perfectly suited to male musicians'. When accompanying a singer, the violinist's role is to 'shadow' the soloist, echoing each phrase in a virtually continuous canon. During the last two decades of the 20th century, virtuosos such as L.K. Subramaniam have elevated the violin to the status of solo instrument. This has been accompanied by changes in technique, the earlier two-finger left-hand technique, derived from that for the *vīṇā*, developed into one involving all four. In northern India, Pakistan and Bangladesh, where the classical vocal styles *dhrupad* and *khayāl* are more long-breathed and relaxed, the violin is much less common in vocal accompaniment; here it is in competition with the deeper-toned, indigenous *sāraṅgī* fiddle. However, violins form an essential section in each of the modern *filmi* orchestras of the South Asian broadcasting and television industries. Alternative north Indian names are *behalā*, *bela* (Hindi) and *behālā* (Bengali), which probably derive from the Portuguese *viola*; in Goa, where the Portuguese ruled for over four centuries, the violin is called 'rebec'.

The violin was brought to Sri Lanka by Parsi theatrical troupes from Bombay during the 19th century. The *ravikiñña* is now used by the Tamils for playing Karnatak music and, less often, for *rukada* (string-puppet plays).

3. SOUTH-EAST ASIA. The violin was introduced into South-east Asia by the Portuguese during the 17th century, and became known as the *biola* from the Portuguese name. European instruments were played in European fashion in colonial houses by slaves of varied origin. In Batavia (Jakarta) in 1689, a bride who had 59 slaves referred in a letter to 'a slave orchestra which played the harp, viol and bassoon at meal-times' (Boxer, 1965, p.240). Ensembles combining Malay instruments and styles with European ones entered the Malay courts of the Riaulinggu archipelago, East Sumatra and the Malay peninsula. Old royal dances combining Portuguese movements with intricate Malay hand and finger movements are still practised in areas such as Bintan Island, Riau; these include the *tari makan sirih* ('betel-nut-eating dance'), accompanied by *biola*, accordion, *rebana* (frame drum) and gong, and the *tari joget jangkung* ('tall *joget* dance'), accompanied by *biola*, guitar, *rebana* and gong. In east Aceh, an ensemble accompanying local dances includes *biola*, *geundrang* (double-headed drum), *buloh meurindu* (bamboo clarinet) or *bangsi* (bamboo flute) and one or two *canang* (small bossed gong). *Biolas* are usually made locally by hand and are generally tuned like the European viola.

The Osinger people of East Java use the *biola* in their *gandrung* ensemble. It is played in several other ensembles, including the *orkes Dul Muluk* (theatre ensemble) of parts of South Sumatra, the *orkes gambus* of northern Java, Sumatra and Malaysia, and the *orkes Lampung* of Lampung, Sumatra.

Biyolin is the term used for the violin by many groups in the Philippines. The instrument is used to play European-type songs in serenades or for entertainment in town feasts. String players for city symphony orchestras are sometimes recruited from the provinces where musical traditions date back to training by Spanish friars in the

17th century. More recently, the *biyolin* has been introduced into the music of some indigenous northern groups.

4. The Americas. The violin arrived in large numbers in North America during the 17th century, and has flourished ever since as both concert violin and folk fiddle. Fiddling is marked not just by a heavy reliance on oral tradition, but also by customary functions, venues, repertories, and, especially in certain parts of the southern states, by playing techniques and some use of scordaturas. The categories of violin and fiddle overlapped considerably at first, and still do: some violinists also play old tunes from memory at dances, and some fiddlers did and do aspire to music literacy, and may play for passive listeners or solely for their own enjoyment. Manuscript music commonplace books from the decades flanking the turn of the 19th century contain reels and hornpipes and popular song tunes alongside classical excerpts. While the romantic image of the illiterate backwoods fiddler of later decades bears more than a germ of truth, many fiddlers were educated community leaders: a steady stream of publications of dance tunes testifies to continued music literacy on the part of some of these men. And while modern contest fiddlers (now including both men and women) include musicians who play only by ear, others puzzle out tunes laboriously from print, and yet others are converted classical violinists.

While violin and fiddle still look alike, the fiddle is less narrowly defined in terms of quality and style of woodworking and varnish application, and in range of desirable timbres. Indeed, in many eras and locations, the relatively nasal and cutting timbres associated with rough-and-ready construction and cheap metal strings helped a solo fiddler be heard by vigorous dancers. The fiddle was the main instrument for the performance of British-American and French-American folk music from the late 18th century well into the 20th. Fiddlers in the colonies that were later to become the USA drew primarily on British traditions (initially Scottish and English, later also Irish) for tunes, ways to compose tunes and shape repertories, and playing styles. The young USA then spawned regional styles, with the North drawing closely on English models and retaining a greater degree of music literacy, and a burgeoning array of southern substyles more strongly linked to Scottish repertories, transmitted both through print and orally, and which absorbed considerable black American influence in performance styles. French Canada drew on French traditions and nurtured new ones (notably in Nova Scotia), while English-speaking Canada nourished styles related to that of New England. The imported tunes and home-grown tunes on imported models that formed the core of the fiddlers' repertory were usually linked with dance genres. During the early 19th century the repertory was supplemented with vocal airs, marches and other popular tunes. As decades passed, and the solo fiddler, fifer or flautist was replaced in cultivated circles by ensembles or keyboard instruments, fiddle music emerged as a discrete, generally rural array of older dances, plus a few descriptive airs and hymn tunes. British hornpipes and reels became American hoedowns, just as other duple-time social dance tunes were eventually fitted into the polka category and various triple-time dances were reworked as waltzes.

As American fiddling became less British or French and more American, other instruments more frequently joined in performance. The fife, which had been closely associated with the fiddle since the Revolutionary War era, was also played in fife and drum corps, so military and dance tunes came to be shared between fiddlers and fifers. Fiddle and banjo duos became widespread in the wake of the popularity of blackface minstrelsy (from 1843; *see* Minstrelsy, American) and of medicine shows, and significantly more common when late 19th-century mail-order catalogues helped disseminate a wide range of cut-price products, including families of instruments. Although minstrel-style banjo playing, which survives down to the present day in the upper South as 'clawhammer' or 'frailing' styles, included African-derived playing techniques, the central repertory for the Southeastern string band (fiddle, banjo, and a few supplementary string instruments including guitar, upright bass, mandolin etc.) has always focussed on British-American dance tunes.

The common-time reel and breakdown usually consist of two (or rarely more) eight-bar strains which contrast in tessitura. A typical performance in older, dance-oriented style consists of one strain twice, the other twice, the first twice, and so on until the dancers are sated. While a few Northern contradances preserve a formerly more common linkage of specific tunes with specific sets of dance figures, many tunes are used interchangeably. That certain tunes are irregularly phrased or otherwise inapt for dance accompaniment reflects the fact that fiddlers have always also played purely for their own and their peers' pleasure. Today's regional styles are characterized by the degree of melodic ornamentation and variation employed (primarily linear styles predominate in areas such as Texas and Ontario), the degree of affinity with older published models (New England style leads here), and the amount of African- and Scottish-derived syncopation, both bold and subtle. The latter is particularly characteristic of the various styles of the Southastern USA, which are in turn differentiated by whether the high or low strain of a tune is played first, and other factors.

Although most other dance genres have been assimilated into the breakdown, the British hornpipe remains vital in Canada and New England, and a few marches, jigs and descriptive pieces have survived here and there. The most widespread alternative to the breakdown remains the waltz, which arrived in large numbers in the 1810s and 20s, received new impetus around the turn of the 20th century from the new pop song styles of Tin Pan Alley, and has returned as a standard ingredient in modern fiddle contests in most of North America. These contests represent a nativistic folk revival, in which a blend of rural and urban brands of nostalgia, the modern luxury of plenty of practice time for players of all socio-economic backgrounds, and the listening-oriented venue, has spawned legions of polished instrumentalists, again blurring the line between folk and art performance, and between violin and fiddle.

For further discussion of the use of the violin in particular cultures, see the entry on the country or countries in which that culture is contained.

Violino piccolo (It.). A small violin on which high violin parts were played from the late 16th century to the 18th. Its function is comparable to that of a piccolo flute; however, the size of the now obsolete instrument continues to be debated. It is classified as a bowed lute (or fiddle) in the Hornbostel-Sachs system.

The violino piccolo was variously pitched up to a 5th higher than the full-size violin (hence sometimes called in German TERZGEIGE, QUARTGEIGE etc.) to accommodate high parts, which could then be played principally in the 1st position. Although violin virtuosos played in the 6th or 7th position by the end of the 17th century, the average violinist normally did not exceed the 3rd or 4th position. The violino piccolo was therefore specified when composers wished to extend the range of the violin upwards. As shifting became a standard part of violin technique in the 18th century, the violino piccolo, as it was originally conceived, became obsolete.

Violini piccoli existed as early as the late 16th century; several *claine discant* violins are listed in an inventory, dated 1596, of the collection in Schloss Ambras, near Innsbruck (Schlosser, 1920). Michael Praetorius (2/1619) noted that the instrument was common in his day. His treatise demonstrates that the *Klein Discant Geig* was significantly smaller than a full-size violin, having a body length of 26·8 cm (according to Bessaraboff's 1941 interpretation of Praetorius's scaling). It had four strings, was tuned in 5ths, and was pitched a 4th higher than the full-size violin.

The dimensions of Praetorius's *Klein Discant Geig* closely match those of an unaltered violino piccolo (body length of 26·6 cm) that was made in the shop of the brothers Antonio and Girolamo Amati (1613, Cremona), and is preserved in the Shrine to Music Museum, University of South Dakota, Vermillion. A number of violins, with body lengths of 23–27 cm, survive by makers such as Cati, Giuseppe Guarneri, Klemm, and both Antonio and Omobono Stradivari. They are similar in length to a modern ¼-size violin, but built for an adult hand rather than for teaching children; they have distinctly thicker necks, slightly wider fingerboards, and somewhat larger pegboxes than children's instruments.

The earliest music specifically calling for the violino piccolo is Monteverdi's opera *Orfeo* (1607). J.S. Bach specified the violino piccolo in three compositions: Cantatas nos.96 and 140, and the First Brandenburg Concerto. Many present-day violinists choose to perform these parts on so-called ⅞-size violins, rather than on smaller instruments. Numerous examples of ⅞-size violins with body lengths of about 34 cm (only 1 or 2 cm less than the size of standard violins), survive from the 17th

and 18th centuries, but no persuasive arguments have been offered to clarify the use for which they were originally intended. Clearly, they are not the *Klein Discant Geig* described by Praetorius nor could they represent the violino piccolo described by Leopold Mozart in his *Violinschule* (1756). All the bowed string instruments known to Mozart are described in the introduction to his tutor. He notes that the violino piccolo is smaller than the ordinary violin and is capable of being tuned to a much higher pitch. Most significant is his remark that violini piccoli were no longer needed to play the high violin parts since by then violinists were accustomed to shifting into higher positions. Therefore, Mozart notes, the small violins were used instead to train young boys. These remarks suggest that the violino piccolo in the mid-18th century was significantly smaller than a $\frac{7}{8}$-size violin and was more likely the size of the 1613 Brothers Amati instrument.

Concertos, sonatas, orchestral suites and cantatas featuring the violino piccolo were composed as late as the third quarter of the 18th century. Composers whose works call for it include Dittersdorf, Doles, Erlebach, Förster, Fux, Harrer, Janitsch, Krause, Pfeiffer and Rosetti.

Violino pomposo. *See* VIOLA POMPOSA.

Violino primo (It.). First violin. *See* LEADER.

Violin player, automatic. A MECHANICAL INSTRUMENT incorporating at least one violin that is bowed and fingered automatically. Normally this is placed in the case of an upright EXPRESSION PIANO or REPRODUCING PIANO, and the playing mechanism of both piano and violin is operated by a musical programme in the form of a pneumatic paper-roll system.

The principle of the 'endless bow', often in the form of a rosined wheel, is an ancient one, and characteristic of such instruments as the hurdy-gurdy. Designs for keyboard instruments applying this principle go back to Leonardo da Vinci (*see* SOSTENENTE PIANO, §1). Makers of fairground organs and orchestrions such as Gavioli, Mortier and J.D. Philipps sought to imitate a string tone using specially voiced, narrow-scaled organ pipes. During the 18th and 19th centuries, however, various attempts were made to construct an automatic violin player. The first practical and reliable instruments were made by Hupfeld in Leipzig, beginning around 1900. After two unsuccessful prototypes, they produced the Phonoliszt Violina in 1907 (put on the market in 1908). This spectacular instrument uses as a base a Hupfeld Phonoliszt expression piano – later a reproducing piano was used – having three violins each with one string played by a pneumatic fingering system. The violins are set vertically, with the necks lowermost, in a cupola set into the case of the piano (see illustration). A circular rotating bow, strung with horsehair, encompasses the violins and is driven at variable speeds between 7 and 32 r.p.m. by a pneumatic motor. When a note is to be sounded, the violin with the appropriate string is pushed outwards so that the string makes contact with the rotating bow. At the same time a small pneumatic motor presses a mechanical 'finger' down onto the string to stop it at the required pitch. A wide range of expressive possibilities is available through varying the speed of the bowing wheel or its pressure on the string, the provision of a bridge mute and a vibrato effect caused by an eccentric rotating wheel attached to the tailpiece of the violin. Duet or trio passages can be played by the violins sounding together, and the violins are accompanied by the reproducing piano; the effect is extremely convincing.

Another model was designed for use in public places such as restaurants and bars, having two music rolls that could be played interchangeably, and therefore non-stop, when accompanying silent films. A later version had six violins.

Mechanical violin: Hupfeld's 'Phonoliszt-Violina', Leipzig, c1912 (The Musical Museum, Brentford, London)

A Swedish engineer, Henry K. Sandell, employed by the Mills Novelty Company in Chicago, took the Swedish *nyckelharpa*, or keyed fiddle, as his model, and in 1905 produced the Automatic Virtuoso – an electrically operated violin with a perforated paper roll. The instrument created a sensation on a tour of Britain in 1908. On 13 March the *Birmingham Gazette* reported: 'Everything that a fine violinist could do, the machine did, and did perfectly. It executed trills and shakes, picked the strings, or played sliding notes just as the composition demanded, and throughout there was no sound or sign of mechanical origin save only the slight buzzing of the motor'. The company then placed this device in a cabinet with a symmetrically-strung 44-note piano, and called it the Violano-Virtuoso. In this coin-operated machine the violin is placed horizontally; for each of the four strings there is a separate small celluloid disc 'bow' and pitch is controlled by four rows of electro-magnetic 'fingers'. The electro-magnetic action also included variable-speed bowing and variable vibrato.

The firm tried to capitalize on the popularity of the Violano-Virtuoso with the Viol-Cello (which had an additional side-cabinet containing a cello, forming a piano trio), the Viol-Xylophone (which replaced the piano with a metal-bar xylophone), the String Quartette (with three violins and a cello) and the Melody Violin (a two-manual keyboard from which 'any number of violins from one to a hundred' could be played with an electric mechanism), but none of these achieved the same success.

Other makers of automatic violin players included Hegeler & Ehrlers of Oldenburg (the Geigenpiano, 1906–8), E. Dienst of Leipzig (Sebstspielende Geige, 1910–12), Popper of Leipzig (Violinovo, 1930–31) and J.D. Philipps & Söhne of Frankfurt. The latter experimented with a violin in one of its Paganini orchestrions (*c*1910–14) but opted in the end for violin-toned organ pipes in its Paganini Violin Piano (piano-orchestrion). None of these had the success of the Hupfeld instrument.

Violoncello [cello]. The bass instrument of the violin family. In the Hornbostel-Sachs system it is classified as a bowed lute (fiddle). The violoncello's present name means, in Italian, a 'small large viol', as it employs both the superlative suffix *-one*, and a diminutive one, *-ello*. Such a bizarre name suggests that its early history is not straightforward. In this article the term BASS VIOLIN will be used for the earliest forms of the instrument: not until the early years of the 18th century did the smaller model of cello become standard, and the name violoncello was generally adopted at about the same time. The bass violin was given myriad names before this date: 'bas de violon' (Jambe de Fer, 1556, p.61f); 'basso di viola' (Zacconi, 1592, p.218); 'bass viol de braccio' (Praetorius, ii, 2/1619, 'Tabella universalis', p.26); and 'basse de violon' (Mersenne, 1637, ii, p.185). Other terms given in Italian prints from 1609 to 1700 include: *bassetto*, *bassetto di viola*, *basso da brazzo*, *basso viola da brazzo*, *viola*, *viola da braccio*, *viola da brazzo*, *violetta*, *violoncino*, *violone*, *violone basso*, *violone da brazzo*, *violone piccolo*, *violonzino*, *violonzono*, *vivola da brazzo*. The variety of names shown here were often localized in time, place, or both. They further suggest that in the 16th and 17th centuries the instrument existed in several sizes. For a discussion of the use of the term 'violone', *see* VIOLONE.

The two earliest prints that are known to include music for bass violin are Monteverdi's *L'Orfeo* (Venice, 1609), under the name 'basso viola da braccio', and Caterina Assandra's *Motetti* op.2 (Milan, 1609), under the name 'violone'. G.C. Arresti, in his *Sonate* op.4 (Venice, 1665), was the earliest known composer to use the term 'violoncello'. This newer term was soon generally accepted in Italy and Germany, and after 1700 in France and England, though the term 'bassetl' (*see* BASSETT (i)) persisted in Austria during Haydn's younger years. The abbreviation 'cello' is commonly used in English and German.

I. Origins and history to c1700

1. The instrument. 2. Technique and performers. 3. Repertory.

1. THE INSTRUMENT. The history of the bass violin has yet to be thoroughly traced, primarily because of the confusion arising from the many names applied to the instrument and the great variety of sizes it took in pictorial sources throughout its early years. In Italy, until the early years of the 18th century and with the exception of Venice, the term 'violone' probably indicated bass violin. (From the 1660s Venetians seem to have applied this term to a contrabass instrument.) Depending on time and place in Italy, the terms 'violetta' and 'viola' could apply either to alto or bass instruments. What seems certain is that the bass violin first appeared and attained its present size, name and tuning south of the Alps.

The earliest-known evidence of the instrument's existence is found in Agricola's *Ein kurtz deudsche Musica* (Wittenberg, 1528), where the *Geige* appears as the bass member of a newly emergent, four-part violin consort. The earliest-known pictorial representation appears in an 'Angel Concert', painted by Gaudenzio Ferrari in 1534–6 on the dome of the sanctuary of the Madonna dei Miracoli in Saronno (fig.1).

The history of the instrument, before it was called violoncello, may have been directly related to the material used for its strings (*see also* STRING, §3). Originally, all four were made solely of sheep gut. Numerous illustrations of early bass and contrabass instruments demonstrate how great was the disparity in thickness between top and bottom strings (fig.2). Thick strings, regardless of material, are afflicted by inharmonicity (the overtones are badly out of tune, resulting in a poor quality of sound).

1. Detail from an 'Angel Concert' by Gaudenzio Ferrari, fresco, 1534–6 (Madonna dei Miracoli, Saronno)

Moreover, the volume of sound produced with thick gut strings is much less than with thin strings. Longer strings could be thinner and hence better sounding, so string length on early bass violins was made as long as the maker dared without exceeding the reach of the fingers of the left hand in first position; hence one of the commonest names for the early bass violin was 'violone'.

Development of the wirewound string, produced by winding a fine wire around a gut core, provided a solution to several of these problems by increasing the density of the strings, allowing them to be made much thinner and also shorter. Two pieces of evidence pinpoint the time and place of this development: a notice in the fourth edition of Playford's *Introduction* (C1664), mentioning that wirewound gut or silk strings, a 'late invention', sounded 'much better and lowder than the common Gut strings'; and a request in 1701 for reimbursement for a set of four strings purchased for a violone by Andrea Mauritij, a viola player at S Maria Maggiore in Bergamo, who specified of the bottom string: 'la quarta coperta d'Argento di Bologna'.

The cumbersome violone could thus be cut down in size – many literally were so – and the name 'violoncello' emerged. Two bass violins, made by Gaspar Borbon and now in the Musée des Instruments de Musique of the Brussels Conservatory, illustrate the drastic results of these operations. One, dating from 1702, was unaltered and hence retained its original, larger size. In contrast to a typical modern cello, whose sounding string length is 68–69 cm and body length 75–76 cm, this instrument has a sounding string length of 73 cm and a body length of 80 cm. The other instrument, of 1670, has been altered in a rather drastic and unsightly fashion. Among the operations performed on it was the relocation of the f holes. The original ones were filled in with pieces of wood whose grain necessarily differed from what was found in the original belly; the holes were subsequently recarved at another, higher location.

Fig.3 shows the earliest known representation (1681) of a wirewound bass string. Significantly, the two smaller string instruments, a viola and violin, do not have wirewound strings.

The early bass violin existed in two sizes with different families of higher and lower tunings. Instruments with the higher tunings are somewhat older. It is possible that such an instrument is pictured in the fresco by Ferrari

2. Violoncello with five strings: 'Still-life with Musical Instruments' by Pieter Claesz, 1623 (Musée du Louvre, Paris)

3. Bass violin with wirewound bottom string: detail from 'Musicians of the Medici Court' by Anton Domenico Gabbiani, 1681 (Galleria degli Uffizi, Florence)

(fig.1). Agricola (C1529) and Ganassi (*Lettione seconda*, Venice, 1543/*R*) were the first to mention a three-string bass instrument tuned *F–c–g*. Hans Gerle (*Musica teusch*, Nuremberg, 1532) was the earliest to describe a four-string cello, and gave the tuning that is used today: *C–G–d–a*. Praetorius (*Syntagmu Musicum*, ii, 2/1619) was the next to give this tuning. However in the intervening years, and even later, the tuning of the bass violin was most often one step lower, *B♭′–F–c–g*, given by Lanfranco (C1533), Jambe de Fer (C1556), Zacconi (C1592), Cerone (*El melopeo y maestro*, Naples, 1613), Mersenne (*Harmonie Universelle*) and Playford (C1664). This tuning continued the downward progression based on fifths established for the violin, the common note between soprano and bass instruments being *g*.

Later writers give one or another version of a higher family of tunings, adding a fourth string to the treble end of Agricola's tuning: Zacconi and Praetorius both give *F–c–g–d′*, Banchieri (*Conclusioni nel suono dell'organo*, Bologna, 1609) gives *G–d–a–e′*. An instrument probably intended for one of the higher tunings belongs to the Gemeentemuseum, The Hague; made by Jan Boumeester in 1676, it has a sounding string length of 52 cm and a body length of 53 cm.

An analysis of the tessitura used by Monteverdi favours the tuning of *C–G–d–a*. Other composers, such as Giovanni Valentini, (*Musiche concertate*, 1619), wrote bass lines that call for B♭′. The tuning based on B♭′ was in use in France and England until the 18th century; Corrette (*Méthode ... pour apprendre ... le violoncelle*, 1741) stated that the tuning based on C was introduced to France around 1710, and J.F. de la Fond's *A New System of Music* indicates that by 1725 it was in use in England.

Although the term 'violoncello' was increasingly used in publications in the latter years of the 17th century, the earlier name for this instrument, 'violone', persisted well into the 18th century. Corelli used the term 'violone' for the bass string instrument in all his prints. The partbook for the bass string instrument in G.A. Silvani's *Il secondo libro delle litanie* op.14 (Bologna, 1725) was entitled 'Violone o tiorba'. Ten years later, G.A. Perti's *Messa e salmi concertati* op.2 was published in Bologna, including a partbook entitled 'Violoncello o violone di ripieno'.

Andrea Amati and his descendants in Cremona (*c*1511–1740), and Gasparo da Salò (1540–1609) and his successor G.P. Maggini (*c*1580–?1630/1) in Brescia, were among the earliest makers of bass violins. Other somewhat later makers included Francesco Rugeri (*c*1630–1698) and members of the Guarneri family (1623–1744) in Cremona, G.B. Rogeri (*fl c*1670–*c*1705) in Brescia, and members of the Grancino family (1637–*c*1726).

It appears that the neck on the early bass violin was, like that on the early violin, directly aligned with the belly of the instrument, requiring a wedge under the fingerboard to make it parallel with the strings. One unaltered example with this construction, made by Egidius Snoeck in 1736, survives in the Musée des Instruments de Musique of the Brussels Conservatory. By installing a neck that canted backward the downward force on the bridge is increased, thereby conveying more energy from the strings to the instrument and producing the louder sound needed for an instrument expected to compete with an orchestra in a concerto.

By the early years of the 18th century Stradivari had established a body length of 75–6 cm, which has served as the standard ever since, although some makers continued to make larger sizes into the 1750s.

4. Violoncello resting on the floor: detail of 'The Cello Player' by Gabriel Metsu, c1660 (Royal Collection, London)

5. Cellist resting his instrument on the floor, with the composer Gennaro Manna: caricature by Pier Leone Ghezzi, pen and ink, 1751

Ex.1 Caterina Assandra: *O salutaris hostia* (1609), violone part

2. Technique and performers. The early bass violin rested on the floor while being played (fig.4). This position was still used as late as the 1750s, as can be seen in a drawing by P.L. Ghezzi (fig.5). Towards 1700 it became usual for the player to raise the instrument off the floor, supporting it with the calves, in the traditional posture of the bass viol player. This higher position made it easier for the performer to explore more demanding fingering and bowing techniques. Published tutors for the instrument do not exist before the 18th century. It is clear that the performer in Metsu's painting (fig.4) holds the bow as a viol player, using an underhand position, although other pictures (e.g. fig.1) show an overhand grip.

Little is yet known about performers on the instrument, especially those north of the Alps. In the last decades of the 17th century, three men made reputations as solo cellists performing in and around Bologna: Petronio Franceschini (*c*1650–80); Domenico Gabrielli (1651–90), and Giuseppe Maria Jacchini (*c*1663–1727). All three were cellists at S Petronio.

3. Repertory. The only repertory for the early bass violin that has thus far been investigated with any thoroughness is music that was used in the Roman Rite. Among the earliest surviving prints of pieces with a part for the bass violin (called 'violone' in each instance) are two published in Milan. The first, a motet entitled *O salutaris hostia* in *Motetti à due, & tre voci* op.2 (1609) by Caterina Assandra, a nun at the convent of S Agata, Lomello, near Milan, has a violone part with a very limited range, *F–c′*, and could be performed in first position on either size of bass violin or on some kind of bass viol (ex.1). The second, the *Concerti ecclesiastici* by G.P. Cima, was published the following year, and contains a *Sonata per violino e violone*. Here the writing is somewhat more demanding in terms of fluency of execution (ex.2). The range of Cima's part for violone

Ex.2 G.P. Cima: *Sonata per violino e violone*, from *Concerti ecclesiastici* (1610), violone part

C–d′ indicates that at least one of Assandra's contemporaries may have been writing parts for an instrument tuned *C–G–d–a*. Certainly Legrenzi was writing for an instrument with this tuning when he published his *Sonate* op.2 (1655) in Venice (ex.3).

Ex.3 Giovanni Legrenzi: Sonata 'La Donata', from *Sonate à due e trio* op.2 (1655), violone part

Ex.4 Maurizio Cazzati: Sonata a 3, 'La Casala', from *Sonate a due, tre, quattro, e cinque* op.35 (1665), violone part

In 1665, the year following Playford's announcement of the development of the wirewound string (see §I, 1, above), Cazzati's semiquaver broken octaves in the violone part of his *Sonate* op.35 require greater bow control than the previous examples as well as *e′* (ex.4).

Ex.5 G.M. Placuzzi: Sonata no.6 from *Suonate* op.1 (1667), violoncello part

G.C. Arresti's *Sonate* op.4 appeared in the same year and was the earliest print to call for the 'violoncello'. G.M. Placuzzi's violoncello part in his *Suonate* op.1 (1667) (ex.5), and Cazzati's *Capriccio detta il Lambertini*, in his *Varii, e diversi capricci* op.50 (1669) (ex.6), both contain

Ex.6 Maurizio Cazzati: *Capriccio detta il Lambertini* from *Varii, e diversi cappricci* op.50 (1669), violone part

rapid broken octaves. In Ferrara, Sebastiano Cherici published his *Inni sacri* op.1 (1672), including a bass part labelled Violetta, with a range of *D–e′* (ex.7).

Ex.7 Sebastiano Cherici: *Ave Maria* from *Inni sacri a tre* op.1 (1672), violetta part

Evidence that in late 17th-century Italy the violone had become distinct from the violoncello appears in G.A. Perti's *Messa à 5 concertate con instromenti* (*c*1675–85), which includes partbooks for violoncello, violone and contrabasso (ex.8). The range of the violoncello part is *D–c′*.

The appearance of the term 'bassetto' adds to the confusion: the title of Andrea Grossi's op.1 (1678) reads *Balletti . . . a tre, due violini e violone*, and Giorgio Buoni's op.2 (1693) is entitled *Suonate a due Violini, e Violoncello*, yet in each case the bass partbook is labelled 'Bassetto'.

Other early Italian composers for the bass violin (using various terminology) include (published in Venice): Claudio Monteverdi (viola da brazzo), *Vespro della Beata Vergine* (1610), *Selva morale* (1641), and *Messe à 4 et*

Ex.8 G.A. Perti: Kyrie from *Messa à 5 concertate con instromenti* (*I-Bsp*, MS.P.XIII.I, c1675–85), violoncello and violone parts

salmi (1650); Alessandro Grandi (violone), *Il secondo libro de motetti* (1613) and (viola) *Motetti a una, et due voci, libro III* (1629); Giovanni Priuli (violone), *Missae* [8vv] (1624) and (viola), *Delicie musicali* (1625); Tarquinio Merula (violone), *Libro secondo de concerti spirituali* (1628), *Canzoni overo sonate* (1637), and *Il quarto libro delle canzoni da suonare* (1651); G.B. Buonamente (basso da brazzo), *Il quinto libro di varie sonate sinfonie, gagliarde, corrente, & ariette* (1629) and *Sonate et canzoni ... libro sesto* (1636); Maurizio Cazzati (violone), *Canzoni* op.2 (1642), *Sonate* op.8 (1648). Composers who published in Bologna include Cazzati, *Sonate* op.35 (1665), and *Varii, e diversi capricci* op.50 (1669); Cherici (violetta), *Inni sacri* (1672) and (bassetto), *Harmonia di devoti concerti* op.2 (1681) and *Compieta* op.3 (Bologna, 1686). The following composers, publishing in either Bologna or Venice, specified 'violoncino' as the bass: G.B. Fontana, *Sonate* (1641); Domenico Freschi, *Messe e salmi* op.1 (1660); Simpliciano Olivo, *Salmi di compieta* op.2 (1674); Francesco Cavalli, *Musiche sacre* (1656) and Gasparo Gaspardini, *Sonate* op.1 (1683).

II. 18th and 19th centuries

1. Organological development: (i) 18th century (ii) Five-string and piccolo cellos (iii) 19th century (iv) Makers (v) The bow. 2. Technique: (i) Holding the cello (ii) Left-hand technique and fingering (iii) Vibrato (iv) Bowing (v) Clefs (vi) Accompaniment. 3. 18th-century use, performers and repertory: (i) Italy (ii) Austria and Germany (iii) Britain (iv) France. 4. 19th century: (i) Use and repertory (ii) Performers and schools of playing.

1. Organological development.

(i) 18th century. Although there is evidence that Maggini, Francesco Rugeri and members of the Amati family manufactured a small type of cello before 1700, Antonio Stradivari is credited with standardizing and perfecting its dimensions in about 1707 with his smaller model, labelled 'forma B' and 'forma B piccola' on original patterns found in Stradivari's workshop. The 'forma B' body length measured 75–6 cm, and its maximum width was 44·5 cm, being both shorter and narrower than at least 30 cellos that he made between 1680 and 1701. The most famous extant example of his older, larger model is the 'Servais' cello of 1701 (whose proportions have not been altered except for the modern neck, bridge and fingerboard) which measures 79 cm in body length and 47 cm in width. By the end of the 18th century, however, Stradivari's 'forma B' dimensions, exemplified by his 'Duport' and 'Mara' cellos (both of 1711), had become accepted as the norm.

Some makers, such as the Austrian-born David Tecchler (*b* 1668; *d* after 1747) in Rome, were still making larger cellos (known as 'church basses' in England) into the middle of the 18th century. In his treatise on playing the flute (*Versuch*, Berlin, 1752), J.J. Quantz also mentions the need for cellos of two sizes: the larger with thick strings for orchestral (ripieno) playing, and the smaller with thin strings for solos.

During the course of the 18th century, many of these larger, late 17th- and early 18th-century instruments were cut down in size to conform to the smaller dimensions established by Stradivari. This reconstruction often also included a new, stronger bass bar and a longer, thinner neck. At the time, such 'repairs' were considered desirable by players, but the unfortunate results of such alterations were often detrimental to the integrity of an instrument's acoustic design. Very few examples remain today of early cellos with original body dimensions, neck, fingerboard or bass bar. Those that have survived in original condition point to an early 18th-century cello with a fingerboard pitch (upwards angle from the plane of the table) giving a bridge height of at least 7·6 cm, achieved by inserting a wedge under the fingerboard. This degree of fingerboard pitch is high when compared with that of contemporaneous examples of violin construction, on which the fingerboard is generally closer to the parallel with the table of the instrument.

The earliest documented measurements for the neck and fingerboard of a cello are those of James Talbot (*c*1695) who gives 10 inches (25·4 cm) as the length of the neck (nut to shoulder) and 13 inches (33·8 cm) from the nut to the end of the fingerboard, allowing for a range of stopped notes to approximately *a′*. A string length, from nut to bridge, of around 68·8 cm was standard by the middle of the 18th century. The fingerboard gained length as the range of hand positions demanded by players increased during the 18th century to encompass four octaves, and playing in thumb position became more widely used. Iconographical and documentary evidence indicates that the standard fingerboard length was about 60·7 cm by the early 19th century. Frets were still used on some cellos in the mid-18th century, as observed by Quantz (1752), and advocated by Robert Crome in his tutor (C1765). (For a discussion of use of the Endpin and other methods of supporting the cello, see §II, 2(i), below.)

(ii) Five-string and piccolo cellos. Although cellos with four strings predominated in Italy by the end of the 17th century, cellos with more than four strings were still used elsewhere. The advent of thumb position fingerings (the technique in which the whole hand is put on top of the strings with the thumb placed across and perpendicular to them, functioning as a moveable nut in relation to the other fingers) may have caused the redundancy of cellos with more than four strings at the beginning of the 18th century. However, five-string cellos were used in Germany into the middle of the 18th century. In addition to J.S. Bach's solo cello suite no.6 BWV1012, written for a five-string cello, the cello part of his cantata *Gott ist mein König* BWV71, requires a range extended to *c″* (*f″* in Bach's

original, unorchestrated version), suggesting that an E string would have been required for the execution of this part. Five-string cellos also appear in numerous Dutch, Flemish and German paintings and etchings from the 17th and 18th centuries. (see fig.2).

The correct definition of the *violoncello piccolo* has been widely debated. At least eight of Bach's cantatas written between 1724 and 1726 have obbligato parts designated as such. The term *piccolo* means 'small'. An original cello pattern of Antonio Stradivari is labelled *forma B piccola di violincello* but it is likely that Stradivari sought simply to distinguish this new smaller pattern from his earlier larger instruments. But these *violoncello piccolo* parts by Bach imply that a four-string cello tuned *G–d–a–e′* was used.

A late 18th-century account by E.L. Gerber (whose father was a student of Bach) claimed that Bach invented a special sort of small cello or large viola – called a *viola pomposa* – to facilitate the execution of rapid obbligato parts in the bass (see W. Neumann and H.-J. Schulze, D1972, p.469). Dreyfus (D1987) has suggested that this instrument may have been the same as the VIOLA DA SPALLA ('shoulder-viola') mentioned by J.J. Walther in his *Musicalisches Lexicon* (Leipzig, 1732), which was tuned like a cello but with an added fifth string and held over the shoulder by a strap. However, there is evidence of the earlier existence of both small and large four- and five-string instruments (Stradivari, apparently, also made a five-string viola), and it seems doubtful that this was actually Bach's invention. Rather, it reflects the broad variety of instrument sizes and types still being used in Germany around 1720, and the terminological amibiguity associated with them. (Surviving instruments that may be examples of the *viola pomposa*, *viola da spalla*, or *violoncello piccolo* are listed by M.M. Smith, B1998.)

(iii) 19th century. The basic design of the cello changed very little in the 19th century from that established in the 18th century. 19th-century cello manufacture continued to rely principally on older Italian models, especially Stradivari's model 'B'. However, crude alterations to older cellos at the beginning of the 19th century were very common. Exhortations against these practices occur frequently in 19th-century treatises and literature on violin-making, and suggest that efforts to establish more firmly the standard dimensions of the cello at this time occurred in response to the damage to many fine old instruments caused by these 'repairs'.

The German cellist B.H. Romberg (1767–1841) experimented with minor modifications to the cello's set-up and was responsible for inventing the practice (known as the 'Romberg') of slightly scooping out and angling the upper surface of the bass side of the fingerboard to accommodate the wide vibrations of the C string; this is especially necessary when played in high positions. It is clear from contemporary accounts that this invention, as well as alterations to the neck, did not meet with universal approval until the end of the 19th century.

It is possible that the two sizes of cello continued to be used into the 19th century. Two different terms were still used in the Paris Conservatoire *Méthode* (1805): *violoncelle* to describe the solo instrument, and *basse* for the accompaniment and orchestral instrument.

(iv) Makers. The high demand for cellos in Italy during the period 1680-1740 was reflected the growing output of Italian makers. In addition to Stradivari, other North Italian makers of good cellos in the late 17th and early 18th centuries included Domenico Montagnana, Sanctus Seraphin, Pietro Guarneri and Matteo Goffriller in Venice; Francesco Rugeri, G.B. Rogeri and Andrea and Guiseppe Guarneri in Cremona; P.G. Guarneri in Mantua; the Grancino and Testore families in Milan; and (slightly later) G.B. Guadagnini in Turin. The Gagliano family in Naples made cellos from about 1700 for well over a century. An important 19th-century maker was Giuseppe Rocca in Turin (later in Genoa).

Jacob Stainer (*c*1617–1683), worked in Absam in the Austrian Tyrol but may have been trained as a luthier in Italy. Tyrolean cellos are distinct in their high arching and square upper bouts. Stainer's influence can be seen in the prevalence of these characteristics in cellos of successive Austro-German makers, particularly the Klotz family (founders of the Mittenwald School), and in the instruments of early English makers.

In addition to Stainer, 17th- and 18th-century English violin-making was influenced by the Brescian school of Maggini. The earliest cello identifiable as 'English' was made by William Baker in Oxford in 1672. Other important early makers of cellos in London were Barak Norman (1651–1724), Nathaniel Cross (*c*1689–1751) and Peter Wamsley (*fl* 1725–45). Succeeding generations produced a large number of excellent makers of cellos. Among these were Benjamin Banks, Richard Duke, Thomas Kennedy, Vincenzo Panormo, and the Betts, Dodd, Forster and Hill families. Makers in the second half of the 18th century were influenced by the work of Stradivari and the Cremonese school, although features of the earlier English style were retained, such as high arching of the back and belly, and square bouts.

In France the documented ownership of good Italian instruments by prominent 18th-century French cellists, such as J.L. Duport, suggests that fine Italian cellos were readily available and preferred over locally manufactured instruments. However, French makers later achieved high standards in the production of cellos, such as the Lupot family in the second half of the 18th century, and Vuillaume in the 19th.

(v) The bow. The evolution of the cello bow in the 18th century was influenced by that of both the violin and viola da gamba. Early cellists used bows of many different sizes; measurements of pre-Tourte, 18th-century bows range from approximately 67 cm to 74 cm in length and weigh from 65 to 86 grams. Italian players were known to use thicker strings and correspondingly heavier bows that produced more sound. Quantz also provides evidence that cellists may have used different types of bow hair: coarser black hair on a heavier bow for orchestral use and white hair on a lighter bow for solo playing.

Experiments with violin bow design in the second half of the 18th century affected cello bow manufacture. The technical requirements of repertory composed by cellists associated with Mannheim, such as Anton Fils (1733–60) and Peter Ritter (1763–1846), suggest the use of a concave rather than convex bow in Germany as early as 1760, because of the leverage required to make many passages in thumb position on the thick lower two strings sound well.

François TOURTE perfected his bow design by 1786. J.L. Duport (1749–1819) discussed the merits of different bow lengths, weights and hair tightness in his *Essai* (*c*1806), and specifically recommended Tourte's bows,

stating that 'there is no one who has succeeded better in our day in the manufacture of bows than Mr Tourte jr', and that Tourte's pre-eminence as bowmaker was generally acknowledged at the time. With the perfection of the modern bow design by Tourte, most players began using the concave bow because of its strength of tone and capacity to sustain a legato line. The length of the stick of Tourte's cello bows ranged between 72 cm to 73·6 cm, with the hair length 60 cm to 62 cm. The balance point of the bow was approximately 18·2 cm from the end of the frog.

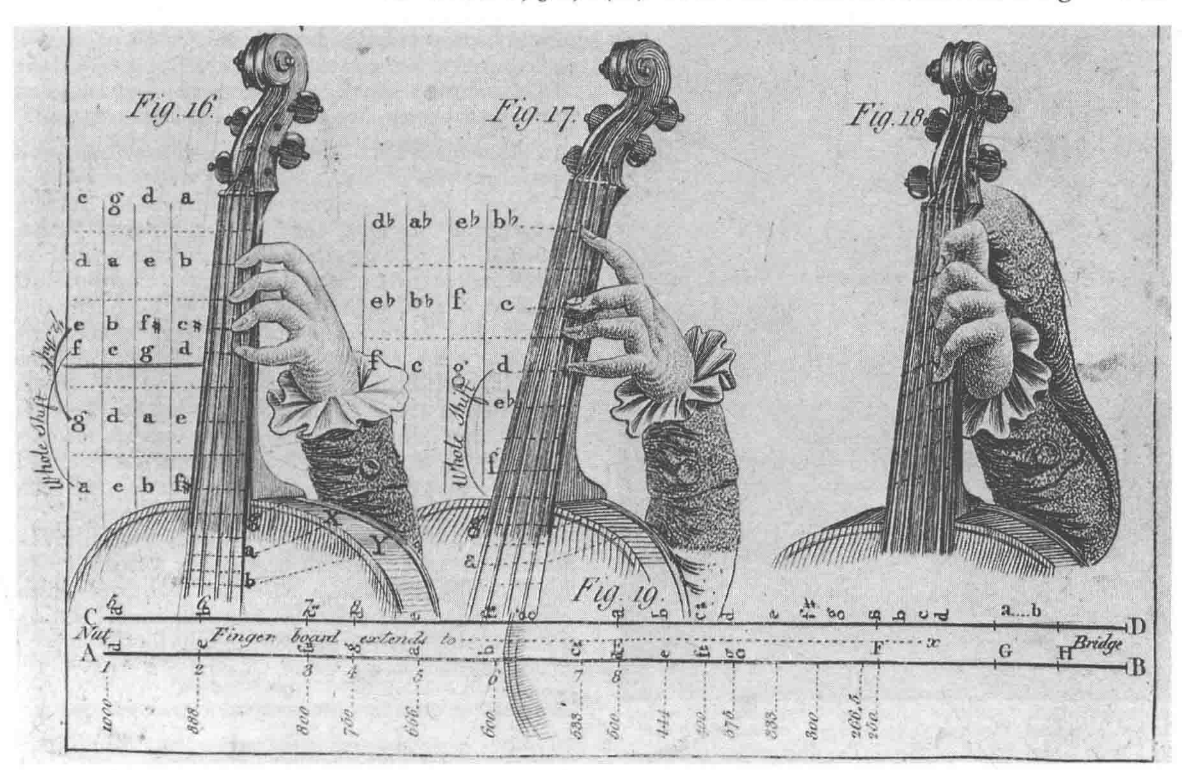
There were relatively few changes to bow design after Tourte's, and these were mainly concerned with increasing the power of the bow or affording the player greater convenience. The leading French makers of cellos bows in the mid-19th century were F.N. Voirin and Dominique Peccatte, both of whom worked in the Parisian workshop of Vuillaume and whose bows often bear his stamp. Other fine French makers of cello bows included A.J. Lamy, E.F. Ouchard and Pierre Simon. The Dodd family produced excellent bows in London in the early 19th century, although some bear the stamp 'Forster', representing the shop where they worked (*see* BOW, §I, 3–4).

2. TECHNIQUE.

(i) Holding the cello. Although all treatises and tutors of the 18th and early 19th centuries advocate supporting the cello by holding it solely with the legs, iconographic and documentary evidence indicates that endpins, stools and boxes were used by cello players, probably for reasons of acoustic enhancement or comfort, throughout the 18th century. The use of a wooden peg to support the cello is mentioned by Robert Crome in his *Compleat Tutor* (Cc1765) and by Corrette in his *Méthode* (C1741), as an aid for cellists when they were required to stand.

J.-L. Duport (C1806) noted that the cello could be held in varying ways according to the 'habits and stature of persons'. He stated that the usual method of supporting the cello was to sit very far forward on a chair with the left foot forward and the right drawn back, so that the left-hand corner of the cello falls into the hollow of the right knee with the weight of the cello resting against the left leg. The right leg steadies the instrument against the lower right side of the cello. Etchings from 18th and 19th century treatises often show the right calf enveloping the top of the lower right bout, probably for stability. Romberg (C1839) emphasized the importance of maintaining good posture when sitting with the cello, warning against slumping: 'stiffness in the arm generally proceeds from bending the body too much forward, and raising the elbows too high. This defect may be also avoided in playing the violoncello, by sitting quite straight, and taking care not to raise the shoulders'.

The endpin re-emerged only at the end of the 19th century. Its use was recommended for the first time in print only from 1882, by Jules de Swert (*The Violoncello*, London, 1882), a pupil of A.F. Servais. Servais began to use an endpin to support his cello about 1860, when he became too portly to hold his large-sized Stradivari cello solely with his legs. Being such a prominent performer and teacher, he has been erroneously credited with its invention because he promoted its use. Since cellists in the 19th century did not generally use endpins, his adoption of this manner of supporting the cello was considered innovative at the time.



Other cellists in his circle followed suit, probably encouraged by his example and relishing the greater comfort it afforded, especially when playing in high positions. The adjustable endpin was introduced after 1890. An increase in the number of women cellists in the late 19th and early 20th centuries, especially in England, may reflect the greater freedom the endpin offered, allowing the cello to be held in a side-saddle manner that did not conflict with prevailing rules of decorum. Lisa Cristiani (1827–53) was the only notable female cellist before the late 19th century.

Various types of endpin material – such as wood or metal – were thought to have special acoustic properties; Hugo Becker (1864–1941) apparently used not only a wooden endpin, but rested it on a box to enhance and augment his cello's tone. Many prominent late 19th-century cellists, such as Alfredo Piatti (1822–1901) and Robert Haussmann (1852–1909), never used an endpin. Haussman was closely associated with Brahms and known to produce a very powerful tone. A photograph of the young David Popper from 1861 shows him holding the cello in the older manner, without an endpin.

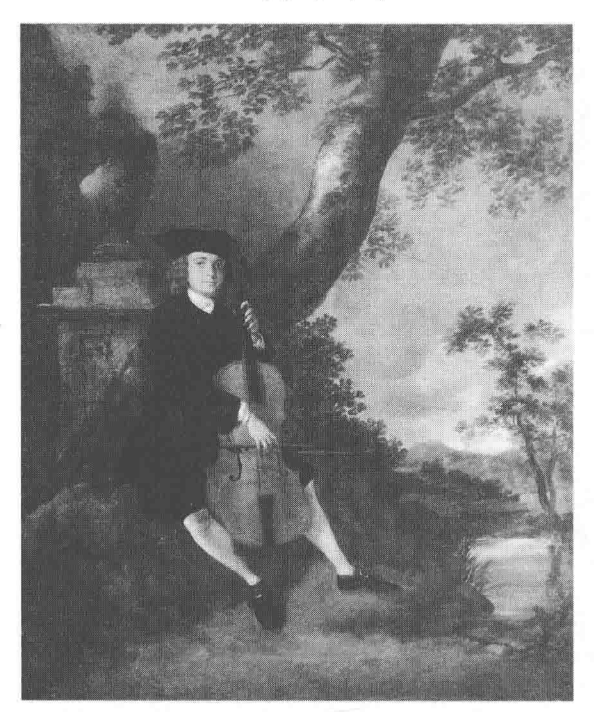
(ii) Left-hand technique and fingering. According to John Gunn in his *Theory and Practice of Fingering on the Violoncello* (C1789), earlier cellists held the neck of the cello with the fingers of the left hand at a slanted, oblique angle and the thumb behind the first finger (fig.6). This position, a diatonic fingering system adapted from the violin, was adopted by English cellists, probably following Italian models, and is documented elsewhere as being used by some late 18th-century cellists, such as J.B. Janson (1742–1803), J.B. Tricklir (1750–1813), and Romberg as late as 1839.

The earliest French cellists, who were usually trained as viol players (such as Martin Berteau), adapted the left-hand technique of the viol, which is based on semitones, to the cello. In this technique the fingers are perpendicular to the strings and fingerboard, with the thumb opposite the second finger of the left hand. Corrette also advised placing the thumb opposite the second finger, stating that 'those who play the bass viol learn the neck of the cello more easily than do the others. They already possess the finger technique and almost the positions of the cello'. Duport was quite specific in his instruction that the thumb should be placed exactly between the first and second fingers of the left hand, and parallel with them. This system, as developed and systematized by Duport, was widely accepted by cellists at the beginning of the 19th century and provides the basis of modern left-hand technique. Romberg stated that an oblique left-hand position in the higher positions of the neck, with rounded fingers, afforded the player greater power in the left hand, and he commented on the relative lack thereof in Duport's position, although being more perpendicular to the fingerboard, the latter allowed greater relaxation of the palm and base joints of the left hand.

Virtuoso left-hand techniques, such as the use of thumb position, were developed early in the 18th century by Italian cellists such as Salvatore Lanzetti (*c*1710–80). The origins of thumb position are unclear, although it may be linked to the technique of playing the trumpet marine, on which harmonics were produced by placing the left thumb lightly on the string and drawing forceful bow strokes. Corrette's *Méthode* contains the first documented reference to the use of thumb position, although earlier cello

6. Violoncello hand positions, (left) 1st position, (centre) extended position and (right) the position described by Gunn as 'formerly much in use, and originating probably from the position of the hand on the violin': engraving from John Gunn's 'The Theory and Practice of Fingering the Violoncello' (London, 1789)

compositions indicate that thumb position was already being use by Italian cellists at this time. French cellists, beginning with Berteau, used harmonics as a technical effect, and works written by prominent 18th-century French cellists such as Jean Barrière, J.-B.-A. Janson, J.-P. Duport and J.B. Bréval often feature passage-work in the highest positions. 18th-century German virtuosos favoured thumb position fingerings for passage-work, using stationary, 'blocked' hand positions with fingerings across the strings, thus avoiding frequent position changes. They also had a propensity to use the fourth finger in thumb position. French cellists avoided using the C string until the early 19th century, possibly because of the lower pitch standard in Paris and the resulting lower tension of the string.



(iii) Vibrato. VIBRATO is mentioned in a few 18th- and 19th-century treatises. Called the 'close shake' or 'tremolo', Dotzauer (C1832) referred to it as being practiced primarily by Italian players, and suggested that it should be used to intensify long notes. Romberg gave examples with specific notation for vibrato on long notes, but stated that it should occur only at the beginning of the note and not be sustained. Both Dotzauer and Romberg recommended using vibrato judiciously. Romberg comments 'formerly, the close shake was in such repute that it was applied indiscriminately to every note of whatever duration. This produced a most disagreeable and whining effect, and we cannot be too thankful that an improved taste has at length exploded the abuse of this embellishment'. Later cellists, such as O.-C. Vaslin (1794–1889) and Bernhard Cossmann (1822–1910), also seem to have used vibrato sparingly and commented that its over-use was in poor taste. It is likely that cellists of the French school used little, if any, vibrato, focussing instead on nuances of bowing for beauty of tone and expression.

(iv) Bowing. The bow was held in a variety of ways by 18th-century cellists. The underhand grip, derived from viol technique, was still used towards the end of the 18th century by some players, such as Antonio Vandini (*c*1700–73) and J.G. Schetky (1737–1824). Quantz makes reference to its frequent use in Germany in the mid-18th century (see fig.4 above).

The most common way of holding the lighter, convex bow was the violin-influenced overhand grip, above the frog, with the thumb under the stick (fig.7). Corrette (C1741) reported that Italian players held the bow in this manner, although he gave two alternative overhand grips that he considered to be equally good: one as that described above, but with the thumb under the hair; and the other with the thumb underneath the frog.

Tourte's perfecting of the concave bowstick design greatly affected cello bowing technique and tone production. Duport advocated holding the bow with a flat thumb on the stick above the frog, between the second and third fingers, with the little finger balancing the movements of the hand and bow. He also recommended that the second finger should bear on the hair, and suggested that mobility in the fingers of the right hand on the stick is necessary to facilitate expression in the bow. The use of the bow grip above the frog is documented in France, England and Spain to the end of the 19th century.

French bowing in the 18th and 19th centuries was characterized by use of regulated bow strokes and varied bowing styles. The custom of holding the bow above the

7. *'Rev. John Chafy Playing a Violoncello in a Landscape': portrait by Thomas Gainsborough, c1750–52 (Tate Britain, London)*

frog allowed for development of light and off-the-string virtuoso bowing techniques, such as slurred staccato.

In Germany, Romberg and his pupils, including Friedrich Dotzauer (1783–1860), held the bow on the frog, allowing for increased leverage and bowing power. It is possible that this manner of holding the bow developed when concave sticks began to be used in Mannheim in the third quarter of the 18th century, although this manner of using the bow was not univerally adopted in Germany. It was consistent with bowing technique of the French violin school of Viotti, whom Romberg greatly admired. Romberg advocated holding the bow very firmly in the hand, with a straight thumb and fingers, in a position which he stressed should remain constant while bowing, irrespective of direction. The arm should remain low and relaxed, hanging close to the body. He admonished the student:

> it is only by placing the hand firmly on the bow, that a strong, powerful tone can be drawn from the instrument ... if the strength of the tone proceed from the arm, the instrument must be played with the arm held stiff; which entirely prevents a fine execution, and this is the cause that so few players arrive at perfection, they play with the arm and not with the hand.

The pervasive influence of the Dresden school, originating with Romberg's pupil Dotzauer (see §II, 4(ii)(a), below), can be seen in 19th-century German and Russian cello technique, and throughout the 20th century; today the frog-held bow is the standard practice of most modern cellists.

(v) Clefs. In the early 18th century, when Italian cellists dominated the field, vocal clefs were most commonly used, i.e. bass (*F*4) clef, combined with movable *c* clefs to notate passages in high positions. In the middle of the century, this practice changed and passages not written in bass clef were written in *g*2 clefs, both at pitch and transposed one octave below. By the latter part of the century, it was common practice for high solo passages in cello music to be notated in the *g*2 clef an octave above the actual pitch played, although accompaniments and lower parts were still written in bass and tenor (*c*4) clefs.

(vi) Accompaninent. The art of accompaniment was a special skill, the importance of which was emphasized in 18th- and early 19th-century cello methods (e.g. Baudiot, Baumgärtner, Corrette, Gunn, Kauer, Mozart, Quantz, Schetky). The accompanying cellist was seen as a subordinate partner to the principal melodic voice, instrumental or vocal, in aria, melody and recitative. Required skills for the cellist in this role included the regulation of time (rhythm, metre and tempo) in an ensemble, and the expressive articulation of musical character through the sensitive and appropriate use of bow strokes. There is some disagreement about adding ornaments to the bass in early sources, although this apparently was practised by the English cellist Robert Lindley well into the 19th century. J.B. Baumgärtner's *Instructions de musique ... à l'usage du violoncelle* (C*c*1774) provides detailed advice for cellists about how to accompany recitatives and harmonically embellish a bass line, with arpeggiated chords and double stops. Several 18th-century writers advocated using larger-sized instruments for the purpose of accompaniment (e.g. Gunn, Quantz).

3. 18TH-CENTURY USE, PERFORMERS AND REPERTORY.

(i) Italy. Notwithstanding the terminological ambiguity associated with the larger members of the violin family, lasting well into the 18th century, there is ample iconographic and musical evidence to show that the cello was firmly established as a member of the continuo group in Italy by the beginning of the 18th century. At that time the cello played an important role in the opera orchestras of Venice and Naples as an obbligato instrument in vocal accompaniment. The orchestra of the Teatro S Carlo in Naples had a well-fortified bass section in the mid-18th century, with two to three cellos, and an equal or larger number of double basses as the century progressed. Benedetto Marcello's comments (1720) about the excessive improvisational liberties taken by cellists when accompanying singers is indicative of both the players' high skill and the soloistic nature of their role in both arias and recitatives. In chamber ensembles the cello was the most common bowed instrument in the continuo group by the beginning of the 18th century. Italian compositions for solo cello increased in the early 18th century with the growing importance of the solo cellist in the orchestra and chamber ensemble (see §3(iv) below).

Numerous cellists were employed at the Basilica of S Marco in Venice in the late 17th century and the 18th as *maestri de' concerti* or as instrumentalists. Some of these were notable composers as well, such as Antonio Caldara (*c*1670–1736). Caldara is of special interest because of his migration to the Hofkapelle in Vienna after about 1700 and the resulting spread of Italian influence. His extant works include a collection of 16 cello sonatas and a chamber concerto. His manuscript *Lezioni* (*A-Wn* EM 69), consisting of 44 two-part pieces (alongside over 100 similar, though unattributed works), are among the earliest pedagogical works for the cello. Other significant Venetian repertory includes the six sonatas for cello and basso continuo by Benedetto Marcello (Amsterdam, *c*1734), and a large number of pieces for cello by Vivaldi, including nine extant continuo sonatas, and 27 concertos.

Domenico Della Bella was a cellist and *maestro di capella* at Treviso (*c*1700–15) whose compositions include four cello sonatas and a set of *sonate da chiesa* (Venice, 1704). These are characterized by contrapuntal writing and virtuoso solo parts, including multiple stopping.

Naples became an important centre of cello playing in the early 18th century, probably due to the rise of Neapolitan opera and the need for good cellists to accompany singers. Francesco Scipriani (1678–1753) wrote one of the earliest known instruction manuals: *Principij da imparare a suonare il violoncello e con 12 toccate a solo* (undated MS, *I-Nc*). His *Sonate a 2 violoncelli e basso* also require advanced fingering technique. The famous conservatories in Naples produced internationally recognized virtuosos in the early 18th century, such as Francesco Alborea (1691–1739) and Salvatore Lanzetti (*c*1710–80). Alborea, known popularly as 'Francisc(h)ello', was the most famous and admired virtuoso of the early 18th century, and his skill on the cello remained legendary for later generations of musicians including Quantz, Geminiani (as quoted by Burney) and Benda, although little documentary or musical evidence of Alborea's career has survived. From Naples he travelled to Rome and abroad, and in 1726–39 was employed as solo cellist to the Hofkapelle in Vienna, where he was the highest paid cellist there in the 18th century. Two attractive sonatas in manuscript are attributed to him.

Lanzetti, also became a touring cello virtuoso. He made his way to Paris and London, where he resided for an extended period until about 1754. He then went to Germany and returned to Italy, where he was employed in the royal chapel in Turin from about 1760. His *Principes* is among the earliest instruction manuals to pay special attention to fingering. Lanzetti's technical skill and innovative approach can be seen in his cello sonatas, which are some of the most interesting pieces for the instrument from this period. His Sonatas op.1 (Amsterdam, 1736) contain unusual and imaginative special effects, both musical and technical, and extend the upper range to *b″*. Thumb position is used extensively in these works, along with double, triple and quadruple stopping, rapid string crossings and passage-work and slurred staccato bowings.

Luigi Boccherini (1743–1805) was possibly the greatest cellist of the late 18th century. Evidence of Boccherini's virtuosity can be seen in his many technically challenging and attractive solo and chamber works for the cello, written in an elegant rococo style. The range is extended as high as *b♭‴* in his sonatas, and florid passages in the highest positions abound. Boccherini wrote 11 cello concertos, 34 sonatas for cello and basso continuo, and dozens of string quintets with two cellos.

Although a violinist, Francesco Geminiani (1687–1762) wrote six remarkably original and technically challenging continuo sonatas for cello (Paris, 1746), which he later transcribed for the violin. Other significant 18th-century Italian works for the cello include sonatas by Boni, Vandini, Platti, Porpora, Antoniotti, Bononcini, Pergolesi, J.-B. Canavas, Caporale, Cervetto, and Graziani. There are two concertos by Cirri, six by Leo, one each by E.F. Dall'Abaco, Porpora and Vandini, and 20 by Platti.

(ii) Austria and Germany. In Austria and Germany the cello appears to have been used primarily in dance music, or as a part of the continuo group to reinforce the bass or to play obbligato parts. It did not gain a more independent role until the second half of the 18th century.

In 1730 J.S. Bach's orchestra at Leipzig had two cellists and one violone player. By the second half of the 18th century, the number of cellists in German court orchestras began to increase to balance the expanding wind and brass sections. In the orchestra of the Prussian court at Berlin, for example, the ratio of cellos to basses were, respectively, 4:2 in 1754, 6:3 in 1783, and 8:4 in 1787. The orchestras at Mannheim in 1782 and Dresden in 1783 had slightly more modest sections with four cellos and three basses. At the same time, the numbers in Haydn's orchestra at Eszterháza remained relatively small: still only two cellos and two basses in 1783.

The six solo suites by J.S. Bach, along with the numerous obbligato parts in his cantatas and Brandenburg concertos, are anomalous in German music of the period, since music written specifically for solo cello before the middle of the 18th century is extremely rare. Composed at Cöthen about 1720, the technical demands of the suites suggest they were written for a player of high skill, either Christian Ferdinand Abel (according to the supposition of Spitta, although it is by no means certain that he played the cello) or C.B. Linike (1673–1751). Characteristic of the suites are complicated bowing patterns, the use of *batteries*, *bariolage*, arpeggios, multiple stopping, chords and a high degree of left hand virtuosity in the positions of the neck. Suite no.5 uses scordatura tuning. These demands are associated more with contemporary violin and viol performing practice than contemporary German cello technique as represented in obbligato and continuo cello parts. The sixth suite uses a five-string cello.

The Mannheim court was an important centre of cello playing in the 1750s. Anton Fils wrote numerous works for cello while employed at the Kapelle in 1754–60, including four concertos, sonatas and chamber works. They show an innovative approach to left-hand technique in the use of stationary, blocked hand positions for virtuoso passage-work, especially in thumb position. He also used thumb position on the G and C strings as a technical effect for contrasting registers. The Mannheim tradition was continued by Peter Ritter (1763–1846), who composed many solo works for the cello, as well as operas and chamber works.

Early Viennese works for the cello include concertos by M.G. Monn (1745) and G.C. Wagenseil (1752 and 1763). These show an emerging virtuosity in the Austrian school, the range employed by each composer extending to *d″* and *e″* respectively. Special techniques, such as *batteries*, *brisure*, double stopping and arpeggios are also used.

The cellists in the employ of the Kapelle of Prince Esterházy at the time of Haydn's association with the court provided the stimulus for an expanding repertory of significant works for the cello, and the emergence of a role distinct from its traditional bass line accompaniment function in ensembles. Already in the op.20 string quartets (1774), Haydn explored the concept of equal four-part writing and treated the cello as a principal melodic voice like that of the violin. His Concerto in C (*c*1761–5) is the first cello concerto by a major composer of the Classical period, although Haydn's interest in exploring the cello's technical possibilities in a concertante role can be seen already in several of the early symphonies (nos.6, 7, 8, 15, 31 and 45). Written for Joseph Weigl, then principal cellist at Eszterháza, the Concerto in C is a musical

masterpiece and a virtuoso showpiece for the cellist. It uses techniques similar to those employed by Fils in his concertos: fast passages implying the use of horizontal thumb position fingerings across three strings in blocked hand positions, arpeggios, *batteries*, *brisure*, double stops alternating with lower open strings, and lower-register sonorities. The range of the cello part extends to *a″*.

The Concerto in D (1783) was written for the Bohemian cellist, Anton Kraft (1749–1820), principal cellist at Eszterháza from 1778 to 1790. It was erroneously attributed to Kraft in Schilling's *Lexikon der Tonkunst* (1837), leading to a century of doubt about its authenticity until Haydn's autograph was found in Vienna in 1951. Its style and special technical effects give ample opportunity for virtuosity and expressiveness, suggesting that a high degree of collaboration between Kraft and Haydn may have occurred in the compositional process. Kraft's own compositions for the cello include virtuoso sonatas, duos, salon pieces and concertos for cello. These works, as well as the cello part of Beethoven's Triple Concerto op.56, written for Kraft, show his technical fluency. Techniques such as lower string octave passages, double stops in thumb position, *brisure*, passages specifically intended to be played on lower strings, arpeggios, *bariolage*, *batteries*, and bowing *sul ponticello*, are employed in these works. His playing was noted for its power and expressiveness, and he performed the premières of numerous works of Beethoven.

Beethoven demonstrated an early interest in writing for the cello. The two sonatas op.5 represented an experiment with a new type of ensemble: cello alone with piano. Written for performance by Beethoven and Duport in 1796 at the royal court at Berlin, these works incorporate technical effects characteristic of Duport's style and give the cello an unprecedented equality with the piano part.

The interest of 18th-century Prussian monarchs in music, and the cello in particular, provided the stimulus for a large number of good compositions for the cello. In addition to the works by Beethoven, C.P.E. Bach wrote three concertos for cello, and Boccherini, as court composer to Friedrich Wilhelm II, dedicated numerous pieces to the king. The cello also has a prominent part in chamber works written for this monarch, such as Mozart's three 'Prussian' Quartets K575, 589 and 590, and Haydn's Quartets op.50.

Other prominent expatriate Bohemian cellists of the 18th century include J.B. Mara (1744–1808), whose dissolute lifestyle ruined his promising career, Josef Reicha (1752–95), who was employed as musical director at the court in Bonn from 1787, and Jan Šťastný (*c*1764–*c*1826), whose works for the cello have retained a place in the repertory.

(iii) Britain. Although it is possible that the cello came to England in the first half of the 17th century, the earliest cello identifiable as 'English' was made by William Baker in Oxford in 1672. This date corresponds with the rising popularity of Italian-style opera and chamber music in 17th-century England, which would have called for a cello rather than a bass viol. The cello, sometimes known as the 'church bass' or even 'bass viol' in this context, also had an important role in 18th-century England as the favoured continuo instrument in those parishes which used an instrumental ensemble to accompany the church choir, instead of an organ (*see* BASS VIOL; this practice carried on in the British and US churches well into the 19th century). The cello in England also has associations with the aristocratic class: both Frederick Louis, Prince of Wales (1707–51; *see* MANDOLIN, fig.2), and George IV (1762–1830) played the cello. Numerous instruments were commissioned by the royal family from contemporary makers (e.g. the younger William Forster's 'Royal George' cello, *c*1782). The instrument's popularity undoubtedly was enhanced by the large number of tutors and music published during the 18th century for the amateur market, and by the London performances of Italian and French cellists, beginning early in the century.

It was migrating Italian cellists, such as Lanzetti, Giovanni Bononcini (1670–1747) and Giacobbe Basevi Cervetto (1680–1783), Andrea Caporale (*fl* mid-18th century), Guiseppe Dall'Abaco (1662–1726) and Pasqualini de Marzis (*fl* 1740s), who established cello playing in England in the late 17th and early 18th centuries. Many of these produced works for the burgeoning English music publishing market. Cervetto's son, James (1748–1837), and John Crosdill (1751–1825) were the leading English cellists of the latter half of the 18th century and both men enjoyed highly successful performing careers. Robert Lindley (1776–1855), a pupil of James Cervetto, exceeded his master in ability and reputation.

John Gunn's *Theory and Practice in Fingering on the Violoncello* (C1789) is the most comprehensive English treatise of the 18th century on cello technique and the history of stringed instruments. Aimed at the musically literate amateur, it provides a detailed glimpse into technical practices and musical aesthetics in England at the time. Gunn's discussion of fingering includes reference to the Italian oblique left hand position as being 'formerly much in use' (fig.6). It is not clear what caused the old-fashioned, consecutive diatonic system of fingering to be superseded by the semitone system of finger spacing, although it may be indicative of French influence on the English school, possibly through Crosdill, who studied with J.-P. Duport.

(iv) France. Although the cello was used for the basso continuo in Italy by the middle of the 17th century, supplanting the viol, in France the latter remained the favoured chamber music instrument into the 18th century. Hubert Le Blanc's *Defense de la basse de viole contre les entreprises du violon et les prétensions du violoncel* (C1740) colourfully expresses the resistance with which the cello, along with other Italian influences, was greeted by musical conservatives in France. Le Blanc wrote that the cello, 'a miserable dunce, hated, & a poor devil ... now flatters himself that in place of the bass viol, he will receive many caresses', and compared its tone quality to the trumpet marine. However, from the late 17th century there is clear evidence that the cello was preferred to accompany the violin. The penetrating tone of the violin and cello was better suited to public concerts, such as the Concert Spirituel, which was inaugurated in the 1720s.

In his *Méthode* (C1741), the earliest dated instruction manual on playing the cello, Michel Corrette described the cello as the ideal bass-line instrument, attributing to it excellent sonority, capacity for volume, articulate and clean tone, and versatility as the bass instrument in different types of ensembles. Other testimony to the rapid rise in the cello's popularity in France is the fact that the Parisian music publisher Le Clerc produced at least 26 volumes of French and Italian cello sonatas between 1738 and 1750. A relatively large number of low string

instruments were used in the orchestra of the Paris Opéra: eight basses (combined) in 1713, eight cellos and four double basses in 1763, and 12 cellos and five basses in 1790. Four sets of cello sonatas were published by JEAN BARRIÈRE (1707–47) between 1733 and 1739. A member of the Académie Royale de Musique from 1730, he was noted for the precision of his playing. His works require an advanced command of left-hand and bowing techniques, and show a strong Italian influence in style, possibly due to Barrière's sojourn in Italy, 1726–9. They are unusual in that the accompaniments are sometimes written with separate parts for keyboard and a second cello, often as elaborate as that of the solo part.

Corrette's *Méthode* was directed at both the beginner and the viol player taking up the cello for the first time. Martin Berteau (1708–71) was one such player who, according to legend, abandoned the viol for the cello after hearing Francischello (Francesco Alborea) play, and became the founder of the French school of cello playing. Of his cello compositions, only a set of six violoncello sonatas (Paris, 1748) and one study attributed to him (no.6 in J.-L. Duport's *21 exercices*, *c*1813) are extant. However, his influence as the teacher of a small but important group of Parisian cellists had a profound impact on the development of cello playing. Berteau's noteworthy students included François Cupis (1732–1808) and his nephew Jean-Baptiste (*b* 1741), J.-P. Duport (1741–1818), J.-B.-A.J. Janson (1742–1803) and J.B. Tillière (*c*1740–90). Tillière published a cello tutor in 1764 which was followed by a more detailed method by Jean-Baptiste Cupis in 1772, but the most highly regarded of Berteau's pupils was Jean-Pierre Duport. Among Duport's distinguished pupils were his brother Jean-Louis Duport, John Crosdill, Nikolaus Kraft (1778–1853), Peter Ritter and Crown Prince Friedrich Wilhelm of Prussia. The players of the French school were distinguished by smoothness and purity of tone, and a high degree of left-hand skill, especially in high positions.

J.-L. Duport's *Essai* (C1806), which credited Berteau with the development of technical principles for the cello, is an advanced exposition on both left-hand and bowing techniques. Although it is unknown how many students he taught, the methodical, thoroughly tested principles presented in the *Essai* shows Duport's extensive experience as a teacher. His systematic standardisation of fingering and bowing principles, and the *21 exercices* (Paris, *c*1813) that comprise the second part of the *Essai*, influenced successive generations of cellists and remain an important part of the advanced study repertoire to the present day.

J.-B.S. Bréval (1753–1823), a student of Cupis, was a cello virtuoso, a prolific composer and a teacher. However his comprehensive technical method, the *Traité du violoncelle* op.42 (C1804), was overshadowed by the publication of Duport's *Essai*. Bréval's works for solo cello include seven concertos and several sets of continuo sonatas. When the Paris Conservatoire was founded in 1795, Janson and J.-H. Levasseur (1764–1823) were appointed as cello professors. The official *Méthode* (C1804) of the Conservatoire was co-written by Levasseur, C.-N. Baudiot, C.-S. Catel and Pierre Baillot. Although it preceded the Duport *Essai* in date of publication, the professors of the new Conservatoire, particularly Levasseur, were already heavily influenced by Duport's teaching.

4. 19TH CENTURY.

(i) Use and repertory. The role of the cello in large and small ensembles in the 19th century followed the practice established in orchestral and chamber compositions of the last decades of the 18th century. The increasing number of cellist-composers enlarged the solo repertory, developing with it an expanded range of virtuoso techniques for both the left hand and the bow, although many compositions written by cellists for their own concert performances have failed the test of time.

A number of first-rate works by pre-eminent early 19th century composers feature the cello prominently. Works with piano include three later sonatas by Beethoven (opp.69 and 102), two by Mendelssohn (opp.45 and 58), and one sonata (op.65) and several shorter pieces by Chopin. The cello's capacity for cantilena playing in the tenor register, as well as for playing accompanying bass and tenor lines, is exploited by Romantic composers for dramatic and melodic effect in chamber works. Beethoven, Schubert, Schumann, Mendelssohn, Brahms, Tchaikovsky and Dvořák all wrote string quartets, quintets, trios and other works that contain prominent cello parts.

The core of the late 19th-century repertory for solo cello and orchestra consists of Schumann's Concerto in A minor op.129, the Brahms Double Concerto op.102, Dvořák's Concerto in B minor op.104, Tchaikovsky's *Rococo Variations*, Lalo's Concerto in D minor and the first (in A minor) of two concertos by Saint-Saëns. There are numerous significant works for cello and piano from this period, including two sonatas each by Brahms and Mendelssohn, sonatas by Strauss, Grieg and Saint-Saëns, the *Fünf Stücke im Volkston* by Schumann and the Fauré *Elégie*. Short salon pieces also abound.

In the operatic literature the cello section was often divided (e.g. Rossini's *Guillaume Tell*, Verdi's *Otello*, Puccini's *La bohème*), and many 19th-century operas have solo cello passages. In other orchestral works a solo cellist is often given important obbligato parts, for example the piano concertos in B♭ and A by Brahms and Liszt respectively, *Le carnival des animaux* by Saint-Saëns and *Don Quixote* by Strauss. Romantic composers also wrote section solos for the cellos in the symphonic repertory.

As the size of wind and brass sections of the symphony orchestra increased, the size of the cello section more than doubled for some large-scale works. Even as early as 1814, Beethoven's Seventh and Eighth Symphonies were performed using 12 cellos and seven basses, compared with two of each for his Symphonies nos.4–6. The Ninth Symphony reportedly had 12 of each, matching the double winds. Berlioz recommended the use of at least 11 cellos and nine basses for the *Symphonie fantastique*, and 29 cellos and 18 basses for his Requiem. Richard Wagner's orchestra at Bayreuth in 1876 had a relatively modest bass sections, consisting of 12 cellos and eight basses, the same numbers of players used by Richard Strauss for his major orchestral works, such as *Ein Heldenleben*. The Gewandhaus Orchestra, Leipzig, had three cellos and three basses in 1802, increasing to ten of each by 1890.

(ii) Performers and schools of playing. At the beginning of the 19th century distinct schools of cello playing existed in Austria and Germany, France, and England, with those of J.-L. Duport in France and Bernhard Romberg in Germany dominating. As a result of the migrations during the French Revolution there was interaction between the

various schools. Duport and Romberg shared an orchestra desk in Berlin for a brief period and other important cellists of the time also had contact with them. Romberg's powerful, expressive style of playing and technical prowess earned him the pre-eminent place among cellists of the early 19th century. He travelled extensively in Europe, giving concerts. His cantilena playing was particularly admired and many other sought to emulate his style of playing. His *Violoncell-Schule* (C1839) contains a comprehensive treatment of cello-playing and is an excellent source of information on early 19th-century performing practice in Germany, including elementary and advanced techniques, aspects of instrument set-up (including life-sized diagrams), elements of general musicianship, phrasing and expression, ensemble playing and musical style.

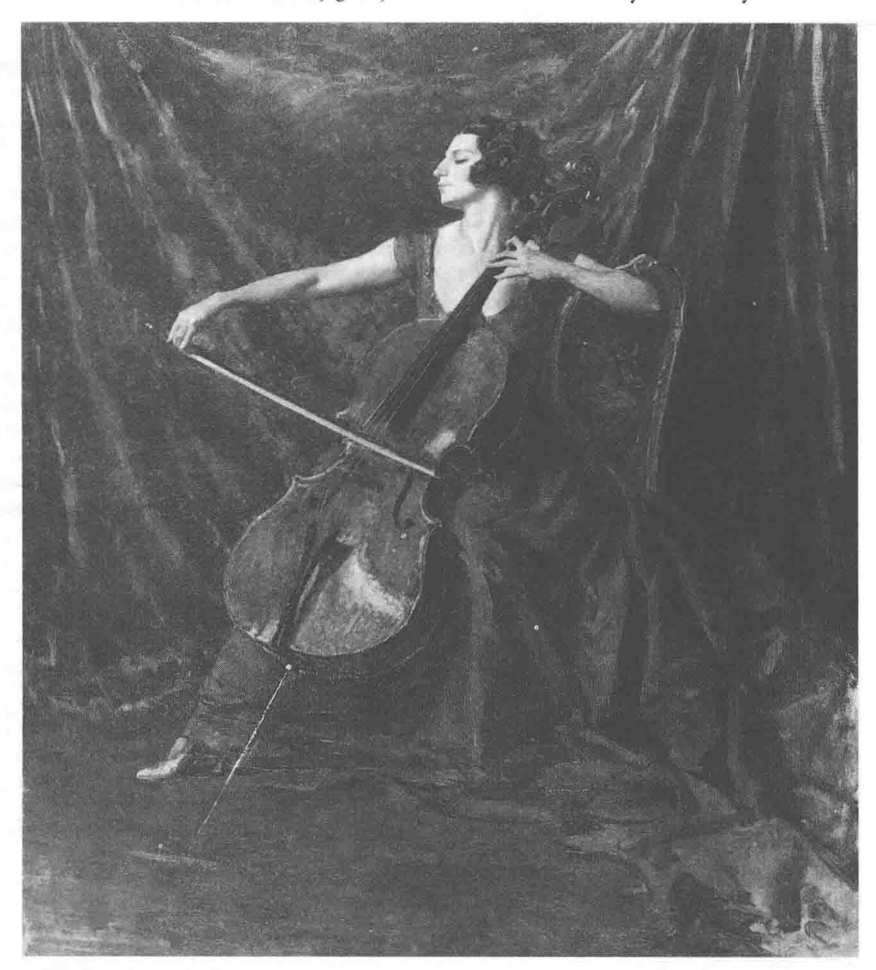
(a) Germany and the Dresden school. The ideas of Duport and Romberg were synthesized by Dotzauer, who studied with Duport's student, J.J. Kriegk (1750–1814), and later with Romberg himself in Berlin. Although Dotzauer was well-known as a performer and composer in his own time, he is best remembered for his contribution to cello pedagogy as the founder of the 'Dresden school'. His *Violoncell schule* (1832) predated Romberg's by seven years, and was the first significant method to appear by a German cellist. Dotzauer's many students included F.A. Kummer, K.L. Voigt, Karl Drechlser and Carl Schuberth, through whom the principles of Dotzauer's teaching were preserved and disseminated to other regions, including (through Schuberth) Russia.

Kummer succeeded Dotzauer in Dresden in 1852, both as solo cellist in the orchestra and professor at the Conservatory. Kummer was renowned for his natural technique and elegant musical style. His pedagogical works are among the most musically interesting from this period and have remained in the étude repertory to the present day. The systematic and progressive instruction contained his *Violoncell-Schule* (*c*1839) remains an invaluable resource for teachers and shows the musical emphasis which he placed on the teaching of technique. Kummer taught several significant 19th-century cellists, among them Julius Goltermann (1825–76), later professor at the Prague Conservatory, and Bernhard Cossmann.

Karl Drechsler (1800–73) was based in Dessau, where he served as principal cellist and professor. His students included Cossmann, and Friedrich Grützmacher (1832–1903). Grützmacher's influence dominated the Dresden school in the latter half of the 19th century. Hugo Becker (1864–1941), Diran Alexanian (1881–1954), and Julius Klengel (1859–1933), among the most influential cellists and teachers around the turn of the century, are all linked directly or indirectly to Grützmacher.

(b) France and Belgium. The technical principles of the French school, as outlined by Duport in his *Essai* and the Paris Conservatoire *Méthode*, were disseminated by his pupils and those of Janson. J.-M.H. Lamare (1772–1823) and Louis Norblin (1781–1854) were among the early graduates of the Paris Conservatory who became prominent cellists and teachers. N.J. Platel (1777–1835), a student of Lamare, eventually founded the Belgian school of playing when he was appointed professor at the Conservatory in Brussels in 1826.

Platel's student, A.F. Servais (1807–66), known as the 'Paganini' of the cello, rose to prominence because of his technical brilliance, graceful style and beautiful tone. Servais was a prolific composer for the cello, writing many works for his own concert performances, which contain innovative and arresting technical effects. Servais is credited with developing left-hand technique to new heights of virtuosity. His Six Caprices op.11 (Mainz, ?1854) features much passage-work in thumb position and double stops including octaves and 10ths. He performed extensively in Europe, including numerous concert tours to Russia, where his performances were an important catalyst for interest in the cello in the emerging Russian school. Servais succeeded Platel in the cello professorship at the Brussels Conservatory in 1848, where he instructed cellists such as Jules de Swert (1843–1891), Joseph Hollmann (1852–1927) and Ernest De Munck (1840–1915).



Auguste Franchomme (1808–84), a pupil of Norblin and Levasseur at the Paris Conservatoire, inherited the mantle of Duport. Highly successful as a solo cellist and known for his impeccable musicianship and beautiful cantilena, Franchomme was a close associate of Chopin and the dedicatee of the Sonata op.65. In 1846 he was appointed principal professor at the Conservatoire, a position he held until his death. His pupils included L.A. Vidal (1820–91) and Louis Hegyesi (1853–94).

(c) Italy. After Boccherini, no internationally prominent Italian cellist emerged until Alfredo Piatti (1822–1901), a pupil of Gaetano Zanetti and Merighi. Early concert successes led to an active career as both performer and teacher. His playing was greatly admired for its musical integrity, technical virtuosity and beauty of tone. His 12 Caprices (Berlin, 1875), explore a broad range of virtuoso techniques, such as slurred staccato, *sautillé*, *ricochet*, double and triple stopping, octaves and passages in thumb position.

(d) The English school. Robert Lindley was England's leading cellist for most of his life and taught at the RAM. His desk partner F.W. Crouch (*c*1808–44) was also an accomplished player and published a comprehensive treatise on the cello based on the Paris Conservatoire method. In 1846, Alfredo Piatti took up residence in London and, as professor at the RAM, influenced the next generation of English cellists, which included Edward Howell, W.E. Whitehouse and Leo Stern. Whitehouse and Howell were also very active as teachers at the RAM, the English pedagogical line from Whitehouse being particularly strong into the 20th century.

(e) The Russian school. The patronage of the Russian Counts Saltïkov and Mateusz Wielhorski, and of Prince N.B. Golitsïn (the latter two of whom were amateur cellists), was an important factor in generating a rich Russian musical life in the 19th century, and helped to stimulate interest in the cello. The sojourn of Romberg in Russia, where he fled following the invasion of Prussia by Napoleon in 1806, and his close association with Wielhorski in particular, laid the foundation for the Russian school.

K.Y. Davïdov (1838–89), a pupil of Carl Schuberth, is particularly associated with the Russian school, being the first Russian cellist to gain a professorship at the St Petersburg Conservatory in 1862. His training was based on the teaching of Grützmacher, and his high level of technical skill, purity of intonation and expressive playing set a new standard in his native Russia and abroad. Davïdov adopted a new system of fingering on the cello

8. Guilhermina Suggia ('Madame Suggia'): portrait by Augustus John, 1920–23 (Tate Britain, London)

(documented in his unfinished *Violoncell-Schule* Leipzig, 1888), in which the left hand has complete mobility over the entire compass of the fingerboard, without reference to fixed positions. Davïdov composed many attractive pieces for the instrument in the German Romantic style. Wilhelm Fitzenhagen (1848–90), a pupil of Grützmacher, was a soloist and chamber musician, and was also very influential as the teacher of many Russian cellists in the latter part of the century.

(f) The Czechs and Hungarians. Along with Davïdov, David Popper (1843–1913) was among the most influential cello virtuosos of the later 19th century. Born and educated in Prague, Popper was a prolific composer of advanced studies for the cello, as well as light showpieces, concertos and chamber works, all still very popular with modern performers. He was appointed professor at the National Hungarian Royal Academy of Music in Budapest in 1886, establishing the Hungarian school of cello playing. According to his contemporaries, Popper's mastery of the cello was unsurpassed, and his playing was characterized by musical refinement and rich tone, as well as faultless virtuosity, even in the highest register of the instrument. Popper, along with Piatti, was among the first 19th century cellists to revive interest in older masterpieces, by playing works such as the Haydn Concerto in D and the Schumann Concerto.

Popper's *Hohe Schule des Violoncello-Spiels* op.73 (Leipzig, 1901–5) is still among the most important pedagogical works for the cello, using advanced virtuoso techniques, such as double stopping and octaves, position changes in thumb position, trills, and bowing techniques such as slurred staccato, *sautillé*, spiccato, *piqué*, and rapid string crossings. The dazzling virtuoso salon pieces he wrote were innovative in their departure from the characteristically soulful quality of the cantilena style that was traditionally associated with the cello in the 19th century.

III. 20th century

1. History. 2. Repertory. 3. Jazz

1. History. With the proliferation of cellists the world over, the extraordinary development in the technique of the instrument under the guidance of the great teacher-performers and the way in which composers have accepted the challenges these developments offer, extending and enriching the repertory, the cello' identity as a solo instrument has been confirmed in the 20th century.

The endpin or spike was regarded as an accepted part of the instrument and revolutionized technique. It also allowed women to play the cello in a dignified manner. Before the 20th century, few women played the instrument owing to the way in which it was held, although a handful of women compromised by playing 'side-saddle'. The invention of the endpin brought about the liberation of women cellists, and the pioneers included May Mukle (1880–1963), Guilhermina Suggia (1888–1950; fig.8) and

Beatrice Harrison (1892–1965). Paul Tortelier later devised the longer, angled spike which was also adopted by Mstislav Rostropovich (fig.9). By raising the point at which the bow touches the strings and the incline of the strings towards the horizontal it is said to be easier for the left hand to negotiate the upper part of the fingerboard. However, most cellists today employ the shorter, straight endpin.

During the 20th century many large concert halls were built; consequently there arose a need for a larger sound. Players began experimenting with steel or steel-covered gut strings, replacing the gut strings in use until this time. Although steel strings are the most widely used today, some cellists have reverted to gut for some if not all of their strings.

In other respects, the construction of the instrument itself has not changed, having reached a standard form in the previous century. However, the proliferation of cellists throughout the world has called for more instruments to be available. The old Italian and German instruments still fetch high prices for those who can afford to pay, but there is a constant demand for good new instruments, and good makers are now emerging from all over the world who are responding to this demand.

At the beginning of the 20th century, the German school of cello playing was leading the field with many distinguished soloists and chamber music players, many of whom were also teachers. The two most influential figures were Julius Klengel (1859–1933) and Hugo Becker (1864–1941). Although both stemmed from the Dresden school, in their approach they were poles apart. Becker concentrated on the scientific aspect, having made researches into anatomy and physiology, whereas Klengel favoured an empirical approach.

Klengel was a fine soloist and a respected composer. He also wrote a number of teaching works, some of which are still in use. He taught at the Leipzing Conservatory, and many of his students achieved international reputations; these included Emanuel Feuermann, Guilhermina Suggia, Edmund Kurtz, Gregor Piatigorsky and William

9. Violoncello with bent endpin: Mstislav Rostropovich with Benjamin Britten, 1964

Pleeth. Piatigorsky said that he 'taught without teaching' and always allowed a student to play a piece to the end. Pleeth confirmed this view: 'he had no whims, no sophistication and never encouraged us to copy. We were all different'.

Becker was also a fine performer in his earlier days, but latterly he concentrated upon teaching. In complete contrast to Klengel, he made explorations into the physiological aspects of performance and attempted to align these to the most natural way of playing. Many cellists criticized his dogmatic and logical approach; Raya Garbousova said that he was 'obsessed with anatomy, but never took into consideration the fact that no two people are identical in this respect'.

But it was Pablo Casals (1876–1973) who brought the cello into equal popularity with the violin as a solo instrument. For him, technique was a means, not an end: 'The purpose of technique is to transmit the inner meaning, the message of the music. The most perfect technique is that which is not noticed at all'. Casals popularized chamber music and, in particular, brought the Bach solo suites into the regular cello recital repertory.

Ever since the publication of Duport's *Essai* (C1806), the left-hand technique has been based on a series of positions, together with the use of the thumb. While acknowledging the notion of positions, Casals favoured giving weight and freedom to every finger, allowing the centre of gravity to shift from one finger to another. By using extension of the left hand undesirable glissandos, which were in common use before this time, could be avoided and portamento used only for special effect. The use of the first and second fingers to encompass a tone in the lower position required a different lay of the hand: the traditional 'square' lay of the hand had militated against a smooth flow of position changing and portamentos. These developments in cello playing released energy in the service of expression.

When Casals described his method as 'Freedom with Order', he was referring to his overall approach to playing the instrument. He taught the importance of relaxation and how to train the left hand to create a balance between tension and relaxation. Casals' principles are explained by his disciple, Diran Alexanian, in the *Traité théorique et pratique du violoncelle* (Paris, 1922). It covers half-step shifts with the same finger, shifting in repeated finger patterns, minimum shifting within phrases, contractions and extensions, as well as plucking the string with the left hand to ensure precise articulation in descending passages and percussive finger-falls in ascending passages.

Casals' pupil and close friend Maurice Eisenberg (with M.B. Stanfield) gave a full exposition of Casals' left-hand technique in his *Cello Playing of Today* (D1957). Eisenberg had previously studied with Klengel, Alexanian and Willeke; in his preface he states that working with cellists of different 'schools' enabled him to 'see the changing outlook of our epoch in a clear perspective'. He also notes that Casals' more natural way of holding the instrument serves interpretative ends. Eisenberg's manual includes thumb-position drills, studies of unisons, tenths, fingered octaves and fingerings for major and minor scales and arpeggios on all strings, and for double stops, chords and harmonics. Eisenberg spoke of 'vocalization' and 'the living hand': 'the hand must be trained to be so vital and flexible that as soon as a finger strikes its note, the preparation for the following note begins' and, according to Eisenberg, 'the hand shifting must never be audible. When the hand moves backwards across the strings to a lower position, the thumb should act as a pivot over which the extended fingers are shifted swiftly and smoothly'.

The Hungarian-born cellist Janos Starker systemized this by introducing position control: discarding the idea of seven positions and the thumb-position he developed a unique system of the same control for every half tone all over the cello, which represented a minor revolution in cello playing. In *An Organized Method of String Playing: Violoncello Exercises for the Left Hand* (1961), he offered examples from the repertory. More recently, Christopher Bunting's *Essay on the Craft of 'Cello-Playing* (C1982) covered aspects of technique and also of mental attitude.

Many other 20th-century cellists have contributed to the development of the instrument. They include Alexander Baillie, Christopher Bunting, Gaspar Cassado, Orlando Cole, Rohan da Saram, Joan Dickson, Emanuel Feuermann, Amaryllis Fleming, Jacqueline du Pré, Pierre Fournier, Raya Garbousova, Maurice Gendron, Karine Georgian, Natalia Gutman, Lynn Harrell, Florence Hooton, Steven Isserlis, Antonio Janigro, Ralph Kirshbaum, Julian Lloyd Webber, Yo-Yo Ma, Enrico Mainardi, Mischa Maisky, Zara Nelsova, Siegfried Palm, Gregor Piatigorsky, William Pleeth, Gabor Reijto, Leonard Rose, Miloš Sadlo, Felix Salmond, Eleanore Schoenfeld, Luigi Silva, Daniil Shafran, Frances Marie Uiti, Raphael Wallfisch and Phyllis Young. Many are or were also great teachers.

In the latter part of the 20th century teachers such as Joan Dickson (1921–94) and William Pleeth (1916–99) became less bound to 'schools', and there was a great deal more individuality in the way they attempted to understand their students, not only as musicians but psychologically. Some, following Pleeth, are of the opinion that too much emphasis is placed on technical perfection and would like to see a better marriage between technique and creative musicality. Casals himself said: 'Two things are essential – method and instinct'. He also maintained that, since his pupils had so many different opinions about his approach, it was proof that he never treated any two the same way.

2. Repertory. In the 20th century an enormous amount of music was written for the cello by composers from all over the world. Early in the century, cellists relied on the legacy of the late 19th-century repertory, and the early writing of the new century was in a lush, post-Romantic style: Rachmaninoff's Sonata in G minor (1901), Dohnányi's *Konzertstück* in D (1904), Bloch's *Schelomo* (1915–16), Fauré's two Sonatas (1918 and 1922) and Elgar's Concerto (1919) are but a few examples. Webern, in his atonal *Drei kleine Stücke* (1914), and Debussy, in his *Sonata* (1915), were among the first to break with Romantic tradition. The composers who followed include: in the UK, Bax, Benjamin, Bridge, Britten, Delius, Finzi, Holst, Ireland, Rubbra and Walton; in France, Caplet, d'Indy, Françaix, Honegger, Ibert, Milhaud, Poulenc and Tortelier; in Russia/former USSR, Denisov, Glazunov, Glière, Grechaninov, Gubaydulina, Kabalevsky, Khachaturian, Myaskovsky, Prokofiev, Shostakovich, Tishchenko and Ustvol′skaya; in the USA, Barber, Carter and Piston, and US citizens born elsewhere: Bloch, Hindemith, Krenek, Schoenberg and Stravinsky; Wellesz (Austria); the Czech Martinů; Henze (Germany); Pijper (Holland);

Bartók, Kodály (Hungary), Casella, Castelnuovo-Tedesco and Dallapiccola (Italy), Chávez (Mexico), Enescu (Romania), Villa-Lobos and Ginastera (S. America), Casals and Cassadó (Spain), Larsson (Sweden), Sallinen and Kokkonen (Finland).

Frank Bridge's *Oration, Concerto elegiaco* (1930) is, among English cello concertos, an early but important forward-looking work. Prokofiev wrote three concertos for cello, the first *Symphony-Concerto* (1950–51, rev. 1952), was published posthumously in 1955, completed by Rostropovich and orchestrated by Kabalevsky. Walton's Concerto (1955–6, rev. 1975), commissioned by Piatigorsky, exuding Mediterranean warmth and sensuality, came at the time when Romanticism became distinctly unfashionable and serialism was all the vogue. Written only six years later, Britten's Cello Symphony (1963, rev.1964) is dark, disturbing and highly innovative and incorporates many new ideas such as the clever use of trilled, stopped harmonics in the Scherzo.

Shostakovich's Cello Concerto no.1, op.107 (1959), brings several novel features such as a long passage where the cello is in dialogue with the celesta, playing harmonics and a cadenza which lasts for the entire third movement. Lutosławski's aleatory Cello Concerto (1969–70) is also a colourful and innovative work which is now firmly in the repertory; it uses quarter tones and employs rapid groups of notes to achieve percussive effects. Schnittke's First Cello Concerto (1986), written for Natalia Gutman, is an exceedingly difficult work and expressive on an epic scale. In the final apotheosis the cello leads a hymn-like processional, and in order to avoid being drowned by the orchestral crescendo, the cello is amplified, creating a very beautiful and unearthly effect.

Samuel Barber's concerto (1945) is one of the most challenging works known for the cello (Leonard Rose once proclaimed it to be the most difficult piece he had ever encountered). Rostropovich, one of the major musical figures of the latter half of the 20th century, commissioned over 100 works for his instrument from composers such as Britten, Lutosławski, Penderecki, Prokofiev and Shostakovich. Dutilleux's concerto *Tout un monde lointain . . .* (1967–70) was one of these: it is a carefully crafted work which is free in thought, and follows Debussy and Ravel in its colourful and evocative scoring.

Following the revival of the Bach solo suites by Casals, there was a rush of compositions for solo cello: from 1900 to 1960 there were over 160 composed. One of the most popular is the Sonata op.8 (1915), by Kodály, who was a cellist himself. The sonata uses left hand pizzicato extensively to accompany the melodic line, and scordatura in a daring and original manner (the two bottom strings are tuned to *B*♮′ and *F*♯, which together with the D string give an unusually resonant and evocative chord of B minor). Hindemith's Sonata op.25, no.3 (1923), in five linked movements, is one of his best compositions for cello. Iannis Xenakis in his *Nomos alpha* for solo cello (1965–6), wrote the wide ranging chords on three staves and in three clefs – two bass and one treble. His *Kottos* (1977) is even more challenging. Franco Donatoni's *Lame* (1982), two pieces for unaccompanied cello, are innovative and show influences of the composer's previous essay into 12-note serialism, Quartetto II (1958). Luigi Dallapiccola's *Ciaccona, intermezzo e adagio* (1945), which uses large spread chords across the cello to resemble a gutar, and Ernst Krenek's Suite op.84 (1939) have many original features. Britten's three *Suites for Solo Cello* (1964, 1967, 1972) are firmly established in the repertory. The *Sacher Variations* came about as a result of Rostropovich commissioning 12 composers including Britten, Lutosławski and Dutilleux to write short solo pieces based on the letters of the name SACHER, to celebrate in 1976 the Swiss conductor Paul Sacher's 70th birthday and the 50th anniversary of the founding of the Basle Chamber Orchestra. Dutilleux later added two more movements to the original, calling it *Trois strophes sur le nom de Sacher* (1982); in it he employs scordatura, with the C string being tuned down to *B*♭′ and the G string to *F*♯. George Crumb, who was influenced by Debussy and Bartók, uses some vivid sonorities and instrumental effects in his *Sonata* for solo cello (1955).

Most of the composers mentioned above, and many others including Poulenc, Janáček and Alexander Goehr, have written works for cello and piano. Elliot Carter's Cello Sonata (1948) is the first example of the composer's experimentation in 'metric modulation', involving complex contrasting polyrhythms between the cello and the piano, and proportional tempo changes. In Britten's Sonata (1961) a whole movement is played pizzicato. Julius Klengel was one of the first to compose for massed cellos, with his *Hymnus* for 12 cellos (*c*1922). The Berlin Philharmonic Orchestra subsequently formed their own 12-cello ensemble, for which Jean Françaix wrote his *Aubade* (1975). Villa-Lobos wrote for at least eight cellos in *Bachianas Brasileiras* nos.1 and 5 (1930–45), no.5 (with soprano soloist) being the most popular.

Composers for the cello have experimented in ways hitherto unknown. James Dillon's *Parjanya-Vata* (1981) employs streams of double stops covering all the registers of the instrument (the score has the appearance of piano writing). Jonathan Harvey, in his *Curve with Plateaux* (1982), uses the sixth and seventh octaves of the cello, multiphonics with mute, clashing quarter-tones, glissandos over four strings with *sul ponticello* and *sul tasto* bow strokes. Karlheinz Stockhausen's *Spiral* (1969), for amplified cello and short-wave radio, requires the performer to improvise within specifications marked on impulses from the radio. Tavener's *The Protecting Veil* for cello and orchestra (1987) captured the public imagination as a spiritual minimalist composition on a religious theme, and exploits to the full the composer's exuberant lyricism. Other composers whose works employ quarter-tone and multi-stave writing, amplified cello and graphic effects, include Roger Redgate, Michael Finnissy, Mauricio Kagel, Brian Ferneyhough, Morton Feldman, James MacMillan, Colin Matthews and Arvo Pärt.

There is now a fresh conception of what can be achieved on the cello: two-bow technique, microtones, harmonics (both natural and artificial), variations in vibrato speed, extreme finger-extensions, extended tessitura etc. The 20th century has revolutionized almost every aspect of the cello and its literature, but time alone will assess the real influence of the current writing for the cello.

3. Jazz. The cello was used in a jazz-related context as early as 1916–17 when Walter Kildare, cellist from the Clef Club, recorded in London with his brother Dan's string band, Ciro's Club Coon Orchestra. In 1926 it appeared in recordings by singer Ethel Waters with Will Marion Cook. However, the cello was not used with any frequency in jazz until the bop era of the late 1940s and the 50s, when it was taken up by a number of double bass

players, some of whom gained significant reputations on the smaller instrument. Harry Babasin recorded pizzicato cello solos with Dodo Marmarosa (*Bopmatism*, 1947, Dial). Oscar Pettiford recorded on the instrument in a quintet with Duke Ellington and in a quartet with Charles Mingus (*Cello Again*, 1952, Roost). The following year Pettiford and Brabison recorded on cello together. George Koutzen also recorded on cello with Mingus in 1952. Chico Hamilton's band featured cello between 1955 and 1962, played at first by Fred Katz and then by Nat Gershman. Another important jazz cellist was Calo Scott (*Vinnie Burke's String Jazz Quartet*, 1957, ABC-Paramount). Other bass players who adopted the cello included Ray Brown, Ron Carter and Sam Jones, but with Carter's introduction of the piccolo bass (tuned an octave higher than the double bass) this practice lost impetus.

From the late 1960s the cello once again found use as a solo instrument in styles derived from bop, in fusions of jazz with ethnic and classical music and in free jazz. Exponents include Irène Aebi, David Baker, Diedre Murray and, in the 1990s, Matt Turner, Michelle Kinney and saxophonist Ivo Perelman. Three pre-eminent cellists since the late 1970s are Ernst Reijseger, Tristan Honsinger, who performs ferocious free improvisations, and Abdul Wadud who combines a virtuoso classical technique with heartfelt, incisive improvisations (e.g. *By Myself*, 1977, Bisharra).

Violone (It.: 'large viol'). In modern terminology, the double bass viol, the direct ancestor of the double bass. Historically, the term has embraced a variety of meanings: it was originally used, from the 1530s onwards, to denote any size of viol. Francesco Prandi, in his treatise of 1606 (see Bonta, 1977), applied the term to a low-pitched viola da gamba. In numerous Italian prints dating from 1609 to the 1730s the term refers to the early, larger size of the bass violin that existed before the invention of wire-wound strings in the mid-17th century (after which time it was reduced in size and became known as the violoncello). In some parts of Italy after 1660 (and subsequently in other countries) it was used for the double bass (see Bonta, 1978). The complexity of usage has led to continuing controversy as to the exact meaning of the term.

1. Italy. 2. Germany, Austria and other countries.

1. ITALY. In 16th-century Italy 'violone' was a generic term for the viol family (see Ganassi, *Regola rubertina*, 1542, and Ortiz, *Trattado de glosas*, 1553); it distinguished the viol family from the violins, which in some early sources are called 'violette'. By about 1600 'violone' had come to stand for a large bass viol. Banchieri (*Conclusioni nel suono dell'organo*, 1609, 2/1626) referred to the 'violone da gamba', tuned *G′–C–F–A–d–g* (a 5th below the normal six-string bass viol), and to a larger instrument, 'violone del contra-basso', tuned *D′–G′–C–E–A–d*. It is not clear when the term 'violone' first became associated with the bass violin. The bass part of Caterina Assandra's motet *O Salutaris hodie* (*Motetti* op.2, Milan, 1609), which employs the typical Baroque trio scoring for strings, calls for a 'violone'; this was probably the early, larger form of the bass violin, as opposed to Banchieri's violone da gamba. The first known instance of the term 'violone' being specifically associated with the violin family is found in Giovanni Ghizzolo's motet *Quem terra pontus* (*Seconda raccolta de' sacri canti*, Venice, 1624) which is scored for 'due canti o tenori con due violini et chitarrone o violone da brazzo'. The confusion in terminology persisted into the early 18th century; the *Vocabulario degli Accademici della Crusca* (Florence, 4/1729) defined violone as 'a large viol, which is also called "bass viol" and, when of smaller size, "violoncello"'. Corelli's use of the term 'violone' should be interpreted as signifying a bass violin or 'violoncello'.

See also VIOLONCELLO, §1 and DOUBLE BASS, §3; for illustration *see* DOUBLE BASS, fig.4.

2. GERMANY, AUSTRIA AND OTHER COUNTRIES. Praetorius, who cited Italian sources (including Agazzari) in *Syntagma musicum*, ii (2/1619), illustrated in *Theatrum instrumentorum* (1620) a five-string 'Gross Contra-Bas-Geig' (pl. V) and a six-string 'Violon, Gross Viol-de Gamba Basz' (pl. VI), both fretted and tuned in 4ths; the length of the latter has been estimated at 114 cm (Bessaraboff; the smaller instrument is estimated at 80 cm). He also referred to the 'Bas-Geig de bracio', later known as 'violoncello'. To avoid confusion he emphasized the distinction between 'Violonistam' (bass player) and 'Violinistam' (violin player). Schütz (*Musicalische Exequien*, 1636) referred to the violone, or Gross Bassgeige, as 'the most convenient, agreeable and best instrument to go with the concertato voice with the accompaniment of a quiet organ'. Several German authorities of the late 17th century and the early 18th give tunings that correspond with the Italian. The earliest known instructions for the instrument are by Johann Jacob Prinner (*Musicalischer Schlissl*, 1677, MS in *US-Wc*), with the tuning *F′–A′–D–F♯– B*. Georg Falck (*Getreu und gründliche Anleitung*, 1688), Daniel Speer (*Grundrichtiger … Unterricht*, 2/1697), J.F.B.C. Majer (*Museum musicum*, 1732) and J.G. Walther (*Musicalisches Lexicon*, 1732) all give the tuning *G′–C–F– A–d–g* (Walther has *E* rather than *F* for the third string). J.P. Eisel (*Musicus autodidactus*, 1738) gave *G′– C–E–A–d–g* for the 'Basse Violon' and, for a larger violone, a tuning a 4th lower; he also mentioned a four-string 'violone grosso' tuned in 5ths

C′–G′–D–A. Janovka (*Clavis ad musicam*, 2/1715) cited the tuning *G–A–d–g* for the violone and an octave below that for the violone grosso. The lower tuning (with *E′* as an alternative for the bottom string) corresponds with that given in 1694 by the Italian Bartolomeo Bismantova in his instructions for violone and violoncello (*I-REm* Regg.E.41). Among the composers who apparently distinguished between the violone and the violone grosso are Schütz and Bach. Georg Muffat (preface to *Florilegium secundum*, 1698) stated that the instrument called 'contrabasso' in Italy went under the name 'violone' in Germany; he distinguished between this and the 'Welsches Violoncino' or 'Bassetl' (the later cello). Walther noted with approval the old violone as preferable to the harsher bass violin (cello); but Quantz (*Versuch einer Anweisung die Flöte traversiere zu spielen*, 1752) wrote of the so-called 'German violone' with five or six strings which 'has justly been abandoned'. By Leopold Mozart's time (1756) the double bass, 'commonly known as violone', usually had four or five strings but sometimes only three. Koch (*Musikalisches Lexikon*, 1802) referred to 'violone' as meaning double bass. Writing in England, both Pepusch (*Rules, or a Short and Compleat Method for attaining to Play a Thorough Bass*, *c*1730) and Prelleur (*The Modern Musick-Master*, 1731) unambiguously identified the violone as the double bass, as did Brossard (*Dictionaire de musique*, 1703) in France, where the term 'violone' was not usual by this date.

THARALD BORGIR/STEPHEN BONTA (1), ALFRED PLANYAVSKY/R (2)

Viotta, Henri [Henricus Anastasius] (*b* Amsterdam, 16 July 1848; *d* Montreux, 17 Feb 1933). Dutch conductor and writer, son of Joannes Josephus Viotta. He received his musical instruction with Richard Hol in Amsterdam, and in 1864–5 studied the piano with W. Bargiel and F. Breunung, the violin with O. von Königslöw, the cello with H. Schmitt and composition with F. Hiller at the Cologne Conservatory. He then studied law at the University of Leiden and in 1877 wrote a doctoral dissertation on musical copyright. After visiting Bayreuth in 1876 and 1882 he founded the Wagner Society in Amsterdam in 1883, which he headed until 1919. He conducted the Caecilia concerts from 1889 until 1896, the year he succeeded W.F.G. Nicolai as director of the Royal Music School (from 1900 the Royal Conservatory) in The Hague. He resigned from the post in 1919. He founded the Residentie-Orkest in The Hague in 1903, and was its conductor until 1917, performing Mahler's Eighth Symphony at his farewell concert. He spent his last years in Switzerland.

Viotta did much to propagate the music of Berlioz, Liszt, Wagner and Strauss in the Netherlands. Although *Tannhäuser* had been staged in Amsterdam in 1858, and although Hermann Levi and Louis Saar conducted abridged performances of several Wagner operas in Rotterdam in the 1860s, Viotta gave complete performances of the operas from the 1880s onwards; in 1905 he gave the first performance of *Parsifal* outside Bayreuth. Viotta also conducted Wagner overtures and works by Strauss and modern French composers at the Caecilia concerts and the concerts of the Residentie-Orkest, as well as works of Bruckner and d'Indy with Excelsior, an Amsterdam choral society. He contributed numerous articles to the musical journal *Caecilia*, the *Maandblad voor muziek* (monthly magazine of the Wagner Society) and *De Gids*, and wrote several books on music, among them the first Dutch biography of Wagner.

JAN TEN BOKUM

Viotta, Joannes Josephus (*b* Amsterdam, 14 Jan 1814; *d* Amsterdam, 6 Feb 1859). Dutch conductor and composer of Italian descent. The son of a merchant, he taught himself the piano, the organ and singing, and studied medicine at the University of Leiden, where he wrote a dissertation on the health of the human voice (1837). He subsequently practised as a doctor in Amsterdam. Viotta was president of the Maatschappij tot Bevordering der Toonkunst in 1844, 1848, 1852 and 1854, and a permanent member of the board of the society's Amsterdam chapter. As répétiteur of the chapter's chorus, he did much to promote the works of Mendelssohn, Schumann and Gade and to encourage musical education, particularly in singing. His school songs and folksong arrangements long remained popular for their lively rhythmic and melodious character; his other works, including choruses, church music, symphonies and piano pieces, have been forgotten.

JAN TEN BOKUM

Viotti, Giovanni Battista (*b* Fontanetto da Po, 12 May 1755; *d* London, 3 March 1824). Italian violinist and composer. He was the most influential violinist between Tartini and Paganini and the last great representative of the Italian tradition stemming from Corelli. He is considered the founder of the 'modern' (19th-century) French school of violin playing, and his compositions,

among the finest examples of Classical violin music, exerted a strong influence on 19th-century violin style.

1. Life. 2. Performance style. 3. Works.

1. LIFE. Viotti was probably of humble origins (according to Fétis his father was a blacksmith), and his talent was manifest early. In 1766 he was taken to Turin under the protection of Prince Alfonso dal Pozzo della Cisterna, in whose home he lived and was educated. He first studied with Antonio Celoniat, but when Pugnani returned from London in 1770, Viotti became his pupil. Widely travelled and highly regarded as a performer and composer, Pugnani had been a pupil of G.B. Somis and was, through him, the heir of Corelli. He was the only teacher Viotti acknowledged in later life.

Viotti entered the orchestra of the royal chapel at Turin on 27 December 1775. For five years he occupied the last desk of the first violins, drawing one of the lowest salaries in the orchestra. Early in 1780 he and Pugnani set out on a concert tour, first to Switzerland, then to Dresden and to Berlin, where Viotti's first publication, the concerto in A now known as no.3, was issued in 1781. Concerts in Warsaw preceded an extended visit to St Petersburg, and late in 1781 they returned to Berlin. Until this time Viotti had been presented as the 'pupil of the celebrated Pugnani', but he parted with Pugnani in Berlin and proceeded alone to Paris.

After at least one private appearance Viotti made his début at the Concert Spirituel on 17 March 1782. His success was instantaneous, and it established him at once in the front rank of all violinists. For a year and a half he played frequently, continuing to receive the highest praise of critics and public. After 8 September 1783 he retired abruptly from public concerts, and in January 1784 he entered the service of Marie Antoinette at Versailles. For a time he was also leader of Prince Rohan-Guéménée's orchestra, and he may have held a similar position for the Prince of Soubise. In 1788, having secured the patronage of the Count of Provence, he established a new opera house called the Théâtre de Monsieur (after July 1791, Théâtre Feydeau). He proved a vigorous and ambitious administrator. His excellent company introduced a number of important works, both Italian and French, including the operas of his friend and associate Cherubini. He constructed a new theatre and established in April 1792 (possibly also in 1791) a series of Holy Week concerts. By mid-1792 the Revolution had made Viotti's situation untenable, and in July he fled to London. He had completed the most successful and influential period of his life; probably half of his published works, including 19 violin concertos, had appeared during the decade in Paris.

In London Viotti turned again to performance and made a thoroughly successful début at Salomon's Hanover Square Concert on 7 February 1793. For two seasons he was the featured violinist for Salomon's series, and in 1795 he became musical director of the new Opera Concerts, himself performing no fewer than six times. He played at Haydn's benefit concerts in 1794 and 1795, and he was a frequent performer in the homes of the wealthy, including the Prince of Wales. In the 1794–5 season he served as acting manager of Italian opera at the King's Theatre and succeeded William Cramer as leader and director of the orchestra at the King's Theatre in 1797.

In February 1798 the British government, suspecting Viotti of Jacobin activity, ordered him to leave the country. There is no evidence that the order was justified, and Viotti protested his innocence in a statement to *The Times* and in an autobiographical sketch written a few months later (see Giazotto, pp.229–31). For a year and a half he lived with English friends in Schenfeldt, near Hamburg, where he published a set of duos op.5, conceived 'some in pain, some in hope', according to the dedication. He left Germany in July 1799, and by 1801 (probably earlier) he had returned to London. He then retired almost entirely from music and devoted his energies to a wine business which he had entered before his exile. He continued to play and compose for his friends, and his works continued to be published in London and Paris, but he made no effort to re-establish his musical career. In 1802, 1814 and finally in 1818 he visited old friends in Paris and played for them in private. Baillot reported their wonder that his playing had lost none of its power. His name appeared as a founder of the London Philharmonic Society, but he performed in the programmes only occasionally, and then in chamber music.

Giovanni Battista Viotti: portrait by an unknown artist, pen and ink and wash (British Museum, London)

The failure of his business in 1818 left Viotti deeply in debt to his English friends. His former patron, the Count of Provence, was now Louis XVIII, and on 1 November 1819, having applied for the position, Viotti was appointed director of the Paris Opéra. But the assassination of the Duke of Berry at the Opéra less than four months later aroused the antipathy of the public and the royal patrons. Viotti struggled with the difficulties for more than a year and in November 1821 he resigned. Although he continued as nominal director of the Italian Theatre for another year, he was still in debt. The will prepared at this time is testimony to his humiliation, and a letter to

Rode reflects the bitter regrets of neglected talent. In 1823 he returned to London to be with his closest friends, Mr and Mrs William Chinnery. He died in their home in Portman Square.

Viotti was an attractive and forceful person, and some small measure of his extraordinary influence may be credited to the strength of his personality. He formed lasting friendships with people of talent and social position; his students and younger contemporaries idolized him. Most of the anecdotes surviving in 19th-century accounts stress his idealism, his sensitivity and his artistic integrity; yet these qualities were unable to prevent a number of scandalous rumours about him from circulating in his lifetime. In a period of social instability and of shifting values in music, his ambition and uncompromising ideals made it impossible for him to be satisfied with a career as a composer-virtuoso; when he abandoned the fields in which his great talents lay, however, he consistently met misfortune that ultimately brought his life to an unhappy end.

2. Performance style. Viotti performed before the public for less than ten years, yet the impression he left was so strong that he dominated an entire generation of violinists. In 1810 *Les tablettes de Polymnie* declared that his influence had resulted in a new unity of execution in Parisian orchestras. Although contemporary accounts usually mentioned his technical brilliance, they more often emphasized beauty of sound, power and expression. The *Allgemeine musikalische Zeitung* (3 July 1811) described the principles of Viotti's 'school': 'A large, strong, full tone is the first; the combination of this with a powerful, penetrating, singing legato is the second; as the third, variety, charm, shadow and light must be brought into play through the greatest diversity of bowing'. The London *Morning Chronicle* (10 March 1794) reported: 'Viotti, it is true ... astonishes the hearer; but he does something infinitely better – he awakens emotion, gives a soul to sound, and leads the passions captive'. During his second season in Paris *L'almanach musical* accorded him a place above all his contemporaries and wrote of 'that boldness of the fingers and the bow which gives a very pronounced character and soul to his tone'.

The tradition that Viotti had inherited from Pugnani emphasized tone; but his playing evidently had a breadth and power that his contemporaries regarded as new, and it became the ideal of younger performers. Alday, Cartier and Rode were among his pupils, and both Kreutzer and Baillot were regarded as disciples; but Viotti's activity as a teacher was limited, and it is difficult to separate its influence from the pervasive influence of his example. Although his own violin method remained a fragment, the principles of his manner of performance are thought to be embodied in the *Méthode de violon* of Baillot, Rode and Kreutzer (1803) and in Baillot's more detailed *L'art du violon: nouvelle méthode* (1834).

3. Works. Viotti's interest as a composer centred on his own instrument. Despite his involvement with opera, he wrote no theatrical works. His arias that found their way into the operas of other composers are arrangements from his concertos; his original arias are simple, unpublished songs written for his friends. All of his piano concertos are arranged from violin concertos, despite publishers' attempts to claim originality in two cases. Of nearly 30 piano sonatas, only seven are not demonstrably arrangements. In chamber music he preferred old-fashioned combinations (violin and bass, or two violins and bass) which assured the dominance of the violin. Of the more modern genres, his favourite was the violin duo. His string quartets, except perhaps the last three, take little notice of the balance in texture achieved by Haydn.

Only the 29 violin concertos fully reflect Viotti's musical imagination, his power as a performer and his development as a composer. These are his most important works, both musically and historically. The repertory that Viotti worked with as a student is still unknown, but his teacher Pugnani was a widely travelled modern virtuoso and Turin was a respected, up-to-date musical centre. Viotti's first concerto (no.3 in A) clearly reveals that his starting point for the genre was the cosmopolitan *galant* style developled in the 1770s in Paris by composers of various nationalities. After his arrival in Paris symphonic and operatic influences rapidly broadened the scope and deepened the drama of his concertos. The last six Paris concertos (nos.14–19), all but one in minor keys, complete the development from the *galant* style and approach Romanticism. Only the orchestration, particularly the French-Italian practice of assigning accompaniment to two violins and bass, remains conservative.

Viotti's last ten concertos, written in London, are products of his full maturity. They surpass the late Paris concertos not in drama and boldness, but in craftsmanship: fuller orchestration, more varied accompaniment and richer texture, possibly influenced by contact with Haydn, particularly his late symphonies. The figuration and passage-work still reflect Viotti's fine technique, but the brilliance is tempered by pervasive lyricism. Somewhat more varied in form than their predecessors, the late concertos occasionally show forward-looking features, by linking movements (no.26), quoting material from the first movement in the last (no.21) and foreshadowing an allegro theme in the slow introduction (no.27, and previously in no.16).

Viotti most directly influenced his French contemporaries in the 1780s and early 1790s. His late Paris concertos served as models for Rode, Kreutzer and others of less talent throughout their careers. The London concertos, delayed several years in publication, were already regarded as 'classical' when they appeared on the Continent from 1803, and had less effect. Although Mozart knew at least some of Viotti's works (he added parts for trumpet and timpani to Concerto no.16), assumptions of influence are doubtful. Viotti's influence on Beethoven, however, has been convincingly demonstrated (see Schwarz, 1958). Among German violinists, Spohr was the most significant to use the Paris concertos as his starting-point, as can be seen by comparing his first concerto with Viotti's no.13.

In spite of elements of early Romanticism, Viotti's concertos are generally marked by restraint, and they balance display with expression and formal clarity. They fell quickly from favour with 19th-century performers, who required more flamboyant virtuosity; however, as études for advanced students they continued to influence the German school as well as the Franco-Belgian. The admiration of some of the finest 19th-century violinists culminated in Joachim's revival of no.22 in A minor, for which Brahms, in a letter to Clara Schumann (June 1878), expressed unstinted admiration.

WORKS

See thematic catalogue in White (1985) and Giazotto (1956). Printed works were first published in Paris unless otherwise stated; subsequent publications are cited only in cases of conflicting op. nos. or other designations. Arrangements are presumably by Viotti unless otherwise indicated.

W – *no. in White catalogue*

CHAPPELL WHITE

Viotti, Marcello (*b* Gressy, Vaud, Switzerland, 29 June 1954). Italian conductor. His first studies were in the piano, the cello and singing at the conservatoires of Geneva and Lausanne. He made his conducting début in 1979, and in 1981 took first prize at the San Remo Gino Marinuzzi Competition. He served as Kapellmeister at the Teatro Regio, Turin, from 1986 to 1989, music director at Lucerne Opera (1987–91) and Generalmusikdirektor in Bremen (1990–93). In 1990 he stepped in for Muti with the Berlin PO and his international career was born. From 1991 to 1995 he was music director of the Saarbrücken RSO, and in January 1997 he made his début with the Vienna PO. Viotti makes his career primarily in opera, and has appeared at La Scala, La Monnaie, Brussels, the Paris Opéra, Zürich Opera and elsewhere. In 1997 he was appointed principal guest conductor of the Queensland SO. Among his recordings are stylish, sparkling performances of several Rossini operas, notably *La scala di seta*.

CHARLES BARBER

Viozzi, Giulio (*b* Trieste, 5 July 1912; *d* Verona, 29 Nov 1984). Italian composer. Of the Italian composers born between the 'generation of the 1880s' and the postwar avant garde, Viozzi has a place of special interest for the quantity and quality of his large, diverse output. At the beginning of the 1950s, he moved from an initial involvement in chamber music towards theatre and orchestral music, scoring an important and immediate double success with the comic opera *Allamistakeo*, performed at La Scala under Maazel and at the recommendation of Sabata, and the orchestral *Ditirambo*. These works made clear the personal nature of Viozzi's musical language, in which references to Straussian vitality, the folk palette of Bartók and the sonic exuberance of Stravinsky and Prokofiev are combined with a sturdy rhythmic force and, even more, the evocation of the magical and surreal. This linguistic cocktail served the composer extremely well both in opera, not only in *Allamistakeo*, but also in his tragic masterpiece, *Il sasso pagano*, and in orchestral and chamber music.

WORKS
(*selective list*)

Ops (all librettos by the composer): Allamistakeo (1, after E.A. Poe: *Some Words with a Mummy*), Bergamo, Novità, 26 Sept 1954; Un intervento notturno (1, after R.A. Bowen), Trieste, Verdi, 26 Jan 1957; Il sasso pagano (3, after O. von Leitgeb), Trieste, Verdi, 10 March 1962; La giacca dannata (1, after D. Buzzati), Trieste, Verdi, 1967; Elisabetta (1, after G. de Maupassant), Trieste, Verdi, 1971; L'inverno (1, after N. Spazzali), unperf.

Ballets: Prove di scena, Milan, 1958; Agenzia teatrale, 1958, unperf.; La vampira timida, 1960, unperf.; Stricto gladio tenacius, Trieste, 1963

ALBERTO PIRONTI/ROBERTO COGNAZZO

Vir, Param (*b* Delhi, 6 Feb 1952). British composer of Indian parentage. His family background in classical Indian music created an early interest in composing. After reading philosophy at Delhi University, he produced music theatre projects for young people which attracted an invitation to study with Maxwell Davies at the Dartington Summer School (1983–4) and later with Knussen at the GSM, London, where in 1985 he won the composition prize. In 1986 he was composition fellow at Tanglewood and was featured composer in the Festival of India, Geneva, in 1987. He has won the Tippett Composition Award, the PRS prize and the Britten Prize, the latter for *Before Krishna* (1987), the first work which overtly acknowledged his Indian heritage.

His output, though small, evinces a finely wrought synthesis of European modernism and Eastern aesthetics, influenced as much by the rich exoticism of Britten and Messiaen as by Indian instrumental sonorities, rāgas, traditional rhythms and Buddhist folklore. *Horse Tooth White Rock* (1994), a tone poem about the Tibetan saint Milarepa, displays the expressive translucence of its dedicatee Henze; *Brahma, Vishnu, Shiva* (1988) is a highly charged setting of Tagore and the Rig-Veda spiced by resonant crotales. Tagore is again the source for the one-act chamber opera *Snatched by the Gods*, commissioned together with *Broken Strings* for the Munich Biennale (1992). Wide critical acclaim for both operas led to a commission for a full-length opera, Ion, for the Aldeburgh Festival in 2000.

MALCOLM MILLER

Virchi [Virche, Virchinus, Virchis, Virga, Virghi, Virgis, Vigri etc.], **Girolamo di** [de] (*b* Brescia, *c*1523; *d* after 1574). Italian cittern maker. The best known member of a family of instrument makers and musicians, he was the friend and possibly the teacher of the violin maker Gasparo da Salò, for whose son, Francesco, he stood as godfather in 1565. Documents from 1559 to 1569 record his activity: in 1568, for example, he paid a salary to two carvers, which would account for the high quality of decorations on his extant instruments. There is a cittern by Virchi in the Musikinstrumenten-Museum, Berlin, and another more elaborate one of particularly fine construction in the Kunsthistorisches Museum, Vienna (*see* CITTERN, fig.2). Two more citterns may be ascribed to him on account of their rich carving and decoration: one (formerly attributed to Stradivari) is in the Musée de la Musique, Paris, and the other is in the Ashmolean Museum, Oxford.

His brother Benedetto (*b* 1520; *d* after 1568) was also a cittern maker, whose son Bernardino (*b c*1565; *d* after 1624) was an organ maker who studied with, and worked for the Antegnatis. Girolamo's son Paolo Virchi (*c*1550–1610), court musician at Fetrara and Mantua, published a cittern tablature (1574).

UGO RAVASIO

Virchi, (Giovanni) Paolo [Targhetta] (*b* Brescia, 1551–2; *d* Mantua, May 1610). Italian instrumentalist and composer. He was the son of Girolamo Virchi, a famous maker of stringed instruments. Paolo grew up in Brescia during the 1560s, which suggests that, like Marenzio and Bertani, he may have had some instruction from Giovanni Contino, although no confirmation of this has yet been found. Fabris suggests that he may also have benefited from the teaching of the organist F. Maschera. Despite the assertions of several modern sources, he is not identifiable with the 'messer Paolo' who went to the Mantuan court from the Ferrarese court in 1570. The first biographical notice of Virchi is on the title-page of his cittern tablature of 1574, where he called himself a Brescian organist. He entered the service of the Este court at Ferrara at some time between January 1579 and December 1581, probably by mid 1580, since Fabris documents that Virchi was banned from Brescian territory in May of 1580 for some unspecified crime, a ban lifted only in July 1586. Virchi is listed on the Ferrarese salary rolls among the singers, but on the title-pages of the publications of the 1580s he called himself organist and instrumentalist to the duke, and he was given an extra salary at Ferrara for teaching the heirs apparent to the Este dynasty, the children of Alfonso d'Este, Marquis of Montecchio and the Duke's uncle, to sing and to play the viol. (He was thus the teacher of Gesualdo's future wife and of the future cardinal, Alessandro d'Este.) Records exist of several extraordinary gifts he received at Ferrara; he was also one of the very few musicians to receive an outright salary rise during his tenure there. After the dissolution of the Ferrarese music establishment early in 1598, he was immediately appointed by the Mantuan court to the post of organist at the Palatine basilica of S Barbara, where he remained until his death. He may have provided some music for the wedding celebrations in 1608 (Fabbri, p.129). He was succeeded as court organist in Mantua by his son Fulvio.

Apart from the cittern book his only pieces surviving in complete form are madrigals, almost exclusively from the 1580s. They show that his talent and skill were comparable to Marenzio's at that period. His use of ornamentation was almost more instrumental than vocal in concept, yet he was capable both of expressive harmonic excursions and of dramatic writing in solo passages and duets. These pieces, together with those by Bertani and Ingegneri dating from the 1580s, repay careful study. Not

only do they form an important part of the background to the madrigals of Marenzio and Monteverdi, they are in themselves skillful and excellent pieces among the best of the decade.

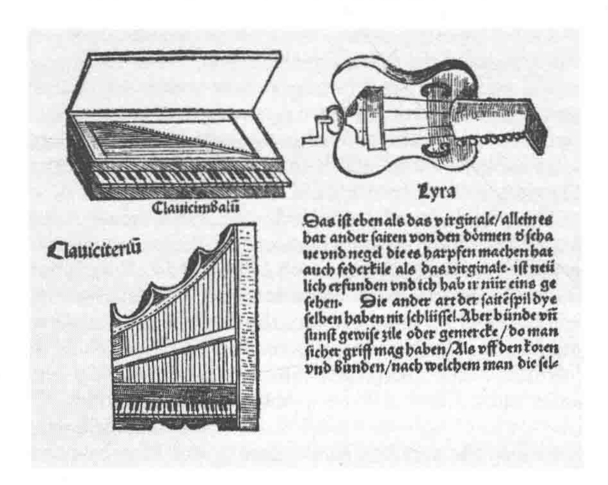
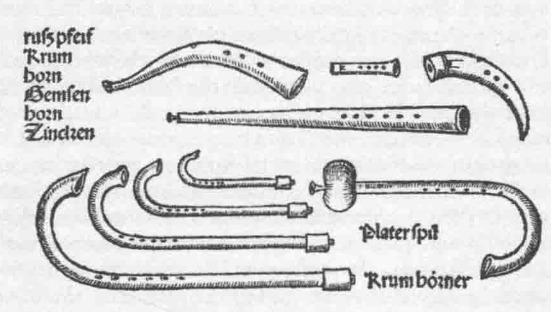
ANTHONY NEWCOMB



Virchinus [Virchis], **Girolamo di** [de]. *See* VIRCHI, GIROLAMO DI.



Virdanck, Johann. *See* VIERDANCK, JOHANN.

Virdung [Grop], **Sebastian** (*b* ?Amberg, *c*1465; *d* after 1511). German theorist and composer. His father, Wernczlein (or Wenntzlaw) Vierdung, adopted the name Grop in 1469; he earned citizenship in Amberg (1475), then in Nuremberg (1486). Sebastian matriculated at Heidelberg University in 1483. By 1486 he was studying law while employed as an alto singer in the chapel of Count Philip, elector palatine, at Heidelberg, where Johannes von Soest served as 'Sängermeister' and Arnolt Schlick as organist. No record tells of Virdung's gaining a degree; by 1489, however, he had become a priest, as befitted the holder of an ecclesiastical benefice awarded him that year by the elector. Despite an accusation of slander against him in 1490 Virdung maintained his reputation, receiving a second benefice in 1500 at Stalburg Castle; at this time he bore the title of chaplain. In 1503 and 1504 Virdung wrote two letters to his employer's son, Ludwig (then on a visit to the court of Louis XII of France in Lyons), requesting the following items for the chapel library: Gaffurius's treatise *Practica musice* (1496) and Johannes de Muris's *Compendium musice practice* (*c*1322), and correct copies of music by Ockeghem (the *Missa prolationum*, the *Missa cuiusvis toni* and a canonic motet of 36 voices derived from six). From about 1505 Virdung was employed at the Württemberg chapel of Duke Ulrich in Stuttgart. By January 1507 he had formally left his posts at Stuttgart and Stalburg and been appointed succentor at Konstanz Cathedral, where his duties included teaching the choirboys singing, composition and counterpoint and seeing to their physical welfare. A year later, in January 1508, he was dismissed for being 'erratic and negligent with the boys'.

In 1510, at the Diet of Augsburg, Virdung was soliciting support to complete and publish a comprehensive treatise in German, *Ein deutsche Musica*. Unable to find funding, he produced a greatly truncated version, covering only the section on musical instruments, which he published at Basle in late summer 1511. This work, entitled *Musica getutscht*, is the earliest printed treatise in the West to deal exclusively with musical instruments and aspects of their performance and pedagogy. It is also one of the earliest works on music in a vernacular tongue. Virdung hoped that dedicating this smaller treatise to Wilhelm Honstein, Bishop of Strasbourg, who had shown interest in the larger work, would elicit subvention for its completion. However, his magnum opus was never published, and the manuscript does not survive.

Musica getutscht contains much material appearing in print for the first time, including illustrations of musical instruments in current use arranged by organological categories (see illustration), German keyboard tablature, German lute tablature, recorder fingering charts, and instructions with diagrams on aspects of performance. The author presents his material as a dialogue between himself (Sebastian) and his more erudite friend, Andreas Silvanus – most likely the latinized name of Andreas Waldner, a colleague of Virdung's at Heidelberg. Sebastian acts as the more knowledgeable of the two regarding contemporary musical instruments and performing practice, while Andreas takes the role of the initiate.

Two pages illustrating string and wind instruments from Virdung's 'Musica getutscht' (1511)

Virdung's treatise provides insights into music history, both in his era and earlier. It is here, for example, that the invention of German lute tablature is attributed to Conrad Paumann (*d* 1473). On the issue of whether black keys be considered *musica ficta* or notes from the Greek chromatic genus, Virdung, citing Boethius, sides with the latter view. He expresses his conviction by lambasting Arnolt Schlick for having espoused the former view in his treatise *Spiegel der Orgelmacher und Organisten*, published earlier in 1511. To this attack, which included cruel allusion to his blindness, Schlick retorted angrily several months later (November 1511) in the introduction of his subsequent publication, *Tabulaturen etlicher Lobgesang und Lidlein uff die Orgeln und Lauten* (1512), in which he castigates Virdung for his pretentious 'knowledge' of Greek language and theory and for the numerous errors in the musical examples of *Musica getutscht*. Most of these errors result from Virdung's pedagogically inspired decision to transcribe the notes exactly, as demonstrations of instrumental notation, rather than to generate playable pieces.

Hints as to Virdung's date of death come from a treatise originally commissioned as a Latin translation of *Musica getutscht* but which, despite the presence of the original woodcuts, took on an identity quite its own: Othmar Luscinius's *Musurgia seu praxis musicae*, written about 1517 but published in 1536 and 1542. In his dedication (1536) Luscinius writes that 'unmistakable signs' in *Musica getutscht* (i.e. frequent references to the larger work) make clear that 'Sebastian was prematurely taken away from the living' before publication of his magnum opus could be realized. Virdung's death, then, took place after Schlick's harsh words (printed in 1512) and before the writing of *Musurgia* (*c*1517).

The popularity of both Virdung's subject matter and his illustrations inspired a second edition of *Musica getutscht* at some time between 1511 and 1521, and four derivative works in as many languages between about 1517 and 1529. In addition to the Latin *Musurgia*, these are Martin Agricola's *Musica instrumentalis deudsch*, in German (Wittenberg, 1529/*R*, enlarged 5/1545); the anonymous *Dit is een seer schoon boecxken*, in Flemish (Antwerp, *c*1528; exemplars from 1554 and 1568 survive); and the anonymous translation into French of this last work, *Livre plaisant et tres utile* (Antwerp, 1529).

Virdung follows a bipartite plan in *Musica getutscht*, first providing an illustrated instrumentarium and then offering elementary instructions for three representative instruments in preferred order of study: clavichord, lute and recorder. He also expounds the basic principles of intabulation. He places instruments in three traditional categories – strings, winds and percussion – and bases his subgroups on the instrumental notation appropriate to each. String instruments have four subdivisions: (1) those with keyboards, for which keyboard tablature is used in teaching and playing: clavichord, virginal, harpsichord (*clavicimbalum*), clavicytherium, hurdy-gurdy and presumably *harpfentive* (named but not pictured); (2) those with frets, for which (whether bowed or plucked) lute tablature is used: lutes, *quintern* (a small lute-like instrument) and viols (*gross geigen*); (3) those with multiple open strings and no keyboards or frets (tablatures are not discussed): harps, psaltery and hammered dulcimer; and (4) those with one to three strings and no frets, for which tablatures are not practical (thus rendering them 'unprofitable instruments'): rebecs (*clein geigen*) and trumpet marine.

Wind instruments come in three subgroups: (1) those that can be blown by a person and have finger-holes, for which a tablature resembling fingering charts can be used (Virdung's wind tablature is unique): shawm, tenor shawm (*bombardt*), tabor pipe (*schwegel*), fife (*zwerchpfeiff*), recorders, *russpfeif* (four-hole fipple flute), curved horn (with four holes), gemshorn, cornetts, bladder pipe, crumhorns and bagpipe; (2) those that can be blown by a person but do not have finger-holes (listed but not discussed): trombones and trumpets (military trumpet [*felttrummet*], *clareta* [high trumpet] and tower trumpet [*thurner horn*]); and (3) those that cannot be blown by a person and are sounded by bellows, for which keyboard tablature is used: organs (large organ, positive, regal, portative).

Virdung defines percussion instruments as those 'made of metal or other resonant substances'. Since he accepts only instruments capable of carrying melody, the sole representatives in this category are hammers and anvil, chime bells and tuned clapper bells. He dismisses drums (military kettledrums [*grossen herpaucken*], side drums and small drums) as 'devilish', for they cause 'a smothering and a drowning of all sweet melodies'. He also rejects the following: (1) 'foolish instruments': Jew's harp, non-pitched bells, hunting horn, 'field horn' (*acher horn* = coiled horn), clappers and 'beater on the pot' (*britschen uff dem hafen*); (2) 'tomfoolery' (*göckel spill*, literally 'juggler play'): whistles, birdcalls, leaves or keys into which one blows, and xylophone (*hültzig gelechter*, literally 'wooden laughter'); and (3) all instruments not represented by extant examples that could be played and heard – obsolete instruments known only from pictures or descriptions. (Virdung does bow to the prevailing reverence for antiquity, however, by including the fictitious 'instruments of Jerome', which he recognizes as allegorical.)

Most of the pictures in *Musica getutscht* cannot be taken with modern expectations of technical accuracy; their presence, as in other books at the time, offered enhancement of the text through pleasing suggestion of an object. They do, however, give insights into the relative importance of certain features. The clavichord keyboard, for example, was drawn accurately (but it appears in mirror image in the print). The flat bridge on the viol shows that instrument's relationship to the vihuela. The depiction of the recorder family conveys information about consort performance: these instruments came in three sizes a 5th apart – discant, alto/tenor and bass – not four, as has been assumed. Three sizes sufficed for playing four-part music at the time, the normal disposition being one each of bass and discant and two of alto/tenor. Shawms are shown in two sizes and crumhorns in four, although the fingering charts for crumhorns in three sizes published by Agricola several decades later (1529–45) suggest pictorial misrepresentation in this instance.

As a practice piece for intabulation, Virdung provides his own sacred lied, a four-part setting of a rhymed translation into German of three Marian responsories: *O haylige, onbeflecte, zart iunckfrawschafft marie*. His keyboard and lute intabulations of this song in *Musica getutscht* are, by his own admission, literal transcriptions from staff notation to tablature intended only to demonstrate the principles involved; he pledges to provide

idiomatic (and playable) versions in the larger work. Four secular songs *a* 4 composed by him about 1505 were printed in Peter Schoeffer's *Liederbuch* (RISM 1513[2]: nos.48, 49, 52, 54), one of which (no.54) reappeared over 20 years later in *Gassenhawerlin* (RISM 1535[10]); and the alto parts of two songs published in *Ein Ausszug guter alter und newer teutscher Liedlein* (RISM 1539[27]: no.63 by Hofhaimer and no.96 by Lapicida) are attributed to Virdung. His five extant four-part works (all in bar form) exemplify various types of Tenorlied: two feature imitation between discant and tenor (*O haylige* and no.49), two have frequent parallelism between tenor and discant within a homophonic texture (nos.48 and 52), and one proceeds initially by point of imitation (no.54). All five have been transcribed by Meyer.

For an illustration of Virdung's lute tablature *see* TABLATURE, fig.4.

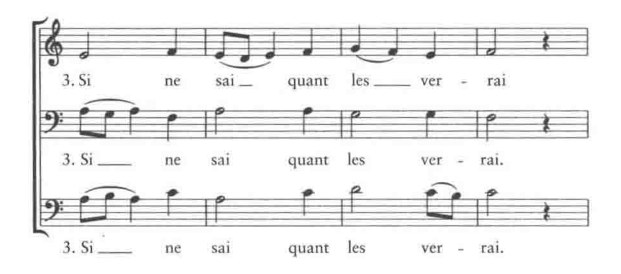
BETH BULLARD

Virelai. One of the three *formes fixes* (the others are the ballade and the rondeau) that dominated French song and poetry in the 14th and 15th centuries. Its musical structure is essentially *ABBA*, regardless of subtleties of rhythm and metre in the superimposed text. The virelai form has a long and complex history, closely interwoven with the general history of early song and dance.

Convincing studies suggest a line of descent from 11th-century Arabic song forms in north Africa and Spain, the *mūwashshaḥ–zajal* types. They would in turn have influenced Provençal troubadour song structures and by the 12th century also Old French song forms further north. These would then have persisted in France and also have been a dominant influence on the compositions in the large late 13th-century Spanish religious song collection compiled at the request of King Alfonso el Sabio (1221–84) and known as the *Cantigas de Santa María*. These are nearly all virelai types; and this song pattern evidently became extremely popular in both Spain and Portugal, for many examples have survived which have usually been described since the 15th century by the term 'villancico'.

A second major school of thought prefers to see any similarities between Arabic and Romance song forms as mere coincidence. It suggests, equally convincingly, that the main source of virelai form and, indeed, of Provençal courtly song in general, is to be found in poetic and musical patterns contained in the liturgical repertory, particularly in such influential centres as the monastery of St Martial, Limoges. The whole complicated Arabic–liturgical debate, unlikely ever to find a total solution, is lucidly summed up by P. Le Gentil in his book *Le virelai et le villancico* (1954).



The root of the word 'virelai' is Old French *virer* ('to turn' or 'to twist'). This confirms the dance origins of the form at least for France, where in the 13th century 'vireli' is the most common spelling; 'virelai' was a modification probably under the influence of another important musical and poetic form, the lai.

In the 13th century approximations to virelai form may occasionally be found in one or more voices of polyphonic motets. Such treatment was, however, more commonly accorded to the rondeau. One source in particular (*GB-Ob* Douce 308) clearly illustrates the extent to which virelai form had developed by the late 13th century; unfortunately the section concerned, labelled 'ballettes', lacks its accompanying music. The distinction between ballade and virelai here is a little hazy, but an essential guide to classification is the placing of the refrain. In the virelai the refrain is normally several lines long and occupies the whole of the first musical section, whereas in the ballade it is most commonly one line long and appears at the close of the second musical section. A typical virelai from this source is *Dame, bien me doneroie* (no.62), which has the following structure: $I(A_7–B_7–A_7–B_7)$ $II(c_7–d_7)$ $II(c_7–d_7)$ $I(a_7–b_7–a_7–b_7)$ $I(A_7–B_7–A_7–B_7)$. Some other examples were less 'tidy' at this stage, but the 14th-century ideal had already been achieved. Its principal features were: the first musical section for the refrain, several lines in length; two sets of matching text for the repeated second musical section, usually with first-time (OUVERT) and second-time (*clos*) bars; the return to the first musical section with text to match the rhyme and metre of the refrain; and finally the repetition of the refrain itself. The refrain always comes at the close, even if the whole form is to be gone through two or three times, as often happens. In such a case the composition may be very extended and far more substantial than it appears in its written form (as is also true for the ballade and the rondeau).

The first direct polyphonic setting of a virelai-like piece is Adam de la Halle's *Fines amouretes ai*, of which the refrain is given in ex.1. The harmony is in three-voice conductus style. The musical structure is that of the true virelai: $I(A_7–B_1–A_7)$ $II(c_7)$ $II(c_7)$ $I(c_7–a_7)$ $I(A_7–B_1–A_7)$. The irregularities in the verse patterns, though typical of the earlier period, would not have been acceptable later in the 14th century. Jehannot de l'Escurel (*d* 1304) composed five monophonic virelais, all using different metrical

Ex.1

patterns. *Gracieusette* (no.32) is irregular, but the remaining four are excellent examples of the now established 14th-century form – *Douce Amour, confortez moi* (no.20), for example, has the structure $I(A_7–B_7–A_7–B_7)$ $II(c_7–d_5)$ $II(c_7–d_5)$ $I(a_7–b_7–a_7–b_7)$ $I(A_7–B_7–A_7–B_7)$.

An important characteristic of the virelai as it developed in the 14th century was its increasing use of complex metrical patterns in the text with much use of contrasting line lengths. In this respect, as well as in certain others, it came to be a rather more boisterous form than the ballade or the rondeau. An indication of its perhaps more 'popular' nature is the fact that of the 33 virelais that Machaut set to music only eight use polyphony; and of these seven are very simple two-part settings for voice and untexted tenor. The one exception, *Tres bonne et belle*, adds an untexted contratenor. Machaut's virelai *Mors sui, se je ne vous voy* (ex.2) is characteristic. Its structure is: $I(A_7–B_4–B_3–B_4–A_4–A_7–B_4)$ $II(a_7–a_7–b_4)$ $II(a_7–a_7–b_4)$ $I(a_7–b_4–b_3–b_4–a_4–a_7–b_4)$ etc.

The texts of most virelais, as of most ballades and rondeaux, are concerned with courtly love. In the second half of the 14th century, however, a particularly interesting and attractive type, which has been called the 'realistic virelai', was developed. It often portrayed love in vivid terms with imagery from the hunt, from battle or from fire. Certain composers, especially those who flourished in the southern courts of Orthez, Navarre, Barcelona and Avignon, took full advantage of this opportunity for vivid musical as well as verbal scene-painting. The colourful results are reminiscent of the slightly earlier French *chace* and of the contemporary Italian caccia, and the texts of hunting and woodland scenes in particular recall certain 12th- and 13th-century *reverdies* or spring songs. It was probably the need for an impression of bustle and activity in the achievement of realistic effects that resulted in the extensive use of fragmented metrical patterns and striking rhythms. On the other hand, the realistic virelai was not so prone as the more standard virelai or the ballade to the extreme complexities of syncopation employed in the Ars Subtilior. As a characteristic example we may take Vaillant's *Par maintes foys* (ex.3, bars 40–45), in which much imitation of birdsong is used to tell the story of the nightingale so infuriated at finding its song of love interrupted by an intrusive cuckoo that it summons all the other birds of the air to put the intruder to death. Also typical are the anonymous *Or sus, vous dormez trop*, with further bird imitation and fanfares to summon revellers out to dance on a May morning (the text mentions nakers and cornamuses), and Grimace's *Alarme, alarme sans sejour*, with its canonic fanfare entries which summon the lady to take up arms on the lover's behalf. This last piece employs two singers with supporting instruments, as do a number of other pieces, for example the fiery anonymous *Restoés, horrible feu d'ardant desir*, in which the counterpoint of the two singers aids (as it does in the Italian caccia) the impression of intense activity – the putting out of (amorous) fire.

In the 14th and 15th centuries the virelai was never as popular a form as the ballade or the rondeau, unlike its

Ex.2

Ex.3

Ex.4

structural counterpart in Italy, the ballata, which dominated the late 14th century. Some indication of the way in which taste changed during this period is given in Tables 1 and 2: the occurrence of the three forms in six of the most important 14th- and early 15th-century manuscripts is shown in Table 1, and the usage of these forms by four principal composers of the period in Table 2. This demonstrates that in the 14th century the ballade was generally by far the most important lyric form, with the rondeau less important but slightly more influential than the virelai, despite the fact that Machaut especially favoured the monophonic type. In the early 15th century the dominance of the rondeau is very evident, with the relative decline of both the ballade and the virelai. However, by this stage a very substantial amount of poetry was being written which used the fundamental *formes fixes* but was totally divorced from music. In this realm the ballade held its ground, as may be seen in the works of Deschamps, Froissart, Christine de Pisan, Charles d'Orléans and Villon, though the virelai remained comparatively rare. After about 1420 composers would seem to have almost entirely stopped composing virelais;

but some time in the 1440s the form returned to favour in France, being cultivated particularly by Busnoys and Ockeghem. Du Fay's *De ma haulte et bonne aventure* (ex.4, bars 1–8) is typical of the mid-15th century, with its reversion to fairly simple rhythms, though hemiola and embellished figures are frequent. None of Dufay's virelais possesses the textless introduction found in many of his rondeaux and ballades. Guillaume Legrant used a simple homophonic style, though with some striking chromaticisms, in a group of three interrelated virelais. The general form of the 15th-century English carol is also analogous to the virelai type.

For bibliography *see* CHANSON.

NIGEL WILKINS

Virga [virgula] (Lat.: 'rod', 'staff'). In Western chant notations a neume signifying a single note. It usually consists a single vertical stroke of the pen (hence its name), often with a small *episema* (adjoining stroke). It generally represented a note higher than those on either side. (For illustrations *see* NOTATION, Table 1. See also M. Huglo: 'Les noms des neumes et leur origine'c, *EG*, i, 1954, pp.53–67.)

Virga, Girolamo di [de]. *See* VIRCHI, GIROLAMO DI.

Virga strata [gutturalis, franculus]. In Western chant notations a neume formed by joining a VIRGA and an ORISCUS. As with all neumes that include the *oriscus* there is doubt as to its exact significance. The *virga strata* is found most frequently in early German chant manuscripts, while comparable French sources, for instance, use a *podatus* (two notes in ascending order). Other manuscripts again understand it as two notes of the same pitch; this form when followed by a PUNCTUM is a PRESSUS. The alternative name *gutturalis* (Lat.: 'throaty') probably indicates that this neume involves a note whose ambiguity of pitch springs from a peculiarity of the manner of its performance. According to Huglo the other term *franculus* is not authentic and cannot be certainly identified (see M. Huglo: 'Les noms des neumes et leur origine', *EG*, i, 1954, 53–67).

□

Virgelli, Emilio (*fl* 1594). Italian composer. In his *Primo libro de madrigali a cinque voci* (Venice, 1594), he is identified as *maestro di cappella* at Camerino, a town in

the Marche. He appears to have been a skilful composer, using an incipient concertato style involving a solo voice pitted against a chorus, employing paired voices in contrapuntal passages, and varying the vocal combinations in five-voice textures.

RUTH T. WATANABE

Virghi, Girolamo di [de]. *See* VIRCHI, GIROLAMO DI.

Virgil [Vergil; Publius Vergilius Maro] (*b* Andes [?now Pietole], nr Mantua, 15 Oct 70 BCE; *d* Brundisium [now Brindisi], 21 Sept 19 BCE). Latin poet. After schooling at Cremona and Milan, he went to Rome as a student. By devoting himself to poetry, he won the favour of Octavian's powerful counsellor Maecenas and later that of the emperor himself.

1. Virgil and music. 2. Later treatments.

1. VIRGIL AND MUSIC. The *Eclogues* (*c*45–37 BCE), Virgil's first major work, differs from the *Idylls* of Theocritus and other Alexandrian prototypes in the earnestness of the poet's response to a harrowing and unpoetic age. His references to wind instruments are not merely ornamental, like those of the *Idylls*; they form an essential part of his thought. He frequently mentioned the *fistula* or panpipe, often under the name of *calami* (*see* SYRINX). The primitive *stipula*, in contrast (iii.27), was probably an oat or wheat stalk with one end flattened as a vibrator. For Virgil it symbolized a lack of poetic skill.

A *tenuis avena* ('slender oaten pipe') is mentioned at the beginning and end of the *Eclogues* (i.2, x.51) and further described by the unique singular *calamus* (i.10). Traditionally regarded as symbolic of the pastoral genre, it was probably a *stipula* with finger-holes added. It would thus embody an intermediate stage, known from comparative evidence, being a true musical instrument with a real though limited compass (cf Horace, *Ars poetica*, 202–3; a tetrachordal or pentachordal range has been conjectured), but lacking the complex construction of the tibia with its separate reed tongue. By contrast the *stipula* produced only a single sound and is compared in the *Eclogues* to the cicada's drone (ii.13). As the 4th-century commentator Servius noted, the *avena*, in the first poem of the *Eclogues*, typified a 'humble style'. Accordingly, its association there with Tityrus casts doubt on the traditional assumption (doubtful on many other grounds) that he was an enviably happy figure singing with full powers; and it complicates, at best, the attempt to identify him with the poet. The *avena* was used similarly as a genre symbol in lines thought by some after Virgil's death to be the true beginning of the *Aeneid*. It is unlikely to have been a tibia with an oaten mouthpiece like some surviving Egyptian pipes, since it is mentioned only in a simple pastoral context by Virgil and Tibullus (ii.1.53, iii.4.71) and with the deprecatory adjective 'tenuis' (*Eclogues*, i.2).

The tibia is mentioned only once in the *Eclogues* (viii.21, repeated as a refrain) and has no Theocritean parallel. It has been proposed that its presence served to emphasize the mood of lamentation with which the tibia and its Greek counterpart, the aulos, were frequently associated. If so, it serves as a warning against any complacently euphoric view of Virgilian pastoral. Evidently the poet referred here to a single pipe, mentioned by Theocritus in other contexts and not unconvincing in the pastoral scene, but rarely evident in Roman art or literature. Since the terms *tibia* and *aulos* alike can be generic, however, it is not clear whether a pipe with an inserted reed tongue (the Greek *monaulos*) or a reedless pipe (the Greek *surinx monokalamos*) was meant. The latter may be thought a far more likely instrument for use by herdsmen.

Occasionally Virgil sacrificed consistency in order to accommodate aspects of his own experience; although an oral tradition was natural to pastoral, he permitted himself references to writing (v.14; possibly x.53–4). The cryptic phrase 'alterna notavi' (v.14) seems to be a reference, unique in Latin literature, to musical notation; whether it denotes an accompaniment – notation alternating with text, line by line – or an instrumental interlude like the Hellenic *diaulion* remains uncertain. This forms part of a larger difficulty: for the reader or listener, the shepherds' piping remains symbolic or characterizing or merely decorative, since it cannot be heard. The poems in consequence inevitably become somewhat artificial, but in compensation the music of the natural world receives strong emphasis and is shown to be related to the singing or playing of men. Certain lines (such as i.1), moreover, display a choice of vowel and consonant which has reasonably been interpreted as an imitation of piping.

Virgil's works apart from the *Eclogues* show little concern with music as that term is usually understood. In the *Georgics* (*c*36–29 BCE) there are only four references to work songs (i.293–6, ii.417) or songs proper to vintage or harvest festivals (i.350, ii.388). Otherwise music was merely decorative: cymbals (iv.64, 150–51) and the Etruscan tibia (ii.193) are mentioned, but the only substantial passage concerns the lyre-playing and singing of Orpheus (iv.464–6, 471–84).

Similarly, in the *Aeneid* (*c*26–19 BCE) no instrument is prominent except the tuba or battle-trumpet. There is occasional mention of the lituus and cornu, and the buccina appears twice (vii.519, xi.474–5). The latter is seemingly termed 'pastorale signum' in the seventh book (vii.513), although this term does not occur in the *Eclogues*. Signalling was the main function of all these types of military horn. Their serviceableness for music as an art form was not relevant to Virgil's purpose; for him, as the voice of war, they speak at times in the *Aeneid* with memorable power. The kithara (concert lyre) appears in one surprisingly detailed technical passage (vi.644–7) concerning a heptachordal lyre plucked alternately with the fingers and with a plectrum. Now clearly identifiable as the double pipes, the tibia is twice named in descriptions of the rites of Cybele and Bacchus that associated it with Etruria, as before, and Phrygia (ix.618–19, xi.737).

The Orpheus of the *Aeneid* is merely a skilled professional, without the magic force credited to his song in the *Georgics*, and Circe sings placidly at her weaving like any country wife (vii.12–14; cf *Georgics*, i.293–4). Portions of the *Aeneid* were given musical performance, at least from Nero's time; and according to an early post-classical tradition, excerpts from the pastoral poems were publicly performed as sung mime not later than 43 BCE. All Virgil's works, nevertheless, were written for recitation in an age when a poetic text was complete without any accompaniment. Moreover, his metre was the hexameter, which had for many centuries enjoyed a particular independence in this respect. The musical element should not, therefore, be sought outside a literary context: for the most part it works indirectly through the rhythm, the symmetry, and particularly the countless subtle sound-patterns of his verse.

See also GREECE, §I, and ROME, §I.

2. LATER TREATMENTS. Book iv of the *Aeneid* has been the main inspiration for Virgilian music. Aeneas, wandering after the sack of Troy, briefly frees himself in Dido's new Carthage from the demands of destiny and the need to press on towards the foundation of Rome. Virgil ignored the 400 years that would have separated any real Dido and Aeneas, bringing them together movingly enough to compel even Metastasio to a rare tragic ending in his first original libretto. Pre-Metastasio operas include *Didona* by Cavalli (1641) and Purcell's *Dido and Aeneas* (1689).The

Metastasio century 1724–1824 begins with settings of *Didone abbandonata* by Sarro (1724), Albinoni (1725) and Porpora (1725), continues with such composers as Galuppi (1740, 1764), Hasse 1742, rev. 1744), Jomelli (1747, 1749) and Paisiello (1794), and enters the new century with Paer (1810), Mercadante (1823) and Reissiger (1824). Meanwhile J.M. Kraus wrote his *Aeneas i Cartago* to inaugurate the Royal Opera's new theatre in Stockholm (1782, but no production until 1799). The most ambitious Virgilian opera is Berlioz's two-part work (composed 1856–8) based on *Aeneid* book ii, *La prise de Troie* and *Les Troyens à Carthage*. 20th-century works include Malipiero's *Vergili Aeneis* (1946), and *Enea* by Guido Guerrini (1953).

The marriage of Aeneas to the Latin bride Lavinia (book vii) is treated by Collasse in *Enée et Lavinie* (1690) and P.A. Guglielmi in *Enea e Lavinia* (1785). Lysenko's *Eneida* (1910) made a musical comedy from Kotlyarevs'ky's parody of Virgil, in which gods and heroes become Ukrainian bumpkins.

The first Spanish setting of Virgil comes in Mudarra's songs with vihuela accompaniment (1546), exactly 400 years before Malipiero's *La terra* for chorus and orchestra. Instrumental music inspired by Virgil includes a *Pagan Poem* by Loeffler, originally for chamber group (1901), then orchestra (1906), and Déodat de Séverac's symphonic suite *Didon et Enée* (1903).

WARREN ANDERSON/THOMAS J. MATHIESEN (1), ROBERT ANDERSON (2)

Virgil, A(lmon) K(incaid) (*b* Erie, PA, 13 Aug 1839 or 1842; *d* St Petersburg, FL, 15 Oct 1921). American music educator and inventor of musical instruments. In 1878 he opened a music school with his wife Antha Minerva Virgil (née Patchen) in Peoria, Illinois, which continued until 1883. The Virgils then moved to New York. A.K. Virgil may have devised as early as 1872 a rudimentary form of his 'practice clavier', a silent keyboard instrument; by the mid-1880s it was being sold under the name Techniphone and by 1892 as the Virgil Perfected Practice Clavier (*see* VIRGIL PRACTICE CLAVIER).

In 1889 Virgil published *The Virgil Clavier Method: Foundation Exercises*, book 1; the following year he and his wife formed the Virgil Practice Clavier Company, and in 1891 the Virgil Piano School. He opened the Virgil Piano School and Practice Clavier Co. in Chicago in late 1896 or 1897, but this lasted only until 1900; other schools were organized in London and Berlin (1895–6), Boston (1899), and St Petersburg, Florida (1917–21). The method emphasized correct technical development during the early stages of piano study, with particular emphasis on legato playing and key release.

About 1900 Virgil and his wife separated but continued to maintain separate schools in the city. In 1902 he married Florence Dodd, who aided him in the preparation of *The Virgil Clavier Method: Foundation Exercises*, book 2 (1896). Antha Virgil continued to direct the Virgil Piano School, and published her own version of *The Virgil Clavier Method* (1902–5) as well as over 250 graded pieces for the piano and several songs. She maintained her own clavier manufacturing operation, which sold instruments under the name Tekniklavier. The Virgil method enjoyed considerable popularity around the turn of the century; 3600 instruments had been manufactured by 1896.

DOROTHEA A. NAHM

Virgil practice clavier. A toneless keyboard instrument devised by the American ALMON KINCAID VIRGIL (1839/1842–1921) in support of his physiologically based piano teaching system, published as *The Virgil Clavier Method* (1889–96). Dissatisfied with his pupils' tendencies to acquire poor habits at the keyboard, Virgil, with his wife Antha Minerva Patchen (1852–1939), developed an adjustable weight-of-touch keyboard instrument on which the only sound produced was a click on the down- or upstroke (or both). In theory, everything would be learnt and practised at the toneless instrument so that, on the transfer to a piano, fail-safe results were virtually guaranteed.

In 1883 or 1884 Virgil marketed his first practice keyboard, the Techniphone. This used a barely adjustable click-sound mechanism which generated a snapping effect (for both up- and down-clicks) through the flexing of spring steel tabs. No surviving example is known. In 1890 the company began production of the 'Perfected Practice Clavier', an improved direct-striker action model which had a click feature with on and off levers at each end of the keyboard, and a 56·5- to 565-gram weight-of-touch adjustment lever over the keyboard; the device had folding legs and was declared portable, although the full $7\frac{1}{3}$-octave model weighed between 41 and 45 kg.

After separating in 1900, the Virgils ran competing Clavier Method schools in New York. As well as publishing her own version of the method (1902–5), Antha established a clavier factory in Bergenfield, New Jersey, and brought out an improved model designed by

her second husband, Amos Cole Bergman (1865–1948). The 'Tekniklavier' (or 'Tek') incorporated an improved, more adjustable action. Like the A.K. Virgil instruments, it was offered in a choice of wood finishes and the $7\frac{1}{3}$- and $5\frac{1}{3}$-octave models were equipped with folding legs, but it was no more portable from the weight aspect than its precursors. Both factories also made truly portable four- and two-octave suitcase models. Practice keyboards continue to be used wherever a low noise level is desirable.

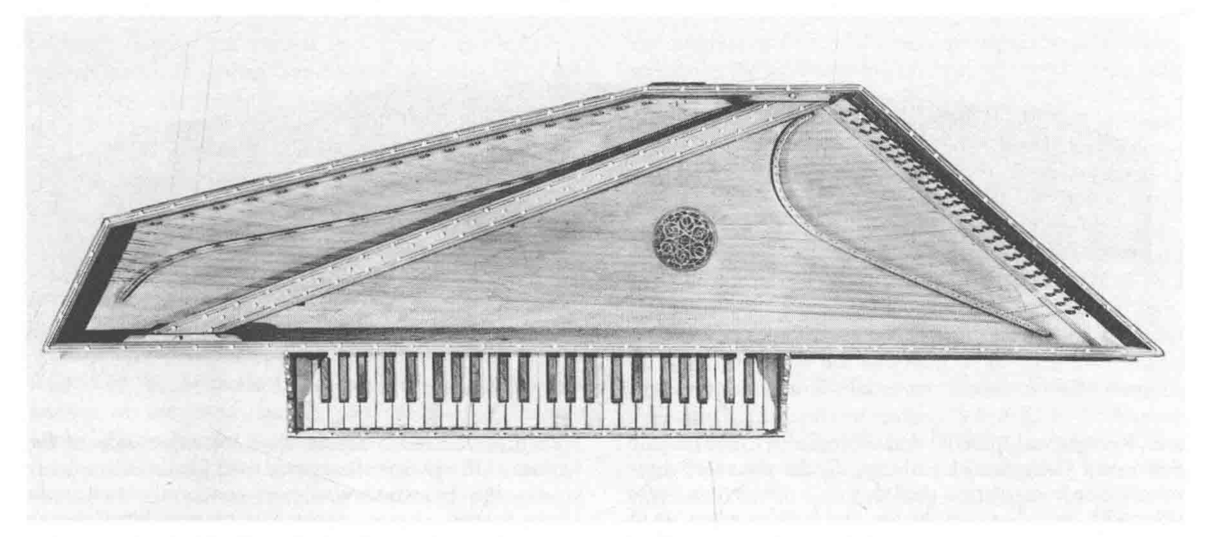
ROBERT E. SHELDON

Virgin. British-owned record company. It was founded in 1973 by Richard Branson, already a successful record retailer, chiefly to record popular music. The first four releases featured avant-garde work by such groups as Can from Germany and the British-based Henry Cow. The company's fortunes changed dramatically with the unexpected commercial success of *Tubular Bells*, an album by Mike Oldfield; issued by Virgin in 1973, it went on to sell over 20 million copies. Virgin associated itself with the punk movement by releasing work by the controversial Sex Pistols in 1977, while under the Front Line label it issued reggae recordings from Peter Tosh, U-Roy and others. During the 1980s, it established itself as a mainstream pop and rock company through such artists as Human League, Culture Club, UB 40 and Simple Minds. In 1982 Virgin acquired the Charisma label, whose most important acts included Phil Collins and Genesis. The company expanded its horizons by setting up a Virgin Classics division, with recordings by Arleen Augér, and Virgin Venture, which featured work by the Irish composer and pianist Mícheál O'Súilleabháin and the jazz composer Mike Westbrook. It had earlier become the British distributor for the JCOA (Jazz Composer's Orchestra Association) label of Mike Mantler and others. During the 1980s branches of Virgin were set up in the USA, Australia, Brazil and several European countries. Virgin Germany was responsible for the multi-million selling new age albums by Enigma (the pseudonym of the producer Michael Cretu).

By the 1990s, Branson was more interested in building up his interests in aviation, and Virgin Records and Virgin Music Publishing were sold for about £1 million to EMI in 1992. Although EMI retained the Virgin Classics label, under the new ownership the company became more orientated towards pop music, issuing best-sellers by Janet Jackson, the Spice Girls and Paula Abdul.

DAVE LAING



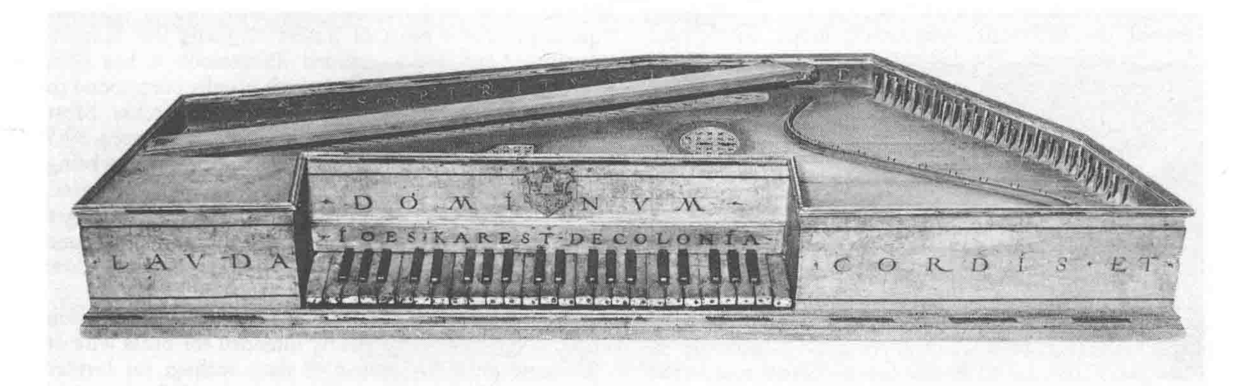
Virginal [virginals] (Fr. *virginale*, *épinette*; Ger. *Virginal*, *Instrument*; It. *arpicordo*, *spinetta*, *spinettina*). A smaller type of harpsichord, usually with only one set of strings and jacks and invariably with only one keyboard (it is classified in the Hornbostel-Sachs system as a chordophone: box zither).

1. Nomenclature and construction. 2. Italy. 3. Flanders. 4. England and other north European countries.

1. NOMENCLATURE AND CONSTRUCTION. The precise application of the term 'virginal' is much debated, partly because of its use in England to denote all quilled keyboard instruments well into the 17th century. Although some writers still reserve the term for rectangular instruments, present usage generally applies it to instruments whose strings run at right angles to the keys, rather than parallel with them as in a harpsichord or at an oblique angle as in a SPINET. A distinction based on the supposed uniqueness of a virginal's having two bridges resting on free soundboard is no longer tenable, since this is also the case with some harpsichords where the wrest plank is hollowed out under the nut (wrest-plank bridge), and some virginals have one bridge deadened by a massive plank underneath the soundboard. However, 'spinet' is often applied to polygonal Italian virginals (in English and in German) because of the similarity to the Italian word 'spinetta'. The late 16th-century Italian name for the rectangular virginal was *spinetta*, while the most common word for polygonal instruments was ARPICORDO. During the 17th century, however, 'spinetta' came to be accepted in Italy as a generic term for any plucked keyboard instrument smaller than a harpsichord. The term 'clavicordio' was used in the 16th century to mean any kind of plucked keyboard instrument, but also specifically for the polygonal virginal. The word *virginale* did not appear in this sense in Italian usage until the 20th-century revival of early music. (For further discussion of terminology, *see* SPINET; for Flemish usage, see §3 below.)

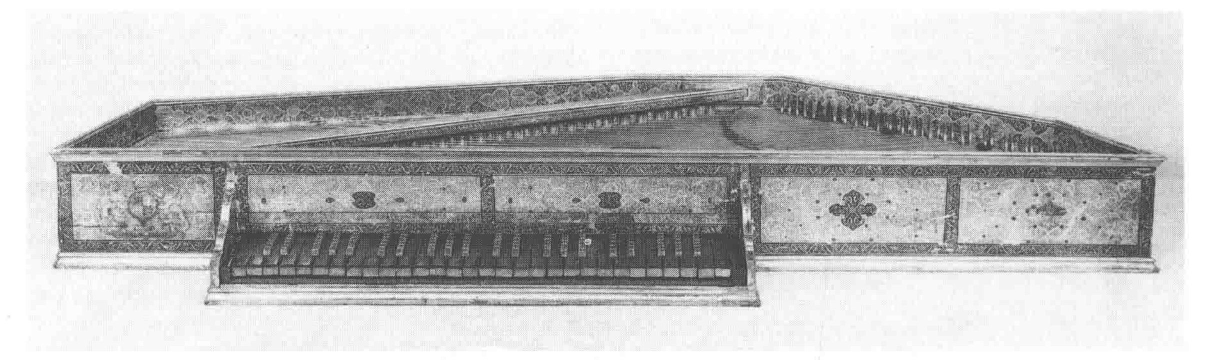
The derivation of the term 'virginal' remains in dispute, the association with the Latin *virga* ('rod') being unproved and that with Elizabeth I ('the virgin queen') being without foundation. The term probably derives in some way, however, from the instrument's association with female performers – Marcuse suggested that this results from a confusion between 'timbrel' (a frame drum played by women since biblical times) and the 'cymbel' in such terms as 'cembalo', 'clavicymbel' etc. – or from its tone, which some theorists likened to a young girl's voice (*vox virginalis*). The term 'pair of virginals', to be found in early literature derived from organ terminology, denotes a single instrument.

In contrast to those of a spinet, the long bass strings of a virginal are at the front, making it possible to build the instrument in a wide variety of shapes, from squat rectangles to more or less graceful polygons, depending on whether the keyboard is inset or projecting. The rectangular form would appear to have been the earliest. It is cited in the manuscript treatise of Paulus Paulirinus of Prague (*c*1460), who described the virginal as 'an instrument having the shape of a clavichord and metal strings making the sound of a harpsichord'. This form was also the one known to Virdung, who showed a small rectangular instrument with a projecting keyboard having a range of just over three octaves (*FG–g″*, lacking *F♯*) in his *Musica getutscht* (1511). Non-rectangular instruments appear in early 16th-century Italian representations, notably intarsias in the Vatican and Genoa Cathedral, as well as Giorgione's well-known *Concert* in the Pitti Palace, Florence, all dating shortly after 1510. An earlier example is the intarsia from about 1506 in Isabella d'Este's *grotta* in the Palazzo Ducale, Mantua, which probably represents an instrument made for her in 1496 by Lorenzo da Pavia, and is the earliest example of a *C/E–c‴* compass in a virginal (see Wraight, ii,



1. Pentagonal virginal by Alexander Bertolotti, Italian, 1585 (Russell Collection, Edinburgh University)

pp.198–201). Like the intarsia in the Vatican, this instrument has some curved case sides and suggests that virginals may have been made in a variety of shapes before the straight-sided, pentagonal design became established.



The bridges of Italian virginals were invariably parallel-sided with a moulding on the top edge, but North European instruments usually have a triangular section. The right hand bridge of any virginal usually has a pronounced curve in the treble; this was always bent in Italian virginals but may be sawn in other traditions. All instruments at quart, quint and octave pitch sometimes have the right bridge (at least partly) made of straight sections. In the North European traditions the left hand bridge is virtually straight, but most Italian virginals have a curve at the bass end.

In a typical virginal the jacks are placed along a line running from the front of the instrument at the left to the back of the instrument at the right. The key-levers are correspondingly quite short in the bass and quite long in the treble, giving the keyboard of the virginal a characteristic touch, and, in some cases, making it difficult to play notes in the extreme bass easily and quickly. The jacks (one for each key) are arranged in pairs and pluck in opposite directions, so that the pairs of jacks are separated by closely spaced pairs of strings. In Italian instruments, each jack passes through a slot in the soundboard and in the solid register or jackslide (about 4 cm by 3 cm) glued to the underside. In North European virginals each pair of jacks is usually served by a single slot in the soundboard, together with another slot below in a thin guide above the keys. Leather on the soundboard and lower guide provides a quiet bearing surface for the jacks.

Although virginals were made in many shapes, the internal bracing is similar for the different types. There is a brace extending from the front to the back of the case at each side of the keyboard; this may be supplemented by corner blocks. A liner around the inside of the case supports the soundboard and carries the hitch-pins; the wrest pins (tuning pins) are held by a larger piece of hardwood. In rectangular instruments a separate diagonal hitch-pin rail and wrest plank are provided. The back corners of rectangular Italian virginals were sometimes cut off as shown by the 1593 virginal by Giovanni Celestini (Donaldson Collection, Royal College of Music, London). A few employ the false inner-outer construction in which a thick softwood case is fitted with cypress veneer and half-mouldings to make it appear as if a cypress instrument were in an outer case. The oldest known such instruments are by Joseph Salodiensis (*c*1570;

2. Polygonal virginal by Joes Karest, Flemish, 1548 (Brussels Museum of Musical Instruments)

3. 'Queen Elizabeth's' virginal: probably by G.A. Baffo, Italian, late 16th century (Victoria and Albert Museum, London)

see Wraight, ii, p.263) and Celestini (1587; in the Beurmann Collection, Hamburg). By far the most common Italian construction used thin (3–5 mm) cypress case sides with mouldings on the top and bottom edges, as in Italian harpsichords. Many of these thin-cased virginals were kept in a painted outer case.

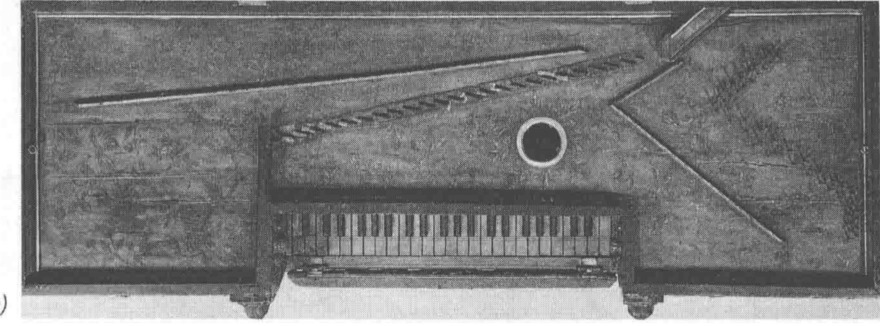
The case joints of Italian virginals are mitred, as might be expected considering the thinness of their wood; accordingly, it is noteworthy that the corners of the 1548 Karest virginal (fig.2) are dovetailed, even though the wood is scarcely thicker. Otherwise, the structure of the instrument is hardly different from that of an Italian example (compare with fig.1), except for the replacement of the solid Italian jack register by a complete counter-soundboard mortised for the jacks and serving as a lower guide (this feature is also found in a number of German and English instruments, and dovetailing of the case joints in German harpsichords and clavichords persisted into the 18th century).

Later Flemish virginals have thick cases, like those of Flemish harpsichords, and are assembled before the bottom is put on rather than being built from the bottom up. As with the Italian instruments, however, the two principal braces run from the front of the instrument to the back at the ends of the keyboard. The decoration of these instruments normally corresponds to that of the Flemish harpsichords, either plain paint or marbling outside and block-printed papers inside, except for the inside of the lid, which may have a painted landscape on it. A few examples are painted with arabesques instead of being papered, but this must have been relatively uncommon. The inclusion of a Latin motto either on the inside of the lid, on the jackrail, or around the inside of the case above the soundboard was quite common, and this is also seen in German instruments. The case-side covering the keywell (the 'fallboard') was usually hinged to the case along its underside. The decorated inside face, sometimes with a motto, was thus displayed when the fallboard was opened.

2. Italy. Numerous Italian 16th-century virginals have survived and show that often considerable trouble was taken to provide elaborate decoration: the 1577 Rossi instrument (Victoria and Albert Museum, London), with inset precious and semi-precious stones is a fine piece of work. More typical was a plain cypress case with fine mouldings, but sometimes the casework was set with intarsia work in contrasting coloured woods, as in the 1523 Francesci de Portalupis virginal (Musée de la Musique, Paris). All of these virginals have a rose in the soundboard, usually made of three or four layers of wood veneer, pierced in intricate gothic or geometric designs. Sometimes carved brackets were set either side of the keyboard. Ivory was sometimes used for the natural-key covers, but boxwood was most commonly used, with ebony-topped sharps. Most instruments by Venetian makers had projecting keyboards, and virginals from the Milan–Brescia area had partly recessed keyboards, but exceptions to these traditions are found in both regions. There is no overwhelming acoustical advantage in one system or the other. Almost all 16th-century virginals have a *C/E–f‴* compass and later 17th-century examples only *C/E–c‴*. Early 16th-century instruments were made with an *FGA–f‴* compass, but in the few instruments that survive the keyboard has since been modified. Some 17th-century virginals (e.g. by Francesco Poggi and Stefano Bolcioni) had split keys for *d♯/e♭* and *g♯/a♭*. Flemish and Italian virginals usually ended on a *C/E* short octave. A well-known instrument, the so-called 'Queen Elizabeth's Virginal' (in the Victoria and Albert Museum, London; fig.3), is Italian, probably by Giovanni Baffo. Its original keyboard had a *C/E–f‴* compass, but a *C–c‴d‴* (i.e. no *c♯‴*) keyboard was later installed, presumably in order to alleviate the difficulty of the non-chromatic bass. In turn, this keyboard was later modified to the present *G′/B′–c‴* compass (see Wraight, ii, p.50). English virginals tend to have a wide compass (see §4 below).

Modifications, which have obscured the history of the Italian harpsichord, were not undertaken often for the virginals. It was relatively difficult to replace keyboards with those from other instruments since the pairwise jackslide tends only to match the keyboards for which it was made. Nevertheless, some virginals had their scales changed and keyboards altered to keep them abreast of changing musical requirements.

Considerable discussion has been devoted to the question of the pitch of Italian virginals (*see* Harpsichord, §2(i), for a detailed discussion): it has been argued that the long scales (which usually correspond to *C/E–f‴* compasses) were intended for low pitches. Most 16th-century Italian virginals have scales between 30·5 and 35 cm at *c″* (with only a few extant examples being shorter than this). These instruments were, however, designed to be strung in iron wire, which requires a longer scale than brass wire, and means that this long scale came to a normal pitch (i.e. for 35 cm about a tone below *a′* = 440).



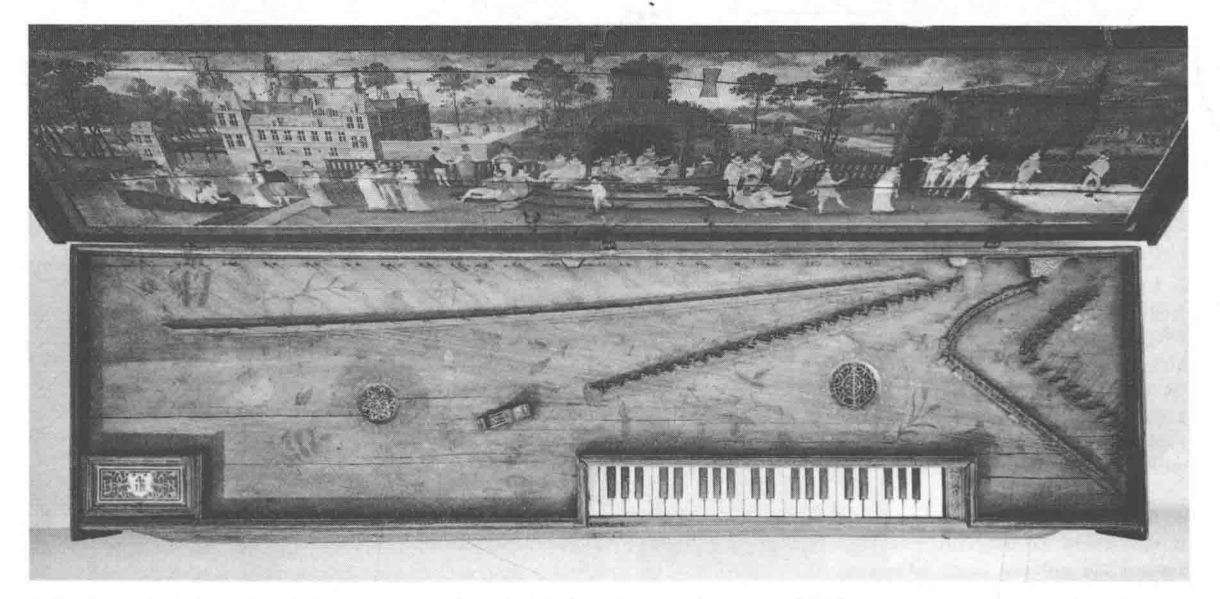
Although most Italian virginals were designed for iron wire, some were quite clearly intended for brass wire at the same pitch (by reason of their sealing; for further details, *see* Harpsichord, §1, such as the 1693 instrument by Cristofori (Musikinstrumenten-Museum, Universität

Leipzig)). Several rectangular instruments by the 17th-century maker Honofrio Guarracino are examples of the latter. They have the tuning pins on the left-hand side and only one bridge on free soundboard, with the result that the sound is much brighter than that of most virginals and closely resembles that of a bentside spinet. These virginals by Guarracino appear to have been the continuation of a Neapolitan tradition: a similar instrument was made by Alessandro Fabri in 1598 (Tagliavini and van der Meer, 1986). Since instruments of this design are unknown further north of the Italian peninsular, the speculation is permissible that this design might have been influenced by Spanish virginals. Virtually nothing is known of the latter, but Naples was under Spanish administration at that time so the introduction of Spanish instruments would have been possible. In the 16th century the use of brass wire on virginals is believed to have been uncommon, but Isabella's intarsia virginal was probably so strung; the pitch would have been about a fourth above normal 8′ pitch (a' = c415–440).

Italian makers (unlike Flemish makers; see §3, below) all adopted similar scalings and plucking points, thereby giving a fairly uniform character to their instruments. The sound of an Italian virginal is usually louder than that of an Italian harpsichord, since the virginal has two bridges on free soundboard. However, as with all keyboard instruments with a plucking action, it is possible to vary the volume considerably by voicing the plectra.

A few virginals were made with two sets of 8′ strings although this was not common. Four such instruments are known: two by Donatus Undeus (1623, Brussels Museum of Musical Instruments; 1633, Kirby Collection, Cape Town), one by Celestini (1594, Museum für Kunst und Gewerbe, Hamburg) and an unsigned instrument attributed variously to Undeus and Celestini (but probably

(a)



(b)

4. Virginal with centrally placed keyboard made for William, Duke of Cleves (1516–92), Flemish, 1568 (Victoria and Albert Museum, London) (a) general and (b) plan views

5. Hexagonal virginal with keyboard placed to the left ('spinett'), by Hans Ruckers, Antwerp, 1591 (Gruuthuse Museum, Bruges)

by the latter) in Fenton House, London. Another rectangular virginal, made by Celestini in 1610 (Brussels Museum of Musical Instruments), does not have the usual pairwise arrangement of jacks: instead each string is separated from the next string by one jack. On the nameboard this instrument is described as an 'arcispineta'. Other Italian makers whose instruments gained a high reputation at the time included Domenico da Pesaro, Vito Trasuntino and Alessandro Trasuntino (no instruments by the latter two makers survive).

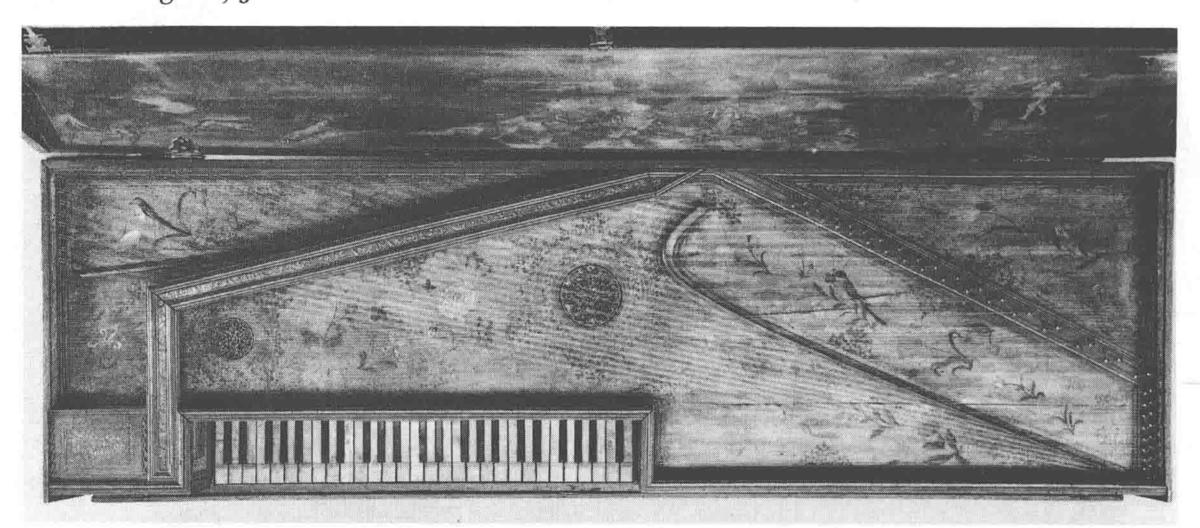
6. Double virginal with keyboard placed to the right ('muselar'), by Hans Ruckers, Antwerp, 1581 (Metropolitan Museum of Art, New York); the octave instrument, or 'child', is not shown but would be placed over the jacks behind the keyboard

3. Flanders. Although the tonal resources of the virginal (which has a single set of strings and is seldom equipped with any means of changing timbre) are more limited than the harpsichord's, it none the less occupies a crucial position both in the musical life and in the development of quilled instruments in general in the 16th and 17th centuries. Harpsichords certainly existed throughout this period both north and south of the Alps, but they are more rarely represented in paintings, drawings etc. than virginals, and it must therefore be concluded that they were much less common than the smaller, simpler and cheaper instrument. In addition, the sound of the virginal is excellently suited to most of the keyboard literature of the period. That the virginal occupied a central position in Flemish instrument building is well illustrated by the fact that in the rules for the admission of keyboard instrument makers to the Antwerp Guild of St Luke (drafted in 1557) the piece of work to be submitted by a candidate was specifically designated as 'a rectangular or polygonal virginal' ('een viercante of gehoecte clavisymbale') whereas no mention of harpsichords is made at all. Furthermore, O'Brien (1974) has shown that the Ruckers family of instrument makers built many more virginals than harpsichords.

The earliest surviving Flemish virginal (see fig.2), like those depicted in Flemish paintings from before 1565, is thin-cased and polygonal. These instruments thus bear a superficial resemblance to their Italian counterparts, the most obvious difference being that their keyboards are entirely recessed rather than wholly or partly projecting; however, some Italian virginals of false inner-outer design have completely recessed keyboards. The appearance of a Flemish polygonal instrument seems somewhat heavier than the graceful Italian design.

Ripin (1971) has speculated that the Flemish polygonal design was transmitted to the Low Countries by way of Germany. It is known that some of the earliest 15th-century makers who worked in the Low Countries came originally from Cologne: of the earliest string keyboard instrument maker in Flanders, Hans van Cuelen (Hans from Cologne; *fl* 1509–57), little is known, but Joes Karest (builder in 1548 of the oldest surviving Flemish virginal; see fig.2) headed the instrument makers' petition to the Guild of St Luke in 1557 as they sought to be admitted as instrument makers and not grouped with the painters. A German harpsichord of 1537 made by Hans Müller in Leipzig shows striking resemblances to thin-cased Italian harpsichords. However, the answer as to where these harpsichord or virginal designs originated probably lies in the 15th century, and about this period so little is known in any detail that answers can be no more than speculative. As is often the case with inventions, similar designs may have been developed simultaneously in different parts of Europe.

As noted above, however, the guild regulations make it clear that rectangular as well as polygonal instruments were being made in Antwerp in the 1550s, and presumably these instruments were also thin-cased. Although no example from this period survives, the earliest Flemish depiction of a rectangular virginal (an engraving by Cornelis Cort printed in 1565, based on a painting by Frans Floris from ten years earlier, now lost) shows an instrument without a lid, suggesting that it was thin-cased



7. *Title-page of 'Parthenia' (c1612–13)*

and intended to be kept in a stout outer case like an Italian instrument. By the end of the 1560s, however, it would seem that a thick-cased rectangular instrument very much like those now considered typically Flemish had come into being, since a painting by Michiel Coxcie purchased by Philip II of Spain in 1569 clearly shows an instrument of this kind, which seems immediately to have superseded the thin-cased types in the Low Countries.

At the end of the 16th century, three types of virginal were being made in Flanders: one with the keyboard centred in one of the longer sides (fig.4), one with it placed off-centre to the left (called 'spinett' by Claas Douwes; fig.5), and one with it placed off-centre to the right ('muselar'; fig.6). The centre-keyboard design in normal-pitch virginals is known only from one surviving instrument, that made for the Duke of Cleves (fig.4), and it is impossible to say whether this was an isolated example or whether it was a design that was later forgotten.

Octave (4′) instruments retain their central placement of the keyboard, although this is virtually obligatory because of their small size. The difference in the placement of the keyboard is important since it determines the placement of the jacks in relation to the two bridges. With the keyboard placed to the left, the jacks run in a line close to the left-hand bridge; therefore the point at which

8. Plan view of rectangular virginal by John Loosemore, Exeter, 1655 (Victoria and Albert Museum, London); the placement of the bridge makes the sounding lengths of the strings shorter than in fig.6

the jacks pluck the strings is close to the mid-point in the treble and well away towards the left end in the bass. This is also true with virginals with centrally-placed keyboards, although the displacement of the plucking point from the centre of the strings in the bass is reduced (see fig.3). Because of this varying plucking-point, the timbre of these virginals gradually changes from flute-like in the treble to reedy in the bass, being similar in this respect to the timbre of a harpsichord.

Muselars, with their keyboard at the right, have their strings plucked at a point near the centre for virtually their entire range, producing a powerful, flute-like tone that varies little from treble to bass. Both spinetten and muselars were made in a variety of sizes, the smaller ones presumably tuned to higher pitches and the smallest ones clearly tuned an octave above the largest ones. Among the surviving instruments, muselars are more numerous in the full-size examples, spinetten in the smaller sizes.

The earliest surviving example of a muselar is by Hans Ruckers (*d*1598) and is dated 1581 (fig.6); it is entirely possible that Ruckers invented the muselar design, even though it must be emphasized that the other characteristics now associated with Ruckers's work are to be found in virginals made by the preceding generation of makers, notably Hans Bos and Marten van der Biest. Muselars always have both their bridges resting on free soundboard in contrast to the spinetten and the polygonal instruments, which often appear to have had the bridge at the left deadened by a plank underneath the soundboard. Ruckers's practice in this regard was not consistent; the smaller spinetten all seem to have the left-hand bridge deadened, but some of the full-size examples have both bridges resting on free soundboard.

Muselars have the further distinction of being the only virginals normally provided with any means of changing timbre. A substantial number of the surviving examples have an ARPICHORDUM STOP, which may be engaged to produce a buzzing sound in the tenor and bass to contrast with the clear flute-like sound of the alto and treble. (For a detailed discussion of surviving Ruckers instruments, *see* RUCKERS, §2.)

The culmination of the Flemish virginal makers' art was the construction of the double virginal called 'mother and child' by Joos Verschuere-Reynvaan (*Muzijkaal kunst-woordenboek*, 2/1795), a usage apparently sanctioned by the makers, since the original Ruckers numbers on surviving examples include an 'M' and a 'k' for *moeder* and *kind* on the large and small instruments respectively. These instruments consisted of a virginal of normal size (the 'mother') with a compartment next to its off-centre keyboard in which a removable octave instrument (the 'child') was housed.

The octave instrument was designed to be coupled directly to the larger one. An oblique slot was cut in the bottom of the octave instrument, and if the jackrail of the 'mother' was removed and the 'child' was put on top of it in place of the jackrail, the larger instrument's jacks reached through the slot to touch the underside of the octave instrument's key-levers. Thus when a key of the 'mother' instrument was depressed its jack pushed upwards on the back end of the corresponding key of the 'child', causing the octave instrument to sound at the same time as the larger one. In addition, the octave instrument could be played separately, either when in place on top of the larger instrument or entirely removed from it. Instruments of this kind appear to have been imitated in Germany and Austria, and an Innsbruck inventory made in 1665 mentions a virginal in which two smaller ones were contained, 'all three of which could be placed on one another and sounded together'.

4. ENGLAND AND OTHER NORTH EUROPEAN COUNTRIES. Unlike some Italian and Flemish examples, the surviving English virginals are all rectangular in shape. Their cases are typically of oak, and the lids were always originally vaulted. The decoration is also standardized: the outside of the cases are plain, ornamented only by ironwork strap hinges and locks; but the insides are given stylized and colourful embellishment including paintings on the lid and fallboard generally of landscapes with figures, painted decorations on the soundboard, and gilt embossed papers contrasting with finely cut mouldings, normally of

9. *'Man and Woman beside a Virginal': painting, c 1658, by Gabriel Metsu (National Gallery, London)*

cedarwood, sometimes painted. The natural keys are usually boxwood, with dark sharps, occasionally inlaid, although instruments survive with snakewood or ebony naturals and solid ivory sharps. The compass of early virginals is often from *C* to c''', later instruments usually having a very wide G'/B'–f''' compass, although three instruments from the mid-1660s have compasses extending down chromatically to G' or below. The short scalings, often based on a c''' string length of 6 inches (15·24 cm) suggests many instruments were strung in iron at a high pitch standard, probably one or two semitones above $a' = 440$. Other instruments were built to pitches one or two semitones below this high pitch and there is one instrument, the orphan of a mother-and-child virginal made by Thomas White (*c*1600–60; the only such instrument known to be made in England), which was designed to play a 5th above the standard high pitch.

The virginal in England probably developed in the early part of the 16th century, influenced by early instruments from Flanders and the Spanish Netherlands. There are many references to virginals in this period, including several in the inventory taken at the death of Henry VIII in 1547. Although a number of these were probably made on the Continent, about 20 virginal makers are known to have worked in Britain in the 16th century. The typical layout and decorative scheme found in the surviving instruments were most likely established by the last quarter of the century.

The surviving instruments date from 1638 to 1684, although two undated examples are probably earlier. The White family appear to be the most prolific of the early makers judging from surviving examples. Five of Thomas White's instruments have survived, including an unusual instrument with double stringing from G'/B' to *A*, then single strung to f'''. His son James has left two instruments. Later virginal makers of note include Stephen Keene (*c*1640–1719) and John Player (*c*1634–*c*1706), who both went on to make spinets, Adam Leuersidge (*fl* 1650–70), and the Exeter makers John Loosemore (1613–81) and Charles Rewallin (*fl* 1657–97). Loosemore, Rewallin and James White were also involved in making or repairing organs.

Praetorius (*Syntagma musicum*, ii, 2/1619/*R*), who also mentioned placing virginals on top of one another, depicted a rectangular instrument differing in several respects from the developed Flemish design, rather resembling pre-Ruckers examples in having a central keyboard and a jackrail supported at the left by an arm extending from the bass end of the key-well. The instrument shown by Praetorius also has a larger range

than the regular Flemish virginal compass of four octaves with a bass short octave (*C/E–c‴*), its keyboard extending to *d‴*, with divided accidentals in the lowest octave to provide the *F*♯ and *G*♯ not ordinarily available with the *C/E* SHORT OCTAVE, as well as having the E♭ keys divided in the remaining octaves to sound D♯, thereby extending the range of available keys to include E major and E minor. As with virtually all north European virginals, a tool box is set in the space to the left of the keyboard.

Although north European polygonal virginals were normally housed in outer cases like their Italian counterparts, this does not seem always to have been true of the rectangular instruments. Praetorius did not show a lid for the instrument he illustrated (presumably to save space), although the presence of a hinged front board to cover the keys strongly suggests that the instrument had one; it would be of great interest to know whether such a lid would have been vaulted like those shown in French illustrations of the 1580s, on the title-page of *Parthenia* (London, 1612–13; fig.7) and found on all surviving English virginals, which range in date from 1641 to 1679. Despite the fact that the English instruments seem to be patterned on Flemish spinetten, the vaulted lid, the method of supporting the left end of the jackrail and the shorter scaling of English virginals (fig.8) suggest that they actually derive from the same non-Flemish tradition represented by Praetorius's illustration and the surviving 17th-century harpsichords and virginals from Germany and France – a tradition also represented by the polygonal Flemish virginals from the mid-16th century.

Outside Italy the making of rectangular virginals seems to have come to an end by the close of the 17th century, these instruments having been replaced by bentside spinets. Since only one bridge of a spinet is on free soundboard, the sound of a spinet resembles that of a harpsichord, and it may be for this reason that taste changed in favour of the spinet and against the virginal. Although the spinet is typically somewhat smaller than a rectangular virginal, the scalings employed in both instruments are similar. Polygonal virginals and spinets usually have less soundboard area in the low tenor and bass than rectangular virginals; this can impart a clearer, reedier character to the sound but, as in all keyboard instruments, it is the skill of the maker that ultimately influences the quality of the sound. Some virginals were made in the early 19th century in Italy: they resemble square pianos in appearance, but contain a plucking mechanism. The last dated of these (1839, now in the Musikinstrumentum-Museum, Leipzig University) is by Alessandro Riva of Bergamo.

The importance of the virginal has been exaggerated by some, who, unaware that the term was used for all plucked keyboard instruments in England, assume that the music of Byrd, Bull, Gibbons, Tomkins and others was intended specifically for these single-strung instruments. However, as is made clear by the title-page illustration of *Parthenia In-violata or Mayden-Musicke for the Virginalls and Bass-Viol* (*c*1624–5), which shows a harpsichord rather than the rectangular instrument of the earlier version of *Parthenia*, the music of the 'virginalist composers' was not intended to be restricted to the virginal. Other writers have relegated the instrument to a status rather lower than that of the modern upright piano. The proper assessment of the virginal lies between these extremes. Despite the limitations imposed by a single register, virginals are useful and remarkably versatile instruments with special qualities of their own, on which virtually the entire literature of their period can be played with considerable success. Thus, although virginals were often used merely as practice instruments and for domestic music-making, they should not, like the spinet, be thought of essentially as substitutes for the harpsichord.

For a discussion of the instrument's repertory, *see* KEYBOARD MUSIC, §I.

Virilas (Lat.). A term (like AVERSI and CURSIVA) found only in the index to the manuscript *GB-Ob* Canon.misc.213, but perhaps more widely applicable to music around 1400. It is used to describe the Credo by Chierisy, which is for two voices of equal range. The style is rare in the mass music of the time (for another example, *see* BRABANT, LAMBERTUS) but appears in the song repertory. The term could perhaps derive from the Latin *virilis pars*, meaning 'an equal share'.

DAVID FALLOWS

Virtuosa (It., from Lat. *virtus*: 'excellence', 'worth'; Ger.: *Virtuosin*). A woman musician of extraordinary talent and accomplishment, counterpart to the male VIRTUOSO (which term is also often applied to women). The term seems to have come into use in the late 16th century with the rise of the professional female singer, before which time opportunities for women musicians were extremely limited. Among the first women identified as *virtuose* were the singers in the famous *concerto delle donne* established by Duke Alfonso II of Ferrara in 1580. In 1598, the music publisher Giacomo Vincenti praised the young women of the Venetian Ospedale della Pietà as 'virtuose giovani' (Baldauf-Berdes, 1993, p.107). As in these early examples, the term has always been associated with performance rather than composition; such 17th-century women composers as Barbara Strozzi and Francesca Caccini were called *virtuose* primarily on account of their vocal prowess. By the mid-17th century, the term became associated particularly with operatic singers, among whom Anna Renzie (*c*1620–*c*1661) was the most renowned. At the end of the century the term, as applied to operatic singers, yielded to PRIMA DONNA, although Benedetto Marcello still preferred *virtuosa* in *Il teatro alla moda* (*c*1720). In the 18th and 19th centuries the term was most often applied to instrumentalists. One early definition of the instrumental *virtuosa* also emphasizes the relation of the term to the quality of virtue: 'Therefore the Italians call a person that has some good quality *virtuosus* or *virtuosa*, grounded upon the sentence of scripture that knowledge doth not enter into a wicked soul', (T. Dart: 'Miss Mary Burwell's Instruction Book for the Lute', *GSJ*, xi, 1958, p.45). Maddalena Laura Lombardini Sirmen (1745–1818), a violinist and singer as well as a composer, is one example of a *virtuosa* trained in the Venetian conservatories for girls. Clara Schumann (1819–1896) was named the 'Royal and Imperial Chamber Virtuosa' in 1838. In the mid-20th century, the backlash against 'empty virtuosity' (an emphasis on technique rather than musical communication) meant that the term became a less common designation, but it has been resuscitated, with no negative connotation, for young women soloists.

ELLEN T. HARRIS

Virtuoso (It., from Lat. *virtus*: 'excellence', 'worth'). A person of notable accomplishment; a musician of extraordinary technical skill. In its original Italian usage (particularly in the 16th and 17th centuries) 'virtuoso' was a term of honour reserved for a person distinguished in any intellectual or artistic field: a poet, architect, scholar etc. A virtuoso in music might be a skilful performer, but more importantly he was a composer, a theorist or at least a famous *maestro di cappella*. In the late 17th and 18th centuries a great number of Italian musicians carried the term 'virtuoso' to the courts and theatres of northern Europe, regularly applying it to themselves whether or not they merited such distinction in the traditional Italian sense. Brossard (*Dictionaire*, 1703), writing in France at a time when debate raged over Italian music and musicians, approached the word 'virtuoso' by way of its Latin root 'virtu', emphasizing that the true virtuoso was a musician of exceptional training, especially in theory (the same emphasis is found in Walther's *Musicalisches Lexicon* of 1732). Johann Mattheson, however, in his *Der brauchbare Virtuoso* (1720), while honouring the traditional 'theoretische Virtuosen', paid tribute also to the 'virtuosi prattici'. Others drew the line less respectfully; in his tract *Der musikalische Quack-Salber* (1700) Johann Kuhnau left no room for confusion between the true virtuoso ('der wahre Virtuose') and the highly gifted *musicus* ('der glückselige *Musicus*') who enjoyed the support of German princes and emperors but had little to commend him apart from practical facility.

With the flourishing of opera and the instrumental concerto in the late 18th century, the term 'virtuoso' (or 'virtuosa') came to refer to the violinist, pianist, castrato, soprano etc. who pursued a career as a soloist. At the same time it acquired new shades of meaning as attitudes towards the often exhibitionist talents of the performer changed. In the 19th century these attitudes hardened even more. Liszt declared that 'virtuosity is not an outgrowth, but an indispensable element of music' (*Gesammelte Schriften*, iv, 1855–9). Wagner, on the other hand, expressed the kind of reservations often voiced in his time: 'The real dignity of the virtuoso rests solely on the dignity he is able to preserve for creative art; if he trifles and toys with this, he casts his honour away. He is the intermediary of the artistic idea' (*Gesammelte Schriften*; Eng. trans., vii, 1894–9, p.112). Pejorative implications are present in such German expressions as *Virtuosenmachwerk* (a piece of routine display), *Pultvirtuoso* (an orchestral player of virtuoso temperament) and *Taktstockvirtuoso* (a virtuoso of the baton). But though there has been a tendency to regard dazzling feats of technical skill with suspicion (and even, in such cases as Tartini and Paganini, to ascribe them to some supernatural power), the true virtuoso has always been prized not only for his rarity but also for his ability to widen the technical and expressive boundaries of his art.

OWEN JANDER

Virués (Espinola) [y Spinola], **José (Joaquín)** (*b* Jerez de la Frontera, 27 June 1770; *d* Madrid, 13 May 1840). Spanish music theorist. A career officer in the Spanish army, he rose to field marshal and director of the Toledo Colegio de Infantería. He was also a man of letters, poet and translator of Voltaire. In 1824 he published in Madrid his *Cartilla harmónica, ó El contrapunto explicado en seis lecciones*, and in 1831 a much-expanded version of his theory, *La geneuphonía ó Generación de la bien-sonancia música*, which also appeared in English (London, 1850), translated and substantially revised by F.T.A. Chaluz de Vernevil. The presentation in both these works is coloured by an irritation against the obfuscation of professional music theorists, their unintelligible jargon and multiplication of rules. Virués sought 'one basic principle, unique and simple' from which all musical practice could be deduced, and he claimed to have found it in what he called 'polytonaganism', the application of which would allow the study of harmony to be completed within a month, thus rendering all previous theories obsolete. In this Virués appears to have been something of an autodidactic crank, especially since his system in its fully developed form was hardly less complicated and had a terminology of its own hardly less arcane than any it was designed to replace. However, his work was given some importance by its adoption as the official method of the Madrid Conservatory in its early years.

GUY BOURLIGUEUX

Vis-à-vis Flügel. A term for a combination of two string keyboard instruments built so that they share a common bentside and that the keyboards are 'facing' (Fr. *vis-à-vis*) each other. Pairs of harpsichords combined in this way were known at the end of the 17th century. JOHANN ANDREAS STEIN made vis-à-vis instruments consisting of a harpsichord and a piano (*see* HARPSICHORD-PIANO).

Viscarra Monje, Humberto (*b* Sorata, 30 March 1898; *d* La Paz, 2 Sept 1971). Bolivian pianist, composer and teacher. He studied piano privately in La Paz, with Giovanini in Rome (1926) and with Camille Decreusse in Paris (1927–8). Returning to Bolivia in 1929, he gave private piano lessons and performed piano works by French and Russian composers. From 1937 he taught at the La Paz Conservatory, and he was a founder member of the Man Cesped Association in Cochabamba (1940). He was director of the La Paz Conservatory from 1949–69, during which period he appeared in recitals and concerts with the Bolivian National SO. Also he published several poems, essays, articles and press reviews. He won several prizes, including diplomas from the Tomás Frías University and the Caja Nacional de Seguro Social, and the National Culture Award (1970). His published compositions, almost all for piano, include *Impresiones del Altiplano* (which won a prize from the La Paz municipality), the Rondino and several pieces published posthumously in Madrid by Tubal's Colección de Compositores Bolivianos, among them the *Toccata de Lluvia*. Also published in La Paz was his *Album de canciones sobre ritmos collas* for voice and piano. Several unpublished works are conserved in manuscript form in his daughter's home in La Paz.

CARLOS SEOANE

Visconti, Domenico (*d* Rome, 1–16 Nov 1626). Italian composer and organist. He was an organist at the Florentine court, where his wife Lucrezia also worked; they were probably in the service of Antonio de' Medici in particular, as appears to be suggested by the dedication (written by one of his pupils) of Visconti's 1615 publication. On 6 October 1626 he was appointed organist of S Maria in Aracoeli, Rome, but about a month later he died. The pieces in his *Primo libro de madrigali a 5 voci* (RISM 1615[21]), which contains two by other composers as well as 19 of his own, are similar in style to other Florentine madrigals, such as those of Marco da Gagliano, but are only of limited interest; *Quel bacio che mi dai* (in Butchart, ii, no.75) shows him at his best. Another madrigal by him appears in an anthology (RISM 1616[21]). There is some rather more rewarding music in his only other publication, *Il primo libro de arie a 1 e 2 voci* with continuo (Venice, 1616), which contains 22 pieces, 17 for one voice, the rest for two (1 duet ed. in Whenham). Most of them are strophic solo songs which in their rather ordinary melodies and hesitant tonality are similar to those of Rontani (who had also served Antonio de' Medici) and whose main interest lies in their varied, piquant rhythms (2 pr. in Aldrich). Many pieces in this volume have ritornellos, and some of them, e.g. that in *Donn'altera*, seem to have been intended for keyboard instead of for the more usual violins. Occasionally Visconti devised interesting formal structures, as in *Non vuoi ch'io t'ami* (the second song in Aldrich), and above all in the most important piece in the book, the pastoral dialogue *O selve, o fiumi*. This comprises three main sections: a set of four strophic variations and a stretch of arioso, both for alternating solo voices, and a final duet with five verses in which three contrasting kinds of triple-time writing are followed by cadential phrases in duple time. The invention is unremarkable, but the design is fascinating for its intimations of certain cantatas dating from later in the 17th century.

NIGEL FORTUNE

Visconti, Gasparo (*b* Cremona, 10 Jan 1683; *d* in or after 1713). Italian violinist and composer. The English edition of his op.1 identifies Visconti with the diminutive by which he was best known to the London public: *Gasperini's Solos ... Composed by Seignr. Gasparo Visconti*. The usual spelling of this name, 'Gasparini', often engenders confusion with Francesco Gasparini, a vocal composer of an earlier generation (*see* GASPARINI family (1)). Born into a noble family, Visconti apparently

plied the trade of a musician for his own pleasure and during a relatively short period in his youth. For these reasons, notices about him are rare. We have Visconti's word that he was 'five years Corelli's scholar' before 1702. From then until 1705 Visconti was a frequent soloist at theatres and public halls in London, performing at court at least once with the flautist James Paisible. His sonatas for violin and flute enjoyed considerable vogue in England at that time. Visconti married Cristina Steffkin in 1704; their daughter was born in Cremona in 1713. About that year, Tartini made a pilgrimage to meet and hear Visconti in his native city. His judgment later was that Visconti possessed a unique, God-given style of playing which was born and died with him.

Visconti's sonatas of 1703 are, in large measure, successors to Corelli's op.5, but the pupil departs from his master's style in several important respects. Among them are the more frequent use of tonic recapitulation in the binary movements, the definition of distinct areas of motivic development, and written-out ornamentation, especially in slow movements. Since these traits are found in Tartini's sonatas of the 1730s and 40s, we might be justified in considering Visconti a progressive innovator in spite of his use of imitation and inverted counterpoint. Visconti's concertos are generally in the style of Vivaldi's but make more use of repetition of small phrase units in the themes and motivic connections between tutti and solo passages.

JOHN WALTER HILL

Visconti, Giulio (*b* Naples, 1750; *d* Naples, 4 March 1829). Italian composer. He studied philosophy and theology (becoming a priest), and had music lessons from Cotumacci and Jommelli. An amateur composer, he wrote at least seven operas for amateur performance, an oratorio, Passion music, sacred cantatas and many arias and duets with piano accompaniment, several collections of which were published. In 1826 he produced a collection of sonnets set to his own music.

Cavicchi has identified this composer with a Giulio Visconti who appears among the violinists in the La Scala orchestra on lists dated 1783 and 1802 and who is also the presumed composer of a number of instrumental works, principally concertos and trio sonatas for violins and other string instruments (in *I-Mc*; one in *D-Dl*). It seems unlikely, however, that a priest, who always identified himself on his title pages as a dilettante, would have played in a theatre orchestra, and de Rosa made no mention of it or of a period in Milan. (*MGG1* (A. Cavicchi); *RosaM*)

DENNIS LIBBY

Visconti (di Modrone), Count **Luchino** (*b* Milan, 2 Nov 1906; *d* Rome, 17 March 1976). Italian director and designer. His family was musical and had a long association with the Teatro alla Scala, where he was at home from an early age, but he approached opera only after considerable successful experience as a director and designer in the spoken theatre and as a film director. This step was in part prompted by his admiration for Maria Callas, who sang in his first production, Spontini's *La vestale* (1954, La Scala). In successive years, also with Callas, he staged *La sonnambula*, *La traviata*, *Anna Bolena* and *Iphigénie en Tauride*, all at La Scala (he wrote on Callas in *Opera*, xxi, 1970, pp. 806–19 and 911–21). In 1958 he directed his first opera outside Italy, the highly successful *Don Carlos* at Covent Garden, and inaugurated the Spoleto Festival with *Macbeth*. He worked frequently at Spoleto (Donizetti's *Il duca d'Alba* was an important revival) and ended his opera career there in 1972 with a much admired *Manon Lescaut*.

Visconti's career in the opera house coincided with and fostered the renewed interest in neglected works by the leading 19th-century Italian composers. His profound love and knowledge of music, his visual taste, his familiarity with the styles of various periods, gave his finest productions an unrivalled authenticity. His influence on opera production in Italy and elsewhere was vast. Before him, most Italian opera houses were content with routine productions, in a tired tradition; with his insistence on the individual character of each work, he renewed, indeed revolutionized, the approach to opera staging. He had a strong influence also on younger directors and designers such as Franco Zeffirelli, Piero Tosi and Filippo Sanjust, many of whom were his assistants. In collaboration with Sanjust and Enrico Medioli, he wrote the libretto for Franco Mannino's opera *Il diavolo in giardino* (1963, Palermo), which he also staged.

WILLIAM WEAVER

Visée, Robert de (*b* ? *c*1655; *d* 1732–3). French guitarist, theorbo, lute and viol player and composer. He was possibly a pupil of Corbetta. He is first mentioned (as theorbist and guitarist) by Le Gallois in 1680, and about that time became a chamber musician to Louis XIV. In the dedication of his first guitar book (1682) he mentions that he was often called upon by the king to amuse the dauphin, and the diary of the Count of Dangeau from the year 1686 states that he regularly played the guitar at the king's bedside in the evenings. Between 1694 and 1705 Visée frequently performed at the French court, particularly at the evening gatherings of Mme de Maintenon, with the flautists Descoteaux and Philibert, the harpsichordist Jean-Baptiste Buterne and the viol player Antoine Forqueray. In 1709 he was appointed to the post of singer in the royal chamber in recognition of his service to the court, in which he had not until then held a position. In

1719 he was formally appointed guitar teacher to the king, although he had actually been the king's instructor since 1695; his son François succeeded him in this post in 1721. A letter of Jean Rousseau of 1688 indicates that Visée was a respected musician at Versailles and that he also played the viol.

Visée's two published guitar books contain a total of 12 suites as well as several miscellaneous pieces. The longer suites generally begin with the usual allemande, courante, sarabande and gigue and end with lighter pieces such as the gavotte, minuet and bourrée. In the shorter suites there is no consistent order of movements. The Suite no.6 in C minor includes a beautiful *tombeau* dedicated to Corbetta. Visée's guitar compositions are intended for a five-course instrument tuned *a/a–d/d′–g/g–b/b–e′*. Exploiting the instrument's resources to the fullest extent, they constitute along with the later works of Corbetta the apex of the French Baroque guitar literature. Visée's works for Baroque lute and theorbo comprise the same types of dance pieces as are found in his guitar music and often duplicate the guitar works, although it is difficult to determine for which instrument the original versions were written. The fact that a substantial number of theorbo works survives in manuscript sources shows the regard in which Visée was held. Though they lack character pieces and Italian influence, they reveal him as a fitting partner for his colleagues Marin Marais and François Couperin. These pieces also include various *tombeaux* as well as arrangements of pieces by Lully, Marais, Forqueray and François Couperin.

ROBERT STRIZICH/DAVID LEDBETTER

Vïshnegradsky [Wyschnegradsky], **Ivan (Aleksandrovich)** (*b* St Petersburg, 4/16 May 1893; *d* Paris, 29 Sept 1979). Russian composer. His father introduced him to music before he began to study harmony, orchestration and composition with Nikolay Sokolov, a pupil of Rimsky-Korsakov (1911–15). He studied the piano and became particularly interested in the works of Skryabin, whose harmonic principles he later further developed. He studied law and became fascinated by philosophy, mathematics, physics, chemistry and Far-Eastern thought; his wide cultural interests lay at the root of his desire to unite arts, sciences and spiritual thought. His first orchestral works were performed at the Pavlovsk Theatre under the direction of Aslanov (1912–13) and Varlich (1914). After writing *La journée de l'existence* (1916–17), for reciter, large orchestra and mixed chorus, he conceived a scheme for 'ultrachromatic' synthesis using intervals of one sixth and one twelfth of a tone, in addition to quarter-tones. He decided to tune two pianos a quarter-tone apart, and first introduced the use of microtones in the *Chant douloureux et étude*, op.6 (1918), for violin playing in third-, quarter-, sixth- and eighth-tones, and piano. He settled in Paris in 1920 and applied successively to the firms Gaveau, Erard and Pleyel to have a piano tuned in quarter-tones constructed. Following Pleyel's inconclusive experiment with a piano employing pneumatic action (1921), Vïshnegradsky joined forces with Moellendorf, Richard Stein, Mager and Alois Hába in Berlin (1922): the first piano tuned in quarter-tones was built by the firm August Forster in Czechoslovakia in 1924, using Vïshnegradsky's design involving a triple keyboard as a starting point. Meanwhile, the use of pianos tuned to various adjustable intervals (quarter-, sixth- and twelfth-tones) proved to be the most practical one for Vïshnegradsky who developed theoretical systems over thirty years from 1924. The serial principle had to be expanded to provide 'any number of sounds of any pitch', and had to be extended to include 'the totality of all audible sounds' and to tend towards a non-hierarchical conception 'beyond any already established system of sounds'. Vïshnegradsky published many articles, edited a *Manuel d'harmonie à quarts de ton* (1932) and explained his concept of the sound continuum and ultrachomaticism in *La loi de la pansonorité* (1924–5, published by Editions Contrechamps, 1996). He moved towards a mathematisation of the sound continuum: 'pansonority deriving from the Greek word "pan", meaning "all", pansonore means that everything makes a sound and that there is no single point where sonority does not exist', and drew up by successive divisions and relationships a scheme of regular, irregular, semi-regular, periodic, composed and non-octaval frequential intervals. These 'ultrachromatic' intervals are arranged in a maximal space, tuned to twelfths of a tone, a discontinuous network of 505 sounds stretching over seven octaves from the lowest to the highest pitches. Ultrachromaticism applies also in the realm of durations and rhythms. A principal of 'rhythmic modulation', established on the basis of 115 divisions, allows the morphological structuring of rhythms and speeds to be administered according to the 'coefficients of deceleration and acceleration'. Vïshnegradsky fully exploited his technique in works such as *Cosmos* op.28 (1939–40; first performed by Yvette Grimaud, Yvonne Loriod, Serge Nigg and Pierre Boulez), *Etudes sur les densités et les volumes* op.39a (1956), and *Etude sur les mouvements rotatoires* op.45a (1961). A special number of *La Revue Musicale* has been dedicated to him (1972), as well as concerts in Montreal (McGill University) and on Radio France (Paris, 1977).

PASCALE CRITON

Vishnevskaya, Galina (Pavlovna) (*b* Leningrad [now St Petersburg], 25 Oct 1926). Russian soprano. She studied privately with Vera Garina in Leningrad, and made her début in operetta in 1944. In 1952 she joined the Bol'shoy Theatre. A versatile and fascinating artist, she was one of the outstanding Russian singers. Her expressive, rich-hued voice of highly individual timbre, her polished technique and strong dramatic talent allowed her to appear in a wide variety of roles. Her notable array of stage portraits included Tat'yana and Lisa, Kupava (*The Snow Maiden*) and Marfa, Aida, Violetta, Tosca, Leonore and the solo part in Poulenc's *La voix humaine*. She gave the first Bol'shoy performances of Katherine in Shebalin's *Ukroshcheniye stroptivoy* ('The Taming of the Shrew',

Galina Vishnevskaya

1957), Natasha in *War and Peace* (1959), Marina in Muradeli's *Oktyabr'* ('October', 1964) and Sof'ya in Prokofiev's *Semyon Kotko* (1970). She first sang at the Metropolitan, as Aida and Butterfly, in 1961, at Covent Garden (Aida) in 1962 and at La Scala (Liù) in 1964. London critics praised her artistry, her warm, liquid tone and excellent legato, and her passionate and intense style, though some found her acting a little exaggerated. She appeared in the film of Shostakovich's *Katerina Izmaylova* (1966).

Vishnevskaya often performed songs by Musorgsky, Tchaikovsky and Shostakovich, usually with the cellist Rostropovich, whom she married in 1955, accompanying her on the piano. Shostakovich dedicated his Seven Romances op.127 to her, and Britten intended the soprano part of his *War Requiem* for her. Although she was prevented by the Soviet authorities from singing in the première, she took part in the subsequent recording conducted by the composer. Britten also composed for her and Rostropovich his Pushkin cycle, *The Poet's Echo*. Vishnevskaya has also turned to directing (e.g. Rimsky-Korsakov's *The Tsar's Bride*, Washington, DC, 1987). She and Rostropovich left the USSR for political reasons in 1974 and eventually settled in the USA. She has written an autobiography, *Galina: a Russian Story* (London, 1984; Russ. orig., Moscow, 1991).

I.M. YAMPOL'SKY/R

Visigothic rite. *See* MOZARABIC CHANT.

Visitatio sepulchri (Lat.: 'visit to the sepulchre'). The name given by modern scholars and many medieval scribes to the largest single category of medieval Latin church plays. The *Visitatio* takes as its nucleus the dialogue known as the QUEM QUERITIS (originally an introit trope from the Easter Mass), but is distinguished from it in a number of ways: first, by being placed at the end of Easter Matins, after the third responsory (commonly *Dum transisset Sabbatum*); second, by numerous accretions of liturgical chants, antiphons in particular, and laments of non-liturgical origin; third, by dramatic amplification as an acted representation of the events of the Resurrection story with impersonation and (sometimes) non-liturgical costuming. Some 400 texts of the *Visitatio* were described, printed or mentioned by Young, who, following earlier scholars, arranged the texts in three categories (his own word 'stages' is better avoided because of its overtones of steady chronological development); over 200 texts are listed by Lipphardt, not all with music.

Young's categories are as follows: 'one in which the dialogue is conducted by the Marys and the angel, a second in which are added the apostles, Peter and John, and a third which provides a role for the risen Christ' (vol.i, p.239). Lipphardt's categories are similar but, as a music historian, he stressed different aspects. The first category is divided into 'French type' (the basic dialogue trope) and 'Lorraine type' ('antiphon-play', in which the dialogue is transposed to fit musically with antiphons in various tones). An important musical development in this first category is the addition of the sequence *Victimae paschali*. In the second category the problem again arises of relating the new musical borrowings to the basic material (in an important group of texts from around Passau (south-east Germany) the dialogue and introductory antiphon, *Quis revolvet?*, are transposed up a 4th to give a tonal unity which accommodates the *Victimae paschali* and the vernacular Easter hymn *Crist ist erstanden*). In the third category the scene of the three Marys lamenting as they approach the sepulchre gives an opening for laments varying from the restrained, litany-like setting of *Heu, Redemcio Israel* (Brunswick, 14th century) to the sweeping and emotive *Heu, pius Pastor* (Dublin, 14th century). The final heights of this PLANCTUS style are reserved in drama for the Passion plays and for the Ordo Rachelis. The introduction into plays of this third category of a brief scene between the Marys and the merchant from whom they buy their spices gives the opportunity for the use of melodies of a truly secular character (Origny-Ste-Benoîte, 14th century).

The final amplification of the *Visitatio sepulchri*, which in all the forms discussed retained its central dialogue, the 'Quem queritis', transforms it into the Ludus Paschalis.

For further information and bibliography see MEDIEVAL DRAMA, §II, 2–3, esp. Young (1933), Rankin (1954), Lipphardt (1960, 1971, 1972 and 1975), Smoldon (1980) and Hiley (1993).

JOHN STEVENS

Viski, János (*b* Kolozsvár [now Cluj-Napoca], 10 June 1906; *d* Budapest, 16 Jan 1961). Hungarian composer. Though trained as a violinist in Kolozsvár, Viski abandoned this career at the age of 19 in order to concentrate on composition. From 1927 to 1932 he attended the Franz Liszt Academy of Music in Budapest, where he studied composition with Kodály. Until 1940 he then lived and worked in seclusion in Transylvania. During this time he composed his first significant orchestral works, two of which – *Szimfónikus szvit* (1935) and *Enigma* (1939) – achieved international success; the latter work, conducted in Europe by Mengelberg, Failoni and Karajan, had a determining influence on Viski's career. In 1940 he moved to Budapest, where he taught at the city's conservatory until 1941. He served as director of the

Kolozsvár Conservatory, 1941–2, and eventually became professor of composition at the Franz Liszt Academy. Among his students were Szőnyi, Dobszay, Lendvai, Soproni, Károlyi and Eötvös. Until 1955 the principal stylistic influence on Viski's music was Kodály, particularly as regards the prominence given to melodic invention. This is most evident in the major works composed after the war, such as the Violin Concerto (1947) and the Piano Concerto (1953). From 1955 Viski's musical vocabulary changed in response, primarily, to the influence of Bartók (see for example the Cello Concerto, 1955, and *Az irisórai szarvas* ('The Stag of Irisóra'), 1958), while works from the late 1950s onwards reflect the sudden influx into Hungary of new ideas espoused by the Second Viennese School and later serialist composers. In this last period Viski followed mainly the path taken by Webern. Highly evolved and full of poetic invention, Viski's works received numerous prizes, including the Gerguss Medal (1941) and the Erkel (1954), and Kossuth (1956) prizes. In 1955 he was created a Merited Artist of the Hungarian People's Republic.

MELINDA BERLÁSZ

Vismarri [Vismari], **Filippo** (*b* before 1635; *d* Vienna, ?1706). Italian castrato singer and composer. He began receiving a monthly stipend of 60 guilders as a soprano castrato at the Habsburg court in Vienna on 1 April 1650. However, his association with the court probably dates from the previous year, for in February 1683 the Kapellmeister, Antonio Draghi, upheld his request for a pension by referring to his 34-year period of service. In addition to his salary he received numerous sums from the emperors Ferdinand III and Leopold I and the Dowager Empress Eleonora: in 1655, for example, he was given 150 guilders to send for his sister from Italy so that she could marry the court singer Baldassare Poggioli. Moreover, his monthly salary increased by 15 guilders in 1659 and again in 1671. The increase of 1659 was followed by professional success: in 1660 he sang in Leopold I's *Il sagrificio d'Abramo*, and his own *Orontea* was produced at court. During the 1660s he occasionally acted as a political agent for Count Humbert Černín of Neuhaus. In 1679 he fled from the plague with the entire court; somewhat earlier he must have taken holy orders, for from this date on he is referred to by the title 'Don'. He became an honorary member of the chapel when he retired in 1683, and the pension that he began to receive then continued to be paid until 1706. His disappearance from court records after this date suggests that he died then.

During his long career Vismarri seems to have enjoyed the high esteem of his colleagues. In 1656 the Kapellmeister, Antonio Bertali, supported his request for financial aid by citing his busy activity and general excellence in the theatre. Wellesz (1950, p.40) liberally praised his *Orontea*, a setting of the famous libretto by G.A. Cicognini that was probably first set to music by Antonio Cesti (Venice, 1649) and that served as the basis of several other operas. Divided into a prologue and three acts, Vismarri's work adheres closely to the original libretto. Stately chordal sonatas for strings and continuo by Sances preceding the prologue and each act contrast sharply with the more detailed and idiomatic string writing found in Vismarri's ritornellos. His gift for characterization is evident from the use of appropriate vocal and instrumental motifs, and his recitatives are distinguished by their concise, dramatic style. The texts and/or music of at least five cantatas in the volume in Vienna (*A-Wn*) also survive in Roman sources. Because of the mature style of the music it seems unlikely that these pieces date from his youth, before Vismarri entered the emperor's service; he may have visited Rome during his service in Vienna. The cantatas may reflect the influence of Cesti, who arrived in Vienna in 1666 and, like Vismarri, set at least one poem by the Roman Giovanni Lotti. The 16 cantatas (in *A-Wn*) include five *cantate morali*. Most of the cantatas consist of a free intermingling of recitatives, arioso and brief arias, although a few show the clear alternation of recitative and aria typical of the late Baroque cantata. Several arias are miniature da capos, but Vismarri preferred strophic schemes, which he used with great variety and often combined with the refrain principle.

LAWRENCE E. BENNETT

Vïsotsky, Mikhail Timofeyevich (*b* nr Moscow, 1793; *d* Moscow, 16/28 Dec 1837). Russian composer and guitarist. He was one of the earliest significant exponents of the seven-string guitar. The son of a steward's assistant on the estate of the poet and dramatist M.M. Kheraskov (1784–1807), Vïsotsky received his first lessons on the guitar from S.N. Aksyonov (1773–1853) and thereafter taught himself. Liberated from serfdom in 1813, Vïsotsky moved to Moscow and soon became famous as a performer and a teacher. He was a contemporary of Andrey Sychra (1773–1850), a leading promoter of guitar music, and the teacher of Mikhail Stakhovich (1819–58), author of *Istoriya semistrunnoy gitarï* ('History of the seven-string guitar', 1864). While in Moscow he became acquainted with both John Field and Aleksandr Dubuque. He died of consumption.

Vïsotsky's compositions include about 150 guitar pieces which he wrote to perform himself. The swift scale passages, arpeggios, widely spaced chords and other technical difficulties included in these works indicate Vïsotsky's extraordinary accomplishment as a performer. He also wrote a number of short preludes which are primarily virtuoso showpieces. Just before his death he produced a *Muzïkal'nïy al'bom dlya 7-mistrunnoy gitarï* ('Album of music for the seven-string guitar'); published in Moscow in four volumes, it contains many of Vïsotsky's compositions, including various short dance pieces, exercises and several sets of variations on Russian folk tunes. Pieces of this type constitute a large proportion of Vïsotsky's creative work, though he also transcribed for guitar a Bach fugue and several pieces by Mozart, Beethoven, Field and Hummel.

GEOFFREY NORRIS

Visse, Dominique (*b* Lisieux, 30 Aug 1955). French countertenor. At the age of 13 he became a chorister at the maîtrise of Notre Dame in Paris. Later he studied the organ and flute at the Versailles Conservatoire. Between 1976 and 1978 he was a pupil of Alfred Deller and René Jacobs, and decided to specialize in singing. In 1978 he founded the Ensemble Clément Janequin and joined Les Arts Florissants under William Christie. In 1980 Visse began to study with Jean Laurens, and in 1982 he made his opera début at Tourcoing in *L'incoronazione di Poppea*; subsequent roles included the title role of Charpentier's *Actéon* at Edinburgh (1985), Annius in Gluck's *La clemenza di Tito* at Tourcoing (1987) and at Lausanne (1991), Cupid in *Orphée aux enfers* at the Paris Opéra (1987), and Delfa in Cavalli's *Giasone* at Innsbruck (1988). He created Geronimo in Claude Prey's *Le rouge et le noir* at Aix-en-Provence in 1989, then sang Octavia's Nurse (*L'incoronazione di Poppea*) at Montpellier. His voice has a distinctive clarity which, with a forceful projection and a lively dramatic sense, lends colour and presence to his stage performances. Besides *Poppea* Visse has recorded Cavalli's *Xerse* and *Giasone*; Charpentier's *Actéon*, *Les arts florissants*, *David et Jonathas* and *Le malade imaginaire*; Campra's *Tancrède*; Rameau's *Anacréon* and Hasse's *Cleofide*.

NICHOLAS ANDERSON

Vissenaken [Vissenaecken, Vissenaeken], **Willem van** (*fl* Antwerp, 1542–45). South Netherlandish printer. He formed a partnership with Tylman Susato and Hendrik ter Bruggen in order to print music; ter Bruggen acquired a privilege to do so on 22 December 1541. However, the partnership was short-lived. On 12 September 1542 Susato agreed to pay ter Bruggen for his share of the printing materials, and a lawsuit which Vissenaken brought against Susato, unsuccessfully, on 9 April 1544 showed that the association between the three had lasted for less than a year. A volume of motets published in 1542, *Quatuor vocum musicae modulationes numero XXVI* (RISM 1542[7]), has only Vissenaken's name on the title-page, though Susato may have been the musical editor: one of his compositions is included in the collection and Susato's own first publication, a book of chansons, also comprised 26 items. The 1542 motet book is the earliest dated volume printed in the Low Countries using single-impression music type. The type design is quite different from the one Susato used from 1543.

By 1543 Vissenaken was working with Adrien Verbrugghen at Willem Vorsterman's premises, and in 1545 this house and its contents were bought by Martin Nutius. After Nutius's death in 1558, and the sale of goods to Symon Cock, the music type reappeared in two editions of *Souterliedekens*, one published by Symon Cock (1559), the other by Cock's son-in-law, Claes van der Wouwere (1564).

SUSAN BAIN

Visser-Rowland Associates. American organ-building firm. The firm was founded in Houston in 1973 by Jan R. Rowland (*b* Beaumont, TX, 3 June 1944) and Pieter A. Visser (*b* Amsterdam, 3 Nov 1940). Rowland, a graduate of Lamar University, first worked as an installer for the Wicks firm, then went on to work for the Walcker firm in Germany from 1968 to 1969, and the Berkshire Organ Co. in the USA from 1969 to 1973. Visser was apprenticed to L. Verscheuren in the Netherlands; he went to the USA

in 1960, where he worked as an installer for both Wicks and Walcker from 1960 to 1972, and for Berkshire in 1973. Visser-Rowland builds organs primarily with mechanical action, often with electric stop and combination action; their tonal designs lean towards the north European 'neo-Baroque' style. The firm has built some organs of substantial size, including those in St Anne's Catholic Church, Houston (1981), St Luke's Episcopal Church, San Antonio, Texas (1982) and the First Presbyterian Church, Stamford, Connecticut (1991). For further information see U. Pape, ed.: *The Tracker Organ Revival in America* (Berlin, *c*1977).

BARBARA OWEN

Vistamente (It.: 'fast'). *See* VITE.

Viste. *See* VITE.

Vitale, Costantino (*fl* 1603–23). Italian printer. He specialized in music printing in Naples from 1603 to 1623, except for a brief period in the service of the Archbishop of Trani in 1617–18. He published secular vocal music by Macedonio di Mutio and Montella (1603), Gesualdo (1603 and 1604), Albano (1616), Camillo Lambardi (1616) and others, instrumental music by Mayone and Trabaci and a number of anthologies and music treatises. From 1607 for two or three years he was in partnership with G.G. Carlino, with whom he published madrigals by Meo and Dattilo Roccia (1608), Rodio's *Regole di musica* (1609), and two collections of secular music by Donato Basile and Scialla and one of hymns by Stella (all 1610).

STANLEY BOORMAN

Vitale, Edoardo (*b* Naples, 29 Nov 1872; *d* Rome, 12 Dec 1937). Italian conductor. He studied in Rome at the Accademia di S Cecilia; he took composition under Eugenio Terziani. From 1886 he directed operettas at the Teatro Metastasio in Rome, first as deputy, then as a regular conductor, and from 1893 also teaching harmony at the Accademia di S Cecilia. G. Ricordi urged him to become a full-time conductor, but he taught until 1897. In 1896 he conducted the first *La bohème* performed in Florence, then undertook a season at the Teatro Argentina in Rome (their first *Götterdämmerung*, 1897). Now very successful, Vitale was asked to conduct at theatres throughout Italy and in Madrid and Cairo. He deputized for Toscanini at La Scala (1908–10), revived Spontini's *La vestale* (1908) and conducted the first performance in Italy of Cherubini's *Medée* (1909). Among the other operas he introduced to Italy were Strauss's *Elektra* (1904) and Musorgsky's *Boris Godunov* (1909). From 1910 he was in South America for several seasons, conducting in Argentina, Brazil and Uruguay; he returned for tours in 1920, 1925 and 1926. Between 1913 and 1926 he was also conductor at the Teatro Costanzi, Rome, giving premières of many operas, including Mascagni's *Parisina* and Zandonai's *Francesca da Rimini*. Throughout his life he won praise for enlarging the repertory in Italian theatres, both by the production of new operas and by the revival of the classics. In 1897 he married the opera singer Lina Pasini (1872–1959).

MARVIN TARTAK

Vitali. Italian family of musicians. The two most distinguished members were Giovanni Battista and his son Tomaso Antonio, who are discussed separately below. Another of Giovanni Battista's sons, Antonio (*b* Modena, 1690; *d* Modena, 1768), was a noted violinist at the Este court. Tomaso Antonio's sons Fausto (*b* Modena, 1699; *d* Modena, 1776), organist at Modena Cathedral from 1720 to 1738 and *maestro di cappella* at the Este court from 1750 until his death, and Romano, a cellist, were both prominent musicians, like their father and grandfather, at the Este court at Modena.

(1) Giovanni Battista Vitali (*b* Bologna, 18 Feb 1632; *d* Bologna, 12 Oct 1692). Composer, cellist and singer. He is noted for his work in establishing the Baroque sonata, especially the trio sonata. His works appear to have influenced the chamber music of such eminent composers as Corelli, Torelli and Purcell.

1. LIFE. Vitali's only known teacher was Cazzati, from 1657 to 1671 *maestro di cappella* of S Petronio, Bologna, which Vitali joined in 1658 as a cellist (his instrument is sometimes called a violoncino, an early form of 'violoncello', and on the title-page of some of his publications , a 'violone da brazzo'). By 1666 he was a member of the Accademia dei Filaschisi, and he was a founding member of the later Accademia Filarmonica. In 1673 he became *maestro di cappella* of S Rosario, Bologna, and in 1674 went to the Este court at Modena to become one of two *vicemaestri di cappella* to Duke Francesco II (the other was Giuseppe Colombi). In 1684 he was promoted to *maestro di cappella*, but was replaced in 1686 by the opera composer Antonio Gianettini. He then remained a *vicemaestro* until his death. He also appears to have been a member of the Accademia dei Dissonanti, Modena, and is credited with having introduced music publishing as a profession there.

2. WORKS. In his early works, opp.2 and 5, Vitali accepted his teacher's conception of the *sonata da chiesa*, which was one of flexibility and experimentation applied to a form that had its roots in the monothematic canzona. These characteristics are reflected in the establishment of three basic types of movement in his early sonatas: the fast fugal movement in duple metre; the fast pseudo-contrapuntal movement in triple metre with frequent use of dance rhythms; and the slow homophonic movement in duple metre with affective harmony. His experiments include the linking of movements through harmonic formulae, the application of dance rhythms to all movements, the abbreviation and fragmentation of thematic materials, the use of variation technique and an increased use of functional harmony, particularly through the use of bass patterns. He continued and codified these experiments in his later *Sonate da chiesa* op.9, which also illustrate his main contribution to the Baroque ensemble sonata: the creation of a more unified style for an entire work through the use of a common contrapuntal foundation for the various movements without losing the individual character of each movement; and the intensive application of the principle of variation to all the movements of a sonata to provide diversity within the general stylistic unity.

The application of the variation principle is particularly notable in Vitali's collections of dances or *sonate da camera*, which differ from the *sonata da chiesa* in function rather than in style. The dances in these collections are generally arranged in groups of from two to six by thematic links, identical tonality and similar internal cadences. Each group includes at least one dance in duple metre and one in triple metre. All dances are in the

standard binary form, and they gradually show an increasing tendency to modulate at the end of the first section. In the earlier collections, opp.1, 3 and 4, there is an emphasis on Italian dances and a stylistic separation of dances 'per ballare' from dances 'da camera'; the latter are more contrapuntal, use extensive sequential expansion and have more irregular phrase structures. The later collections, opp.8, 11, 12 and 14, contain a progressively greater number of stylized French dances including the 'borea' (bourrée) and minuet, which Vitali was one of the first to introduce into the *sonata da camera*.

In 1689 Vitali published his famous *Artifici musicali*, a systematic pedagogical presentation of 60 compositions documenting his conception of instrumental counterpoint; it appears to be the earliest collection of its kind in the Baroque period. Through this textbook, which foreshadows Bach's *Musicalisches Opfer*, Vitali presents the essence of his compositional art through canons, examples of double counterpoint and nine works in the principal contemporary instrumental forms. The works vary in size and scope and are arranged in order of increasing difficulty. The collection also includes a number of unusual pieces, for example a balletto in three different metres simultaneously, a passacaglia which modulates from B♭ to B through the circle of 5ths over some 261 bars and another balletto for two string instruments which has one line written in G♭ and the other in F♯.

Although Vitali is known mainly for his instrumental music, for which he was most celebrated during his lifetime, he also composed several vocal works, ranging from two published collections – vesper psalms in concerted style, op.6, and hymns for solo voice with instrumental ritornellos, op.10 – to ten cantatas, sacred and secular, and four oratorios, the music of two of which survives; he also wrote introductory sinfonias, which are lost, to two others. The texts of his oratorios are either allegorical or based on the Old Testament. The only musical novelty in them occurs in *Il Giono*, where Vitali anticipates Handel's choral recitative by having the chorus narrate the story. He wrote several of his secular cantatas for meetings of the Accademia dei Dissonanti in the Este palace in Modena. They were concerned with ethical problems discussed at meetings of the academy or celebrated specific occasions such as the coronation of Maria Beatrice, Francesco II's sister, when her husband became King of England as James II. All Vitali's vocal works adhere to the conventions of the period; his arias belong to three basic types: da capo, binary and strophic, the latter occasionally employ strophic variations.

OTHER VOCAL

Salmi concerti, 2–5vv, insts, op.6 (Bologna, 1677)
Hinni sacri per tutto l'anno, 1v, 5 insts, op.10 (Modena, 1684)

(2) Tomaso Antonio Vitali (*b* Bologna, 7 March 1663; *d* Modena, 9 May 1745). Composer and violinist, eldest son of (1) Giovanni Battista Vitali. He went to Modena in 1674 with his father, with whom he probably learnt the violin. He began to perform professionally with the Este orchestra in 1675 and later became its leader; he remained on the court pay register until 1742. He had a number of distinguished pupils, including Senaillé, E.F. Dall'Abaco, G.N. Laurenti and L.A. Predieri.

He studied composition with Pacchioni, one of the leading musicians in Modena. He published his first two collections in 1693, a year after seeing through the press his late father's op.14. He appears to have composed only instrumental music, which is similar in style to that of his father and Corelli. This is particularly evident in his consistent employment of binary forms and in his mixture of *da chiesa* and *da camera* movements. His last published collection, op.4, is dedicated to Cardinal Ottoboni and the cello part, in being fairly independent of and yet

clearly derived from the continuo, appears to be similar to the cello writing in Corelli's op.5. Sonata no.12 is a series of variations based on the well-known *folia de spagna*, similar to the variations published by Corelli the previous year. Recent research (by Reich among others) provides convincing evidence that the famous *Ciacona* for violin and continuo, long attributed to Vitali, is not by him, a conclusion supported also by a comparison of it with music definitely by him.

WORKS

op.
1 Sonate, 2 vn, vc, bc (org) (Modena, 1693)
2 Sonate, 2 vn, bc (org) (Modena, 1693)
3 Sonate da camera, 2 vn, vle (Modena, 1695)
4 Concerto di sonate, vn, vc, hpd (Modena, 1701); ed. in SCMA, xii (1954)

One trio sonata in Corona di dodici fiori armonici (Bologna, 1706)
MSS of other inst music in *I-Bc*, *MOe*
Brief examination composition for membership of the Accademia Filarmonica of Bologna, 1703, in *Baf*

JOHN G. SUESS

Vitali, Angelo (*b* Milan; *fl* 1664–80). Italian composer and organist. He was a member of the clergy. On 13 June 1664 he was appointed first organist of Udine Cathedral, where he was also a violinist, theorbo player and singer. Documents about Udine clarify that he was from Milan, not Modena, as often claimed. In August 1674 he became a *mansionario* at Aquileia and served there as *magister musices* until 1676. In 1680 his opera *Tomiri* (libretto by A. Medolago) was performed at the Teatro S Cassiano, Venice. His arias, nine of which survive (in *I-Vqs*, see Dubowy), show the techniques of repetition and extension, and the tonal clarity that were becoming essential features of the da capo aria in the 1670s and 80s. Vitali's only other surviving work is a motet, *Confitebor tibi Domine*, for two sopranos, bass, strings and continuo (in *GB-Och*); it requires considerable vocal agility. He was not the 'Sig. Angelo Vitale' of Orvieto to whom Angelo Berardi directed a letter on proportions (printed in *Il perché musicale*, Bologna, 1693); that musician, a Neapolitan, was *maestro di cappella* of Orvieto Cathedral from 1669 to 1671 and, according to the cathedral acts, had previously occupied similar positions at Sutri, Terni and Soriano.

LORENZO BIANCONI

Vitali, Bernardino (*fl* 1494–1531). Italian printer. He printed a number of volumes in partnership with his brother Matteo, who may have done no more than provide financial support. The most significant music printing that can certainly be assigned to them comprises the treatises of Aaron and Spataro, printed in Venice between 1523 and 1531. By then Bernardino, based in Venice, had also printed in Rome (1507–10) and in Rimini (1521). The printing of Degli Silvestri's *Della origine delli volgari proverbi* (1526) is thought to have led directly to the establishment of Venetian censorship. The most important volume associated with Bernardino Vitali is Girolamo Cavazzoni's *Intavolatura* (1543), marked with a printer's device but no name. This has also been ascribed to Bernardus Vercellensis and even to Bernardinus de Vianis. It is now thought likely that it was printed by Vitali, which would make it his last printed work.

STANLEY BOORMAN

Vitali, Filippo (*b* Florence, *c*1599; *d* ?Florence, after 1 April 1653). Italian composer, singer and priest. By 1618 he was in Rome, where his second book of *Musiche* for one and two voices was published by Robletti. It is possible that he stayed in Rome until the production of his opera *Aretusa*; the score was published by L.A. Soldi with a dedication (dated 20 May 1620) by the author to Cardinal Scipione Borghese, nephew of Pope Paul V. The titles and dedications of Vitali's subsequent publications suggest that he was back in Florence in 1621. It is not known why he returned to Rome in early 1631, but on 2 February he took part in a ceremony at S Agnese as part of Cardinal Antonio Barberini's retinue. As a member of Cardinal Barberini's household, he annually directed festival music at S Agnese, S Agata and SS Trinità dei Pellegrini. On 10

June 1631 he entered the papal chapel as a supernumerary tenor, by order of Pope Urban VIII (who was a member of the Barberini family). Vitali was granted half pay on 26 May 1632 and the full salary that went with his post on 10 December 1634. He spent a month in Florence between April and May 1642. On 4 October 1645, he announced to his companions in the papal chapel that he had obtained permission from the Pope to retire to Florence with a benefice and a pension. From 21 September 1648 to 17 December 1649 he was *maestro di cappella* of S Maria Maggiore, Bergamo.

Vitali's collection of *Hymni* for Vespers (Rome, 1636) does not seem to have been very successful in the papal chapel, even though the settings use the new reformed texts as authorized by the commission set up by Urban VIII to correct the Roman breviary. He was the last composer to follow Palestrina's example in hymn writing: after a brief intonation in plainchant, the first strophe ends with polyphony and the following strophes alternate between plainchant and polyphony. However, while written in the *stile antico*, these 34 hymns without continuo do make some concessions to the new musical language. The solo and ensemble songs in his collections of secular music sometimes foreshadow the more highly developed aria and cantata found in Italy in the late 17th century, though some of the writing is rather stiff and pedestrian. The most interesting pieces on the whole are the strophic variations, including five based on the romanesca in the second book of the *Musiche* (1618). *Concerto* has a title-page very similar to that of Monteverdi's seventh book of madrigals (1619). This may have been the publisher's doing – Bartolomeo Magni published both collections – but there are one or two similarities in the contents, for example Vitali included a *Lettera amorosa*.

Aretusa was the first secular opera staged in Rome. In the important preface (in which he named the singers who performed the work) Vitali acknowledged his debt to the operas of Peri and Caccini. He also explained that the work was composed, copied and rehearsed in only 44 days (26 December 1619–8 February 1620). The haste is apparent in the quality of the writing and in the repetition of certain sections: one of the four ritornellos is used three times, and of the 13 choruses, one is used three times and two others twice. In the *intermedi* for Jacopo Cicognini's *La finta mora* musical interest is centred on vocal ensembles rather than on solos (as in *Aretusa*), and the continuo lines show greater onward drive and rhythmic interest.

WORKS

STAGE

all published shortly after first production

Aretusa, favola in musica, Rome, residence of Monsignore Corsini, 1620

Intermedi ... fatti per la commedia [J. Cicognini: La finta mora] degl' Accademici inconstantini, Florence, 1623

Cocchiata [= serenata] delli Accademici rugginosi, Florence, 20 Aug 1628

SACRED

Sacrae cantiones, 6vv, bc (org), liber primus (Venice, 1625)

Motetti, 2–5vv, bc (Rome, 1631)

Hymni, 4vv, Urbani VIII Pont. Max. iussu editu in musicos modos ad templorum usum digesti (Rome, 1636); ed. in Pruett; Ave maris stella also in *I-Rvat*

Psalmi ad Vesperas, 5vv, bc (org) ad lib (Rome, 1641)

Laudate pueri, 2vv, 3 vn, bn, violetto, org, *D-Bsb*

Responsori, 4vv, *I-Pca*

Salve me Jesu, 1v, 2 vn, bn, bc, *D-Bsb*

SECULAR

Il primo libro di madrigali, 5vv (Venice, 1616[21])

Musiche, 2–3, 6vv, libro primo (Florence, 1617[20])

Musiche, 1–2vv, bc, libro secondo (Rome, 1618); 3 pieces ed. K. Jeppesen, *La flora* (Copenhagen, 1949), ii, 13; iii, 14, 86

Musiche, 1–3vv, hpd, libro terzo (Rome, 1620)

Arie, 1–3vv, chit, gui, other insts, libro quarto (Venice, 1622)

Il secondo libro de madrigali, 5vv (Florence, 1623)

Varie musiche, 1–3, 5vv, libro quinto (Venice, 1625)

Concerto ... madrigali et altri generi di canti, 1–6vv, libro primo (Venice, 1629)

Il terzo libro di madrigali, 5vv (Venice, 1629[10])

Arie, 1–3vv (Orvieto, 1632)

Arie, 3vv (Rome, 1635)

Arie, 3vv (Rome, 1639)

Musiche, 3vv, libro quinto (Florence, 1647)

JAMES W. PRUETT/JEAN LIONNET

Vitásek [Wittaschek, Wittasek], **Jan (Matyáš Nepomuk) August** [Johann Matthias] (*b* Hořín, nr Mělník, 22 Feb 1770; *d* Prague, 7 Dec 1839). Czech composer and teacher. His dates, which have been the subject of some confusion, were satisfactorily established by Marie Tarantová from a biographical outline of the composer's life found in the papers of his friend the composer Jan Theobald Held (1770–1851), now in the Literary Archive of the National Museum, Prague.

Vitásek received his first musical training from his father, the organist and choirmaster in Hořín. Later he studied in Prague with F.X. Dušek and J.A. Kozeluch; his early career was spent in the service of the Lobkowitz and Nostitz families. Through the Dušeks he came to know Mozart, whom he greatly admired and whose influence is evident in his music; he was himself considered an outstanding interpreter of Mozart's works. He was also friendly with Mozart's biographer F.X. Niemetschek, and with the lexicographer B.J. Dlabač.

In 1814 he succeeded Kozeluch as choirmaster of Prague Cathedral, the highest musical office in Bohemia. He held this post until his death, refusing the post of choirmaster at the Stephansdom, Vienna, in 1824. In 1826 he was a founder of the Society for the Promotion of Church Music in Bohemia, and he was the first director of the society's organ school (1830–39). His pupils included Robert Führer and Josef Krejčí.

As Vitásek spent 25 years in ecclesiastical service, it is hardly surprising that a major part of his output consists of church music, but he also wrote a large amount of secular music, particularly for the piano. Since he disdained opus numbers and dates, it is difficult to arrive at an overall assessment of his output. His keyboard music reflects the Classical technique of his teacher Dušek, especially in its writing for the left hand, and although he shows some leaning towards Romantic character-pieces

he is generally considered to be among representatives of 18th-century Classicism. His originality lies in his song-writing. He was one of the few late 18th-century Bohemian composers to make his career in his native country, and his songs, being some of the first 19th-century settings of Czech texts, paved the way for the Romantic and nationalistic revival which culminated in the work of Smetana. As they were composed mainly during the first two decades of the century, it is ironic that only one of them appeared in the five-volume *Věnec ze zpěvů vlasteneckých* ('A garland of patriotic songs', Prague, 1835–9), which was published as a cumulative expression of nationalist feeling.

WORKS

VOCAL

David oder Die Befreiung Israels (melodrama, 3, J. Münch-Bellinghausen), Prague, Estates, 19 March 1810, excerpt ed. in MAB, xiv (1953)

Sacred choral: 12 masses, incl. Missa solemnis, C (Prague, 1806); 7 Requiem; 2 TeD; numerous hymns, spiritual songs, pastoral hymns, offs, grads

Secular vocal: Sláva vlasti, sláva Češi [Hail, Fatherland, Hail Czechs], chorus (Prague, n.d.); 6 neue Gesänge (Prague, 1808); numerous Czech solo songs, incl. Žalostná píseň na smrt milenky [Lament on the Death of a Sweetheart], 1806, Marš každého Čecha ctného [The March of Every Honourable Czech], *c*1809, Vzhůru Češi [Upward, Czechs!], 1812, Trápení lásky [The Miseries of Love], 1835, Píseň zimní [Song of Winter], 1835

INSTRUMENTAL

Orch: 3 syms., incl. Sym., C, perf. Vienna, 1808, ed. in Maestri antichi boemi, ii (Prague, 1974); Pf Conc.; Cl Conc.; Basset-hn Conc.; Bn Conc.; Harp Conc.

Chbr: Partita, 2 cl, 2 hn, bn, 1813; Str Qnt; 6 str qts; 6 vn sonatas

Pf: 3 pièces favorites (Vienna, *c*1810); *c*40 minuets, in 5 bks (Prague, 1802–12); ländler, other German dances; rondos, polonaises, romances

Org: numerous preludes and fugues

ADRIENNE SIMPSON

Vite (Fr.: 'fast'; old form *viste*). A tempo designation found in French music since the time of François Couperin. Qualifications include *tres viste* (Couperin) and *fort vite* (Lebègue). The adverbial form *vitement* also appears, as does its earlier spelling *vistement*, which probably explains Koch's comment (*Musikalisches Lexikon*, 1802) that 'Vistamente ist eben so viel wie presto'. Rousseau (1768) had translated *vite* simply as *presto*, the fastest of his five main degrees of musical movement.

For bibliography *see* TEMPO AND EXPRESSION MARKS.

DAVID FALLOWS

Vitelli, Vitellozzo. Italian prelate and musician, colleague of CARLO BORROMEO.

Vitet, Ludovic [Louis] (*b* Paris, 18 Oct 1802; *d* Paris, 5 June 1873). French critic. He showed great musical talent as a youth, but chose to study law. At the same period, he also attended the private aesthetics course of Théodore Jouffroy (1821); there he met many of the young men who three years later would form the influential periodical *Le globe*, founded to analyse and synthesize a wide range of subjects, without the usual mixture of gossip and party politics. Vitet himself was invited to join the journal as music and fine arts critic in November 1824. He quickly entered the debate about the nature of Romanticism that *Le globe* did much to advance, and reinforced his Romantic reputation with the publication of a trilogy of unstageable 'scènes historiques' that mixed historical exposition with theatrical dialogue. He fell deeply in love with Maria Malibran early in 1828, but his passion was not reciprocated, and his disillusionment following her marriage to the Belgian violinist Charles de Bériot, combined with the July Revolution, led to his abandonment of both journalism and (but for a brief foray many years later into the theory of neumes) writing on music. He turned instead to politics and to the visual arts, acting as General Inspector of Monuments (1830–34), and later writing studies of a wide range of painting, sculpture and architecture, and publishing a successful series of letters during the siege of Paris (1870–71).

Vitet's position as one of the most important early French music critics rests on the extended articles that he produced during his first months with *Le globe* (many of which were reprinted in *Fragments et mélanges*, i, Paris, 1845, and *Etudes sur l'histoire de l'art*, iv, Paris, 1864). At a time when the Romantic debate was entirely literary, he moved opera to its centre, calling for a 'coup d'état musical' that would put librettists under the control of composers and lead to an operatic style based on musical values different both from existing works and from Romantic spoken drama. He further recognized the institutional factors standing in the way of any change, and sought to reinforce Stendhal's alliance of Romantic art with the politics of the liberal opposition. Announcing that 'taste in France awaits its 14th of July', he saw the demands of the audience, educated by critics, teachers and the music itself, as the means for change. And in the years following, many of his predictions for the growth of musical appreciation in France, and for a new repertory at the Opéra, were fulfilled. From 1828, however, his obsession with Malibran led to the abandonment of many of his wider concerns about music's position in society. In their place, however, appeared an equally valuable consideration of Rossini's French operas from a position of technical expertise rarely seen before in the French press, together with a series of reviews submitting each nuance of Malibran's singing and acting to detailed analysis, building up an image of her voice that ranks with the finest vocal criticism of the century.

BENJAMIN WALTON

Vithele. *See* FIDDLE.

Vītoliņš, Jēkabs (*b* Sarkaņi, Madona district, 5 Aug 1898; *d* Riga, 9 Sept 1977). Latvian musicologist. He studied composition with Jāzeps Vītols at the Latvian Conservatory in Riga (1920–24) and later had lessons in conducting with Emil Cooper. In 1929 and 1931 he studied music

history at Vienna University and from 1936 to 1937 attended the Sorbonne. He took the *Kandidat* degree at the Leningrad Conservatory in 1956, and in 1961 was awarded the doctorate for his work on Latvian folk music. He taught at the College of Education in Riga (1922–38) and was a Dramaturg at the Latvian National Opera (1925–9). From 1932 to 1939 he edited the journal *Mūzikas apskats*. He was appointed senior lecturer at the Latvian Conservatory in 1938, and later became a professor (1941–4, 1946–61). In 1946 he was appointed senior research fellow at the Institute of Ethnography and Folklore in the Latvian Academy of Sciences. His work was concerned principally with Latvian folk music, to which he devoted several books and papers. In 1958 he produced a collection of Latvian work songs, which was the first volume in an anthology of Latvian folk music, *Latviešu tautas mūzika*; the subsequent four volumes contain traditional wedding songs (1968), children's songs and funeral songs (1971), traditional calendar songs (1973) and matchmaking songs (1986). In 1961 Vītoliņš was dismissed from his post at the conservatory for publishing a collection of reviews by Jānis Zālītis (1884–1943), a Latvian composer and music critic whose writings were regarded as anti-Soviet.

JOACHIM BRAUN/ARNOLDS KLOTIŅŠ

Vītols, Jāzeps [Wihtol, Joseph] (*b* Valmiera, 26 July 1863; *d* Lübeck, 24 April 1948). Latvian composer and teacher. Born into a musical family, he studied at the St Petersburg Conservatory with Rimsky-Korsakov. He graduated in 1886 and taught a composition class at the conservatory, where he was a professor from 1901 to 1918. Among his pupils were Prokofiev and Myaskovsky. Vītols was a close friend of Glazunov and Lyadov, and a regular participant at the 'Belyayev Fridays', meetings of distinguished Russian composers at the home of the well-known publisher and patron; Belyayev was Vītols's main publisher at the time, though works were published under the name Joseph Wihtol. From 1897 to 1914 Vītols was music critic of the *St Petersburger Zeitung*, but after the revolution he moved to Riga and for 25 years he dominated the musical life of independent Latvia. He became director of the Latvian Opera in 1918 (renamed the Latvian National Opera in 1919), and in 1919 he established the Latvian State Conservatory, working there as professor until 1944 and rector during the years 1919–35 and 1937–44. There he taught most of the musicians who formed the Latvian national school, as well as some leading Lithuanian composers. In 1944 he fled before the Soviet army; he ended his life in exile and deep depression.

Vītols was the composer of the first Latvian symphony (1888), string quartet (1899) and piano sonata (1885). His music is academic in the best sense of the term: in style and form it is restrained, clear and confident however attractively coloured. Synthesizing west European and Russian musical influences of the late 19th century, the music also retains elements of Latvian folklore. His ballads and songs for chorus as well as chamber and piano pieces have attracted particular interest.

WORKS
(*selective list*)

Orch: Sym. no.1, e, 1888; La fête Lihgo, sym. poem, 1889; Ouverture Dramatique, 1896; 7 chants populaires lettonnes, 1903; Sprīdītis [Tom Thumb], ov., 1908; Dārgakmeņi [Precious Stones], 1924; Rudens dziesma [Song of Autumn], 1928; Latvju lauku serenāde [Latvian Village Serenade], 1935
Chbr: Str Qt no.1, 1885; Esquisse, vc, pf, 1894; Romance, vn, pf, 1894; Str Qt no.2, 1899; Fantaisie sur des chants populaires lettons, vn, pf, 1910; other works
Pf: Sonate, 1885; Variations sur un thème lette, 1891; Valse-caprice, 1897; 10 chants populaires lettonnes, 1901; Viļņu dziesma [Song of Waves], 1909; Carmina, 1921; Sonatina, 1926; *c*100 other pieces
*c*100 choral songs a cappella, incl. Gaismas pils [The Castle of Light] (Auseklis), 1899; Karalmeita [The King's Daughter] (J. Rainis), 1903; Dūkņu sils [The Haunted Thicket] (V. Plūdonis), 1916; Uguns milna [The Burning Brand] (A. Brigadere), 1924; Saules svētki [The Sun's Revelry] (F. Bārda), 1923; Dāvids Zaula priekšā [David Before Saul] (F. Bārda), 1928
*c*100 solo songs, incl. 7 dziesmas [7 songs], op.31, 1v, pf, 1893–1903; 5 dziesmas [5 songs], op.34, 1v, pf, 1905–06

JOACHIM BRAUN/ARNOLDS KLOTIŅŠ

Vitruvius Pollio (*fl* 1st century BCE). Roman architect. His reputation is based primarily on the treatise *De architectura*, comprising ten books and dedicated to Emperor Augustus. In the introductory section (i.1.8–9) he asserts that music is essential to the education of the architect, along with drawing, geometry, history, philosophy, medicine, law and astronomy. A musical education enables one to perform accurately such diverse tasks as tightening the cords on projectile military engines, designing acoustical enhancements for theatres, and building water organs and other instruments. These remarks anticipate three passages in *De architectura* that explicitly address musical subjects.

In his discussion of theatre construction (v.3–9), Vitruvius comments on the importance of acoustical considerations in site selection as well as in the design of the structure itself. The site should neither produce an echo nor deaden the voice, and the ascending rows of seats must not obstruct the sound waves. A brief summary of Aritoxenian harmonic theory provides the background for a discussion of vases designed to resonate to various musical notes. According to Vitruvius, such vases served as acoustical enhancements in many theatres in Greece and Italy, though apparently not in Rome.

In a discussion of the architect's concern with climate (vi.1.5–7) Vitruvius draws an analogy between geographical latitude and a musical scale. Understanding that Rome would have been Vitruvius's point of reference, the reader is to imagine a circular plane figure defined by the horizon. Perpendicular to this is a triangle whose three defining points are due north, due south and the celestial north pole. This triangle represents the outline of a string instrument called the *sambukē* (*see* SAMBUCA), though with the strings stretching vertically. The shorter strings, to the south, explain the supposed higher-pitched voices of peoples from the tropical regions, while the longer strings correspond to the deeper voices of northern peoples.

The last book of *De architectura* is devoted to the construction of various machines; it includes a detailed description (x.8) of the parts and operation of the water organ (*see* HYDRAULIS).

DENISE DAVIDSON GREAVES

Vitry, Philippe de [Vitriaco, Vittriaco] (*b* ?Champagne, 31 Oct 1291; *d* 9 June 1361). French composer, theorist and bishop.

1. LIFE, POSITION, REPUTATION; LITERARY WORKS. The early career of Philippe de Vitry remains obscure: he is often styled 'magister', but there is no direct evidence either that he studied at the University of Paris (though some contact with its members seems likely) or that he held the degree of *magister artium* (he is called 'master of music' in *F-Pn* lat.7378A). Vitry is first documented in 1321, when he was presented to a canonry with the expectation of a prebend at Cambrai; in the event no vacancy occurred and Vitry dropped his claim to this position between 1327 and 1332. He may, however, already have been a canon of the collegiate church of Notre Dame in Clermont-en-Beauvais, the family church of the counts of Clermont; he certainly held this position by August 1322, probably acquiring it through the patronage of Louis de Bourbon, Count of Clermont, with whom he was closely linked, as clerk, administrator and diplomat, over the next 20 years. A connection with Louis de Bourbon may originate before 1320, providing perhaps the context for any role that Vitry may have taken in the compilation of the interpolated ROMAN DE FAUVEL (Wathey, 1995; Fauvel Studies, 1998).

Vitry served as Louis's representative at the papal curia in Avignon in 1327, as a witness to several of his charters, and as the principal clerical executor of his will in 1342 (Wathey, 1995). After Louis was created Duke of Bourbon in 1327, Vitry also acted as his representative in the French royal chancery, holding the title of royal *notaire* by 1328. Until shortly before the duke's death in 1342, however, Vitry was not especially active in royal service and despite receiving a fee from the French king, Philippe VI, he was concerned almost exclusively with the duke's own business (though it is likely that he worked mainly in Paris and enjoyed good access to the royal court). From 1340, however, he held senior positions in the royal administration, as *maître* in the Requêtes du Palais (a specialized jurisdiction within the Parlement of Paris), and from 1344 in the Requêtes de l'Hôtel (which tried legal cases within the royal household). Vitry was present with the army led by Philippe VI's eldest son, Jean, Duke of Normandy, at the siege of Aiguillon from April to August 1346 and, shortly after Jean was crowned king in 1350, acted as his representative at Avignon. With royal backing, Vitry was appointed Bishop of Meaux on 4 January 1351, holding this post until his death. This was the last of numerous ecclesiastical preferments that Vitry received, of which several were apparently the result of Bourbon patronage. In addition to his first canonry at Clermont, which he held at least until he became Bishop of Meaux, his most important appointments were to cathedral canonries at Verdun (by 1327) and Soissons (by 1332), and to the archdeaconry of Brie in the diocese of Soissons (1333). He also held canonries in the cathedrals of Beauvais and Paris, and in collegiate churches at Saint Omer, Saint Quentin, Amiens, Vertus (St Jean) and Paris (St Merry); in addition, he was nominated, apparently without result, to expectative benefices at Aire, Cambrai (St Géry) and Châlons-sur-Marne.

The vigorous role in French politics played by Louis de Clermont made its mark on Vitry's own career and on his literary and musical output. Louis's presence in the royal and princely circles in which the interpolated *Roman de Fauvel* (*F-Pn* fr.146) was created may provide a route whereby motets by Vitry were included in this collection. Similarly, the lifelong interest taken by Louis in the French kings' crusading plans provides a context for Vitry's motet *O canenda/Rex quem/Rex regum*, praising the crusade leader Robert, King of Sicily and Jerusalem (*d* 1343). It more directly underlies Vitry's most substantial literary work, the 1148-line verse allegory *Le chapel des trois fleurs de lis*, written in 1335 and incorporating passages translated from Vegetius's *De re militari*, in support of the crusade in general, and more particularly of a cancelled expedition to Anatolia and the Holy Land under the leadership of Louis, Duke of Bourbon. A 32-line verse pastoral by Vitry, *Le dit du franc Gontier*, was widely circulated in the 15th century and provoked

responses from Pierre d'Ailly (1351–1420) and an elaborate parody in François Villon's *Contredit* (1461). A satirical ballade without music, *De terre en grec Gaulle appellee* (?1337–8), and Vitry's part (the *sentencia judiciis*) of a jeu-parti, *Ulixea fulgens facundia*, written with Jean de Savoie (*d* 1353) and Jean de le Mote, survive in an important 15th-century literary collection (*F-Pn* lat.3343) that also includes the triplum text of Vitry's motet for Pope Clement VI (see below).

Vitry's involvements in Anglo-French relations are similarly reflected in his works, and were probably also the product of Bourbon and royal patronage. He possibly accompanied the duke to London in March 1331, and in the following month he was present at Pont-Sainte-Maxence when Edward III did homage to Philippe VI for Gascony and Ponthieu. Comment on England in his poetic output, however, almost certainly dates from after the outbreak of hostilities with England in 1337. The triplum of *Phi millies/O Creator/Iacet granum/Quam sufflabit*, for which no music survives, calls for an end to English perfidy ('et cessabit horum perfidis, nec plus erit hoc nomen: Anglia') and the salvation of the French nation. The ballade *De terre en grec Gaulle appellee* styles England 'de Dieu maudite'. Vitry may also be the author of an episode describing the treachery of Edward I in 1301 that he copied into his copy of Guillaume de Nangis's *Chronicon*; in the same manuscript Vitry commented on the danger posed to Paris by the English in 1346 (Wathey, 1992, 1998).

It was perhaps through Louis that Vitry first forged his contacts with the papal curia. Vitry was in Avignon in 1327, ?1334, 1342, 1344 and 1349–50, and enjoyed the particular support of Pierre Roger, Archbishop of Rouen, elected Pope Clement VI in 1342, and of Cardinal Guy de Boulogne. His motet *Petre clemens/Lugentium siccentur/Non est inventus*, written at Christmas 1342 for the visit early in 1343 of the Roman ambassadors to Avignon, supports Clement VI in his dispute with the Holy Roman Emperor over the proper seat of the papacy (Avignon versus Rome) (Wathey, 1993). Alongside Paris, the papal court at Avignon emerges as a major focal point in Vitry's network of political and intellectual contacts. It was probably there, perhaps in the 1320s, that Vitry first encountered Petrarch. He may have been at Avignon during the conference on calendar reform to which Johannes de Muris and Firmin de Beauval were summoned by Clement in 1344. Annotations by Vitry in one of his own books reveal some astronomical knowledge (specifically of Abu Ma'shar's *De conjunctionibus*); it is likely that he contributed to the series of prognostications made for the curia later that year by three of his associates (the above-named Muris and Beauval, and Gersonides) on the great conjunction of Saturn and Jupiter due to occur in 1345 (Wathey, 1997).

Vitry was a leading intellectual figure and from about 1340 onwards he attracted the praise of several contemporaries. Two letters from Petrarch to Vitry survive, from 1350 and 1351; Petrarch called him 'litteratissimus homo' and 'the only true poet among the French', and also made Vitry (personified as 'Gallus') his co-respondent in a debate between music and poetry in the fourth eclogue of the *Bucolicum carmen* (?1344). On the strength of this relationship, Vitry acquired some fame among early Italian humanists, and his posthumous reputation among such scholars may be one factor in the literary circulation of his motet poetry (see below): writing in 1394, Francesco Piendibeni da Montepulciano, chancellor of Perugia, called Vitry a 'most famous musician and philosopher, well known to Petrarch', and for Donato degli Albanzani he was 'in musica summus artifex'. Petrarch recorded Vitry's death, along with very few other personal losses, on the front flyleaf of his own copy of Virgil, now in Milan.

No other 14th-century musician appears to have been praised so frequently or from so many quarters. Vitry received tributes from astronomers and mathematicians as well as from literary figures. Such regard by notable authors is unprecedented for a musician, and evidently testifies to verbal and intellectual as well as musical gifts. Although no philosophical, historical or mathematical writings have been identified as his, recent work on his library (Wathey, 1997) and its relations to his motet texts does perhaps provide some of the necessary interface. The Benedictine theologian Pierre Bersuire called him (*c*1340) 'a man of excellent intellect, an exceptionally ardent lover of moral philosophy, history and antiquity, and learned in all the mathematical sciences' (Samaran, 1962). Nicholas Oresme, the celebrated mathematician, theologian and philosopher, dedicated his *Algorismus proportionum* (after 1351) to Vitry, there likening him to Pythagoras and requesting his approval for its contents. Vitry was the dedicatee of two other works. Johannes de Muris, who also lent Vitry several books, dedicated his *Opus quadripartitum numerorum* (1343) to him as 'the one person in the world more estimable than this work'; Gersonides claimed to have written his *De numeris harmonicis* (1343) in response to a direct request from Vitry, whom he dubbed 'a leading expert in the science of music'. Nevertheless, individual tributes to his musical and poetic abilities appear to predominate and the testimony of Jean de Fillou de Venette, Prior Provincial of the Carmelite order in France (*L'histoire des trois Maries*, before 1357, *F-Pn* fr.12468, ff.142*v*–143), makes plain Vitry's fusion of mastery in these two spheres:

> Maistre Philippe de Vitry,
> Qui en son chant est bien mery
> Et pour ses diz qui sont moult beaux,
> Car il est evesque de Meaux,
> Bien a chanté, bien ditté;
> Qui sires est de tel citté
> Par ma foy bien l'a deservi,
> Car de chanter a mieux servi
> Et de ditter trestout ensemble
> Que nul autre, si com moy semble.

The work of Vitry and his brothers (see below) was praised alongside that of Guillaume de Machaut and Jean de le Mote in the *Meditations* (*c*1350) of Gilles li Muisis, Prior of St Martin. In turn, Jean de le Mote, perhaps writing at the same time, placed Vitry among the 'mondains dieux d'armonie', and in a related text (1350) Jehan de Savoie, a *notaire* in the French royal chancery, called him the 'eminent prince of musicians, outstanding peer to Orpheus, whose name should live for ever', The anonymous author of the *Quatuor principalia* (*see* JOHN OF TEWKESBURY), who perhaps had first-hand knowledge of the composer and is the authority for two motet attributions, described Vitry as 'flower and jewel of singers'. The royal chaplain Gaces de la Bugne, in his *Roman de deduis* (1359–77), wrote that Vitry 'mieux sceut motetz que nul homme', while the anonymous

author of the *Règles de la seconde rhéthorique* (between 1411 and 1432) credited Vitry, under the general rubric of poetry as a second rhetoric, with discovering 'la manière des motès, et des ballades, et des lais et des simples rondeaux', although little of the extensive poetic and musical production there implied has survived; as regards music, he is credited with inventing 'les iiij prolacions, les notes rouges et la nouveleté des proportions'. Both Vitry and Machaut are mentioned in texts of two motets along with other contemporary musicians: *Apollinis eclipsatur/Zodiacum signis* and *Musicalis sciencia/Sciencie laudabilis*.

A strong case can be made for regarding Vitry as the author of his own Latin motet texts, confirming the judgment of Jean de Fillou (cited above). These texts were copied not only with music, but also enjoyed an independent literary circulation that probably originated in Vitry's relationship with Petrarch and early Petrarchan scholarship. By the 15th century, Vitry's motet poetry was widely copied in humanist anthologies (alongside dictaminal treatises, letters and classical works), acquiring special popularity with German students at Italian universities and subsequently in Germany (Wathey, 1993). Among the non-liturgical texts set in 14th-century motets, only Vitry's (however weakly attributed elsewhere) appear to have been circulated in this way. Although the independent grounds for attribution are sometimes not strong, inclusion in this tightly circumscribed group of works may itself offer support for Vitry's authorship. This largely Petrarchan tradition also preserves the texts of extra voice-parts no longer found in musical sources, pairings of texts that differ from those found in the motets, and, in the case of the motet *Petre clemens*, a date and occasion for its composition. The dissemination of Vitry's literary reputation and motet poetry may well have been responsible, particularly in Italy, for the attribution to him of other works, including several writings on music, as well as a commentary on Aristotle's *Libri naturales* (*I-Rvat* Ottob.1521).

Vitry's activities as a scholar, some of which were pursued in close proximity to (if not within) the University of Paris, have left a small but important literary deposit. He borrowed several books from Johannes de Muris (probably during the 1330s), including Muris's own *Commentum super musicam*, Boethius's *De musica* and the *Didascalion* of Hugh of St Cher. He also provided the theologian Pierre de Bersuire with a French commentary on Ovid's *Metamorphoses*, and, in addition to Abu-Ma'shar, there is evidence that he read the *Historia hiersolymitana* of Albert of Aachen. Three books once possessed by Vitry have survived, containing the *Elementarium* of Papias Grammaticus (*F-RS* 1092), a commentary on Aristotle's *Libri naturales* (*I-Rvat* Ottob.1521) and Guillaume de Nangis's *Chronicon* (*I-Rvat* Reg.lat.544). The last of these provides valuable evidence for Vitry's scholarship and intellectual perspectives, since he annotated most of its 744 pages, recording the date of his own birth against the year 1291 and writing out (as a moralizing aside to a passage in the *Chronicon*) a hexameter couplet that he used in the motet *Tribum que non abhoruit/Quoniam secta latronum/Merito hec patimur* (see Wathey, *Musica e storia*, 1998). Marginal annotations by Vitry, reflecting a deep concern with legal questions and dating from his period as bishop, are also found in one of the cartularies of the cathedral chapter at Meaux (MS 63).

2. MUSIC THEORY. Vitry's earliest reputation in modern scholarship was as a theorist, the author of the treatise *Ars nova*. Sanders (*Grove6*; after CSM, viii, 1964) reported that only the last ten of the 24 chapters are original, on the grounds that the first 14 come from a different work or section of the work, and that they in any case represent Vitry's teaching as formulated by his disciples. Of these ten, the last five chapters occur only in full in *I-Rvat* Barberini 307, and in much abbreviated form in *F-Pn* lat.14741; the whole is greatly condensed in *Pn* lat.7378A (both *I-Rvat* 307 and *F-Pn* 7378A bear ascriptions to Vitry in their explicits; see Fuller). Sarah Fuller took this further with arguments that have won general acceptance: while its teaching may be associated with Vitry and with the innovations of his compositions, its connection with him is so tenuous that he can no longer be regarded as the 'author' of a stably transmitted text. The body of theory survives in several different related versions, often with different citations of named music examples. Some earlier arguments for Vitry's authorship treated such citations of motet titles in 'Vitry's' *Ars nova* as grounds for their attribution to him; however, many of the cited motets do not survive. The treatise has been dated about 1320 (Roesner, 31; or up to five years before or after, and to other dates in the early 1320s by Fuller and Michels), on grounds of the state of development of its notational theory and in relation to other datable treatises from the 1320s, notably that of Jacobus of Liège. It reflects a notational stage comparable to that found in the interpolated *Fauvel* manuscript, namely, that values shorter than the breve are assumed to be adequately notated as stemless semibreves to be decoded in conformity with standard groupings, though their values are clarified in the treatise by stems. None of the motets in *Fauvel* uses arrangements other than these that would have required stems, nor do they use minim rests or indeed distinguish minim and semibreve rests. Two of the motets assigned to Vitry by Leech-Wilkinson, however, and dated by him 1316/1317 (*Per grama* and *Flos/Celsa*) go beyond *Fauvel* and *Ars nova* in both these respects, as do their passages of nearly complete isorhythm in upper parts.

Surviving motets mentioned in the various versions of the text have invited attribution to Vitry on grounds of his supposed authorship of *Ars nova*, some because they are mentioned in one or more versions of the treatise: *Orbis orbatus/Vos pastores*, *Firmissime/Adesto*, *Colla/Bona condit*, *Douce playsance/Garison* (in chap.XVII, on *modus* and *tempus* changes); *Douce/Garison* (in chap.XVIII, on *modus* and *tempus* signs); and *Douce/Garison*; *Garrit/In nova*; *Tuba/In arboris* (chap.XIX, on red notes, where many other motets are named in the various versions of the treatise, only three of which are clearly identifiable with surviving compositions). All the last three have at some time been assigned to Vitry (*Garrit/In nova* is in *Fauvel*), and constitute the earliest known motets using coloration in the tenor to effect changes of *tempus* and *modus*. *Vos quid/Gratissima*, attributed to Vitry in the *Quatuor principalia*, is cited in *F-Pn* lat.14741, which uniquely supplies examples for the section of *Ars nova* ('Chapters 20–24') dealing with *tempus* and prolation. The attributions of some of these motets to Vitry are somewhat weakened by the loosening

Part of the treatise 'Ars nova', based on the teachings of Philippe de Vitry' (I-Rvat Barberini 307, f.19r, 2nd column, and f.20r), showing the end of chapter XIV and most of chapter XV (f.19r), and the end of chapter XVII and chapters XVIII and XIX (f.20r)

of Vitry's connection with the various versions of the treatise, but there is in any case no significant tradition of self-citation in treatises before Tinctoris.

The chief notational innovations associated with Vitry are all present to some degree in *Ars nova*: values shorter than the semibreve and the use of red notes. The author of *Les règles de la seconde rhéthorique* attributed to Vitry the 'quatre prolacions' and the invention of red notes; the *Quatuor principalia* states that the minim was invented 'in Navarina' and was approved and used by Vitry. The setting out of the combinations of *modus* and *tempus* and the assignment of standard values to notes below the semibreve seems to qualify as the prolations, but the hierarchy is less completely systematized in the *Ars nova* writings than in fully developed *Ars nova* theory. The various treatises that make up the complex of *Ars nova* give several different meanings for red notes and are the first to do so; one could say that the grounds for assigning this body of theory to Vitry on the testimony of the *seconde rhéthorique* are no worse than the grounds for other assignations to him.

Of the wide range of meanings given for red notes, many are not documented in any surviving composition, or are apparently different from surviving practical uses; some of them are cited as occurring in works that do not survive. According to *Ars nova*, red notes can change combinations of *modus* and *tempus* from perfect to imperfect or vice versa. *In Tuba/In arboris* red notes effect *modus* change only, and effect parallel variation of *tempus* and *modus* in *Douce/Garison*. They can also be agents of syncopation (though no known uses are so early). A corrupt sentence seems to refer to the distinguishing of notes deviating from the chant by red notation, but the meaning may not be as clear as Sanders suggested (*Grove6*). Red can signal imperfection of a long before another, or non-alteration of a second breve (*Garrit/In nova*); or perfection of a preceding long or breve (*Tuba/In arboris*). Red notes can also cause upward octave transposition of a cantus firmus; two motets are cited for this usage but, as in some other examples, neither survives, nor is any example known.

3. Musical works

(i) Motets. Apart from the special case of Machaut, most 14th-century music survives anonymously. Only two works are attributed in any musical source to Vitry. One of these (*Impudenter circuivi/Virtutibus*) was in *F-Sm* 222 (burned in 1871), the other (*O canenda/Rex quem*) is in a fragment (*CH-Fcu* Z 260) whose authority may be somewhat undermined in that its other piece is misattributed to Machaut. In Vitry we encounter a well-known public figure of formidable learning and authority whose general culture and musical composition are attested in a wide range of extra-musical sources, encouraging the enterprise of identifying his music among anonymously transmitted pieces. Vitry's stature not only as a theorist

but as a composer was first revived by Besseler, the first to attribute (eight) anonymous motets to him. Schrade extended this list to the 14 (plus one without music) in his edition.

The evidence on which modern scholars have proposed such identifications includes internal evidence from the poetic texts, such as the authorial 'hec concino Philippus' of *Cum statua/Hugo*, and the possibly self-referential 'concinat Gallus' in *Tribum/Quoniam*. The vituperative style that seems to be characteristic of Vitry may be reflected in vocabulary. Citations in treatises and literary sources are also taken as evidence for his authorship: motet titles are cited in three chapters of *Ars nova*, one on variations between perfect and imperfect *modus* and *tempus*, one on the use of red notes. Now that this treatise's connection to Vitry has been loosened, an earlier notion, itself questionable, that such self-citation guaranteed his authorship of a group of works including some of the *Fauvel* motets, fades further, while not disqualifying their attribution on other grounds. *Douce/Garison* is mentioned by Gaces de la Bugne as a work of Vitry's, naming him also as Bishop of Meaux (thus dating the mention after 1351); Kügle interpreted this reference as indicating an early work. *Cum statua/Hugo* and *Vos/Gratissima* are attributed to Vitry in the *Quatuor principalia*. The manuscript *F-Pn* lat.3343 contains the ballade *De terre en grec Gaulle appellee*, and also presents the texts of *Phi millies Deus pulcherrime/O Creator*, for which no music survives, and the triplum text of *Petre clemens/Lugentium* with the ascription 'hunc motetum fecit Philippus de Vitriaco pro papa Clemente', an ascription now corroborated by Wathey (1993) with a precise dating.

Transmission of motet texts without music but with attribution to Vitry has also been taken as evidence of his authorship of these motets. The implication that he wrote his own texts is corroborated by parallel passages in motets, and in books from his library with those passages marked or annotated by him. *Tribum/Quoniam* has now been more firmly linked with Vitry in this way (Wathey, 1998). It must now be asked whether such separate survival is sufficiently strong evidence for the attribution of other motet texts preserved in this way, since the same group also includes some motets ascribed to him on independent grounds (notably *Flos/Celsa* but also the still questionable *Quid scire/Dantur*); some of these are mentioned in treatises. Attributions are also based on style and construction as well as on links between pieces (see especially Leech-Wilkinson, Kügle, Coplestone-Crow).

Sanders (1975) challenged some of Schrade's attributions and promoted others. His list of 12 removes *Dantur/Quid scire* entirely, adds *Floret/Florens*, retains the text-only *Phi millies/O Creator* and relegates two of Schrade's to doubtful status. Roesner's judgment is the most severe: he found no secure basis for assigning any of the *Fauvel* motets to Vitry, or indeed for Vitry's involvement as Chaillou's music editor for that enterprise, confining the Vitry corpus to five, perhaps seven, reliably ascribed motets all contained in *I-IV* 115 (Roesner, 38–42). Sanders proposed that Vitry was Chaillou's editor, one of four men presumed to have been involved in *Fauvel* who were all at the same time in the royal chancery. Whatever Chaillou's role, and whoever the compilers of *Fauvel* in *F-Pn* fr.146, they must have had the services of an extraordinarily learned and skilful musician (or musicians), over a wide chronological span, familiar with repertory reaching back to Notre Dame and the Ars Antiqua, as well as the monophonic courtly lyric. The use of plainchant, some of it quite obscure, suggests a deep familiarity such as to permit the use of chant snippets (sometimes satirically and subversively) 'reflecting the latest developments of the emerging Ars Nova'. He (or they) must have had 'considerable formal education, well-read in the *artes*, no ordinary musician – and [been] something of a polymath as well' (Roesner, 38).

Six *Fauvel* motets have been ascribed to Vitry at various times: *Orbis orbatus/Vos pastores*, *Aman novi/Heu fortuna*, *Tribum/Quoniam*, *Firmissime/Adesto*, *Garrit gallus/In nova fert* and *Floret/Florens* (the latter is not in *Fauvel* but an adapted form of its triplum appears as the monophonic *Carnalitas, luxuria*). Leech-Wilkinson (1982–3) added five more Ivrea motets on grounds of their similarity of facture to motets more firmly attributed to Vitry. Leech-Wilkinson (1995; further discussed in Coplestone-Crow) also proposed an anonymous 'Master of the Royal Motets' who he believes wrote four other *Fauvel* motets, including *Orbis orbatus/Vos pastores*, previously ascribed to Vitry, while reassigning to Vitry three motets in *F-Pn* fr.146 which Roesner had eliminated (*Garrit/In nova*, *Tribum/Quoniam*, *Firmissime/Adesto*). Leech-Wilkinson also added two non-*Fauvel* motets not previously attributed to Vitry: the incomplete *Per grama* for Pope John XXII (he dated it around the time of his election, 7 August 1316, but a later dating was suggested by Bent, 1998), and *Flos/Celsa* for St Louis of Toulouse (canonized 7 April 1317; Leech-Wilkinson dated it before his first feast-day, 19 August; Kügle agrees). Bent, however, argues that given the advanced notation and isorhythmic structures of these works, either a later date must be considered for them, or the view that *Fauvel* was at the cutting edge of new developments would need revision, especially if the 'Marigny' motets (those that describe the downfall of the royal chamberlain Enguerran de Marigny: *Aman/Heu*, *Tribum/Quoniam* and *Garrit/In nova*) date from about 1317 rather than earlier (see below).

Kügle accepted *Flos/Celsa* and *In virtute/Decens carmen* as works of Vitry, and indeed dated their group 1315–20; he linked a further group of motets to these: *Almifonis/Rosa*, *Nazarea que decora/Zolomina* and *Amer/Durement*, but stopped short of attributing them. Leech-Wilkinson (1995) assigned three motets to followers of Vitry: *Floret/Florens*, *Aman/Heu* (both supported in Coplestone-Crow) and *Nulla/Plange*. *Floret/Florens* is indeed a less well crafted piece, with uncharacteristic strings of repeated notes, but it cannot be ruled out entirely, because of its close connection to the Marigny complex; Bent (1998) has defended *Aman/Heu* as a work of Vitry because of its intimate connection to and contemporary genesis with *Garrit/In nova* and *Tribum/Quoniam*. Leech-Wilkinson, Kügle and Coplestone-Crow have argued for links between groups of pieces based on musical techniques, but with differing emphases with respect to attribution.

Many earlier writers have taken the *Fauvel* historical motets as documentary and applied dates accordingly. Bent (1998) has argued that the three 'Marigny' motets were designed as an interrelated group, and probably by one composer, specifically for the *Fauvel* project, with

clear and double intent for both the *Fauvel* narrative and the Marigny parable (see, however, above for different views on attributions). She challenged Sanders's basis for an 'orderly' chronology (Sanders, 1975, p.36), restoring Schrade's attribution to Vitry, on grounds that progress towards periodicity and isorhythm is not the only measure of order, that his de-attribution of *Aman/Heu* and indeed of *Orbis/Vos* rests on limited criteria; and that the self-proclaimed tenses that seem to establish the order of composition of the Marigny trio might be seen as narrative fiction, overriding Sanders's basic argument of literal documentary chronological order. If at least some of these motets served a double narrative purpose, they need not all be so early (because of its present tense, *Garrit/In nova* has been dated during the lifetime of Philippe IV 'the Fair', who died on 29 November 1314).

Criteria that may guide chronology include the extent and nature of isorhythmic organization, and the stage of notational development required by the rhythms of the upper parts. Isorhythm may not be a useful criterion, as advanced techniques are present in motets that are dated early; this is also true for *modus* variation using coloration. As seen in the works-list, the presumably earlier motets attributed to Vitry are preserved mostly in *F-Pn* 146, and the presumably later ones, with no overlap, in *I-IV*. It is nonetheless difficult to propose datings for the post-*Fauvel* motets, apart from *Petre/Lugentium*. Partly on grounds of their citation in the *Ars nova* complex, and partly on style considerations relating them to *Fauvel*, Kügle suggested early dates for most of those preserved only in Ivrea, even those requiring more advanced notation for short notes than the *Fauvel* motets.

In the unquestionably early motets that might be by Vitry, the composer contrived great variety in manipulating *modus* relationships, alternating groups of twos and threes, sometimes achieved by coloration. Among the motets that juxtapose binary and ternary *modus*, both within and between voices, are *Garrit gallus/In nova*, *Firmissime/Adesto* and *Tuba/In arboris*. Some (for example the later *Colla iugo/Bona condit*; *O canenda/Rex*) have a second or third color repeat in diminution (but never more than one level of reduction); some (*Firmissime/Adesto*, *Vos quid admiramini/Gratissima* and *Douce/Garison*) have 'pseudo-diminution' – a second color that gives the impression of diminution but is in fact independently rhythmicized. Others have no diminution, or use a wide range of other repetition strategies, often setting up rich webs of musical and textual reference both within and between motets quite independently of any periodic or isorhythmic repetition.

Impudenter/Virtutibus and *Vos quid admiramini/Gratissima* both have essential contratenors and a 'solus tenor' conflation of tenor and contratenor. The motet surviving without music, *O Creator/Phi millies/Iacet granum/Quam sufflabit*, must have been in four voices. Other four-voice motets listed are *Apta/Flos*, with two different contratenors, both inessential (therefore this is not a candidate for solus tenor treatment) and *In virtute/Decens carmen* with an essential contratenor. Vitry is the first composer associated with the solus tenor apart from an isolated earlier English case in *GB-Onc* 362, no.2, also (perhaps significantly) on *Jacet granum*.

The upper parts of these motets, all with different texts, are much more closely integrated musically and textually than in 13th-century motets; neither can be omitted. Some have an *introitus* before the tenor entry: this applies to both 'more certain' Vitry motets (e.g. *Impudenter/Virtutibus*; *Tribum/Quoniam*) and less certain works (e.g. *O Philippe/O bone dux*; *Apta/Flos*). Sanders has shown Vitry's skill at setting up periodic phrase structures bounded by rests in the upper parts, overlapping with each other and also overlapping with the structural tenor joins, and sometimes sharing a numerical significance with the motet as a whole. Upper-part isorhythm is most strongly cultivated in diminution or pseudo-diminution sections, or in mid-talea around points of *modus* change (e.g. in *Tuba/In arboris*).

All the *Fauvel* motets (and *Cum statua/Hugo*) arrange their short notes in normative ways that do not require overriding by stems, even if stems appear in some sources; they also do not use rests shorter than the breve, which would also require notation with stems. This would normally suggest an earlier date than compositions requiring more advanced notation. *Douce/Garison*, not in *Fauvel* but mentioned in early treatises, uses semibreve rests, but only to mark the word 'soupir'. *Vos quid admiramini/Gratissima* uses minim rests in its hocket section, as does *Tuba/In arboris*; minim rests are also found in the textless hocket sections of *Impudenter/Virtutibus* and *O canenda/Rex*. Conventional rhythms are usually adhered to, but occasional exceptions are made, sometimes to emphasize particular words (for instance in *Vos/Gratissima* and *Colla iugo/Bona condit*). *Petre/Lugentium* uses semibreve and minim rests; its 9/8 rhythms depart considerably from standard trochaic patterns, requiring stems.

The novelty of the advanced motets in *Fauvel* that may be by Vitry is their integration of a wide range of note values, from maxima down to minim, into a single composition, under tight numerical control. Tenor organization at the *modus* level accommodates organization of the upper parts also by *tempus* and prolation. As Sanders concluded (*Grove6*), 'Each composition is an integral entity with a specific structural and poetic individuality, retained throughout all its manuscript sources ... The variety of uniquely conceived forms in Vitry's works is as fascinating as the clarity and pregnancy of melodic style of many of his motets are attractive.'

(ii) Songs. Vitry is credited in the *Règles de la seconde rhéthorique* with the invention of ballades; but although one text exists, no composed ballades are known to survive, nor have any been attributed to him. There has been a presumption that in order to be new, such works are likely to have been polyphonic, that the resources of the Ars Nova were brought to bear on these forms as antecedents to Machaut's polyphonic songs. All the ballades in *Fauvel* are monophonic. However, the most advanced of the large-scale *Fauvel* ballades and some other monophonic *forme-fixe* songs are notated in the same way as the *Fauvel* motets, in stemless semibreves set off where necessary by dots. They can be read in exactly the same formulaic way and produce the same rhythmic language as the motets and as shown in *Ars nova* and related treatises, with a much wider range of note values than was possible previously. Thus interpreted, they are far different from all their precedents; this is masked by their free transcriptions in Rosenberg and Tischler's edition. Could these be, or be like, the lost repertory of ballades and other song forms by Vitry? Earp (1983, p.357; 1987) and Page (1998, p.384) have affirmed the

distinction between the long, unmeasured *grant chant courtois* and the measured rhythms of dance-song to which, around 1300, rhythmic innovations earlier applied to the motet were now applied. Page demonstrated both the antecedents of the *Fauvel* ballades in a series of ballade texts transmitted in *GB-Ob* Douce 308 and their rhythmic potential, but stopped short of claiming the *Fauvel* ones for Vitry.

Although the loosening of Vitry's association with the treatise formerly ascribed to him may seem to weaken his association with such notational reforms, there is enough to link him with Ars Nova practices. Given the growing evidence of Vitry's connection with *F-Pn* 146, these should be considered serious candidates for his authorship. While they are not, in this form, polyphonic, they are 'new' rhythmically and in extent, and if we accept that Vitry may well have been Chaillou's music editor, and remove the modern presumption that Vitry's innovation in this area was necessarily polyphonic, the case for seeing these pieces as candidates – it can be put no higher than that – for the lost ballades of Vitry gains some weight.

MARGARET BENT, ANDREW WATHEY

Vittadini, Franco (*b* Pavia, 9 April 1884; *d* Pavia, 30 Nov 1948). Italian composer and conductor. From 1903 he studied at the Milan Conservatory, but left prematurely because of a disagreement with the director, Giuseppe Gallignani. After a short period as organist and *maestro di cappella* in Varese, he spent the rest of his life in Pavia, where he directed the Istituto Musicale from 1924 to his death. He won his biggest success with *Anima allegra*, which was performed in several foreign countries as well as in Italy. Firmly traditional in style, the opera is notable for its refined harmony and orchestration and for vivid picturesque and atmospheric effects, ranging from the Spanish local colour in Act 2 to the Puccinian tenderness of the final pages. Among his other stage works only the ballet *Vecchia Milano* achieved comparable success: the later operas circulated very little after their first productions. In *Caracciolo*, which he himself regarded as his masterpiece, he attempted a more grandiose, tragic manner which seems to have made quite a strong impact on the work's first audience; but the gentle, playfully sentimental *Fiammetta e l'avaro* was probably a more natural expression of his talent – too conservative, however, to arouse more than passing interest at its posthumous première. Outside the theatre Vittadini attracted most attention with his large output of religious music: his numerous masses and motets, mostly simple and easy to perform, reveal his admiration for Perosi; but, for all their naivety, the best of them contain unobtrusive harmonic subtleties of a kind rare in the older composer's music. The poignant *L'agonia del Redentore* shows Vittadini's church style at its best, while *Nazareth* forms a bridge between the religious and dramatic sides of his achievement.

WORKS
(*selective list*)

Stage: Il mare di Tiberiade (op, L. Illica), *c*1912–14, unperf.; Anima allegra (op, 3, G. Adami and L. Motta, after S. and J. Alvarez Quintero), 1918–19, Rome, Costanzi, 15 April 1921; Nazareth (visione lirica, 1, Adami), Pavia, Fraschini, 27 May 1925; Vecchia Milano (ballet, 1, Adami), Milan, 1928; La Sagredo (op, 4, Adami), Milan, Scala, 29 April 1930; Fiordisole (ballet, 1, G. Cornali), Milan, 1935; Caracciolo (op, 3, A. Rossato), Rome, Opera, 9 Feb 1938; La Taglioni (ballet, Adami), Milan, 1945; Fiammetta e l'avaro (op, 3, Adami and G. Forzano), begun 1942, Brescia, Grande, April 1951; ?3 other works, unpubd

Film music: at least 2 sets of pieces, small orch (1924), (1929)

Sacred: Il Natale di Gesù (trittico pastorale, A.S. Novaro), solo vv, chorus, orch (1931); L'agonia del Redentore (Bible, liturgy), A, 2 T, Bar, chorus, orch (1933); at least 17 masses, many motets, mostly vv, org; Quadretti francescani, small orch and/or org, 1939; many org pieces, of which 40 pubd as Vittadiniana (1952)

Orch: Armonie della notte, 1923; Scherzo (1931); Poemetto romantico, str (1938); L'ora vespertina
Other works: songs, small chbr compositions, pf pieces
Principal publishers: Carrara (Bergamo), Centimeri (Monza), Ricordi

JOHN C.G. WATERHOUSE/R

Vittori [Vittorij], **Loreto** [Victorius, Lauretus; Rovitti, Olerto] (*b* Spoleto, bap. 5 Sept 1600; *d* Rome, 23 April 1670). Italian singer, composer, poet and librettist. Of the several conflicting accounts of his birth and early career, the one given by Fausti (1916 and 1922) and confirmed by Antolini seems to be based on the most reliable documentary evidence. This shows that Loreto Vittori was born in 1600, the son of Vincenzo Vittori, and that he sang as a soprano in the choir of Spoleto Cathedral, certainly from 16 October 1614 to 24 April 1617. The date of birth given by Ambros and Fétis (*c*1588) seems to be conjectural; and the Loreto who was baptized at Spoleto on 16 January 1604 (see Rau) must now be regarded as someone else. Tebaldini's assertion that Vittori was, by 1612, a member of the choir of the Santa Casa, Loreto, though undocumented, cannot as yet be discounted.

It was probably in 1617 that Vittori was taken to Rome by Maffeo Barberini, then Bishop of Spoleto, later Pope Urban VIII. Baini and most subsequent biographers have maintained that Vittori studied at Rome under Francisco Soto de Langa, G.M. and G.B. Nanino and Francesco Soriano. There seems, however, to be no evidence to support this claim, which may be no more than a conjectural embroidery of Erythraeus's assertion (in *Pinacotheca*, ii, 216) that he was taught by 'the best masters in the whole of Italy'; in any case he would probably have been too young to have studied under G.M. Nanino (*d* 1607). At some time before 1619 he was taken to Florence by Niccolo Doni, a relative of G.B. Doni. He lived there in the Doni household under the patronage of Grand Duke Cosimo II and, according to Erythraeus, so profited by the education he received that he was able to take leading roles in Florentine stage productions, including Peri's and Gagliano's *Medoro* (1619). His ability as a singer also brought him to the notice of the young but powerful Cardinal Lodovico Ludovisi (nephew of Pope Gregory XV), who petitioned Cosimo to release him into his service. The autobiographical section (viii.11–41) of Vittori's poem *Troja rapita* (Macerata, 1662) suggests, however, that he did not move to Rome until some six months after Cosimo's death in 1621. At Rome he remained in Ludovisi's service until the latter's death in 1632. This period marked the beginning of his rise to fame as a singer. On 23 January 1622 he was admitted to the papal choir as a soprano without the usual audition. At some time between 1623 and 1624 Pope Urban VIII created him a 'Cavaliere della Milizia di Gesù Cristo'. In 1624 he travelled to Bologna with Ludovisi and sang at Florence in Gagliano's *sacra rappresentazione La regina Sant'Orsola*. In 1626 he sang at Rome in Domenico Mazzocchi's *La catena d'Adone*, probably as the sorceress Falsirena. And in 1628 he travelled again to Florence and to Parma to take part in the celebrations for the wedding of Odoardo Farnese and Margherita de' Medici. At Florence he sang in Gagliano's *Flora*; at Parma probably in Monteverdi's *Mercurio e Marte*. Something of the status and reputation that he had acquired by this time is reflected in a document in the Parma archives which states that, as a person of the first rank, he should be rewarded with gifts rather than with money.

At some time after Ludovisi's death Vittori entered the service of Cardinal Antonio Barberini, although he had sung for various Barberini occasions from at least 1623. His name appears on the salary lists of Antonio Barberini's household between 1637 and 1642 together with those of other singers, such as Marc'Antonio Pasqualini and Lorenzo Sances (Lorenzino). At the same time, however, he continued his career in the papal choir, acting as its *camerlengo* from 1642 to 1644. And in 1643 he was ordained priest in an imposing ceremony at the Chiesa Nuova. He left the papal choir on 27 January 1647 and requested a pension in respect of his 25 years' service. Little is known of the last decades of his life. The last available documentary evidence of his activity in Rome shows that in 1650 he was appointed to act as choirmaster for a special Holy Year performance at the Oratorio del Crocifisso on the third Friday in Lent. It is known, however, that he also returned to his native Spoleto in 1648, 1655 and 1656 to sing at the cathedral on the Feast of the Assumption, and that in 1662 he became a member of the Accademia degli Ottusi at Spoleto. He is buried in S Maria sopra Minerva, Rome.

Vittori was one of the most fêted Roman singers of the mid-17th century and among the earliest of a long line of operatic castratos. In contemporary writings his name was often coupled, not always to his advantage, with that of Pasqualini, who was also a castrato. On 22 February 1642 both men took part in the first performance of Luigi Rossi's opera *Il palazzo incantato, ovvero La guerriera amante*, Vittori taking the role of Angelica; and on this occasion at least, as Ottaviano Castelli grudgingly wrote to Cardinal Mazarin, he was voted the outstanding performer of the evening. Erythraeus, one of his most fervent admirers, left an enthusiastic description of his style of singing in an account (in *Pinacotheca*, ii, 217) of his performance, at the Oratorio della Vallicella, of a lament of Mary Magdalen at the feet of Christ. The suggestion (in Ambros and Gallico) that this lament may be identified as the setting of *Lagrime amare* in Domenico Mazzocchi's *Dialoghi, e sonetti* (1638) is based on a misinterpretation of a comment by Kircher and is without foundation.

For the most part only the texts of Vittori's dramatic works survive; and the sacred drama *S Ignazio di Loyola* (first performed at the Gesù, 7 July 1640, for the centenary of the founding of the Jesuit order) is known only from contemporary descriptions (see Antolini, 1978). Both *Santa Irene* and *La fiera* are of interest for the manner of their performance. *Santa Irene*, though intended to be sung throughout, was first performed with only some of the scenes sung, a practice recommended by the composer when a full complement of singers was not available. *La fiera*, inspired by the fair scene in Giulio Rospigliosi's libretto *Chi soffre speri*, was actually conceived as a mixture of speech and song. Vittori's elegant pastoral opera *Galatea*, the only one of his dramatic works whose music survives, was probably written during a period of enforced exile at Spoleto following Vittori's abduction,

on 7 November 1637, of Plautina Azzolini, wife of the Florentine painter Francesco Borbone (see Antolini, 1978). The opera was dedicated to Antonio Barberini and may have been given at the Teatro Barberini, though no performance is documented before one at Naples in 1644 at the palace of Prince Cariati. Some of the finest music of the work is found in its choral writing. Most scenes include at least one set piece, whether in the form of a chorus, a strophic aria or a set of strophic variations, and each of the three acts concludes with a chorus. Vittori's recitative style is, on the whole, blander than those of Peri and Monteverdi, but moments such as Galatea's lament 'Pur mi lasci crudele' (Act 3, scene i) are more intense.

Vittori's *Arie* (1649) contains 25 items, including nine settings of his own texts. Most of the contents are strophic songs written in styles ranging from triple-time bel canto to rather old-fashioned madrigalian declamation. The volume also includes a sonnet – *Geloso amante* – set as strophic variations, and two through-composed pieces – the lament *Per l'affricana riva* and the cantata *Udite le querele d'un disgratiato amante*.

As a poet Vittori published, in addition to the aforementioned *La troja rapita*, a set of *Dialoghi sacri e morali* (Rome, 1652), texts written for the oratory of the Chiesa Nuova, Rome. One of the texts is a parody of Ottavio Rinuccini's *Lamento d'Arianna*; Marazzoli's setting of another of the texts, *S Tomaso*, survives in manuscript in Bologna (see Morelli, 1991).

WORKS

SACRED DRAMATIC

S Ignazio di Loyola, Rome, Il Gesù, 1640, lost (described in Erythraeus: *Epistolae ad diversos*, 1645)
Santa Irene (Vittori), Rome, palace of the Marchese de' Nobili, music lost, lib pubd 1644
La pellegrina costante (Vittori), music lost, lib pubd 1647

SECULAR DRAMATIC

La fiera di Palestrina (Olerto Rovitti [Vittori]), music lost, lib *I-Rvat*
Galatea (Vittori) (Rome, 1639); lib rev. (Spoleto, 1655)
Le zitelle canterine (Vittori), music lost, lib (Genoa, 1663)

OTHER VOCAL

2 sacred songs, 1v, bc, 1640[2]
Arie, 1v, bc (Venice, 1649)

Vitzthumb [Fitzthumb, Witzthumb, Vistumb], **Ignaz** [Ignace] (*b* Baden, nr Vienna, 14 Sept 1724; *d* Brussels, 23 March 1816). Austrian conductor, teacher, impresario and composer, active in the southern Netherlands. In 1735, at the age of 11, he arrived in Brussels and entered the service of Archduchess Marie-Elisabeth, governor of the Netherlands, as a choirboy. In 1740 he was appointed court timpanist in the same department as the trumpeter François-Antoine Vitzthumb, his half-brother. He was to hold this post for over 40 years, although his other commitments subsequently obliged him to relinquish his duties to his son Paul (1761–1838). In 1742, during the War of Austrian Succession (1740–48), he enlisted as a drummer in a regiment of Hungarian hussars commanded by Colonel Count Hadik. He was demobilized in September 1748, returned to Brussels and took up his post as timpanist again. He is mentioned among the court musicians as a composer, tenor and violinist in 1758 and 1759, and as a composer from 1760 to 1775.

However, it was in the theatre that Vitzthumb was to show his talent. On returning from war he took part in the Flemish and French spectacles staged in Brussels by amateur companies: the Chambres de Rhétorique or Sociétés Bourgeoises. In 1758 he joined the Compagnie Saint-Charles, under the patronage of the Duke of Arenberg, which performed at the Petit Théâtre du Coffy. Performances of works by Vitzthumb (in the presence of the court) are first mentioned in the press in 1761, when his prologue *Le temple des arts* was performed at the Concerts Bourgeois, to which he belonged, and the pastoral ballet *L'éloge de la vertu, ou Le tribut des coeurs* was performed at the Théâtre de la Monnaie, where, in the same year, he is mentioned as teacher of the troupe's children. From 1763 to 1766 he held his first appointment at La Monnaie as *maître de musique et de chant* under the brilliant direction of Guillaume Charlier, Pierre Van Maldere and Philippe Gamond. The directors who succeeded them thought him too severe, however, and replaced him with Granier. At the request of the citizens of Brussels, he then became director of a Chambre de

Rhétorique, and took it on tour in Holland for the first time in 1768. This company was so successful that it constituted serious competition to La Monnaie, whose directors persuaded the government to ban its performances. Thanks to the support of d'Hannetaire and the Duke of Arenberg, Vitzthumb returned to La Monnaie as orchestral conductor in 1770. On 14 August 1771 he and the opera's leading singer, Louis Compain-Despierrières, obtained an exclusive licence to direct La Monnaie for a period of ten years, from Easter 1772. His reputation as a fine conductor, already widespread abroad, continued to grow, and under his direction La Monnaie became one of the foremost theatres of Europe. Vitzthumb reorganized the orchestra and was very exacting with the performers. He paid great attention to the decoration of the auditorium and the sets and costumes, and staged novelties from the French repertory, chiefly *opéras comiques*. Composers fashionable in Paris such as Gossec (*Toinon et Toinette*), Philidor (*Ernelinde*) and Grétry (*Zémire et Azor*, *Les mariages samnites*, *La fausse magie*) were glad to entrust their works to him directly after their premières in Paris. Vitzthumb did not hesitate to adapt these works to the taste of Brussels audiences. 'This is another of Vitzthumb's talents', commented the Prince de Ligne. Grétry, on the other hand, took offence at alleged corrections to his works and broke off all relations with Vitzthumb. The theatre's financial difficulties obliged Compain to resign in 1775, leaving Vitzthumb to carry on by himself. Hoping to increase receipts he decided to stage operas in Flemish (the Spectacles Nationaux) at La Monnaie, and formed the Troupe Nationale for that purpose, with artists who included his two daughters Anne-Marie (1757–77) and Marie-Françoise (1758–1820), and singers he had discovered in the Compagnies Bourgeoises (his future son-in-law Henry Mees, Joseph Debatty and the Borremans sisters, all trained by Vitzthumb). In 1775 and 1776 the Troupe Nationale went on tour in Flanders and Holland, and performed in a temporary theatre in the Place Saint-Michel in Brussels. This enterprise ended in failure. On 31 May 1777, weighed down by enormous financial burdens, he announced the closure of the theatre. He was then imprisoned for debt and financially ruined. This tyranny and lack of understanding on the part of the government was condemned by Vitzthumb's contemporaries; he was respected by singers and theatre directors all over Europe.

From 1779 to 1781 Vitzthumb directed the Théâtre Français of Ghent with Mees, Debatty and Lambert, and then returned to La Monnaie as *maître de musique et de chant*. On 27 December 1786 he was appointed *maître de musique* at the royal chapel, a post left vacant by the death of H.-J. De Croës. Unwilling to abandon his theatrical activities, Vitzthumb sometimes neglected the duties of this post. He also composed masonic music, and like many freemasons he took part in the uprising against Joseph II in the Brabantine revolution (1787–90). This action cost him his post, from which he was dismissed on 14 March 1791. On 23 April he announced his departure for Amsterdam, where he had been offered a post as *maître de musique* and stage manager at the theatre of the college of drama and opera. However, the following year he fell seriously ill, and his son Paul brought him back to Brussels, where he lived for many more years in near-poverty but still remembered by musicians.

A reputable but not inspired composer, an inventive but unlucky theatrical administrator, Vitzthumb was chiefly distinguished for his qualities as a teacher and conductor. He played an important part in the development of musical taste in Brussels, and in helping the Théâtre de la Monnaie to its prominence in the second half of the 18th century.

WORKS

STAGE

all first performances in Brussels

Le temple des arts (prol), Concert Bourgeois, 30 May 1761, lost

L'éloge de la vertu, ou Le tribut des coeurs (pastorale, L. Compain-Despièrrières), La Monnaie, 4 Nov 1761

Le soldat par amour (opéra-ballet, 2, J.-F. de Bastide), La Monnaie, 4 Nov 1766, collab. P. van Maldere, lost

Céphalide, ou Les autres mariages samnites (oc, 3, F. de Ligne), La Monnaie, 30 Jan 1777, collab. Cifolelli

La foire de village (comédie pastorale avec vaudevilles, 2), ?1786

La cohorte d'Amour, ou Le siège de Cythère (ballet-pantomime), La Monnaie, 21 April 1813, lost

OTHER WORKS

Masses, motets, Lamentations, solo vv, chorus, orch, *B-Bc*

Vivace (It.: 'flourishing', 'thriving', 'full of life'). As a tempo designation in its own right it appears in scores from the mid-17th century on and in most of the theorists as a tempo roughly equivalent to *allegro*. Beethoven marked the theme of his Diabelli Variations *vivace*, and the second movement of his Ninth Symphony *molto vivace*. As a qualification, *vivace* was especially popular in the 19th century and often designated a mood rather than a tempo. Beethoven marked both the last two movements of his First Symphony *allegro molto e vivace*, but he also used *andante vivace*, a favourite of Piccinni. Schubert's use of *vivace* as a qualification seems normally to indicate not an increase of tempo but merely a more vivacious approach to performance. The superlative forms *vivacissimo* (adjective) and *vivacissimamente* (adverb, as in the finale of Beethoven's Piano Sonata op.81*a*) are also found.

In the 18th century *vivace* often meant something rather slower. The anonymous *A Short Explication* (1724)

put it between *largo* and *allegro*; Leopold Mozart (1756) said that *vivace* and SPIRITOSO meant 'that one should play with understanding and intellect . . . they are the median between quick and slow'; and Charles Cudworth ('The Meaning of "Vivace" in Eighteenth Century England', *FAM*, xii, 1965, p.194) gave examples where the word clearly indicates a slowish tempo.

The French form *vif* was equated with *vivace* by Rousseau (1768) and contains the same ambiguities.

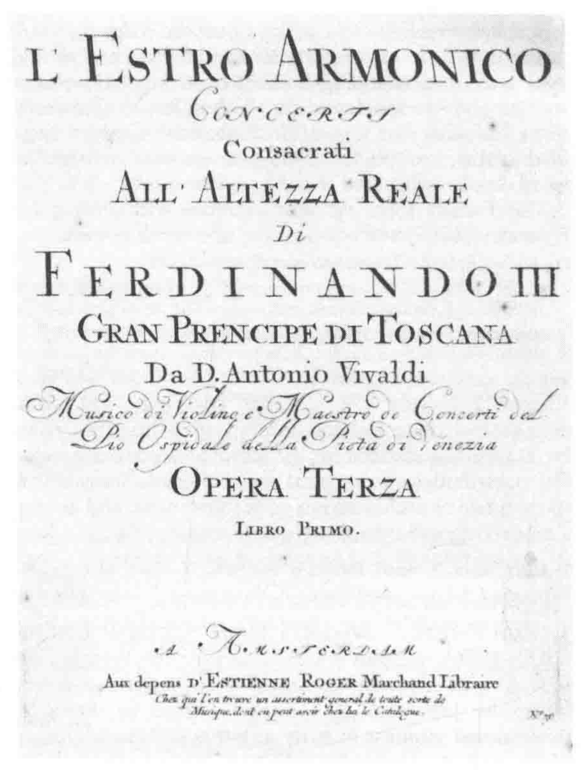
Vivacissimo, vivacissimamente. *See* VIVACE.

Vivaldi, Antonio (Lucio) (*b* Venice, 4 March 1678; *d* Vienna, 27/8 July 1741). Italian composer. The most original and influential Italian composer of his generation, he laid the foundations for the mature Baroque concerto. His contributions to musical style, violin technique and the practice of orchestration were substantial, and he was a pioneer of orchestral programme music.

1. EARLY YEARS. Vivaldi's father Giovanni Battista (1655–1736), a tailor's son, was born in Brescia. He moved with his widowed mother in 1666 to Venice, where he practised as a barber before becoming a professional violinist in early adulthood. Nine children, of whom Antonio was the eldest, are known to have been born to his union with Camilla Calicchio, a tailor's daughter, whom he married in June 1676. None of Antonio's brothers and sisters became musicians, although Francesco (1690–1752) emulated his elder brother's entrepreneurial spirit by adding to his main calling of barber those of paving contractor and publisher. On 23 April 1685 Giovanni Battista was engaged as a violinist at S Marco under the surname of Rossi. This suggests that red hair, which was to earn Antonio the sobriquet of 'il prete rosso' ('the red priest'), was a family characteristic. In the same year Giovanni Battista became a founder-member of the Sovvegno di S Cecilia. He became sufficiently esteemed as a violinist to be listed alongside his celebrated son in Coronelli's *Guida de' forestieri*. There are signs that he was from time to time involved in operatic management. He certainly travelled widely, often with Antonio, to play the violin at church festivals. He may even have been a composer: *La fedeltà sfortunata*, an opera attributed to one G.B. Rossi, was performed at an unidentified Venetian theatre in 1688–9. On 30 September 1729, he was granted a year's leave from S Marco to accompany a son (presumably Antonio) to Germany. Father and son worked in the closest collaboration: the hand of Antonio's principal copyist, from the mid-1710s to the mid-1730s, is believed to be that of Giovanni Battista, with whom he shared a succession of apartments in Venice.

Antonio was baptized officially on 6 May 1678. Because the life of the newborn infant was thought to be in danger the midwife had performed a provisional baptism on the day of his birth; a possible cause was the earthquake which shook Venice on 4 March, but it is more likely that the ailment which the composer claimed to have afflicted him from birth was already manifesting itself. This condition ('strettezza di petto' was how Vivaldi described it) is generally identified with bronchial asthma. Although Vivaldi as an adult was evidently determined not to let it prevent him from undertaking frequent and arduous journeys, even if that meant maintaining a large and expensive entourage, its physical and particularly its psychological effect on him should not be underestimated.

Between 18 September 1693 (the date of his tonsure) and 23 March 1703 (the date of his ordination) Vivaldi was trained for the priesthood at the local churches of S Geminiano and S Giovanni in Oleo while continuing to live with his family in the parish of S Martino. He probably learnt the violin from his father, for whom he is said to have occasionally deputized at S Marco; his participation as a 'supernumerary' violinist in Christmas services at the basilica in 1696 is his earliest known public appearance. A few years after his ordination (probably in late 1706) he ceased for good to say Mass, thereby sacrificing a useful income as a house priest (*mansionario*) at the Pietà. In 1737, while under censure for conduct unbecoming a priest, he blamed this failure on his ailment, but it is not hard also to suspect an opportunist motive in view of his immersion in musical activities. Perhaps his defence is slightly strengthened by a fanciful early 19th-century report of his temporary retirement to the sacristy during celebration of Mass (if one chooses to discount the explanation that his purpose was to write down a fugue). Outwardly Vivaldi remained pious, and even traded on his status as a priest. The religious motto 'Laus Deo' (abbreviated as L.D.) and an expanded version 'LDBMDA', usually found in monogram form and possibly standing for 'Laus Deo Beataeque Mariae Deiparae Amen', occur with great frequency at the head of his scores – strange to say, particularly those of operas. From Goldoni's account of a meeting with Vivaldi in 1735 we glimpse the composer taking refuge from a rather unwelcome confrontation in mechanical recitation from his breviary.



2. APPOINTMENT AT THE PIETÀ. In September 1703 Vivaldi obtained his first official post, becoming *maestro di violino* at the comfortable but unremarkable annual salary of 60 ducats at the Pio Ospedale della Pietà, one of four Venetian institutions devoted to the care of orphaned, abandoned and indigent children and specializing in the musical training of those among the girls who showed aptitude. Services with music – one might almost call them concerts – at the Pietà were a focal point in the social calendar of the Venetian nobility and foreign visitors, and it was essential to ensure both the competent instruction and rehearsal of the young musicians and the regular supply of new works for them. Vivaldi owed his appointment to a request made earlier that year by the Pietà's *maestro di coro* (musical director) Francesco Gasparini that violin and oboe masters be engaged. In August 1704, 40 ducats were added to his salary in consideration of his teaching of the *viole all'inglese* – a family of variously sized instruments resembling *viole d'amore* in having sympathetic strings. To Vivaldi fell in addition the task of acquiring new string instruments for the orchestra and maintaining those already in use. The governors renewed his post annually until February 1709, when a majority voted on a second ballot against retaining him. It seems less probable that Vivaldi was dismissed from his post on grounds of incapacity or misconduct, or through personal animosity, than that the post itself was temporarily discontinued, perhaps in the interests of economy. The orchestra would certainly be left in capable

hands, for the Pietà's teachers had deputies (*maestre di coro*) assigned to them; these were the foremost performers among the girls and women, and some of them (for example, the Anna Maria commemorated in the title of several of Vivaldi's violin and viola d'amore concertos) attained fame beyond the Pietà's walls. In addition, an élite group of a dozen women, the *figlie privilegiate di coro*, were responsible for teaching their younger fellow inmates and were even allowed to take pupils from outside. Ironically, Vivaldi's very success in building up a cadre of seasoned performers may have contributed to his redundancy. This explanation gains support from the fact that the comparable post of teacher of wind instruments was left unfilled for long periods, and that during his lifetime no other violin teacher was ever appointed, although teachers of the cello, beginning with Antonio Vandini (sometimes confused in the Pietà's records with Vivaldi – whose name did, however, appear anagramatically as Lotavio Vandini in the libretto of *Aristide*), were employed between 1720 and 1731.

Meanwhile, Vivaldi was seeking recognition as a composer. The earliest extant edition of his op.1, a set of 12 chamber sonatas in the trio medium, is that by Sala dated 1705 and dedicated to Count Annibale Gambara, a Brescian nobleman. That edition describes Vivaldi on the title-page as 'Musico di violino, professore veneto', making no mention of his appointment at the Pietà but acknowledging his status as a priest by use of the title 'Don'; it could be a reprint of a lost original edition dating from 1703, though the inclusion of a letter of dedication implies otherwise. His op.2, consisting of violin sonatas, was hurriedly dedicated in 1709 to Frederik IV of Denmark during the king's brief visit to Venice. By then Vivaldi was also writing concertos, which circulated in manuscript; copies of some of his cello concertos made by the musician Franz Horneck while staying in Venice during the carnival season of 1708–9 have survived in the library of the Counts of Schönborn.

Vivaldi was voted back into his former post at the Pietà in September 1711 and was reappointed against steadily mounting opposition every year until March 1716, when the required majority of two-thirds was not obtained. Surprisingly, in May 1716 he was appointed to a position of nominally greater responsibility, *maestro de' concerti*. The departure, in April 1713, of Gasparini on a sick leave from which he never returned gave Vivaldi an opportunity to write sacred music, for Pietro Scarpari, the singing master, was only a modest composer. The governors were so pleased with Vivaldi's efforts that in June 1715 they awarded him the choirmaster's customary annual bonus of 50 ducats in respect of 'an entire mass, a vespers, an oratorio, over 30 motets and other labours'. In late 1716 Vivaldi followed his earlier *Moyses Deus Pharaonis* with a new oratorio, *Juditha triumphans*, which contained patriotic references to Venice's war against the Turks. This was probably the most elaborate work he ever wrote for the Pietà.

In 1711 Etienne Roger, the Amsterdam publisher, brought out what was to become the most influential music publication of the first half of the 18th century: Vivaldi's *L'estro armonico* op.3, dedicated to Grand Prince Ferdinando of Tuscany; it comprised 12 concertos divided equally into works for one, two and four solo violins (fig.1). The change to Roger from local publishers, which several other eminent Italian composers made

1. *Title-page of Vivaldi's 'L'estro armonico' op.3 (Amsterdam: Roger, 1711)*

about the same time, reflected not only the superiority of the engraving process over the printing from type still normally used in Italy (a superiority acknowledged in Vivaldi's preface to *L'estro armonico*) but also the enormous growth in demand for the latest Italian music in northern Europe. Nowhere was the enthusiasm for Vivaldi's concertos stronger than in Germany. Bach transcribed several of them (including five from op.3) for keyboard, and his noble patron Prince Johann Ernst of Saxe-Weimar wrote concertos in Vivaldi's style. German musicians visiting Venice such as Stölzel (1713–14), Heinichen (1713–16) and Pisendel (1716–17) sought him out. Pisendel, who is supposed to have taken lessons from him, copied out several of his sonatas and concertos and also received autograph scores of many works directly from the master, who continued to have close relations with the Saxon court. Quantz, who first heard Vivaldi's concertos at Pirna in 1714, gave him credit in his *Anweisung* for having reformed the concerto (together with Albinoni); the formula for composing a concerto set out by Quantz conforms in every particular to Vivaldi's normal practice.

La stravaganza op.4, a set of 12 violin concertos, was dedicated in about 1716 to Vettor Delfino (Dolfin), a young pupil of Vivaldi from the Venetian nobility. The next three publications (opp.5–7, comprising six sonatas and 18 concertos), belonging to the years 1716–20, were left undedicated: apparently Roger ordered them from the composer and had them engraved at his own expense, which shows Vivaldi's exceptional popularity – this procedure, later in the century to become normal, was still rather rare.

During the 1710s, if not earlier, Vivaldi followed his father into the turbulent world of opera. Although his earliest known stage work, *Ottone in villa*, was performed at the summer resort of Vicenza in May 1713, he first established himself, as both a composer and an impresario, at the small, somewhat unfashionable Venetian theatre of S Angelo. In the carnival of 1713–14 Vivaldi wrote the dedication of the libretto by Grazio Braccioli for M.A. Gasparini's *Rodomonte sdegnato*, as he did again a year later for *Luca Papirio*, set to music by Predieri. It was possibly Predieri's opera that the Frankfurt lawyer J.F.A. von Uffenbach heard on 4 February 1715, when he noted in his diary that Vivaldi was the 'entrepreneur' (mistakenly believing him also to be the composer). Vivaldi's own *Orlando finto pazzo* opened the 1714–15 season, and a pasticcio (*Nerone fatto Cesare*) and two new operas followed up to 1717. Between 1716 and 1718 he also wrote three operas for the S Moisè theatre; in addition, there were some revivals.

3. Years of travel. In April 1718 Vivaldi took his recently composed opera *Armida al campo d'Egitto* to Mantua, where he stayed until 1720. During that time he wrote three operas for performance in the 1719 and 1720 carnival seasons. The Governor of Mantua (for the Habsburgs) was Prince Philip of Hesse-Darmstadt, a noted music lover. Vivaldi became his *maestro di cappella da camera*, a curiously worded title (probably meaning 'director of secular music') that he retained after leaving Mantua. He wrote several cantatas and serenatas for the Mantuan court.

Having briefly returned to Venice, Vivaldi was soon off to Rome, where, according to two letters of 1737 to Guido Bentivoglio d'Aragona, he spent three carnival seasons and was invited twice to play before the pope. Three operas performed in Rome during the 1723 and 1724 carnival seasons are known, and it is possible that the other season for which Vivaldi wrote was that of 1720, when he contributed an act to a pasticcio, *Tito Manlio*, performed at the Teatro Pace. Pier Leone Ghezzi's famous caricature of Vivaldi (fig.2) was drawn during Carnival 1723 when *Ercole su 'l Termodonte* was being staged. While in Rome, Vivaldi came into contact with Cardinal Pietro Ottoboni, Corelli's former patron; numerous concertos and a handsome volume of violin sonatas in Manchester can be traced back to Ottoboni's library. In July 1723 the Pietà governors agreed to ask Vivaldi to supply the orchestra with two concertos every month (at one sequin each), sending them by post if necessary, and to direct three or four rehearsals of them when in Venice. The institution's accounts confirm payment to him for over 140 concertos between 1723 and 1729. As a composer Vivaldi was evidently a major asset to the Pietà, notwithstanding his frequent travels, which ruled out a teaching post.

It was around this time that Vivaldi's association with the contralto Anna Girò must have begun. She was the daughter of a Mantuan wigmaker of French origin and became his singing pupil. Between 1723 and 1748 she appeared regularly on the operatic stage, especially in Venice. Goldoni thought her voice weak but conceded that she was a good actress and had an attractive appearance. The alterations made by Goldoni at Vivaldi's insistence to Zeno's original libretto for *Griselda* show that Vivaldi was aware of his pupil's limitations. Both Anna and her half-sister Paolina (who acted as her

2. Antonio Vivaldi: caricature by Pier Leone Ghezzi, pen and brown ink, 1723 (I-Rvat ottob.lat.3114, f.26)

chaperone) were loyal members of his entourage. Tongues inevitably wagged, and it was widely believed that Anna Girò was Vivaldi's mistress, despite his plausible denials.

From 1726 to 1728 Vivaldi was again active as a composer and impresario at S Angelo. At the same time his instrumental works were continuing to spread his reputation. *Il cimento dell'armonia e dell'inventione* op.8 (opening with the four concertos portraying the seasons) appeared by 1725 and was dedicated to his Bohemian patron Count Wenzel von Morzin (a distant relative of the Morzin who employed Haydn). *La cetra* op.9 was dedicated to Emperor Charles VI, whom Vivaldi met in September 1728 at or near Trieste, and from whom he reportedly received much money and a golden chain with a medallion. (The 12 different concertos also entitled *La cetra* and dated 1728 in a manuscript in Vienna may commemorate that meeting; the published *La cetra* appeared earlier, in 1727.) The pioneering flute concertos of op.10 and the string concertos of opp.11 and 12 were issued by Le Cène in 1729. Although the publisher bore the costs of all five collections, Vivaldi was evidently dissatisfied with the financial returns, for in 1733 he told the English traveller Edward Holdsworth of his decision not to have any more concertos published as this inhibited his more profitable trade in manuscripts, for which the current price was a guinea per concerto; and indeed no work of his published after op.12 appeared with his proven consent (op.13, *Il pastor fido*, is a clever pastiche by the French musette player Nicolas Chédeville, while a presumably equally spurious op.14 was announced in Paris but never appeared).

Between late 1729 and early 1733 Vivaldi travelled widely. Perhaps the invitation to Vienna cited in a letter of 1737 relates to this period. He may well have visited Prague (where since 1724 an opera company headed by

the Venetian singer Antonio Denzio had been active at the court of Count Sporck), as two new operas were given there in autumn 1730 (*Argippo*) and spring 1731 (*Alvilda*). By his own account, Vivaldi liked to oversee productions of his new operas, so the dates and places of their premières provide valuable clues to his movements.

During the period 1733–5 he wrote several operas for S Angelo and the Grimani theatre of S Samuele to which Goldoni was attached. His entrepreneurial activities in Venice seem mainly to have petered out; instead, he increasingly promoted opera in smaller mainland centres like Verona, Ancona, Reggio nell'Emilia and Ferrara. From *L'Adelaide* (1735, Verona) onwards Vivaldi styled himself *maestro di cappella* of François III, Duke of Lorraine and (from 1737) Grand Duke of Tuscany, the future Emperor Francis I. This title was doubtless little more than honorific. Meanwhile, he was reinstated at the Pietà as *maestro di cappella* in August 1735. The governors now wished to take a firmer line on his travelling, and his renewed absences probably contributed to his failure to gain reappointment in March 1738. His links were not severed, however: when Friedrich Christian, Crown Prince of Saxony-Poland, visited the Pietà on 21 March 1740 Vivaldi was asked to supply and direct the performance of three concertos (RV540, 552, 558) and one sinfonia (RV149); the scores, mostly autograph, were taken back to Dresden. During the interregnum between *maestri di coro* Giovanni Porta (1726–37) and Gennaro d'Alessandro (1739–40) he also sold the Pietà numerous sacred vocal works.

Vivaldi was on close terms with Guido Bentivoglio d'Aragona, a marquis from Ferrara. He enlisted Bentivoglio's support to stage operas at Ferrara during the carnival seasons of 1737, 1738 and 1739; 13 letters by Vivaldi to Bentivoglio and copies of several replies by the marquis, most of which are in the Bentivoglio archives, provide, among other things, an illuminating record of these three essays (all of them less than successful in their different ways) in opera promotion. In 1737 there were wrangles over a singer's contract and the choice of operas, and an unseemly attempt by Vivaldi to exact the maximum payment. In 1738 Cardinal Tomaso Ruffo, Archbishop of Ferrara (a papal domain), forbade Vivaldi to enter Ferrara, ostensibly on account of his relationship with Anna Girò and his refusal to say Mass, so that he was compelled to put the enterprise in the hands of local impresarios in whom he had little confidence. In 1739 Vivaldi, who was in Venice supervising the performances of *Feraspe*, paid dearly for his absence from Ferrara. The first opera, *Siroe*, was criticized for faults in its recitatives (because, Vivaldi bitterly claimed, of alterations arbitrarily introduced by the harpsichordist, Pietro Antonio Berretta) with the result that the theatre's patrons refused to mount *Farnace*, the second opera. Bentivoglio was sympathetic but too diplomatic to intervene.

De Brosses, who met Vivaldi in autumn 1739, found his stock low with the Venetian public. That may be one reason why Vivaldi was persuaded to undertake his last journey in 1740 (the ground for which may have been prepared by Anna Girò's visits to Graz in 1739 and 1740 to sing in operas presented by Angelo Mingotti's company). On 29 April (not August) 1740 the Pietà governors, having got wind of his imminent departure, rejected a motion to buy 'a certain portion of concertos' from him; they must have relented, however, as on 12 May he was paid for 20 concertos. It appears that Vivaldi's departure was connected with the intended production of one or more operas at the Kärntnertortheater in Vienna. The death of Charles VI in October 1740 and the ensuing closure of all Viennese theatres for the duration of the following carnival must have frustrated this plan, but Vivaldi, perhaps too ill or too poor to return to Venice, lingered on in the city. On 28 June 1741 he signed a receipt for the sale of several concertos to Count Antonio Vinciguerra di Collalto. On 27 or 28 July he died in a house owned by the widow of a Viennese saddler named Waller and was given a pauper's burial on the latter day at the Hospital Burial Ground (Spettaler Gottesacker), confirming a statement in a contemporary Venetian commonplace book (*Commemoriali Gradenigo*) which notes that Vivaldi, who had once earned 50,000 ducats (presumably annually), died in poverty through his prodigality. Anna Girò, who had accompanied him, returned to Venice and continued her career; his opera *L'oracolo in Messenia* was produced posthumously at the Kärntnertortheater in 1742.

4. Reputation. Vivaldi was so unconventional a man and musician that he was bound to elicit much adverse comment in his lifetime. His vanity was notorious: he boasted of his fame and illustrious patrons, and of his fluency in composition, asserting before De Brosses that he could compose a concerto in all its parts more quickly than it could be copied. In many cases these claims were clearly exaggerated. He told Holdsworth, for example, that 17 (not 12) collections by him had been published, rather deceitfully counting double each opus divided into two volumes. His claim to Bentivoglio in 1739 that he had composed 94 operas (fewer than 50 are known) needs to be interpreted in this light. Along with his vanity went an extreme sensitivity to criticism, which comes out even in the dedications of his opp.1 and 4, where one sees a phrase such as 'i miei sudori forse malignati dalla critica' ('my efforts, which are perhaps spoken ill of by the critics'). His preoccupation with money was excessive by most standards: it is a subject that surfaces continually in his letters to Bentivoglio. Holdsworth and De Brosses found that Vivaldi drove a hard bargain with foreign visitors. Yet the sheer zest of the man compelled admiration. De Brosses wrote of his 'furie de composition', and Goldoni painted a charming picture of the old man's enthusiasm on seeing the aria text his visitor had penned before his very eyes. His egotism must have been redeemed by higher qualities for him to have retained the loyalty of the Girò sisters and several patrons. If the well-known engraving of him by François Morellon La Cave (and its imitation by James Caldwall) conveys all too successfully his self-satisfaction, the anonymous painting in Bologna of an unnamed violinist believed to be Vivaldi shows a more sympathetic, pensive side.

Vivaldi was praised more readily by his contemporaries as a violinist than as a composer, though few went as far as Goldoni, who categorized him as 'excellent joueur de violon et compositeur médiocre'. Uffenbach's report of his ending the accompaniment to an operatic aria with 'a fantasy [i.e. cadenza, or 'capriccio'] which really terrified me, for such has not been nor can ever be played; he came with his fingers within a mere grass-stalk's breadth of the bridge, so that the bow had no room – and this on all four strings with imitations and at incredible speed' vividly captures his predilection for extremely high

positions, cadenza-like passages and multiple stopping. Such pyrotechnics undoubtedly hindered his acceptance as a serious composer. Avison found his compositions 'equally defective in various harmony and true invention', an opinion found too sweeping by William Hayes, who, attributing the composer's faults 'to his having a great command of his instrument, being of a volatile disposition (having too much mercury in his constitution) and to misapplication of good parts and abilities', nonetheless thought that the 11th concerto in *L'estro armonico* (RV565) gave evidence of his 'capacity in solid composition'. Hawkins admitted the 'peculiar force and energy' of his concertos, though he found them 'wild and irregular' and disparaged their part-writing.

Quantz had turned against Vivaldi by the time his *Anweisung* appeared in 1752, reproaching him for too much routine composing and for falling under the bad influence of opera. Further, many of Quantz's criticisms directed towards particular features of the contemporary Italian style, such as its fondness for simple, functional bass parts thematically unrelated to the upper parts, apply *a fortiori* to Vivaldi, their originator or popularizer. C.P.E. Bach taxed 'a certain master in Italy' (obviously Vivaldi) with initiating the custom of writing the bass in a high register and assigning it to violins, a usage already deplored by Benedetto Marcello in his satire *Il teatro alla moda* (1720), which targets Vivaldi in particular. Vivaldi's kindest German critic was the italophile Johann Mattheson, who commended him for his observation of the distinction between apt vocal and instrumental writing (the first avoiding the leaps of the second). Ironically, Tartini was reported by De Brosses to have instanced Vivaldi as one of those men gifted in instrumental composition who met with failure when they essayed opera – perhaps a case of sour grapes, for Goldoni wrote that most of Vivaldi's operas were successful.

A few decades passed, and Vivaldi fell into virtual oblivion, except among a few music historians and lexicographers – to be rescued, like so many of his contemporaries, via Bach scholarship. The influence of Vivaldi on Bach had been acknowledged by Forkel; now Rühlmann and Waldersee unearthed the Vivaldi originals of the Bach transcriptions and made their comparisons – always, at that time, to the Italian's disadvantage. His unequivocal importance to the history of the concerto was first demonstrated by Arnold Schering in 1905. The steady growth of interest in him received a tremendous spur from the discovery by Alberto Gentili in the 1920s of Vivaldi's personal archive of scores (the great variety of genres, both sacred and secular, and the preponderance of autograph scores make it impossible that the collection originally belonged to the Pietà, as some have suggested): the Foà and Giordano collections, now in the Biblioteca Nazionale, Turin. These were once, before their arbitrary division as a legacy into two collections, the property of the Venetian bibliophile Jacopo Soranzo, and later of Gluck's patron Count Giacomo Durazzo. The seal was set on Vivaldi's rehabilitation by the inauguration in 1947 of a collected edition of his instrumental works published by Ricordi in association with the Istituto Italiano Antonio Vivaldi and the appearance of Marc Pincherle's famous study in the following year.

The cataloguing of Vivaldi's large and diverse output has proved a difficult task, especially as works having thematic incipits in common often prove on closer examination to be different (conversely, works with different incipits often share secondary material). With the rapid progress of Vivaldi research in recent years the two principal older catalogues, by Pincherle and Mario Rinaldi, have largely fallen into disuse, while the catalogue by Antonio Fanna, though still used, functions mainly as a finding list for the instrumental works published by Ricordi. The most recent and currently preferred catalogue by Peter Ryom, which exists in several versions published from 1973 onwards, is the only one that can claim to be complete. Although much more rationally organized than its predecessors, it has begun to show signs of its age, not least in the mass of recently discovered works untidily occupying the numbers from RV754 onwards and the confusing transfers of works (in both directions) between the main series (RV) and the one containing works of disputed or uncertain authorship (RV Anh).

5. INSTRUMENTAL MUSIC. No brief description can do justice to the variety of form, scoring and imaginative conception in Vivaldi's 500-odd concertos. If he did not invent ritornello form – the form in which varied restatements in different keys of a ritornello (refrain), usually scored for the full ensemble, alternate with modulating episodes of free thematic character, where a soloist predominates – he was at least the first composer to use it regularly in the fast movements of concertos, so providing his contemporaries with the models they were seeking. The same is true of the standard three-movement plan. Several occasional features of Vivaldi concertos were taken further and made normative by his successors: the northern Italians, including Tartini and Locatelli, copied his reference to the ritornello opening at the start of the first solo episode, the infiltration of solo writing into the ritornello, and the provision of a cadenza; the Germans, notably Bach, developed his techniques of thematic integration – the reprise of the first solo idea in the final episode and the use of ritornello fragments to accompany the soloist. Very often, Vivaldi has a double statement of the ritornello in the tonic at the end of the movement (which facilitates the matching of the openings of the first and last episodes) or a single statement of the ritornello interrupted by one or more solo excursions generally either reminiscent of earlier solo material or in the nature of a cadenza. G.M. Alberti and Telemann were among the composers who often copied this feature. One Vivaldian idiosyncrasy – the tendency to make ritornello restatements progressively shorter and less complete, while the length of episodes increases – was not taken over by his imitators, who preferred more symmetrical proportions. This peculiarity was accentuated by Vivaldi's impulsive way of composing: certain ideas in the opening ritornello, it seems, captured his imagination and recur almost automatically, while others, equally fertile in possibilities, are passed over, allowing the ritornello to become whittled down by a process akin to natural selection. It also happens that spontaneous modifications devoid of specific purpose are made to the ritornello in the act of writing it out again, as if the composer disdained to refresh his memory by consulting earlier pages. A simplified version of ritornello form is often used in slow movements, though binary form or through-composed form (sometimes employing a ground bass) also occur. Binary and variation form are occasionally found in finales.

Roughly 350 concertos are for one solo instrument and strings, over 230 of them for violin. Other solo instruments are (in descending order of frequency) bassoon, cello, oboe, flute, viola d'amore, a violin adapted to sound like a trumpet marine, recorder (including the so-called 'flautino') and mandolin. There are 40-odd double concertos, mostly for two similar instruments but including such rare combinations as viola d'amore and lute (RV540). Multiple concertos, in which three or more soloists participate, number over 30 and introduce, among other instruments, clarinets (making one of their earliest orchestral appearances), chalumeaux, theorbos, horns and timpani. A very important group of works is constituted by nearly 60 ripieno concertos (or string concertos without soloist), stylistically often very close to operatic sinfonias, with which they can be virtually interchangeable; some of them demonstrate an impressive sense of thematic economy and a flair for fugal writing that should give pause to those who consider Vivaldi an arch-instigator of the 'flight from counterpoint'. Over 20 concertos are for a small group of solo instruments without string ripieno; the tutti is formed by the united soloists, as in Bach's Brandenburg Concerto no.3. Finally, there are a small number of works for double string orchestra with soloists, continuing an old Venetian and Italian tradition.

Many of the concertos received descriptive titles of various kinds. Some refer to the original performer or performers (e.g. *Il Carbonelli* RV366), while others recall the particular feast on which the work was performed (as in the concertos 'per la Solennità di S Lorenzo'). Some allude to an unusual technical feature; in *L'ottavina* (RV763), for instance, all the solos are directed to be played an octave higher than written. Other titles (e.g. *L'inquietudine* RV234) characterize the pervading mood of the work. Lastly, some programmatic or onomatopoeic concertos have appropriate titles (e.g. *Il Gardellino* RV90, 428; *La tempesta di mare* RV98, 433, 570). In these, the elements in the 'programme' that remain constant (e.g. the huntsmen in the finale of the 'Autumn' concerto from the 'Four Seasons') are, quite logically, incorporated in the ritornello, while transitory events (e.g. the death of their quarry) are depicted in individual episodes. The slow movements are mostly static tableaux in which instrumentation is sometimes skilfully used to differentiate parts of the scene: in the central movement of the 'Spring' concerto, for instance, we hear simultaneously a sleeping shepherd (solo violin), a rippling brook (orchestral violins) and a vigilant sheepdog (viola).

Vivaldi was a deft and enterprising orchestrator. In general, the number of real parts is reduced and the texture lightened in solo passages, but the ways in which that is achieved are so varied as to defy enumeration. Single-line accompaniments on continuo or ripieno violins are the most common. He employed many special colouristic effects, such as muting and pizzicato, and paid exceptional attention for his time to the nuances of string articulation and bowing. The well-known passage in op.3 no.10 (RV580) where each of the four solo violins arpeggiates in a different manner is a representative instance. In particular, Vivaldi was fond of syncopated bowing in which the change of bow occurs on a note off the beat. Occasionally he seems to call for a true crescendo or diminuendo, anticipating early Classical style.

His approximately 90 sonatas are by comparison conservative in form and style, reflecting the special role of the genre in Italy as the repository of traditional technique. The trio sonatas of opp.1 and 5 are firmly in the chamber style, paying due homage to Corelli, while the solo sonatas, variously for violin, cello and wind instruments, are mostly in a composite church–chamber style where *da camera* elements have the upper hand, as shown by the supremacy of binary form, even in slow movements. The most interesting sonatas are perhaps a group of four for two violins performable without bass support (RV68, 70, 71, 77), which probably antedate Leclair's op.3 duets.

In his instrumental music Vivaldi was an uninhibited self-borrower. The extent to which material, including whole movements, was not merely re-used in works of the same genre but even transferred from one genre to another is remarkable. The slow movement of a solo sonata (RV12) can reappear in a solo concerto (RV582). A binary sonata finale (RV755) can be converted into ritornello form and used in a concerto (RV229). More subtly, the opening of the Allemanda finale of RV3 supplies the material of the episodes in the first movement of RV101 and its later version RV437. In those cases the sequence of borrowing is fairly clear, but in many others guesses are hazardous on present evidence. Vivaldi was also prone to modify existing works when they were required for new purposes; it is unlikely that he would ever have considered any version definitive. In recent years it has become evident that many of Vivaldi's movements in the *stile antico* are borrowed, usually with only slight adaptation, from older composers, including Giovanni Maria Ruggieri and Antonio Lotti.

6. VOCAL MUSIC. Vivaldi's sacred music, less well known outside Italy, was subject to the operatic influences of his age, although many individual movements remain close to the *stile osservato*. His numerous solo motets, well described by Denis Arnold as 'concertos for voice', have frankly exhibitionistic vocal parts. Vivaldi left eight 'introductory' motets (*introduzioni*) designed to preface a large-scale setting of a liturgical text (Gloria, *Dixit Dominus*, *Miserere*). Few examples of this subgenre are known from other composers. It is noteworthy how frequently the principal melodic interest in choral movements is allotted to the violins, leaving the choir to declaim homophonically in the background (as in the outer movements of the Credo RV591), thus anticipating the symphonic mass of Haydn's generation. Alongside operatic influence, that of the concerto is rarely absent. An extreme case is the *Beatus vir* RV598, conceived as a vast span of 420 bars in ritornello form; here the vocal soloists are heard in the episodes and the choir fulfils tutti and solo functions by turns. In his church music Vivaldi succeeded admirably in conveying the general sense of the text, but his word-setting can be cavalier (as, indeed, in his secular vocal music) and his attentiveness to the individual word or phrase disappointingly slight. It is the factor of a strong musical personality rather than artistic refinement that has brought deserved popularity in recent times to the Gloria RV589, the *Magnificat* RV610 and 611, and the oratorio *Juditha triumphans*.

His cantatas and serenatas are written in the style often misleadingly termed 'Neapolitan' after Alessandro Scarlatti. Their backbone is a series of two or more da capo arias, with which recitatives alternate. Over three-quarters

3. Autograph score of the opening of Vivaldi's Concerto in C minor for strings and continuo RV120 *(I-Tn Foà T.30, f.227)*

of his cantatas are for solo voice (soprano or alto) and continuo alone, the favoured combination of the time. They constitute the least innovatory portion of his output, but by no means the least expertly written. There is a hint in one cantata (*Nel partir da te mio caro* RV661) that Vivaldi sometimes wrote the poetic text himself, for whereas three rejected openings of one recitative there have one text, the successful fourth version has a similar but not identical text. (Vivaldi is also suspected of having penned the *sonetti dimostrativi* explicating the 'Four Seasons'.) The serenatas are more extended works, intermediate in style between cantata and opera and commissioned to celebrate an event or eulogize some person. Lacking the length and bombast of the operas, while furnishing more interesting sonorities than the cantatas, they fully deserve revival.

The scores of 21 operas, some lacking one or more acts, have survived. They include his first opera (*Ottone in villa*) and one of his last (*Rosmira*). Viewed dramatically, the operas merely supply what was expected of a composer working within narrow and at the time universal conventions; that apart, the music is as vital and imaginative as any he wrote. Obbligato instruments are introduced from time to time: for example, *Armida* calls for a solo violin, *Giustino* a psaltery and *L'olimpiade* a horn. It is interesting that some of the later scores include a few arias by Leo, Hasse, Handel, Pergolesi and other composers of the moment. Vivaldi may have wished to lend a veneer of fashion to the operas, no longer confident of his ability to satisfy public taste; or perhaps he borrowed simply for convenience or at a singer's behest.

7. Points of style. Vivaldi's musical language is so distinctive that it is worth mentioning a few of its peculiarities. His melody shows a penchant for Lombardic rhythms (which, according to Quantz, he was the first to introduce) and for syncopation – betraying, perhaps, Venice's connections with Dalmatia and the Slavonic hinterland. His treatment of the variable sixth and seventh degrees of the minor scale was amazingly flexible, admitting the augmented 2nd as a melodic interval even in an ascending line. Compound intervals, including the octave, could assume an expressive melodic value hitherto barely exploited. He transported ideas from the major into the minor mode (and vice versa) with almost Schubertian freedom. He formed melodies from mere cadential fragments (a phenomenon well described by Kolneder as 'Kadenzmelodik'). His harmony abounds in 7th chords, and he used the higher dominant discords (9th, 11th, 13th) over pedals with near recklessness. He can modulate extremely abruptly, often through a VII–I rather than V–I progression. Juxtapositions of very slow and very fast harmonic rhythms are frequent. His phrasing often includes irregular groups (e.g. of one and a half bars' length). His two violins frequently toss a pair of contrapuntally contrasted motifs back and forth over several bars, either at one pitch (producing a quasi-canonic effect) or at different pitches in a sequential pattern; sequence, incidentally, was a device whose attractiveness to Vivaldi could be dangerous in his more facile moments. Ostinato phrases in one part which contradict the changing harmonies of the other parts are typical.

It is rare that such an individualist attracts many followers. Yet during the period 1710–30 Vivaldi's influence on the concerto was so strong that some established composers older than him like Dall'Abaco and Albinoni felt obliged to modify their style in mid-career. In most of Italy, and in France after about 1725, the Vivaldian model was enthusiastically adopted. Only in conservative Rome and certain other parts of Europe (notably England) where the Corellian style had taken firm root was its hegemony resisted, and even then a Vivaldian spirit informs many concertos whose form is more Corellian than Vivaldian. Because the influence of the concerto permeated all forms of composition Vivaldi can legitimately be regarded as a most important precursor of G.B. Sammartini and the Bach sons in the evolution of the Classical symphony. Equally, he can be seen as a

harbinger of musical Romanticism, not just on account of the pictorialism of certain programmatic concertos, but in more general terms because of the higher value he placed on expression than on perfection of detail.

MICHAEL TALBOT

Vivanco, Sebastián de (*b* Avila, *c*1551; *d* Salamanca, 26 Oct 1622). Spanish composer. He was born in the same town as Victoria, and was his close contemporary; he presumably studied with the same cathedral *maestros*.

On 4 July 1576 the Lérida Cathedral chapter dismissed Vivanco from the post of *maestro de capilla* 'for causes that do not affect his honour'. On 9 October 1576 he was already under consideration for the equivalent post at Segovia Cathedral, and on 9th February he was formally hired on the recommendation of examiners who deemed him worth much more than the half-prebend that was being offered to him. His services were so meritorious that he was frequently awarded bonuses for extra music on feast days. He resigned on 31 August 1587 in order to accept the post of *maestro de capilla* at Avila Cathedral. Earlier that month he had been invited by Seville Cathedral to become Guerrero's assistant there, and, perhaps prompted by financial difficulties at Avila, he visited Seville, taking charge of the choristers on 29 February 1588. However, on 12 March he informed the authorities in Seville that he did not wish to stay, and returned to Avila, where he remained until Salamanca Cathedral appointed him *maestro de capilla* on 20 October 1602. At a formal competition on 19 February 1603, presided over by a panel that included the previous music professor of Salamanca University, Bernardo Clavijo de Castillo, he was appointed university professor there. On 4 March he became Master of Arts.

In 1607 Artus Taberniel, the Antwerp-born printer based in Salamanca, published in luxurious folio Vivanco's *Liber magnificarum*, then in 1608 ten masses, and in 1610 a large collection of motets. Studies of his works have established Vivanco as one of the leading composers of his age. He was capable of writing canons of ingenious complexity as well as movements of great expression. Not a parodist in any conventional sense, he selected instead top lines from his own motets *O quam suavis* and *Assumpsit Jesus* for intensive rhythmic and contrapuntal reworking in his masses of the same names. In a manuscript held in Valladolid (*E-V* 1) his masses on *Doctor bonus* and *O quam suavis* are renamed 'Tone V' and 'Tone I'. These titles, however, are open to question since the finals are G with no flat and D with one flat. His *Missa super octo tonos* began a practice observed by the É'vora composer Pedro Vaz Rego a century later (in his *Missa omnitonum*) of basing a mass on the eight psalm-tone cadential formulae, strung together into a thread of melody. Like Bernardino de Ribera, he reserved his most erudite canons for the Sanctus of his masses rather than the final Agnus, as was more usual. Vivanco's pair of Lady Masses, one for feasts, one for Saturdays (without Credo), his *Quarti toni* (unusual because the last Agnus ends on A), and *Sexti toni* (on F) complete his list of four-part masses. The six-part *Missa 'Crux fidelis'* and the eight-part *Missa 'In manus tuas'* reveal his profound skill in vocal part-writing. In his use of harmonics he stayed principally within the vocabulary of his age, but employed numerous augmented triads and bold false relations.

ROBERT STEVENSON

Vivarino, Innocentio (*b* Adria, *c*1575; *d* Adria, sum. 1626). Italian composer and organist. As organist of the cathedral and teacher of organ and singing at the local school, he was from 1602 the central figure in the musical life of Adria; earlier, in 1592, he may have belonged to the Compagnia del SS Sacramento there. Despite offers of positions abroad, he continued to serve the cathedral and

the town council until his death. The ideas of the literary circle of the Accademia degli Illustrati, the influence of the Counter-Reformation, the probable demand in Adria for music for few voices, and the trouble he took to assimilate the musical innovations of nearby Venice and Ferrara made him a confirmed – and competent – monodist. He published at least six volumes of music, but only two are extant; two others can be identified, and in the dedication of his book of solo motets of 1620 he mentioned masses and motets for several voices that he had composed. The 16 solo motets have singable vocal lines over a continuo bass with few figures. In the 24 madrigals of op.6, most of which are early examples of the chamber duet, he combined madrigalesque word-painting with expressive evocation of the texts: two of them have concertante instrumental parts, for viola and two violins respectively. The eight solo sonatas published with his solo motets are not very virtuoso in character and are uniform in language and structure. The latter consists of a kind of free variation based on a single theme, with two outer sections in duple time that begin imitatively and a middle section in triple time. The sonatas show how the development of the genre was influenced by the instrumental duet, and by the dominance of the outer parts of the instrumental canzona.

PETER BILOWITZKI

Vives [Roig], **Amadeo** [Amadeu] (*b* Collbató, nr Barcelona, 18 Nov 1871; *d* Madrid, 2 Dec 1932). Spanish composer and writer. He studied under Ribera and, later, Felipe Pedrell in Barcelona. With his fellow-pupil Luis Millet he founded in 1891 the Orfeó Català, which was to become the leading Catalan choir, and for which he wrote a number of compositions and arrangements. For a short time he was organist and choirmaster at a convent of Loreto nuns, but an attack of infantile paralysis, complicated by a badly set fractured shoulder, left him with an almost useless right arm. Nevertheless, in 1896 he became chorus master at the Teatro Novedades in Barcelona, where his first opera *Artus* (on the Arthurian legend) was produced with some success the following year. This led him to move to Madrid and to devote the rest of his life, with the exception of a brief period of teaching at the Madrid Conservatory, to composing operas, operettas and zarzuelas. In this last sphere he was as much appreciated by discriminating musicians as by the general public, since he markedly raised standards by the finesse of his harmony and orchestration and by his superior taste. He was a prodigious worker, in 35 years composing over 100 stage pieces, about a quarter of them in collaboration with others, as was common practice (three unperformed zarzuelas were written with the young Falla); he also contemplated further operas to librettos by the Quintero brothers. An extremely well-read man with a mordant tongue, he took a cynical view of his own popularity and hankered after more serious status. Of his operas, *Euda d'Uriac* (1900, written in Catalan) owed some of its success to its incorporation of Catalan folksongs, but his only real triumph was the sentimental *Maruxa* (1914). His reputation today rests largely on this, the operetta *La generala* (1912), and zarzuelas such as *Bohemios* (1904) and, particularly, *Doña Francisquita* (1923), considered his masterpiece.

WORKS

LIONEL SALTER

Viviani, Antonio Maria (*b* ? before 1630; *d* Vienna, Oct 1683). Italian organist, singer, composer, court official and priest, older cousin of GIOVANNI BUONAVENTURA VIVIANI. He went to the Innsbruck court before 1648 and was at first organist, chaplain and secretary to the archduke, who ennobled him in 1654. In 1660 he was superintendent of the Italian chamber musicians at court. In 1669 and 1670 he was at the imperial court and in 1673 went with the retinue of the widowed Archduchess Anna to Vienna, where he became *maestro di musica* to her daughter, Empress Claudia Felicitas. After her death three years later he was paid as a singer and poet by Emperor Leopold I. He wrote the music for an *Introduzzione drammatica* (the libretto, by Diego de Lequile, is in *SI-Lf*), performed in 1652 during a tournament at the court in Innsbruck. He may also have written part of the Spanish opera *Aun vencido vence Amor, o El Prometeo*, performed in Vienna in 1669. Eight Italian and Spanish cantatas and arias ascribed to 'Abbate Viviani' survive in manuscript (*A-Wn* and *I-Fc*).

HERBERT SEIFERT

Viviani, Elena Croce. *See* CROCE, ELENA.

Viviani, Giovanni Buonaventura (*b* Florence, 15 July 1638; *d* ?Pistoia, after 1692). Italian composer and violinist. He was a violinist at the court at Innsbruck at least between 1656 and 1660. From 1672 to 1676 he was director of the court music at Innsbruck, which, after the extinction of the Tyrolean Habsburgs, had come under the control of the emperor. In publications of 1678 he still described himself as holding this position. But during the opera season in Venice from 1677 to 1678 his arrangement of Cavalli's *Scipione affricano* and his own opera *Astiage* were performed, which suggests that he must have been there, and in 1678 at the Oratorio di S Marcello in Rome he directed an oratorio in which Corelli and Pasquini participated. He was probably elevated to the nobility in the same year, since he subsequently designated himself 'Nobile del Sacro Romano Imperio'. Between 1678 and 1679 and 1681 and 1682 he was in Naples as director of a troupe of opera singers, and while he was there he performed some of his own operas and oratorios. In 1686 he was *maestro di cappella* to the Prince of Bisignano. From January 1687 to December 1692 he was *maestro di cappella* of Pistoia Cathedral.

Viviani's operas and solo cantatas follow the style of Antonio Cesti's, even in detail, which may imply that he studied with Cesti during his Innsbruck years; in any case he certainly knew Cesti's work. His instrumental works are predominantly in the Italian style, though south German and Austrian influences are also recognizable. Of particular interest are the instrumental recitatives of the *Sinfonia cantabile* in his op.4, which is written in imitation of a solo cantata; there are also two sonatas in op.4 for trumpet and continuo. The *Solfeggiamenti*, textless vocal pieces intended for teaching purposes, are unusual examples of this genre because of the number of their movements and their exceptional length.

WORKS

OPERAS

Astiage (3, M. Noris, after G.F. Apolloni), Venice, SS Giovanni e Paolo, wint. 1677, 21 arias *I-Vqs*, pubd lib *Bc*; rev. Naples, S Bartolomeo, Dec 1682, *Mc*, *Nc*, arias in *Vqs*

HERBERT SEIFERT

Vivier, Claude (*b* Montreal, 14 April 1948; *d* Paris, 12 March 1983). Canadian composer. During his short career he composed about 50 works and developed a musical style characterized by distinctive melodies and complex orchestral timbres. He studied composition and analysis with Gilles Tremblay at the Montreal Conservatoire where he was considered an exceptional student. His most important work from this period, *Prolifération* (1969) for ondes martenot, piano and percussion, employs

a post-serial idiom, combined with theatrical and improvisational elements. In 1971 he received a scholarship from the Canada Council to continue his training in Europe. He studied electronic music at the Institute of Sonology in Utrecht and composition with Stockhausen at the Musikhochschule in Cologne (1972–4). Stockhausen's influence is noticeable primarily in Vivier's employment of parametrical and mathematical compositional techniques throughout his career.

In 1973 Vivier composed *Chants* for seven female voices, a work which he often referred to as marking the true beginning of his life as a composer. During the years he spent in Cologne he completed four other vocal compositions. A preference for the human voice and an emphatic melodic orientation are characteristic of Vivier's oeuvre as a whole. He usually set his own texts, which express on the one hand uninhibited powers of imagination and lust for life, and on the other an anxious obsession with death. These texts also contain passages in a 'language' of Vivier's own invention, consisting of series of sounds which were chosen after, and in accordance with, the notes.

On his return to Canada, Vivier lectured at the University of Ottawa and received several commissions, among them the ambitious orchestral work *Siddhartha* (1976) composed wholly on the basis of a single melodic phrase. In the autumn of 1976 Vivier undertook a journey through Asia, during which he spent time in Japan, Bali and Iran. This experience was the catalyst for the development of a new musical style. After the success of works such as *Journal* (1977), *Shiraz* (1977) and the opera *Kopernikus* (1979), this style flourished, particularly in a cycle of vocal pieces composed between 1980 and 1982. The psychological theme which emerges in these works is, in Vivier's words, 'the exploration of the inner spaces', the challenge for each individual to probe his own unknown depths. For Vivier the orient was a metaphor for mystery; he became fascinated with the explorer Marco Polo and gave his compositions titles such as *Zipangu* (Japan), *Bouchara* and *Samarkand*. *Lonely Child* (1980) for soprano and chamber orchestra and *Prologue pour un Marco Polo* (1981) for five solo voices and instrumental ensemble are the most important works from this period. The harmonic and rhythmic dimensions of these compositions are largely derived from their principal melodies: while cadential formulae display the influence of Gregorian chant, the suggested modality is of short duration as all 12 notes of the chromatic scale are systematically employed. Both the sectional nature of the form and the homorhythmic texture offer stable backgrounds for a rich exploration of orchestral timbres (what the composer called 'colours'), the most striking aspect of Vivier's late style. These 'colours' are in fact chords covering the whole instrumental range and can be understood as the sound of one large instrument, the ensemble. They are composed using a method which imitates electronic ring modulation: the pitches of all the parts are calculated by a series of additions based on the frequencies of the notes of the melody and the bass. These artificial timbres, containing many quarter tones and harmonics, are juxtaposed with the timbre of the gong, an instrument which Vivier used frequently in his earliest compositions.

In 1981 the Canadian Music Council awarded Vivier the accolade of Composer of the Year. The following year a scholarship from the Canada Council enabled him to settle in Paris where he embarked on an opera on the death of Tchaikovsky. He died there in 1983 in tragic circumstances.

JACO MIJNHEER

Vivier, Eugène (Léon) (*b* Brioude, 4 Dec 1817; *d* Nice, 24 Feb 1900). French horn player of Corsican heritage. He studied law (Poitiers, 1838–41), and worked as a tax collector and journalist (Lyons, 1841–3) before joining the Lyons Grand Théâtre orchestra as a violinist in 1842. He was later offered the position of first horn, which he refused. In the same year, Thalberg and Labarre heard his

horn-playing and suggested he move to Paris. He arrived in 1843 and used social connections to solicit work and sponsors. His immediate success was largely due to his ability to produce chords on the horn, which confounded many, even though it was a technique that had been both used and discouraged by performers and teachers for years. He probably had lessons with Gallay (Fétis), but any other teachers remain unknown. He reportedly played briefly in several theatre orchestras, but he was more interested in being a concert performer. His (paid) début came in 1844, with Adam accompanying on the piano. For 25 years he toured throughout Europe, collaborating with the likes of Thalberg and Jenny Lind. He charmed heads of state with his flashy technique and theatrical presence. Musically, however, he received mixed reviews. He eventually retired to Nice.

According to Fétis, Vivier had a beautiful sound, but played mainly in a one-octave range. He reportedly preferred the E crook and generally performed his own compositions, which showed off his technique and sense of humour, but well-known composers (including Rossini) also wrote music for him. He composed *romances* (including *L'oiseau mort* and *Madeleine et Mathurin*, both performed in Paris in 1844) and published some minor writings (primarily on non-musical topics), but these do not appear to have survived. Limouzin's biography contains flowery accounts of his life and travels until 1852; an advertised sequel apparently never appeared. While some viewed him only as a showman with more flash than substance, he elevated the horn's image as a solo instrument. A horn made for Vivier by Sax in 1844 survives in the Musée de la Musique, Paris.

Vivo (It.: 'alive', 'vigorous'). A tempo designation and an indication of mood. Caccini's *Le nuove musiche* (1601/2) contains the successive directions *esclamazione languida* and *esclamazione più viva*, but the word seems not to have had much currency in music until the middle of the 19th century. Verdi marked the 'Rataplan' in *La forza del destino* as *allegro vivo* (crotchet = 126) with the final section *poco più vivo*. It has many of the same uses and ambiguities as VIVACE.

Vizzana [Vizana], **Lucrezia Orsina** (*b* Bologna, 3 July 1590; *d* Bologna, 7 May 1662). Italian composer, singer and organist. About 1598 she entered the Camaldolese convent of S Christina, Bologna, where she probably learnt music from her aunt, Camilla Bombacci, sometime convent organist, and from Ottavio Vernizzi, unauthorized music master at S Christina from about 1615 to about 1623. By contrast with the lavish, double-choir music by Adriano Banchieri, Gabriele Fattorini, G.B. Biondi and Ercole Porta dedicated to nuns at S Christina and almost certainly performed there, Vizzana's own motets, published in *Componimenti musicali de motetti concertati a 1 e più voci* (Venice, 1623), chiefly solos or duets with continuo, betray the influence of the *stile moderno* in their delicately virtuoso ornamentation for rhetorical effect, frequent insertion of phrases in declamatory style, juxtaposition of chromatic chords a 3rd apart, and, most notably, in expressive leaps from suspended dissonances, a technique Vizzana probably learnt from works by Monteverdi or Porta. Some motets were conceived for feast days at the convent; the greatest number are directed to Christ as redeemer or spouse, or as the object of veneration in the sacrament or on the cross; others may reflect the political struggles at S Christina from 1620 onwards. Vizzana's early retirement from music probably resulted from increasing ill health and from the convent's notorious battles with the diocesan curia between 1623 and 1647, partly provoked by music. According to her confessor, Vizzana was so traumatized by these events that she lost her mind.

CRAIG MONSON

Vlaamse Operastichting (Flem.: 'Flemish Opera Foundation'). Company founded in ANTWERP in 1893 as Vlaamsche Opera; it was renamed the Koninklijke Vlaamsche Opera in 1920. In 1981 it joined with the opera company of GHENT to form Opera voor Vlaanderen, since 1988 the Vlaamse Operastichting.

Vlachopoulos, Yannis [Jannis] (*b* Piraeus, 8 March 1939). Greek composer. He studied composition with Y.A. Papaïoannou at the Hellenic Conservatory, Athens (1960–65), and with Zimmermann and Eimert at the Cologne Musikhochschule (1966–9). During 1965–6 he attended courses given by Messiaen and Wildberger at the Hochschule für Musik, Karlsruhe. In 1970 he began teaching theory, composition and piano at the Städtische Musikschule, Hürth.

Beginning with 12-note serial writing, Vlachopoulos subjected other elements to serial procedures in *Anamnissis* ('Memories', 1967), a piece of subtle timbral and rhythmic interplay, and then turned to chance procedures and music theatre in works which denounce the inhumanity of technological society with a poetic nostalgia for the past. Many of his later compositions present a kaleidoscopic yet intensely dramatic succession of shifting aural impressions. They often originate from an initial statement – such as a motif, a rhythm or a focal pitch – which gradually becomes a source of musical energy, its proliferation creating further harmonic implications, varieties of tone-colour and rhythmic interplay. In *Patmios esperinos* ('Vespers in Patmos', 1989–90) initial expectations of a sober musical conception, liturgical and

static, are thwarted by a powerful build-up of emotion and drama.

GEORGE LEOTSAKOS

Vlach Quartet. Czech string quartet. It was formed on the initiative of the violinist Josef Vlach (*b* Ratměřice, 8 June 1923; *d* Linköping, Sweden, 17 Oct 1988), originally with Václav Snítil (*b* Hradec Králové, 1 March 1928), violin, Soběslav Soukup (*b* Stod, 23 Aug 1922), viola, and Viktor Moučka (*b* Kolín, 6 Feb 1926), cello. Having been members of the Czech Chamber Orchestra under Talich, they began working together regularly in 1950 and made their concert début as the Vlach Quartet on 28 April 1951. The viola player was subsequently changed twice, Soukup being replaced in 1952 by Jaroslav Motlík (*b* Chudeřín, nr Most, 20 April 1926), who was in turn replaced by Josef Kodousek (*b* Prague, 27 Nov 1923; *d* Prague, 20 May 1995) from 1954. The quartet won the 1955 Liège International Quartet Competition, and following this success toured throughout the world. The players became members of the drama orchestra at the Prague National Theatre, which they left in 1957, and were the resident chamber group of Prague radio until 1971. The quartet was dissolved in 1976, after which the players taught at the Prague Conservatory and the Academy of Musical Arts. Vlach, who remained leader of the Czech Chamber Orchestra, was chiefly responsible for the quartet's musical character, based on a unity of technical assurance and interpretative feeling. Its repertory ranged from Tartini and Gluck to contemporary composers, with special attention to Haydn, Mozart, Beethoven, Dvořák, Smetana and Janáček. Much of its repertory was recorded, and its recordings of certain Beethoven quartets were praised for firmness of pulse, forceful character and exemplary textural clarity. In 1982 Jana Vlachová, the daughter of Josef Vlach, founded the New Vlach Quartet. Known as the Vlach Quartet Prague from 1995, it follows in the rich tradition of its predecessor. Its members are Jana Vlachová (*b* Prague, 9 Sept 1955), violin, Karel Stadtherr (*b* Plzen, 15 Jan 1955), violin, Petr Verner (*b* Prague, 7 March 1963), viola and Mikael Ericsson (*b* Arvika, Sweden, 19 March 1952), cello.

ALENA NĚMCOVÁ

Vlad, Roman (*b* Cernauti, Bukovina, 29 Dec 1919). Italian pianist, composer and writer on music of Romanian birth. He studied with Titus Tarnawski and Liviu Russu in his place of birth; after receiving a piano diploma, he moved to Rome in 1938 (he took Italian citizenship in 1951). Enrollment at the University of Rome followed, together with advanced piano classes under Casella at the Accademia di S Cecilia (diploma, 1941). His early career was as a performer and composer; he won the Enescu Prize in 1942 for his Sinfonietta, and the Silver Mask Award for his film music. He also began to work as a music critic and lecturer in Germany, France and Britain as well as in Italy. He taught at the Dartington Summer School in 1954 and 1955, and was appointed professor of composition at Perugia Conservatory in 1968. Vlad has played an important role as the artistic director of various Italian musical institutions: the Accademia Filarmonica Romana (1955–8 and 1966–9); Maggio Musicale Fiorentino (1964); the Florence Municipal Theatre (1968–73); the Ravello Music Festival (since 1975); the RAI Orchestra, Turin (1976–80); La Scala (1994–7). He has also been president of the Società Aquilana dei Concerti, artistic advisor to the Turin Settembre Musica festival and, from 1980 to 1982, director of the Teatro dell'Opera in Rome. In 1995 he was appointed president of the Accademia Filarmonica Romana. As a writer, Vlad has contributed to many Italian and international newspapers and periodicals. He has been editor of the journals *Musica e Dossier* and *Lo Spettatore* and joint editor of the musical section of the *Enciclopedia dello Spettacolo* and the *NRMI*. In 1974 he was awarded the honorary DMus by the National University of Ireland in Dublin and in 1996 he received the honour of 'Cavaliere di gran croce dell'ordine al merito della repubblica italiana'.

Vlad's music has consistently remained tied to serialism, though not in a rigid or a dogmatic manner. He has commented on 'always having tried to avoid ideologies and opposed extremes, refusing to adopt the views of others based on reactionary traditionalism, as well as over-ambitious avant gardism and the search for what is new for the sake of it'. While the earlier works from *Studi dodecafonici* to *Musica per archi* exhibit a 'classical' dodecaphony, Vlad subsequently extended the serial method to all parameters as well as using quarter-tones and aleatory techniques, and experimenting with the electronic medium. At the same time, he has included tonal quotation and Classical procedures. Such eclecticism is seen particularly in his compositions for the theatre, for example *Storia di una mamma* (1951), *Il sogno* (1973) and the ballets *Die Wiederkehr* (1962, rev. 1968) and *Il gabbiano* (1968), where his ability to mediate between different art forms is evident. Vlad's vocal works, in particular, are of high quality, from Cantata no.3 ('Le ciel est vide'; 1952–3) and *Lettura di Michelangelo* (1964, rev. 1968) to the more recent *Tre liriche di Montale*

(1976), in which there is a clear link between sound and text, the music rooted in the phonetic structure of the verse.

WORKS

ROBERTA COSTA

Vlad, Ulpiu (*b* Zărneşti, 27 Jan 1945). Romanian composer. After taking oboe lessons with Pavel Tornea at the Music Lyceum in Bucharest (1958–64), he studied composition with Vieru at the Bucharest Academy, graduating in 1971, and with Mortari at the Accademia di S Cecilia in Rome (1971–2). Vlad worked at the Bucharest Academy, researching the specific characteristics of Romanian folk music (1971–7), then as a researcher at the Institute of Ethnology and Dialectology (1977–80). After a period as an editor (1980–84) then director (1984–92) at Editura Muzicală, he directed the music

department of the ministry of culture (1992–3); in 1993 he became a professor at the Bucharest Academy. His awards include the Enescu Prize (1985) and the Romanian Union of Composers Prize (1991, 1995).

His innovative means of expression derives from his absorption of the harmonic, melodic and rhythmic elements of Romanian folk music. Vlad has explored diverse compositional techniques: quarter tones are employed in the Sonata for oboe and harpsichord (1969); serial and modal procedures interact in *As Hardly from Depths* (1971); folk-influenced melodic lines are set against dense note clusters in *Remembrances* (1973); improvisational elements inform the cycle *Mosaic* (1974–8); folk sources become crystallized in the Symphony no.2 (1984); and controlled aleatory passages are used in *Lights in the Sunset* (1991).

WORKS
(*selective list*)

Orch: As Hardly from Depths, vc, pf, orch, 1971, rev. 1981; Dreams I, str, 1972; Remembrances, brass, str, perc, 1973; The Time of Mirrors, chbr orch, 1974; Simfonia brevis 'Inscriptions in Hearts', 1978; Sym. no.1 'Roads in the Light', 1979; Dreams II, str, 1982; Sym. no.2 'From our Hearts', 1984; From the Joy of Dreams, str, 1991; Lights in the Sunset, 1991; The Game of Dreams I–II, chbr orch, 1992; Suddenly, Dreams, chbr orch, 1994; The Light of Dreams, 1995; Beyond Dreams, wind, str, kbd, 1996

Mosaic (Ulpiu), cycle, any combination of insts or vv from sym. orch and vocal qt, 1974–8

5–12 insts: Septet, wind qnt + perc, tpt + perc, pf, 1970; Codex Caioni, wind qnt, 1984; Voices of Peace, wind qnt, tape, 1986; Sources, 4 sax + cl, 3 tpt, 3 trbn, pf, perc, 1987; The Joy of Dreams I, fl, str trio, perc, 1990; The Secret of Dreams I, wind qnt, 1992; The Secret of Dreams II, wind qt, hp, 1993; The Joy of Dreams II, fl, cl, str trio, 1994; The Legend of Dreams, fl/ob, cl, vn, vc, pf, perc, 1994; The Secret of Dreams III, wind qnt, pf, perc, 1996

OCTAVIAN COSMA

Vladigerov, Aleksandar (*b* Sofia, 4 Aug 1933; *d* Sofia, 15 June 1993). Bulgarian composer and conductor, son of PANCHO VLADIGEROV. He graduated from the State Music Academy in Sofia having studied composition with Parashkev Hadjiev and conducting with Vladi Simeonov; from 1960 continued his studies with Natan Rakhlin, the chief conductor of the Kiev PO. By then his conducting career had already begun with orchestras in Pleven, Plovdiv and Ruse; he subsequently occupied guest positions across Europe as well as in Cuba and Japan. His repertory embraces all eras with an emphasis on 20th-century works; his enthusiasm for the work of Gershwin made him one of the most outstanding interpreters and propagandists of his music in Bulgaria. He orchestrated several of Gershwin's piano compositions and songs. His own works have been performed in Europe and Japan and have been awarded prizes at the World Youth Festival in Warsaw (1955) and the Busoni Competition (1957). Although he worked in most genres, his most popular works are musicals for children. The Sofia Youth Theatre has toured with several of these in the Czech Republic, Germany, Greece, Hungary, Japan, Russia and Yugoslavia. These works combine a lively and delicate musical style (which often employs jazz elements) with witty and inventive plots.

WORKS

Stage: Little Red Riding Hood (children's musical, I. Teofilov, after C. Parrault), 2 nar, solo vv, orch, 1969; The Merry Musicians (comic musical, D. Dimitrov, after Grimm: *The Town Musicians of Bremen*), 1971; The Wolf and the Seven Kids (comic musical, Dimitrov), 1973

Orch: Rondo concertante, vn, orch, 1958; suites from stage works

Chbr and solo inst: Dilmano, Dilbero, variations, pf, 1951; Poėma, vc, pf, 1953; Toccata, pf, 1955

ANDA PALIEVA

Vladigerov, Pancho (Haralanov) (*b* Zürich, 13/25 March 1899; *d* Sofia, 8 Sept 1978). Bulgarian composer. He lived in Shumen, Bulgaria, until 1910 before studying theory with Khristov and the piano with H. Vizner at the private Music School in Sofia (1910–12). He then took private lessons in composition with Paul Juon and the piano with H. Barth (1912–15) and in 1914 enrolled at the Staatliche Akademische Hochschule für Musik in Berlin. There he studied composition with Gernsheim and Georg Schumann and the piano with Leonid Kreutzer at the Akademie der Künste (1915–18, 1920–21). He was awarded the Mendelssohn Prize in 1918. He worked for Max Reinhardt at the Deutsches Theater in Berlin as a composer and conductor (1920–32) before returning to Sofia where he was appointed reader (1932–74) then professor (from 1940) of piano, chamber music and composition at the State Academy of Music. As a pianist and composer he toured Bulgaria (having made his début in 1904) and most other European countries. He is one of the founders of the Bulgarian Contemporary Music Society and was an executive of the Union of Bulgarian Composers.

One of the most important representatives of second generation Bulgarian composers, he underwent a natural creative evolution and formed an individual musical style following the traditions of Rachmaninoff, Richard Strauss and others. He wrote the first instrumental concerto in Bulgarian music, while his *6 Lyric Songs* (1917) mark the beginning of many such vocal works in Bulgarian music. In general terms, his music is highly expressive and employs Romantic harmonies.

The year of 1922 is a turning point in Vladigerov's creative evolution towards a national musical style based on the Bulgarian folklore (*Bulgarian Rhapsody 'Vardar'*, 1928), while, almost a decade later, *Klasichno i Romantichno* ('Classic and Romantic', 1931) represents an original interpretation of the neo-classical styles of that period and at the same time is notable for its synthesis of Bulgarian and west-European musical traditions. His first significant achievements date from the 1930s with the composition of the opera *Tsar Kaloyan* (1936) and the First Symphony (1939). In the 1940s he extended his

activities as a pianist and teacher and established his own composition school (his students include Konstantin Iliev, Georgy Kostov, Lazar Nikolov and Pencho Stoyanov). This period marks a new development in his work with the appearance of epic-dramatic pieces *Deveti Septemvri* ('The Ninth of September') in 1949 and the Fourth Piano Concerto in 1953. Although the lyrical *Legenda za ezeroto* ('Legend of the Lake') had been written in 1946, this trend becomes even stronger after 1960 with works such as the Fifth Piano Concerto (1963).

Vladigerov is a significant figure in 20th-century music. Influenced by German and Russian music (but also using elements of Bulgarian, Jewish, Romanian and Spanish music), he composed original works reflecting many aspects of early 20th-century music. The Gottfried Herder Prize which he was awarded in 1968 reflects the importance of his work.

WORKS

DRAMATIC AND VOCAL

Stage: Tsar Kaloyan (op, 3, N. Liliev and F. Popova-Mutafova, after Popova-Mutafova: *Solunskiyat chudotvorets*), op.30, 1936, Sofia National Opera, 1936; Legenda za ezeroto [Legend of the Lake] (ballet, 3), op.40, 1946

Incid music: Caesar and Cleopatra (G.B. Shaw), 1920; Sanna igra [The Dance of Death] (A. Strindberg), 1921; Judith (F. Hebel), 1922; Venetsiyanskiyat targovets [The Merchant of Venice] (W. Shakespeare), 1924; Tebeshireniyat krag [The Chalk Circle] (Klabund), 1925; Yuarets i Maksimiliyan [Juarez and Maximilian] (F. Werfel), 1926; Mnogo shum za nishcho [Much Ado about Nothing] (Shakespeare), 1928; Yusik (O. Dimov), 1929; Dvanaiseta noshch [Twelfth Night] (Shakespeare), 1932; Elenovo Tsarstvo [Deer Kingdom] (G. Raichev), 1934; Vetriloto [The Fan] (C. Goldoni), 1935; Shchastie [Happiness] (O. Vasilev), 1954

IVAN HLEBAROV

Vladimirova, Valeriya. *See* BARSOVA, VALERIYA.

Vladïshevskaya, Tat'yana Feodos'yevna (*b* Moscow, 3 June 1944). Russian musicologist. She studied at the Moscow Conservatory, graduating in 1970 and taking postgraduate studies until 1973. She took the *Kandidat* degree in 1976 with a dissertation on the early forms of the art of Old Russian singers, and the doctorate in 1993 with a dissertation on Russian church music from the 11th century to the 17th, for which she studied with Yury Keldïsh. She taught the history of Russian music and musical palaeography at the Moscow Conservatory (1973–89) and subsequently headed the department of Old Russian music at the Andrey Rublyov Museum of Old Russian Art in Moscow. Vladïshevskaya's scholarly interests are concerned with the music of Russia. She has written widely on the church music of Old Russia and its links with Byzantine music, Russian folksongs, the traditions of the Old Believers and choral music of the 18th century.

ZIVAR GUSEYNOVA

Vlasenko, Lev (Nikolayevich) (*b* Tbilisi, 24 Dec 1928). Russian pianist. His first piano lessons were from his mother, herself a student at the Tbilisi Conservatory. He continued with Georgian pedagogue Anastasia Virsaladze, then from 1948 went to Moscow to follow courses at the Institute for Foreign Languages and at the Moscow Conservatory with Yakov Fliyer. He was forced to break his studies for a year's army service, but in 1956 he won first prize in the Budapest Liszt Competition, and in 1958 he was runner-up to Van Cliburn in the first Tchaikovsky Piano Competition. Well known for his interpretations of Liszt, Rachmaninoff and Beethoven, Vlasenko is an engaging, if inconsistent, player in other repertory. From 1952 he taught at the Moscow Choral School, then the Gnesin School, and in 1957 took up a teaching post at the Moscow Conservatory, where his pupils have included Mikhail Pletnyov.

DAVID FANNING

Vlasov, Vladimir Aleksandrovich (*b* Moscow, 25 Dec/7 Jan 1903; *d* 7 Sept 1986). Russian composer and conductor. He was a pupil of Catoire, Krïlov, Yampol'sky and Zhilyayev at the Moscow Conservatory (1924–31). Thereafter he was founder and artistic director (1936–42) of the Music and Drama Theatre in Frunze (now Bishkek), and manager and artistic director of the Moscow PO (1942–9). He was made a People's Artist of the RSFSR and of the Kirghiz SSR. Many of his numerous operas were written in collaboration with Fere and Maldïbayev, with whom he also composed the Kirghiz national anthem.

WORKS
(*selective list*)

Operatic (first performed at the Frunze State Opera House unless otherwise stated; until 1966 written in collaboration with V. Fere and A. Maldïbayev): Altïn kïz [The Golden Girl] (music drama, D. Bokombayev), 1937, 12 May 1937; Adzhal orduna [Not Death but Life] (op, 3, Yu. Tursubekov), 1938, 26 March 1938; Aychurek [Moon Beauty] (op, 4, Bokombayev, K. Malikov and Tursubekov, after folk epic: *Manas*), 1939, 15 April 1939; Za schast'ye naroda [For the People's Happiness] (op, V. Vinnikov), 1941, 1 May 1941; Patriotï [Patriots] (op, Malikov and A. Kuttubayev), 6 Nov 1941; Aldar Kose (operetta), 1943; Manas (op, Malikov and A. Tokombayev), 1944, 3 March 1946, rev. 1966; Sïn naroda [A Son of his People] (op, Vinnikov), 1947, 8 Nov 1947; Na beregakh Issïkh-kulya [On the Banks of Lake Issïk] (op, K. Vlijmen, Jan van (*b* Rotterdam, 11 Oct 1935). Dutch composer. He studied the piano, the organ, and, with van Baaren, composition at the Utrecht Conservatory. He was then director of the Amersfoort Music School (1961–5) and lecturer in theory at the Utrecht Conservatory (1965–7). In 1967 he became deputy director of the Royal Conservatory in The Hague, succeeding van Baaren as director three years later, a position he held until 1985; he also continued to teach composition. In 1984 he was appointed director of the Nederlandse Opera, which he left, following disagreements over government funding policy, in 1987. From 1990 to 1997 he was director of the Holland Festival.

During the 1960s van Vlijmen drew attention for his involvement in the turbulent debate about the Dutch cultural establishment. He collaborated on the opera *Reconstructie* with Louis Andriessen, Schat, Misha Mengelberg and Reinbert de Leeuw (with whom he also later worked on his second opera, *Axel*). Van Vlijmen's own development as a composer came initially from the serialism of the Second Viennese School, and soon after from postwar developments, as exemplified in particular by Boulez's *Structures* and Stockhausen's *Carré* and *Gruppen*, whose concept of groups is reflected in his *Gruppi* of 1962. However, van Vlijmen was never a slavish follower of serial thought, and already by the *Serenata II* for flute and four instrumental groups (1964) classic pointillist textures had given way to almost uninterrupted ebb-and-flow continuity. This is evident too in the Sonata for piano and three instrumental groups (1966), which further exhibits an explicit harmonic rhythm, as essential as the derivation procedures applied to the opening material in the piece.

In *Omaggio a Gesualdo* (1971) and the Wind Quintet no.2 (1972) a continuing use of serialism is coupled with

more overt references to harmonic processes and allusions to tonality. The third part of the wind quintet, for example, displays the use of triads, which are, however, distributed in the texture in such a way that their conventional effect remains barely apparent. In this exploration of tonal–atonal ambivalence, van Vlijmen's music points in the direction conceptually, though by no means stylistically, of Wagner, whose principle of *unendliche Melodie* is intriguingly fused with serial methods, cantus firmus technique and harmonic progression in the evening-long four-part *Quaterni I–IV* (1979–85). Elements of this many-sided approach are also evident in the string quartet *Trimurti* (1980, rev. 1981), *Faithful* for solo viola (1984) and the Piano Concerto (1991). In the imposing *Inferno* (1991–3), a cantata for three instrumental and four vocal groups based on texts by Dante, van Vlijmen achieves a highly personal synthesis of a range of stylistic sources. Richly detailed, the musical language remains a clear and precisely judged amalgam of atonality, serial thinking and non-functional tonality. Despite a capricious and dramatic nature, *Inferno* is characterized above all by a lyrical and poignant *melos* which has its parallel in similar works by Dallapiccola Berio and Boulez.

WORKS
(*selective list*)

Stage: Reconstructie (music theatre, 2 parts, H. Claus and H. Mulish), Amsterdam, Carré, 29 June 1969, collab. L. Andriessen, R. de Leeuw, M. Mengelberg, P. Schat; Axel (op, 3, Mulish, after F. Villiers de l'Isle-Adam), 1975–7, Scheveningen, Circus, 10 June 1977, collab. de Leeuw; Un malheureux vêtu de noir (op, 3, J. Thielemans), Amsterdam, Stadsschouwburg, 16 Nov 1990

Orch and large ens: Gruppi, wind, perc, 1962, rev. 1980; Spostamenti, orch, 1963; Serenata I, 12 insts, perc, 1964, rev. 1967; Serenata II, fl, 4 inst groups, 1964; Sonata, pf, 3 inst groups, 1966; Interpolations, orch, elecs, 1968, rev. 1981; Per diciasette, 17 wind, 1968; Omaggio a Gesualdo, vn, 6 inst groups, 1971; Quaterni I, orch, 1979; Quaterni II (Sonata a tre), vn, hn, pf, orch, 1982; Pf Conc., pf, orch, 1991

Vocal: 3 Morgensternliederen, Mez, pf, 1958; Mythos (P. van Ostayen), Mez, ens, 1963; Quaterni III, IV (E. Pound), S, mixed chorus, orch, 1984, rev. 1985; Such a Day of Sweetness (W.H. Auden), S, orch, 1988; Inferno (cant., Dante), 4 vocal groups, 3 inst groups, 1991–3

Voboam [Voboame, Vaubouin, Vauban, Vauboyet, Vobuan, Vogeant, Roboam]. French family of guitar makers, active in Paris from 1630 to 1730. René Voboam (*c*1606–71) was known as a master instrument maker from 1631 onwards. Jacques Prévost was apprenticed to him in 1638, and Dimanche Drouin the following year; at that time he was working at rue St-Honoré. A guitar bearing his name, dated 1641, is preserved in the Ashmolean Museum, Oxford. Three more guitars, made with tortoiseshell and mother-of-pearl, may be attributed to him. One is marked 'Voboam 1668' was in the former collection of Maurice Le Roux, Paris; the other two are preserved in the Musée Masséna, Nice, and the RCM, London. By the end of his career he was working at rue Traversière.

(Nicolas) Alexandre (*b c*1633; *d* after 1691), son of René, signed his first guitars in 1652. Lütgendorff also listed a theorbo, dated 1661. In 1671 Alexandre married Anne Bourdet, the sister of the harpsichord maker Jacques Bourdet the elder. He worked at rue des Arcis, where he stayed until 1692 (the date of his last signed instrument). Between 1673 and 1679 he signed his instruments 'Alexandre Voboam Le Jeune'. 11 guitars are known; three others are attributed. Jean (*b c*1633; *d* after 1691), also son of René, worked first as a musician. He is first mentioned as a master instrument maker in 1680. Seven guitars bearing his signature, dated between 1676 and 1692, are preserved.

Jean-Baptiste (also known as 'Jean'; *b* 1671; *d* after 1731) worked 'préau de la foire Saint-Germain'. He was a prominent member of the guild of instrument makers, and signed the inventories taken after the deaths of Nicolas Bertrand (1725) and Pierre Véron (1731). Seven guitars and two viols, signed and dated between 1697 and 1730, are known. His son Jean-Baptiste began an apprenticeship with Jean-Claude Goujon in 1740, but the contract was broken the following year.

Voboam guitars are characteristic of the 17th century. They have five double courses and a flat back, and are built with narrow proportions and parallel bracing from one side to the other of the rose. A plaque on the front of the head bears the signature and date. Very often the binding of the soundboard, fingerboard, head and rose is made of a diagonal pattern of ivory and ebony. The rose is deep and made of several layers of paper stamped out. The bridge is flanked with ebony flowers or moustaches. Though the Voboams built standard instruments (with backs made of strips of cedar, walnut or exotic wood, inlays of ebony and ivory, and sides often made of ebony) they also made more luxurious instruments incorporating tortoiseshell and mother-of-pearl. The designs of the guitars' heads and their inlay patterns are characteristic to the individual family members. Three instruments are still preserved with their original cases, stamped with coats of arms. Many paintings and engravings from the 17th century, and later works of art by Jean-Antoine Watteau, Jean-Marc Nattier, Jacques-André Portail and

Louis de Carmontelle, attest the fame of Voboam guitars among amateurs.

FLORENCE GÉTREAU

Vocalese. A term for the practice of jazz singing in which texts (newly invented) are set to recorded jazz improvisations. The word is a pun on the term 'vocalise', combining the ideas of a jazz 'vocal' and a private language (indicated by the suffix '-ese'). Eddie Jefferson performed vocalese from the 1940s, but the best-known early recordings were made by King Pleasure, including his version of Jefferson's *Moody's Mood for Love* (1952, Prst.), based on a saxophone solo by James Moody, and his own setting of *Parker's Mood* (1953, Prst.), using Charlie Parker's blues improvisation of that title. Other important practitioners of vocalese were Dave Lambert, Annie Ross and, above all, Jon Hendricks, who was extremely inventive in creating texts to capture the feeling of the original solos. In 1957 Lambert, Hendricks and Ross (later Yolande Bavan) formed a vocal trio which attained some commercial success with their vocalese; it disbanded in 1964, but Hendricks continued to create and perform such pieces into the 1980s with a group comprising members of his family. Although the singing of vocalese is most closely associated with the bop style, it was also practised later by such popular singers as the Pointer Sisters and, notably, Joni Mitchell in her version of Charles Mingus's *Goodbye Pork Pie Hat* (on the album *Mingus*, 1979); in 1985 the vocal quartet Manhattan Transfer recorded the album *Vocalese* (Atl.). Vocal horn. *See* BALLAD HORN.

Vocalion. A type of REED ORGAN. The instrument was developed by John Baillie-Hamilton [James Baillie Hamilton] (*b* Scotland, 20 Jan 1837; *d* London, after 1926), originally in an attempt to combine the sounds of free reeds and strings. A modified instrument in which wires were attached to heavy reed tongues was demonstrated before the Royal Musical Association in 1883; however, but the wires were deleted from the three-manual vocalion built at William Hill's factory and shown at the International Inventions Exhibition of 1885 in London. In the same year Hamilton, who appears to have worked briefly with the Canadian organ builder S.R. Warren, exhibited the vocalion in the USA; he began to manufacture such instruments in Worcester, Massachusetts, in 1886. Shortly thereafter production was turned over to the New York Church Organ Co., and then in 1890 to the piano makers Mason & Risch, who continued manufacture in Worcester. In 1901 the firm was called the Vocalion Organ Co. In 1903 this firm was absorbed by the Aeolian Co., which continued to make vocalions until around 1910. Aeolian had already begun in the 1890s to use vocalion reeds for their 'Orchestrelle' player organs. The firm also produced self-playing organettes under the names 'Syreno' and 'Tonsyreno'.

Ranging in size from foot-operated single-manual models to ones with two (or occasionally three) manuals and pedal, the vocalion is basically a reed organ on the pressure principle, but with unusually wide reed tongues. It is therefore somewhat bulkier than the average reed organ, but produces a smoother, more powerful sound. This characteristic made the vocalion, often decorated with a façade of dummy organ pipes, popular for use in small churches in the late 19th and early 20th centuries.

BARBARA OWEN

Vocalise (Fr.). A textless vocal exercise or concert piece to be sung to one or more vowels. The vocalise derives from two traditions. One dates from the early 19th century, when it became customary to perform and publish *solfeggi* and *essercizi* with piano accompaniment (e.g. Domenico Corri, *The Singer's Preceptor*, 1810; Manuel García, *Traité complet de l'art du chant*, 1840–47/*R*); by the middle of the century there were numerous publications of this kind. The singing instructor Heinrich Panofka, for example, published during his years in Paris five volumes of vocalises. The idea was that with a piano accompaniment even the most mechanical exercises would be performed in a more artistic manner. The other tradition was that of using existing compositions as vocal exercises without words. In 1755 Jean-Antoine Bérard provided, as a supplement to his *L'art du chant*, 20 compositions by Lully, Rameau and others, selected for the technical problems they offered ('pour les sons tendres, légers, maniérés, majestueux' etc.), and he added specific instructions as to how these problems were to be solved. In the 19th century most instruction manuals for the voice included original compositions specially composed for the same purpose: 'melodies without words, offering the pupil a union of all the difficulties of song' (García). Unlike the accompanied *solfeggi*, these were not just exercises but genuine compositions, though they seldom merited performance before an audience.

In 1848 Spohr wrote a Sonatina for voice and piano in which the voice is used very much like a solo instrument (a violin or a flute), but it was not until the early 20th century that leading composers turned in any great number to the vocalise as a concert piece. At first the genre was particularly cultivated in France (Fauré's *Vocalise-étude* and Ravel's *Vocalise-étude en forme de habanera* date from 1907), but it soon caught the attention of Italian composers, including Casella, Cilea, Giordano and Respighi. Among the most frequently performed works of this kind are Rachmaninoff's *Vocalise* op.34 no.14 (1912) and Vaughan Williams's *Three Vocalises* for soprano and clarinet (1958); the most ambitious are Medtner's *Sonate-Vocalise* and *Suite-Vocalise* op.41 (?1922–6). In the second half of the 20th century many

composers produced one or two such works: among these are Peter Racine Fricker's *Vocalise* (1965) and Michael Finnissy's *Songs*.

The term 'vocalization' has been reserved by composers and singing teachers for the singing of vocalises (e.g. in the title of Crescentini's *Raccolta di esercizi per il canto all'uso del vocalizzo*, *c*1810), but it is often used in a more general sense for the practice of singing to vowel sounds or with closed lips (*see* BOCCA CHIUSA and CANTILENA (ii)). Vocalization in this sense may be for solo voice, as in Vaughan Williams's *Pastoral Symphony*, or for chorus, as in Debussy's 'Sirènes' from the *Nocturnes* and Holst's *The Planets*. To use the word, as some have done, for the melismas of Gregorian chant and the coloratura of 18th-century opera is to dilute its usefulness as a musical term. For a discussion of the technique as applied to jazz, *see* VOCALESE.

Vocalization. The singing of textless vocal exercises. *See* VOCALISE.

Vocal score. *See* SCORE, §1.

Voce (It.). Voice. *See* SINGING; ACOUSTICS, §VI; and PART (ii).

Voce di petto (It.: 'chest voice'; Fr. *voix de poitrine*). One of the two primary registers of the singing voice. The voice resonating from the chest is lower in pitch and bigger and darker in sound than that resonating from the head (*see* VOCE DI TESTA). Beginning in the 18th century, singing tutors discussed these registers at length, taking various positions on how to unite the break (*passaggio*) between them. The increasing use of the chest voice in the higher register to create a more powerful sound was hotly contested in the 18th and 19th centuries (*see* VOIX MIXTE and VOIX SOMBRÉE). *See also* SINGING.

□

Voce di testa (It.: 'head voice'; Fr. *voix de tête*). One of the two primary vocal registers. The voice resonating from the head is higher, lighter and clearer than that resonating from the chest (*see* VOCE DI PETTO). Some 18th-century writers equate the *voce di testa* with FALSETTO. *See* SINGING.

Voce humana (It.: 'human voice'). A tenor oboe in F. *See* OBOE, §III, 4(ii).

Voces belgicae (Lat.). The name used in Nikolaus Gengenbach's *Musica nova, Newe Singekunst, so wol nach der alten Solmisation, als newen Bobisation und Bebisation* (Leipzig, 1626), and later in J.G. Walther's *Musicalisches Lexicon* (Leipzig, 1732), for the syllables of the solmization system also known as BOCEDIZATION.

Voce umana (It.). *See under* ORGAN STOP.

Voci pari, voci mutate (It.: 'equal voices', 'changed voices'). Terms applied in the 16th century to vocal compositions in which the total compass of all parts was restricted to a limited range. *Voci pari* (and its equivalents *voix pareilles*, *voces pares* and *voces ad aequales*) meant that the individual parts of the work so designated shared an equal or nearly equal range, either high (SSAA) or low (ATTB or TTBB). The Italian term 'voci mutate' (Lat. *voces mutatae*) implied that the scoring required mature male voices, usually with nearly equal ranges. In most sources before about 1560, works for low voices far outnumber those for high voices.

Although performance entirely by male voices (without use of falsetto registers) was probably not exceptional in part-music of the Middle Ages and Renaissance, the majority of compositions actually bearing the designations *voci pari* or *voci mutate* appeared between 1530 and 1560. Several printed collections of masses (e.g. 1534[2], 1542[3] and 1544[3]), motets (e.g. 1534[6], 1543[2], 1543[5], 1549[6] and 1549[9]) and madrigals (e.g. 1539[23], 1542[19] and Passetto, 1541) have such indications in their titles. Similarly, certain chansons, villottas and settings of the Lamentations were scored for equal voices. The scoring may be a response to local resources, commercial aims or expressive intention. It seems likely, for example, that Placido Falconio's five books of sacred music designated *voci pari* were written for the choirs of the monasteries where he worked in mind. The spate of madrigal books with *voci pari* scoring that appeared around the middle of the century suggests, on the other hand a particular market, perhaps that of all-male academies where commentators like Antonfrancesco Doni claimed madrigal singing was in fashion. And in some works the scoring is clearly intended to be text-expressive, for example in narrative pieces where the voice of the speaker is portrayed in the register to dramatic or humorous effect.

Although the popularity of such compositions, especially of the secular works for low voices, seems to have diminished in the later decades of the 16th century, scoring for *voci pari* or *voci mutate* continued to appear in sacred music, notably in the works of Palestrina and Victoria.

16th-century theorists provided fairly consistent guidelines for compositions of equal voices. Aaron (1516) stated that works for *voces mutates* ('manly voices … such as sing bass or alto') should encompass no more than a 15th or a 17th, with specific limits set between *F* or *A* and *a′*. Vicentino (1555) defined a composition *à voce mutata* as one without soprano, and set the outside limits for the range of such a piece at a 15th or 16th; similar comments for works *à voci mutate* or *à voci pari* were made by Zarlino (1558 and 1573). Morley (1597) specified written limits for men's voices that are virtually identical with those given by Aaron.

A special technique in writing *à voce mutata*, which provided for alternative performance *à voce piena* ('full voice', i.e. mixed voices), was described by Vicentino and Tigrini (1588). Here the tenor part of a work written *à voce mutata* may be performed either as written, by a tenor, or an octave higher, by a soprano. Conversely, the soprano part of a work *à voce piena* could be sung either as written or an octave lower, permitting performance *à voce mutata*. Several works have directions for this kind of transposition, including Claudin de Sermisy's *Missa sur fantasie* (RISM 1534[2]), two *canzone villanesche* of Willaert (in 1542[19]), and four of Falconio's books.

The terms *à voci pari* and *à voci mutate* were rarely used after the beginning of the 17th century, but the

tradition of equal-voice writing has continued to the 20th century. There are numerous examples in choral literature as well as equal-voice compositions for instruments (*see* EQUALE).

FRANK CAREY/R

Vockerodt [Fokkerod], **Gottfried** (*b* Mühlhausen, 24 Sept 1665; *d* Gotha, 10 Oct 1717). German educationist. He may have been related to the composer and theorist Johann Arnold Fokkerod, who was also from Mühlhausen. In 1685 he received a master's degree in philosophy from the University of Jena, where he remained to teach classical languages. In 1689 he went to Halle to become Konrektor of the Gymnasium. In 1693 he was invited to become professor of moral philosophy at the university there, but he went instead to Gotha as a teacher at the Fürstenschule and in 1694 became its Rektor. In 1696 he presented a public lecture entitled *De falsa mentium intemperatarum medicina*. Using the example of three Roman emperors, Caligula, Claudius and Nero, he proposed that their irrationality and despotic characters were the result of excessive infatuation with the arts of theatre, dance and music. Although his remarks were temperate they engendered a violent controversy. He was attacked by J.C. Wentzel (Rektor at Altenburg), JOHANN CHRISTOPH LORBER and especially Johann Beer, who in his *Ursus murmurat* (Weissenfels, 1697) interpreted his remarks to mean that music education would affect German noblemen as it had Roman emperors and that music should be banned from schools and churches. Vockerodt published a lengthy rejoinder to these criticisms, reprinting large portions of each, as well as the original Latin and his German translation of the oration leading to the dispute, in *Missbrauch der freyen Künste, insonderheit der Music*. At the heart of the argument lies the collision of Pietists and orthodox Protestants. The most valuable aspect of Vockerodt's work is the clarity with which he stated the Pietists' position. While declaring that he was no enemy of music, he left no doubt that he deplored the musical character of most Protestant church services, with their long organ improvisations, instrumental pieces in dance forms and operatic vocal music.

THEORETICAL WORKS

Illustris Gymnasii Gothani summos patronos … ad publicas orationes, De falsa mentium intemperatarum medicina (Gotha, 1696)

Missbrauch der freyen Künste, insonderheit der Music, nebenst abgenöthigter Erörterung der Frage: was nach D. Luthers und anderer evangelischen Theologorum und Politicorum Meinung von Opern und Comödien zu halten sey? (Frankfurt, 1697) [incl. Lat. and Ger. versions of *De falsa mentium*]

Wiederholtes Zeugnüs der Wahrheit gegen die verderbte Music und Schauspiele Opern, Comödien und dergleichen Eitelkeiten, welche die heutige Welt vor unschuldige Mitteldinge will gehalten wissen (Frankfurt and Leipzig, 1698)

GEORGE J. BUELOW

Vocoder. An electronic device for analysing and resynthesizing sounds. The original Vocoder ('voice coder') was developed by Homer Dudley in 1936 at the Bell Telephone Laboratories in Murray Hill, New Jersey, for telephonic applications; it has also proved a valuable tool in speech research and has found applications in electroacoustic music. Speech, music or other sound is analysed by a set of filters, each covering a different band of frequencies, that subdivide the entire audio spectrum; the fundamental frequency of the input is used as the 'programme' in a MODULATION (ii) process to control the frequency of an audio oscillator (which supplies 'buzz') and a noise generator ('hiss'). The resulting signal is then passed through a second set of filters, each of which is 'tuned' by the amount of electrical information received by their counterparts in the first set, recreating the original signal electronically. A telephone line may intervene between the analysis and synthesis sections.

About 1960 a vocoder was incorporated into the Siemens Synthesizer, which probably offered the first opportunity for musicians to use the device. Since around 1970 several manufacturers, including Bode Sound, Moog, Korg, Roland, EMS, Sennheiser, Synton, Eventide and Doepfer, have produced vocoders (some of which are controlled from a keyboard) primarily for use in electronic music studios or in live performances of rock music; the 'harmonizer' is a similar device. Such vocoders permit the timbre and articulation of one sound source (usually a voice) to control another. Simpler devices for producing 'talking (or singing) instruments', particularly in films, include the Sonovox (*c*1938) and, from the early 1970s, various 'voice boxes' ('voice tubes') used in rock music, which impart vocal qualities with the larynx and mouth respectively. The 'phase vocoder' (1966) is a software program developed at Bell, which has found a role in computer music since the late 1970s, primarily for time compression or expansion.

In 1937 Dudley and others developed the speech synthesis section of the Vocoder to produce the Voder ('voice operation demonstrator'), a successor to the keyboard-controlled speaking machines devised from the end of the 18th century onwards. The filters are controlled by two independent five-note keyboards. The right thumb also operates a 'quiet' key for fricative consonants and three central 'stops' for plosive ones, and there is a pitch-control pedal for inflection; a left-hand wrist-bar switches between 'buzz' and 'hiss' (also combinable) to give voiced and unvoiced qualities. In 1948 researchers at Bell developed the Visible Speech machine, using DRAWN SOUND in the form of speech 'notation' to control the coder section of a Vocoder.

Vodušek, Valens (*b* Ljubljana, 29 Jan 1912; *d* Ljubljana, 8 Feb 1989). Slovene ethnomusicologist. While studying law at Ljubljana University (LlD 1938) he also studied the piano and conducting at the Ljubljana State Conservatory (1930–36). Self-taught in musicology and ethnomusicology (mainly from the writings of Bartók, Kolessa, Kodály, Wiora and Brăiloiu), he worked as head of the music section at the Ministry of Culture in Slovenia (1946–51) until he joined the Institute for Ethnomusicology in Ljubljana. His work there was interrupted by his appointment as director of Ljubljana Opera (1951–5); on his return he directed the institute until 1972, when it combined with the Institute of Ethnology at the Slovene Academy of Sciences and Arts, and he became a senior research fellow and head of the department for ethnomusicology. He also conducted (1946–51) the Ljubljana Radio Choir (from 1948 the Slovene Philharmonic Choir) and was artistic director (1956–72) of the Slovene Octet (a chamber ensemble of male voices). Vodušek instigated systematic fieldwork in the Slovene ethnic territory. His attempt to establish a method for studying the development of different strata of folk music led him to work on the classification of tunes and the significance of metrical structures; he also worked to prepare a complete critical edition of Slovene folk music.

□

Voegelin, Fritz (*b* Zürich, 19 Sept 1943). Swiss conductor, composer and violinist. He completed diplomas in the violin (Berne Conservatory, 1969) and conducting (Basle Musik-Akademie, 1973), and studied composition with Klaus Huber and Robert Suter; he continued his conducting studies with Hans Swarowsky. After conducting several orchestras in Switzerland, he was appointed artistic director of the National Conservatory of Colombia in 1985. Between 1989 and 1992 he was principal conductor of the Antioquia SO in Medellín (Colombia) and professor of orchestral conducting at the University of Antioquia; he returned to Switzerland in 1992. His numerous awards include first prize in the Colombia National Conservatory composition competition, the composition prize of the City of Berne (1993) and the KIWANIS cultural prize (1997). Not only has his knowledge of the orchestral repertory influenced his orchestration, but it has also conferred upon him a humanist vision that reflects a broad view of the human condition. The great dramas of contemporary life are often visible just beneath the surface of his works. Voegelin's music is born from a need to say something meaningful, rather than from a need to compose. His quartet, *4 Szenen*, in homage to Fritz Zorn's book *Mars*, was composed in less than a fortnight, as if it was a pain that needed urgently to be expurgated. This proximity to experience and to creation confers on Voegelin's works a feeling of the unexpected.

JEAN-PIERRE AMANN

Voelckel, Samuel (*b* Franconia, *c*1560; *d* Bayreuth, after 1617). German composer. He was a member of the Ansbach court chapel at Königsberg from 1583. In 1586 he returned to Ansbach with the musical establishment to serve as an instrumentalist, and by 1602 he had become assistant Kapellmeister. He was not continuously at Ansbach, but spent some time in service at Marburg (1591), Wolfenbüttel (1593) and Kassel (at the end of 1594). He was apparently active in Saxony as well some time later. In 1603 he left Ansbach to become Brandenburg

Kapellmeister in Bayreuth with an interim period of service at the Plassenburg, Kulmbach. His few extant works, all from his mature years, belong to the central German tradition, and show a firm grasp of the techniques of the period.

The most gifted of Voelckel's sons, Christian Theodore, later served as Kapellmeister and composer at the courts of Durlach, Darmstadt and Frankfurt.

Voet [Voetus], Michael. *See* VOGT, MICHAEL.

Vogeant. *See* VOBOAM.

Vogel, Adolph. American music publisher, partner in the firm of ELKAN-VOGEL.

Vogel, Charles-Louis-Adolphe (*b* Lille, 17 May 1808; *d* Paris, 11 Sept 1892). French composer, grandson of Johann Christoph Vogel. He first studied in Lille, then in Paris, where his teachers included Kreutzer for the violin and Reicha for composition. His patriotic song *Les trois couleurs*, written in celebration of the 1830 Revolution and sung by Chollet at the Théâtre des Nouveautés, won immediate fame. Apart from chamber music and numerous songs and romances (which were particularly highly regarded), Vogel devoted himself to the theatre. Though he produced most of his works in Paris, among which *Le podestat* (1831) achieved a revival, he had considerable popularity outside France: the Koninklijke Franse Opera of The Hague commissioned and produced *Le siège de Leyde* in 1847 and revived it in 1854; his comic opera *Le nid de cigognes* was first performed in Baden-Baden (translated into German) in 1858; and *La filleule du roi* (1875) gained more approval in Brussels than in Paris. His success in the theatre can be attributed to his sense of drama, careful word-setting and attractive melodies. The style of his *opéras comiques* resembles Herold's and his instrumental music shows the influence of Hummel.

WORKS

OPERAS

Le podestat (oc, 1, Laffitte), Paris, OC (Ventadour), 16 Dec 1831

Many songs and romances

FRÉDÉRIC ROBERT

Vogel, (Johannes) Emil (Eduard Bernhard) (*b* Wriezen an der Oder, 21 Jan 1859; *d* Nikolassee, nr Berlin, 18 June 1908). German musicologist. After studying music privately in Dresden and Berlin he was a music history pupil of Spitta and took a degree in philology at the universities of Berlin and Greifswald (1880–83). Subsequently he travelled in Italy on a Prussian government grant as an assistant to F.X. Haberl in his work on an edition of Palestrina; after his return he took the doctorate at the University of Berlin with a dissertation on Monteverdi (1887). From 1893 he was in charge of setting up the Peters music library (Leipzig), of which he became the first librarian (1895), building it into one of the biggest private libraries in Europe, concurrently serving as founder and first editor of the *Jahrbuch der Musikbibliothek Peters* until ill-health obliged him to retire (1901). In his research Vogel concentrated on Italian music of the 16th and early 17th centuries. His pioneering two-volume bibliography of printed Italian secular music, first revised by Einstein, is still a standard reference work, laying the bibliographical foundation for the scholarly study of the frottola, madrigal and canzonetta. In addition to the title and contents of each volume, he provided a source index of literature as well as of poets, dedicatees, printers and publishers. His dissertation on Monteverdi was for 60 years the standard German source, and was the stimulus for the German editions of Monteverdi's five-part madrigals, completed after his death by Hugo, Leichentritt and Arnold Mendelssohn. Vogel edited the first music library catalogue of C.F. Peters, and the first seven volumes of the *Jahrbuch der Musikbibliothek Peters* (1894–1900), in which he also contributed his own research on Bach, Mozart, Gluck, Haydn and Mozart and other subjects.

Sartori as *Bibliografia della musica italiana vocale profana pubblicata dal 1500 al 1700* (Pomezia, 1977)

MICHAEL MUSGRAVE

Vogel, Jaroslav (*b* Plzeň, 11 Jan 1894; *d* Prague, 2 Feb 1970). Czech conductor, writer on music and composer. In Prague he studied the violin with Ševčík and composition with Novák; he also studied in Munich (1910–12) and with d'Indy at the Paris Schola Cantorum (1912–13) before working as a répétiteur in Prague (1913–14) and as conductor at the Plzeň opera (1914–15). On concluding

his military service he graduated at the Prague Conservatory under Novák (1919) and worked as an opera conductor (1919–23) in Ostrava where, after freelance work in Prague, he became chief conductor (1927–43). Subsequently he was conductor at the National Theatre, Prague (1949–58), and chief conductor of the Brno State Philharmonic (1959–62). Vogel's most successful years as a conductor were in Ostrava, whose musical life he invigorated with performances of Smetana, Janáček and Novák opera cycles, and many contemporary Czech and European works. He also founded and conducted orchestral concerts which attracted the participation of Hindemith, Stravinsky, Prokofiev and others. His own compositions include three operas, of which the one-act comic opera *Mistr Jíra* was performed in Prague in 1926.

Outside the Czech Republic Vogel is known for his Janáček biography. As a young conductor, he had corresponded with Janáček and in 1948 published a monograph, *Janáček dramatík*, in which, in addition to Janáček's operas, he examined the dramatic impulse in his other works. Over the next ten years Vogel developed this into a general biography, the first substantial attempt to examine Janáček's oeuvre as a whole, which for over 40 years has remained the standard book on the composer. As a performing artist (the conductor of the first complete recording of *Jenůfa*) he brought an interest in the practical problems of performing Janáček as well as a warm and evident response to the music. Although not a scholar, Vogel nevertheless presented in his book much of the abundant Czech research of the early 1950s, together with then inaccessible sources such as the memoirs of the composer's widow. His well-informed, highly civilized mind allowed him to see Janáček in a broad European context that has made the work particularly appealing in the West.

JOHN TYRRELL

Vogel [Fogel], **Johann Christoph** (*b* Nuremberg, bap. 18 March 1756; *d* Paris, 28 June 1788). German composer, active in France. The son of the violin maker Michael Vogel, and grandfather of Charles-Louis-Adolphe Vogel, he studied with Georg Wilhelm Gruber in Nuremberg and with Joseph Riepel in Regensburg. There is no evidence that he was employed as a musician in the Regensburg Hofkapelle, as some biographers have erroneously stated, confusing him with the oboist Johann Bartholomäus Vogel (*d* 1782). He moved to Paris in 1776, and entered the service of the Duke of Montmorency and then of the Count of Valentinois as a horn player. He composed a great number of orchestral and chamber works during this period. His oratorio *Jephté*, performed at the Concert Spirituel in September 1781, received favourable reviews although its harmony was regarded as 'too complicated and baroque'. Philippe Desriaux, for many years the secretary of Baron von Tschudi, wrote the librettos for both of Vogel's operas. The first of them, *La toison d'or*, was written as early as 1781 but was not performed at the Opéra until 5 September 1786. Vogel was an enthusiast for the operas of Gluck, and the work is dedicated to him as 'législateur de la musique'. Here and there it appears to be a faithful stylistic imitation of Gluck's two *Iphigenia* operas, but it displays great mastery in the handling of the orchestra and its arias are particularly lyrical. With 12 performances in all the opera had only limited success since it already seemed old-fashioned and contained no ballet. Around 1786 Vogel began composing his second opera, *Démophon*. Its posthumous première (at the Opéra on 22 September 1789) was given only after the première of Cherubini's opera on the same subject. Among the musical qualities of this dramatically powerful work are the variety of recitative forms, the treatment of the woodwind as solo instruments and the harmonic colour of the choruses. The overture, composed in monothematic sonata form, remained popular into the early 19th century, and was incorporated into Gardel's ballet-pantomime *Psyché* (1790), which had more than 1000 performances at the Opéra between its première and 1829.

ARNOLD JACOBSHAGEN

Vogel [Vogl], **Kajetán** [Caetano, Cajetan] (*b* Konojedy, nr Litoměřice, *c*1750; *d* Prague, 27 Aug 1794). Czech composer and choirmaster. He acquired his basic music education at a school in Konojedy. From 1763 he attended the Jesuit college at Breslau (now Wrocław), where he sang alto and was later an organist. Afterwards he studied theology at Prague, where he joined the Servite order (Ordo Servorum Beatae Mariae Virginis), became a priest

and was appointed choirmaster at the monastic church of St Michael (1774). On the abolition of the Servite monastery (1786) he was appointed as a preacher in German at the Trinity Church in Prague. He studied composition with Habermann and the violin with F.A. Ernst, a pupil of Lolli.

Almost all Vogel's instrumental works listed by Dlabač are lost, but his sacred works were among the most widely disseminated (in manuscript) in Bohemia during the late 18th and early 19th centuries. They have a distinctly secular, high-Classical style, with many dance- and folk-like elements. According to Dlabač his models were Mysliveček, Haydn and Zimmermann. His solemn mass and *Te Deum*, performed to celebrate the jubilee of the investiture as a priest of the Archbishop of Prague, A.P. Příchovský, in 1781, are reported to have been highly successful. Shortly after the Prague performance of Mozart's *Le nozze di Figaro*, Vogel made three arrangements of this work. Haydn's 'Surprise' Symphony, no.94, survives in the Národní Muzeum at Prague as a work attributed to Vogel (manuscript parts, 1806). Vogel's only published work is the collection of *17 psalmi et Magnificat ad Vesperas* (Munich, 1819).

WORKS

SACRED

over 500 MSS, mostly in CZ-Bm, LIT, Pnm, D-Mbs, also in over 60 other sources (see EitnerQ, Kouba, 1969, and Weiss, 1976); for thematic index see Weiss (1977)

17 psalmi et Magnificat ad Vesperas (Munich, 1819)

21 masses; 7 Requiem; motets (offs, grads); 14 Litaniae Lauretanae; 2 Salve regina; vespers; Regina coeli; TeD; 12 stationes; 2 Stabat mater; 4 Tantum ergo; hymns; arias; others

MILAN POŠTOLKA

Vogel, Louis [Ludwig] (*fl* Paris, 1781–98). Flautist and violinist, probably of German extraction, as Fétis maintained. Legend has it that he was the son of the Count of Poligny, a nobleman in the service of Louis XVI. A set of three flute solos with violin accompaniment published under the name 'Comte Vogel' may be by him. In 1781 he collaborated with his Parisian friend and notorious drinking companion Krasinsky (Ernest-Louis Müller) on a set of flute and violin duos. After a highly successful concert tour of Germany in 1792, he became a flautist in the orchestra of the Théâtre des Variétés (now the Théâtre du Palais-Royal), where he remained until 1798. He published a number of instrumental works, mainly for flute, but probably not as many as his opus series seems to indicate (the large gap is probably a publisher's error). In 1814 Gerber wrote of him as still living, though he may have confused him with a younger Count of Poligny (*b* ?*c*1770), also a flautist. (*Choron-FayolleD*; *EitnerQ*; *FétisB*; *GerberNL* ('Vogel'; 'Poligny'))

ROGER COTTE

Vogel, Wladimir (Rudolfovich) (*b* Moscow, 29 Feb 1896; *d* Zürich, 19 June 1984). Swiss composer of German and Russian descent. He was influenced at an early age by Skryabin, whom he saw perform in Moscow. As a German national, Vogel was interned during World War I at Birsk in the Urals. In 1918 he moved to Berlin, where he studied window dressing at the Kunstgewerbeschule and composition privately with Tiessen (1919–21). From 1921 to 1924 he attended Busoni's masterclass in composition at the Akademie der Künste in Berlin; he also became involved in Expressionist circles, joining the Novembergruppe and participating in the activities associated with Herwath Walden's magazine *Der Sturm*. Vogel's compositions, meanwhile, quickly became well known internationally through performances by leading conductors of the time. Between 1929 and 1933 he taught composition and radio-genetic interpretation at the Konservatorium Klindworth-Scharwenka. In the early 1930s Vogel became intensely involved in the workers' movement, writing articles for *Die Welt am Abend* and *Kampfmusik*, setting Weinert's communist 'Der heimliche Aufmarsch gegen die Sowjetunion', among other workers' songs, and participating in the Kampfgemeinschaft der Arbeitersänger. He later tended to deny this involvement. In 1933 Vogel was forced to leave Germany and moved to Switzerland, where he remained for the rest of his life, other than brief excursions to Strasbourg, Brussels, London and Paris later in the 1930s. Forbidden by the authorities to work in Switzerland, Vogel relied on the support of wealthy patrons and his wife, the writer Aline Valangin, until he obtained citizenship in 1954. During this difficult time he nevertheless was active in the ISCM, taught composition privately, taking part in Scherchen's 'Sessions d'études musicales et dramatiques' in Strasbourg, and even organized the international 12-Tone Music pre-conference in Osilina (1949), attended by Dallapiccola, Malipiero and others. He became an honorary member of the Accademia di S Cecilia in Rome (1958), the Accademia Filarmonica in Rome (1955) and an ordinary member of the Akademie der Künste in Berlin (1959). He was decorated with the Berliner Kunstpreis für Musik (1960), the Musikpreis der Stadt Zürich (1970) and the composer's prize of the Schweizerischer Tonkünstlerverein (1972). Among his private composition pupils

in Switzerland were Rolf Liebermann, Wildberger, Bergman and Rautavaara.

Vogel's early compositions show the influence of Skryabin and of the German Expressionist circles around his teacher Tiessen. Although he later became a vocal supporter of Busoni's teachings, Vogel's works of the 1920s show his revolt against, rather than adoption of, Busoni's *Junge Klassizität*. His *Komposition für ein und zwei Klaviere* (1923), for example, displays a polyphonic density, a filling-out of the chromatic spectrum and a constructivist aesthetic that was foreign to Busoni. In this work, and in the *Vier Etüden für Orchester* (1930–32), he developed a compositional approach he called 'ritmica', a principle of variation based on a constant rhythm. He and his apologists frequently compared these works to constructivist art. He is best known for his use of speech and his innovations with speaking choirs, which have their roots in communist agit-prop, melodrama and in Expressionist music. He produced several moving 'dramma-oratorios', among them *Wagadus Untergang durch die Eitelkeit* (1930) and *Thyl Claes, fils de Kolldraeger* (Part 1, 1938, 1941; Part 2, 1943–5). In these works he combined dramatic and epic-oratorio elements, divided strictly between spoken text (for the narrative, illustrative and descriptive) and sung words (for lyric expression and the spiritual). He experimented further with word-tone relationships in the *Arpiade* (1954), in which he distributed Arp's text between four main groups of the speaking choir, for whom he had developed a unique notation. In the later *Flucht* (1963–4), he pursued the dramma-oratorio to its ultimate form, combining free-speaking solo voices (actors), rhythmisized solo-speaking voices, vocal soloists, vocal choir, rhythmisized speaking choir, and orchestra.

Vogel first adopted 12-note technique, in a singular fashion, in his Violin Concerto (1937), in the final movement of which he combined a 12-note row with the theme of the overture to *Die Zauberflöte*. In the 12-note works that immediately followed (e.g. *Madrigaux*, 1938–9) the row was used melodically. Later, however, he applied 12-note technique in a wider variety of ways. Influenced by architectural principles at least since his first contact with the Bauhaus in 1923, Vogel devoted several of his later works specifically to architectural, pictorial and graphic principles, for example, *Inspiré par Jean Arp* (1965), *Graphique* (1976) and *Verstrebungen* (1977). The works composed in Zürich after 1964 (e.g. *Hörformen*, 1967) are characterized by their reduced forces, increased transparency, emphasis on tone colour and clarity of form.

WORKS

(*selective list*)

for complete list see Geering and Ronner (1992)

CHORAL

Wagadus Untergang durch die Eitelkeit (L. Frobenius), S, A, B-Bar, chorus, speaking chorus, 5 sax, 1930; Sturmbezirk Wedding, unison chorus, perc, wind, 1930; Jungpionierenschritt (F. Bönsch), unison chorus, perc, 1931; Madrigaux (A. Valangin), mixed chorus, 1938–9; Thyl Claes, fils de Kolldrager (C. De Coster), 2 pts, S, 2 spkrs, speaking chorus, orch, 1938–45; An die Jugend der Welt (Vogel), chorus, small orch ad lib, 1954; Arpiade (F. Arp), S, speaking chorus, fl, cl, va, vc, pf, 1954; Antigone (incid music, Sophocles, trans. J.C.F. Hölderlin), male speaking chorus, perc, 1955; Jona ging doch nach Ninive (M. Buber), Bar, spkr, speaking chorus, chorus, orch, 1957; Das Lied von der Glocke (F. Schiller), spkr, double speaking chorus, 1959; Meditazione sulla maschera di Amedeo Modigliani (F. Filippini), S, A, T, B, spkr, chorus, orch, 1960; An die akademische Jugend (Vadian, Balbulus), chorus, orch ad lib, 1962; Flucht (dramma-orat, R. Walser), S, A, T, B, 4 spkrs, speaking chorus, orch, 1963–4; Mondträume (Arp), speaking chorus, 1965; Aforismi e pensieri di Leonardo da Vinci, chorus, 1969; Losungen (H. Meier), chorus, db, 1971

OTHER VOCAL

Man sieht nicht den tiefblauen Himmel (Kalmeer), S, pf, 1913; Die Bekehrte (J.W. von Goethe), S, pf, 1920; 3 Sprechlieder nach August Stramm, B, pf, 1922; Der heimliche Aufmarsch gegen die Sowjetunion (E. Weinert), 1v, chorus, pf, 1930; Sturmbezirk Wedding, 1v, chorus, pf, 1930; Introduktion, Chaconne, Les adieux de Claes, Le supplice de Claes [from Thyl Claes I], S, spkr, orch, 1938–42; 3 liriche sopra poemi di Francesco Chiesa, B, pf, 1941; Chant de midi [from Thyl Claes II], S, orch, 1943–5; In memoriam (R. Vuataz), A, va, hp, timp, 1947; Dal quaderno di Francine Settenne, S, fl, pf, 1952; Goethe Aphorismen, S, str, 1955; Alla memoria di G.B. Pergolesi, T, str, 1958; Worte (Arp), 2 female spkrs, 12 str, 1962; 5 Lieder (N. Sachs), A, str trio, 1966; Schritte (Eliot, J.R. Jimenez, Gsteiger, Wegelin, Spoerry), A, orch, 1968; Gli spaziali (Leonardo da Vinci, J. Verne, H. Meier), 2/3 speakers, 5 solo vv, orch, 1970–71; Friede?. . . = Pace? (Vogel), Bar, 2 tpt, 2 trbn, str, 1980; Traumgesicht (Meier), Bar, str, 1982; Das Verhör (M.A. Bulgakov), 2 spkrs, str qt, 1983; Rückkehr und Folge (A. Valangin), S, fl, vn, vc, 1984

ORCHESTRAL

Sinfonia fugata, 1925/8; 4 Etüden: Ritmica funebre, Ritmica scherzosa, Ostinato perpetuo, Ritmica ostinata, 1930–32; Rallye, 1932; Tripartita, 1933; Vn Conc., 1937; 3 Suiten [from Thyl Claes I], 1945; Cortège de noces [from Thyl Claes II], 1946; Orchestersuite [from Thyl Claes II], 1946; Passacaglia, 1945; 7 aspects d'une série de 12 sons, 1949–50; Spiegelungen, 1952; Preludio-Interludio lirico, Postludio, 1954; Vc Conc., 1955; Hörformen I, 1967; Hörformen II, 1967–9; Cantique en forme d'un canon à 4 voix, 1969; Meloformen, str, 1974; In Signum IM, 1976; Verstrebungen, 1977; Pezzo sinfonico, 1979; Colori e movimenti, 1983

CHAMBER AND SOLO INSTRUMENTAL

Nature vivante, pf, 1917–21; Dai tempi più remoti: 3 pezzi, pf, 1922–41, rev. 1968; Komposition für ein und zwei Klaviere, 1/2 pf, 1923; Etude-Toccata, pf, 1926; Variétude, pf, 1931; Epitaffio per Alban Berg, pf, 1936; Ticinella, fl, ob, cl, sax, bn, 1941; 12 variétudes sur une série de douze sons non transposée, vn, fl, pf, vc, 1941–2; Weisser Werktag, film score, fl, cl, vn, vc, 1965; Inspiré par Jean Arp, fl, cl, vn, vc, 1965; Hörformen, pf, str, 1972; Klaviereigene Interpretationsstudie einer variierten Zwölftonfolge, pf, 1972; Analogien, str qt, 1973; 4 Versionen einer Zwölftonfolge, pf, 1973; Abschied, str, 1974; Hörformen, fl, ob, cl, bn, 1974; Meloformen, str, 1974; Monophonie, vn, 1974; Poème, vc, 1974; Terzett, fl, cl, bn, 1975; Graphique, str trio, 1976; Komposition für Kammerorchester, 1976; Qnt, fl, ob, cl, bn, vc, 1976; Erstrebungen, 11 instr, 1978; Per otto strumentisti, 2fl, cl, 2vn, va, 2vc, 1978; Russische Glocken, pf, 1978; Sonances, fl, ob, cl, bn, hn, str qt, 1978; Variationen über Tritonus und Septime, str, 1978; Verso-Inverso, str, perc, 1978; Concertino, fl, str qt, 1979; Kleine Hörformen, fl, pf, 1979; Kleine Hörformen, va, pf, 1979; Contemplazione tra Allegrezza, fl, ob, cl, bn, 1980; Evocation, 2tpt, 2 trbn, 1980; Intervale, pf, 1980; Konzertante Musik, str trio, str 1980; Varianten, pf, 1980; Qnt, fl, cl, str trio, 1981; Reigen, chbr orch, 1981; Zusammenspiel, ob, str trio, 1981; Trio, 3 cl, 1982; Trio, ob, cl, bn, 1982; Klangexpressionen (Bulgakov), str qt, 1983

TAMARA LEVITZ

Vogeleis, Martin (*b* Erstein, 5 June 1861; *d* Schlettstadt, 11 Aug 1930). Alsatian writer on music. He was ordained in 1885 and taught music at the episcopal seminary in Zillisheim (1886–91). He was chaplain and director of the choir at Grafenstaden (1891–6) and served as a priest in Behlenheim (1896–1906) and Schlettstadt (from 1908). Meanwhile he was able to devote time to studying and editing Alsatian music. Vogeleis's chief publication, *Quellen und Bausteine zu einer Geschichte der Musik und des Theaters im Elsass, 500–1800* (Strasbourg, 1911/*R*), is an extensive, systematic study of its sources and history, and has remained a basic reference tool. He also published a facsimile of the Königshofen Tonary (Graz, 1903) and two collections of Alsatian sacred music, and wrote for periodicals.

Vogelgesang (Ger.). A bird-imitating ORGAN STOP.

Vogelhofer [Vogelmaier], **Andreas.** *See* ORNITHOPARCHUS, ANDREAS.

Vogelorgel (Ger.). A type of bird organ. *See* BIRD INSTRUMENTS.

Vogelsang, Johann [Johannes] (*b* Lindau; *fl c*1522–49). German music theorist. He matriculated at Freiburg University in 1522, and from 1549 was a chaplain and schoolmaster in Feldkirch, Vorarlberg. His treatise, *Musicae rudimenta* (Augsburg, 1542), is a brief Latin didactic work intended to convey the elements of music to schoolboys. The first part, in seven chapters, deals with plainchant (i.e. pitch notation), including notation, keys, solmization, mutations of hexachords, intervals and modes. The music examples, in *Hufnagelschrift*, are relatively extensive and include interesting four-part settings of psalm tones. The second part, in ten chapters, provides a brief introduction to mensural music (rhythmic notation), including notes, ligatures, rests, dots, mensural relationships and signs, *tactus*, imperfection, alteration and sesquialtera proportions. Although Vogelsang's treatise is not innovatory in content or approach, it is atypical of its humanist background in that it makes no attempt to cite authority for its assertions. Nine widely dispersed copies are extant.

Vogl, Caetano. *See* VOGEL, KAJETÁN.

Vogl, Heinrich (*b* Au, Munich, 15 Jan 1845; *d* Munich, 21 April 1900). German tenor and composer. He studied with Franz Lachner and made his début in 1865 as Max in *Der Freischütz* at the Hofoper, Munich, where he was engaged for 35 years. Having already sung Lohengrin (1867) and Tristan (1869), he created the roles of Loge in *Das Rheingold* (22 September 1869) and Siegmund in *Die Walküre* (26 June 1870), and at Bayreuth he sang Loge in the first complete *Ring* cycle (1876). He sang Siegfried in the first Munich performances of *Siegfried* and *Götterdämmerung* (1878), Loge and Siegmund in the first Berlin *Ring* cycle, as well as both Siegfrieds in the second cycle (1881, Viktoriatheater), and Loge and Siegfried in the first London *Ring* cycle (1882, Her Majesty's Theatre) and accompanied the early part of Angelo Neumann's European Wagner tour (1882). He returned to Bayreuth as Tristan and Parsifal (1886), and made his New York début at the Metropolitan Opera as Lohengrin (1890), also singing Tannhäuser, Tristan, Loge, Siegmund and both Siegfrieds during the season. In Munich he sang in Ritter's *Faule Hans* (1885), *Otello* (1888), *Benvenuto Cellini* (1889), Franchetti's *Asrael* (1892), *Pagliacci* (1893), *Dalibor* (1894), Berlioz's *La prise de Troie* and Cornelius's *Der Cid* (1895). He sang Baldur at the première of his own opera *Der Fremdling* (7 May 1899) and made his last appearance as Canio (17 April 1900), four days before his death. Besides *Der Fremdling*, he published several songs.

Vogl's voice was powerful and his stamina legendary (he sang Loge, Siegmund and both Siegfrieds in some *Ring* cycles on four consecutive days without apparent strain). During his early years at Munich he was said to lack dramatic ability and understanding (Nohl); Wagner, who refused to accept him as Walther for the first performance of *Die Meistersinger* in 1868, even referred to him as 'thoroughly incompetent' (letter to King Ludwig, 30 March 1868), and Walther remained the only major Wagnerian tenor role that he never sang. Later in his career he was greatly admired as Siegmund, Siegfried and Tristan, and Lilli Lehmann wrote that his Loge 'has never since been equalled: he was born for the part'.

In 1868 Vogl married the soprano Therese Thoma (*b* Tutzing, 12 Nov 1845; *d* Munich, 29 Sept 1921), who as Therese Vogl frequently sang with him, sometimes at his stipulation to managements. She was engaged at the Munich Hofoper in 1866, and the following year sang Ortrud in *Lohengrin*. In 1869 she sang Isolde (with her husband as Tristan) and Wellgunde in the first *Das Rheingold*, and she was Sieglinde in the first *Die Walküre* in 1870. In 1872 she appeared in Cherubini's *Médée*. She

was engaged to sing Sieglinde in the first complete *Ring* cycle at Bayreuth, but she became pregnant and had to withdraw. She later sang Brünnhilde in the first complete Munich (1878) and London (1882) *Ring* cycles, but never appeared at Bayreuth. When casting the first performances of *Parsifal*, Wagner considered that the part of Kundry 'needs ... a vocal energy which I did not think I could demand of her' (letter to Hermann Levi, 20 May 1882), and consequently neither Vogl nor his wife sang there that year. Though declining vocally, she sang at Munich for another decade and made her farewell performance as Isolde in 1892.

ELIZABETH FORBES

Vogl, Johann Michael (*b* Ennsdorf, nr Steyr, Upper Austria, 10 Aug 1768; *d* Vienna, 20 Nov 1840). Austrian baritone. Though Vogl's vocal talents were apparent from an early age, he first studied law at the University of Vienna, before being persuaded into a musical career by his schoolboy friend Süssmayr. In May 1794 he joined the company of the Vienna Hofoper, making his solo début the following year in P. Wranitzky's *Die gute Mutter*. With his fine vocal technique and commanding stage presence, he soon established himself as one of the leading singers of his day and was equally well regarded in both German and Italian opera. Among roles in which he excelled were those of Oreste in Gluck's *Iphigénie en Tauride*, Count Almaviva in *Figaro*, and Mikéli in Cherubini's *Les deux journées*. In 1814 he appeared as Pizarro in the première of Beethoven's *Fidelio*.

Vogl first made Schubert's acquaintance in early 1817, through Franz von Schober. He helped him obtain the commission for *Der Zwillingsbrüder* in 1820 (in which he himself appeared) and gave many performances of his songs, both at informal gatherings of the Schubert circle, and more widely. In 1821 he gave the first public performance of *Erlkönig* and, following his retirement from the stage the following year, dedicated himself to promoting Schubert's music. On a personal level, Schubert and Vogl appear to have enjoyed a close relationship, despite the difference in their ages and background. They spent three summer vacations together in Upper Austria (in 1819, 1823 and 1825), and only once had a serious disagreement: over Schober's libretto for *Alfonso und Estrella*, which Vogl felt to be unworthy of Schubert's talents.

As the composer himself acknowledged, the whole of Vogl's later career revolved around his songs. He played a crucial part in establishing Schubert's reputation, both during his lifetime and posthumously, in particular by demonstrating the songs' suitability for performance in the concert hall as well as in the salon. Vogl's approach to the songs was essentially dramatic and operatic. His own notebooks provide ample evidence of the lavish embellishments with which he was wont to ornament Schubert's melodic lines, a practice for which he was severely castigated by later biographers. In recent years, however, his reputation has been restored: as knowledge of contemporary performing practice has advanced, it has become clear that Vogl was merely following the conventions of his day. Certainly, his interpretations met with Schubert's approval: in September 1825 the composer wrote to his brother Ferdinand, 'the manner in which Vogl sings, and I accompany him, and the way in which we seem in such a moment to be one, is something quite new and unfamiliar.'

Among Vogl's many first performances were those of *Aufenthalt* and *Die Taubenpost*, sung at Schubert's memorial concert in January 1829. He was himself a composer, producing three masses, an offertory and a collection of 15 songs; he also earned some reputation for his public readings of authors as diverse as Epictetus, Thomas à Kempis and Marcus Aurelius.

EWAN WEST

Vogl, Kajetán. *See* VOGEL, KAJETÁN.

Vogl, Therese. Soprano, wife of HEINRICH VOGL.

Vogler, Georg Joseph [Abbé Vogler] (*b* Würzburg, 15 June 1749; *d* Darmstadt, 6 May 1814). German theorist, teacher, keyboard player, organ designer and composer. His theory of harmony influenced 19th-century approaches to music analysis, and he anticipated the Romantic period in his chromatic harmony, colouristic orchestration and melodic borrowings from folk tradition and exotic cultures. His radical concept of organ design aroused widespread interest and controversy; his writings on the reform of sacred music foreshadowed the Cecilian movement.

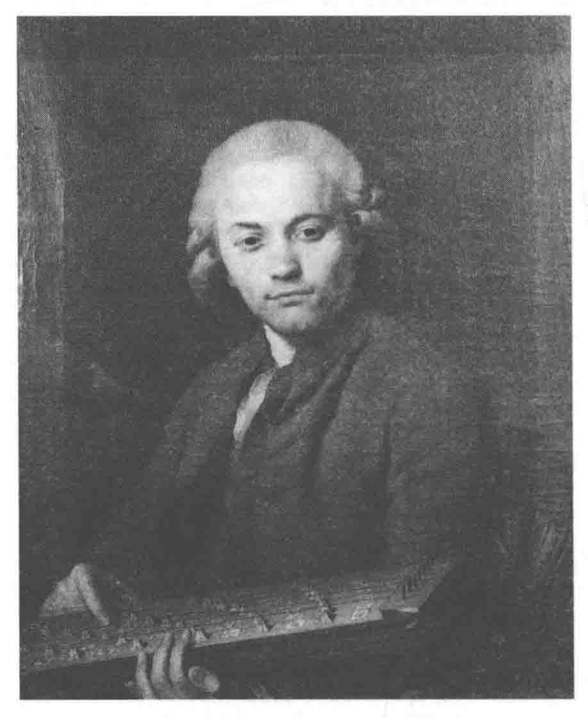
1. Life. 2. Teachings. 3. Music.

1. LIFE. The son of a Würzburg instrument maker, Vogler attended a Jesuit Gymnasium before enrolling in humanistic studies at Würzburg University in 1763. Subsequently he studied common and canon law, first at Würzburg, then at Bamberg. During his student years he composed ballet and theatre music for university performances. In 1770 he obtained a post as almoner at the Mannheim court of Carl Theodor, the Elector Palatine. Politically resourceful, he soon attained prominence in

the court's musical life, secured the elector's favour, and was granted the financial means to pursue musical study in Italy (from 1773). There he studied briefly with Padre Martini in Bologna and spent a longer period in Padua, where he studied theology and became a disciple of the theorist Francesco Antonio Vallotti. In Rome, he was granted membership in the Accademia dell'Arcadia, and Pope Pius VI named him papal protonotary, chamberlain, and Knight of the Golden Spur.

Vogler returned to the Mannheim court in November 1775 and in this new phase of his career, he acquired the titles of spiritual counsellor and second Kapellmeister. He founded a music school, the Mannheimer Tonschule, and began publishing didactic writings, including the handbook *Tonwissenschaft und Tonsezkunst* (1776), a compilation of pedagogical materials entitled *Kuhrpfälzische Tonschule* (1778) and the three-volume series *Betrachtungen der Mannheimer Tonschule* (1778–81).

Following the removal of the electoral court to Munich in 1778, Vogler remained temporarily at Mannheim. In 1780 he travelled to Paris to win approbation for his theory of harmony from the Académie Royale des Sciences, and during the next three years he had works performed both in Paris and at Versailles. He then went to London (1783), where the Royal Society approved his theoretical system. Summoned to Munich to succeed Andrea Bernasconi as first Kapellmeister in 1784, he remained there only until 1786, when he entered the service of Gustavus III, King of Sweden, as music director and teacher of the crown prince. At Stockholm he resumed his pedagogical work but was also permitted to continue his travels, and in 1792, following the assassination of his royal patron, he set off on a journey that took him to Gibraltar, Cádiz (where he was mistaken for a spy and arrested), Tangier and further into the Mediterranean in search of ancient, orally transmitted traditions of modal singing.



In 1793 Vogler returned to Stockholm, where he retained an official post under Gustavus Adolphus IV until 1799. His subsequent wanderings as a performer, organ designer and teacher included sojourns in Copenhagen (1799–1800), Berlin (1800–01), Prague (1801–2) and Vienna (1802/3–5), where he met Haydn, competed with Beethoven, obtained a commission from Emanuel Schikaneder for the opera *Samori*, and taught the young Carl Maria von Weber.

After spending two years in Munich, he received a court appointment at Darmstadt in August 1807. There, in 1810, C.M. von Weber returned to his mentor for further instruction and joined a circle of friends that included Meyerbeer, the theorist Gottfried Weber and the Austrian composer Johann Gänsbacher. This group of disciples soon disbanded, but Vogler continued to compose and undertake ambitious projects, including a 'monument to the science of organ building', the Triorganon: a huge organ to be equipped with 13 manuals distributed among three separate consoles, which remained unfinished at the time of his death.

2. TEACHINGS. In his theoretical handbooks, treatises and essays Vogler aimed to apply harmonic principles in terms understandable to amateurs as well as professionals. Inspired by Vallotti's rationalist methods, he proposed a chain of deductions, leading from elementary harmonic materials to the outermost reaches of modulation and chromatic harmony, as a guide for music instruction and analysis; and to make tangible his theoretical calculations, he devised an eight-string *Tonmaass*, a latter-day monochord whose fixed bridges furnished string divisions in nine to 16 parts (see illustration).

A key ingredient of his theory was the 'system of reduction', first set forth in *Tonwissenschaft und Tonsezkunst*. Based on Vallotti's principles of chord structure and inversion (rather than Rameau's precepts) the method offered a means for determining the functional chord root for any vertical sonority in accordance with contrapuntal context; and in analytical writings from the *Betrachtungen* to the *System für den Fugenbau* (written in 1811), Vogler interpreted the concept of reduction broadly to explain the harmonic design of phrases, sections or whole compositions as elaborations of simple, archetypal progressions. His theory permitted chord roots on all degrees of the scale, and in order to represent the function of scale degrees and their triads, he assigned them the roman numerals I–VII. These symbols appear sporadically in Vogler's early writings (contemporaneously with similar usage by J.P. Kirnberger), but his later publications, especially the analyses of his *XXXII préludes* (1806) and *Davids Buss-Psalm* (1807), use roman-numeral analysis extensively to represent the harmonic content of an entire composition.

In *Tonwissenschaft und Tonsezkunst*, Vogler argued that while remote modulations should be avoided by composers in the interest of tonal unity, they were essential to the church organist's art of improvisation; and in his *Betrachtungen*, volume iii, Vogler's sample modulations explored a novel and dense chromaticism, involving enharmonic spellings of diminished 7th and augmented 6th chords, to illustrate tonal paths from a given centre to any other major or minor key. The *Handbuch zur Harmonielehre* offered additional examples and relaxed the earlier injunction against remote

Georg Joseph Vogler with his Tonmaass: portrait attributed to Friedrich Ölenhainz, 1795 (Städtisches Reiss-Museum, Mannheim)

modulation in composition. To encompass the complete tonal spectrum, but also to preserve the unique tonal colour of different keys, he advocated an unequal, 'characteristic' temperament for the tuning of keyboard instruments. A persuasive mentor, he imparted his theories to younger contemporaries, including Gottfried Weber, J.H. Knecht, V.J.K. Tomášek and Joseph Drechsler, who adapted his ideas in their writings.

Vogler's work as a critic of musical style and technique is well represented in the *Betrachtungen*, whose analyses and essays were designed to refine students' musical tastes and provide them with the skills to judge a composition. Proceeding from the premise that music is an imitative art, he concentrated on works with a text or with depictive content, such as his Singspiel *Der Kaufmann von Smyrna* (*Betrachtungen*, ii–iii) and his overture to Shakespeare's *Hamlet* (*Betrachtungen*, i). Yet he also wrote on non-programmatic instrumental music and expounded on analogies between musical form and rhetoric, most extensively in *System für den Fugenbau*, where he also provided a detailed account of thematic development.

With the aid of published *Verbesserungen* (improved versions of existing works), Vogler sought to explain how musical knowledge had progressed in the course of the 18th century. His most ambitious project of this type, a revised version of G.B. Pergolesi's *Stabat mater* (*Betrachtungen*, i–iii), underscored a commitment to progress in sacred composition. However, he also wrote of an ideal church music whose unembellished purity was capable of timeless endurance (*Betrachtungen*, i, 301–4). In *Choral-System* (1800), he proposed a method of harmonization designed to preserve the modal character of harmonized chorale melodies.

As a theorist of acoustics and organ design, he proposed a SIMPLIFICATION SYSTEM whose principles – including economy of materials, reliability of wind pressure and acoustical enhancements – were embodied in his Orchestrion, a compact, transportable organ (*see* ORCHESTRION, (1)). Initially completed at Rotterdam in 1790, but subject to later modifications, it featured the use of free reeds and exploited the principle of difference tones to eliminate the large and costly pipes otherwise needed to produce low notes. Though deplored by conservative organists, the simplification system was implemented in the renovation of more than 30 church organs, including instruments in Berlin, Munich, Prague and Salzburg.

3. MUSIC. The scope of Vogler's musical accomplishment, encompassing sacred vocal works, operas, instrumental ensemble pieces and solo keyboard music, defies generalization. Much of his sacred output adheres to the austerity of texture, rhythm and harmony that he advocated in his writings, but there are also examples of florid vocal style and richly orchestrated textures; and while many of his chorale settings are purely diatonic, at least one group of harmonizations, in *Zwölf Choräle* (published in 1810 as revisions of harmonizations by J.S. Bach and supplied with commentary by C.M. von Weber), bristles with chromaticism.

Vogler's work as a theatre composer, variously conservative and innovative, touched on most of the genres and stylistic currents of his time. In the ballet *Le rendez-vous de chasse* (1772) and the melodrama *Lampedo* (1779), he explored a language of musical pantomime and dramatic gesture, while the opera *Castore e Polluce* (1787), replete with choral tableaux, dances and arioso as well as virtuoso arias, represents a synthesis of Italian and French operatic tradition. By contrast, the Swedish opera *Gustaf Adolph och Ebba Brahe* (1788) forgoes elaborate arias and static tableaux in favour of syllabically rendered dialogue and a fast pace of dramatic action. The late Viennese opera *Samori* (1804), uniquely rich in melodic, harmonic and instrumental diversity, features exotic and Romantically evocative solo wind colours, musically and dramatically complex ensemble scenes and a remarkable experiment in which a repeated two-word phrase is intoned in a kind of Sprechgesang, halfway between speech and singing.

The surviving symphonies and concertos by Vogler reveal polished craftsmanship and a flair for orchestral colour. He was fond of highlighting wind instruments, and the use of two pairs of horns in complementary keys is a trademark traceable to the early *Schuster-Ballet* of 1768. Though melodic invention is not one of his recognized strengths, some works, notably in the two *Polymelos* collections (1791, 1806) and *Pièces de clavecin* (1798), compensate by adopting exotic melodies, allegedly drawn from African, Chinese, Russian and Scandinavian folk traditions. The latter set, published as a supplement to his Swedish keyboard manual, *Clavér-schola*, extends from pieces of modest difficulty to showcases for virtuosity whose complex trill and glissando passages anticipate those of Beethoven's Waldstein Sonata.

Although relatively few of Vogler's works achieved wide public recognition, some of his music did indeed win immediate, and even enduring, favour. Contemporary accounts record an uncontrollable stampede for tickets to a Copenhagen performance of *Hermann von Unna*, and a chorus of Furies from *Castore e Polluce* was regularly incorporated in Munich performances of Mozart's *Don Giovanni*. Various works were performed in concerts well into the 19th century, and Robert Schumann praised Vogler's music as late as 1838.

To judge from contemporaries' accounts, some of Vogler's most original accomplishments were in the realm of keyboard improvisation rather than notated composition. Although Mozart, hearing him early in his career at Mannheim, condemned him as 'a trickster pure and simple' (letter to Leopold Mozart, 18 December 1777), Schubart (p.133) declared that he was 'one of the foremost organ and harpsichord players in Europe'. Outstandingly successful as a virtuoso organist, he was known for startling sound effects (including low-register note-clusters on the pedalboard) in tone paintings and fantasias on exotic melodies with such titles as *Die Spazierfahrt auf dem Rhein vom Donnerwetter unterbrochen*, *Terrassenlied der Afrikaner* and *Das jüngste Gericht*.

Vogler's work was seldom free from controversy. He was chided for his eccentricities, and detractors denounced him as a charlatan. He nevertheless enjoyed the admiration of patrons and pupils throughout his career, and in retrospect he stands out as an innovative musical thinker and practitioner. His accomplishments not only added a colourful voice to European musical life of the late 18th and early 19th centuries, but also exerted far-reaching influence on his successors.

WORKS

data approximate; for further information see Schafhäutl and MGG1

G – Vogler: Gegenstände der Betrachtungen, suppls. to Betrachtungen der Mannheimer Tonschule (see Writings)

STAGE

Der Kaufmann von Smyrna (Spl, 1, C.F. Schwan, after N. Chamfort), Mannheim, Schauspielhaus auf dem Fruchtmarkt, sum. 1771, *D-DS* (facs. in GOB, viii, 1986), *Mbs*, *OF**, *US-Wc*, pubd in G ii–iii (1779–81); rev., Mannheim, 20 Feb 1778

Lampedo (melodrama, 1, C.F. Lichtenberg), Darmstadt, Hof, 4/11 July 1779, *D-DS* (facs. in GOB, ix, 1986), *Mbs*

Erwin und Elmire (Spl, 1, J.W. von Goethe), Darmstadt, 12 Dec 1781, *DS**

Albert der Dritte von Bayern (Spl, 5, K.T. von Traitteur), Stuttgart, National, Dec 1781 or Munich, Hof, 1781, lost, lib *A-Wn*, *D-Mth*, *Us-Wc*

Ariadne en Naxe (tragedy), *c*1782, ?unperf., lost, cited in *Betrachtungen*, iii (1780–81)

Eglé (pastorale, 2), *c*1782, ?unperf., see Brenet and *Betrachtungen*, iii (1780–81)

Le patriotisme (grand op), Versailles, 25 March 1783, lost, cited in *Handbuch zur Harmonielehre* (1802)

La kermesse, ou La foire flamande (oc, 2, J. Patrat), Paris, Opéra-Comique (Favart), 15 Nov 1783, ov. and airs de ballet, pf, vn (Paris, *c*1783), vs selections in Choix de musique (Paris, 1784)

Castore e Polluce (tragedia lirica, 3, after C.I. Frugoni: I Tintaridi, after P.-J. Bernard: *Castor et Pollux*), Munich, Hof, 12 Jan 1787, *A-Wgm*, *D-Bsb*, *DS**, *Hs*, *Mbs*, *OF*; rev. in Ger., Munich, Hof, 16 Jan 1806

Gustaf Adolph och Ebba Brahe (lyric drama, 3, J.H. Kellgren, after Gustavus III), Stockholm, Royal Opera, 24 Jan 1788, *DS**, *S-Skma*, *St**, vs ed. in MMS, vii (1973)

Zoroastre (melodrama), 1796, lost, listed in *Verzeichniss*

Der Koppengeist auf Reisen, oder Rübezahl (Spl, A. von Kotzebue), Breslau, 1802

Samori (heroisch-komische Oper, 2, F.X. Huber), Vienna, an der Wien, 17 May 1804, *D-DS*, *Mbs*, *OF*, vs (Vienna, 1805), new ov., 1811 (Offenbach, 1817); rev., Darmstadt, 30 June 1811

Epimenides (Spl, 1), ?1806, *DS*, ?unperf.

Der Admiral (Spl, 1), 1810–11, *DS*, ?unperf.; rev. as Der gewonnene Prozess (Spl, 2), Darmstadt, ?1811, *DS**

Prols: Gluck's Armide, 1787, *DS**, *S-St*; 2 prols to Curland, 1788, lost, listed in *Verzeichniss*; Gustaf Adolph och Ebba Brahe, 1795, *D-DS**, *S-St*, separate prol ov., D, *St*

Incid music: Hamlet (W. Shakespeare), ov., 4 entr'actes, pubd in G i (1778–9), iii (1780–81); Der Eremit auf Formentera (Kotzebue), ov., ?1785, *D-DS*, *S-Skma**, used in 1798 for C. Stenborg and others: Eremiten (pasticcio), *Sk*, *St*; Athalie (J. Racine), 1786, *D-DS**, *S-St*; Hermann von Unna (A.F. Skjöldebrand), 1795, *D-DS**, vs (Leipzig, n.d.); Die Kreutzfahrer (Kotzebue), ov. and 4 nos., ?1802, ov. (Offenbach, *c*1818), *DS*; Die Hussiten vor Naumburg (Kotzebue), closing chorus, 1802, *Mbs*; Die Spanier in Peru, oder Rollas Tod (Kotzebue), chorus and Indian march, 1803, lost, listed in *Verzeichniss*

Ballets: Schuster-Ballet (frag.), 1768, frag. rev. 1807 in suppl. to *Utile dulci* (1808); La soirée enchantée, 1771, lost, cited in *Utile dulci* (1808); Le rendez-vous de chasse, ou Les vendanges interrompues par les chasseurs, 1772, *DS**, ed. in RRMCE, xiv (1996), also as Jäger-Ballet, 1777, arr. pf, vn, pubd in G iii (1780–81); Le forgeron villageois, arr. hp/pf (London, n.d.), also as Schmitt-Ballet, 1777, arr. pf, vn, pubd in G iii (1780–81); Jäger-Ballet and Schmitt-Ballet also pubd as Le rendez vous à la chasse and Le maréchal ferrant in Recueil d'airs, hp, vn (Paris, n.d.)

Other lost stage works: Aretius (? incid music), Triumphirend göttliche Vorsichtigkeit, oder Joas (?incid music), both 1766, listed in *Verzeichniss* as dramas

SACRED VOCAL

only principal sources shown

Masses and mass sections (most for chorus, orch, some with solo vv, 2nd choir, org): Missa pasatorita, D, Missa pastorella, A, 1768, 1767, *D-OF**; *Mbs**; Missa pastoritia, E, 1775, rev. 1804 (Offenbach, *c*1824), *DS*, vs ed. J. Winter (Karlsruhe, 1938); Ky–G–San, G, Cr–San, D, G–Ag, b, D, 2 Ky, D, G, Gl, 4 G, C, D, F, d, 2 Ag, D, e, *OF**, G, F, *OF*, Ky, C, Gl, F, *DS**, Ky, D, G, C, San, C, *DS*, ? all 1775–6; Ky–San, Bb, Gl, *OF**, Ag, g, *DS*, all *c*1775–8; Requiem, g, 1776, *DS**; Deutsche Kirchenmusik (J.H. von Kohlbrenner), a, with org acc. 1777, *DS** (n.p., ?1778), with orch acc. 1778, rev. 1807 in suppl. to *Utile dulci* (1808); Missa solennis, d, 1784 (Offenbach, *c*1823); Missa de Quadragesima, F, chorus/(chorus org), 1784 (Offenbach, *c*1818); Missa de Quadragesima, F, 2 choruses, b insts, org, 1805, based in part on 1784 mass, *DS**; Requiem, E♭, 1809, *DS** (Mainz, 1822), vs (Mainz, 1822); 4 Requiem settings, c, d, e, E♭, *OF**; more than 10 other masses, some lost; Ag, g, *DS*; *c*40 further partial mass settings and mass movts, most 1775–7, listed in *Verzeichniss*, ?lost

Other sacred with orch/inst ens (for chorus, some with solo vv, 2nd choir, org): TeD, D, 1775, *D-OF**, *Mbs* (Offenbach, 1827); Beatus vir, F, In exitu Israel, C, Laudate Dominum, B♭, Laudate pueri, E, Memento Domine David, G, Regina coeli, C, *DS**, Mag, C, *DS*, Confitebar, G, Mag, D, *OF**, all *c*1775–8; Miserere, C, with b insts, org, 1776, *DS**, with 2 vn, 2 va, *DS**, G iii (178–81), rev., *Mbs*; Motetto Sancta Maria, A, 1776, *OF**, Vesperae chorales, 1776, *Bsb** (Speyer, ?1781), also as Psalmi vespertini, *Mbs*; Die Auferstehung Jesu (orat.), 1777, *DS*, *S-Smf**; Helig är Herren (cant.), C, ?1786, *D-Bsb*; Miserere, E♭, 1789 (Offenbach, 1826); TeD, D, 1797, *DS**, as O Gud! vi lofve Dig, *S-St**; Serenissimae puerperae sacrum, 1804, *D-DS** (Offenbach, 1817); Vesperae de Paschate, 1805, *DS**; Laudate Dominum, B♭, 1808 (Offenbach, 1817), ed., E. Hessel (Heidelberg, 1961); Laetatus sum, G, 1811, *Mbs**; Veni Sancte Spiritus, B♭ (Offenbach, 1817); De profundis, f, Dixit Dominus, D, both *Bsb**; TeD, A, *S-Smf**; at least 37 other works, ? many lost; *c*10 more pieces for 1v, 2vv, with orch/inst ens, some lost

Other sacred, unacc. or with org/pf/bc (for chorus, some with solo vv, 2nd choir): Ecce panis angelorum, B♭, G i (1778–9); Davids Buss-Psalm (M. Mendelssohn), a, suppl. to *Utile dulci* (1807); many in collections such as 24 lateinische Hymnen, 1809/10, *D-Mbs**, nos.1–12 pubd as 12 Kirchen Hÿmnen (Munich, n.d.), 12 kleinere Gesangscompositionen, 1810–14, *Mbs**; Hymni sex (Leipzig, 1822), as Cantus processionalis, *Bsb**; at least 10 other works, some lost; further MS and pubd collns overlapping those listed, esp. in *DS*, *Mbs*

Chorale and plainsong harmonizations (various scorings): En jungfru födde et barn i dag, 1796, *S-Skma**; 90 chorales, suppl. to *Choral-System* (Copenhagen, 1800); 12 cantiques, ?1812, *D-Mbs**; 14 chorales, 1813, *DS*; 13 [27] Kirchengesänge, 1813, *A-Wn**; others; org accs. to plainsong, incl. Pater noster, Praefatio di SS Trinitate, Praefatio di Beata Maria Virgine, all *D-Mbs*

SECULAR VOCAL

only principal sources shown

With orch: Ino (cant., K.W. Ramler), 1779, *D-DS*; Le dernier morceau de la cantate suédoise, 1786, *DS**; Musique til Seraphimer Ordens Dagen, 1795, *OF*, *S-Skma*, *St*; Trichordium und Trias Harmonica (Meissner), 1799 (Offenbach, 1815), vs (Offenbach, 1815); Amore prigionero (P. Metastasio), 1804, *D-DS*; Carmen seculare una cum psalmodia Vogleri (ode, Horace), 1806, *DS*; Herr Urian (M. Claudius), ?1808, *Mbs*; Augusta's Krone (cant.), 1809, *DS**; Die Scala, 1810 (Offenbach, ?1815), vs (Offenbach, *c*1815); Frohe und fromme Empfindungen, 1813, *DS*; Dialog zwischen dem Platan und dem Kürbis, 1814, *Mbs**; Lied an den Rhein, 1814 (Munich, n.d.); Teutonia, oder Kriegslied, 1814, *DS*; Auf den 15. Februar, lost, listed by Schafhäutl

Other: more than 15 works for chorus, mainly unacc., most on Ger. texts; numerous arias, rondos, songs, duets, etc. on Ger., It., Fr., Swed. texts; Triumph der kindlichen Liebe (occasional piece), ? with orch, 1764, Tuiskon ist erwacht (declamation), with orch, ?1814, both lost, listed in *Verzeichniss*

INSTRUMENTAL

only principal sources shown

Syms.: G, 1779, *D-DS*, *Mbs*, facs. in The Symphony 1720–1840, ser. C, v (New York, 1983); d, 'Pariser', 1782, *DS**; C, 'Satisfactions Sinfonie', 'La scala', 1799, *DO** (Offenbach, *c*1815), rev. 1806 as Baierische national Sinfonie, with addl insts, *DS*

MARGARET GRAVE

Vogler, Johann Caspar (*b* Hausen, nr Arnstadt, 23 May 1696; *d* Weimar, bur. 3 June 1763). German organist and composer. At the age of ten he studied with J.S. Bach in Arnstadt, and later with P.H. Erlebach and Nicolaus Vetter in Rudolstadt. From about 1710 to 1715 he studied again with Bach, this time in Weimar; it was presumably during these years that Bach required him to copy by hand the two *livres d'orgue* of Jacques Boyvin. From 1715 to 1721 he was organist in Stadtilm and from 19 May 1721 until his death organist of the Weimar court (a post which Bach had held from 1708 to 1717). In late 1729 Vogler applied unsuccessfully for two organ posts in Saxony, at the Nikolaikirche, Leipzig, and Sts Peter und Paul, Görlitz; they were filled by other Bach pupils, Johann Schneider and David Nicolai respectively. Vogler failed his trial in Leipzig because he 'played too fast and confused the congregation'. It is therefore ironic that in his application to Görlitz he boasted of his 'swiftness of hand and feet'. In 1735 he was chosen as organist at the Marktkirche in Hanover, but Duke Ernst August refused to let him leave Weimar (just as Duke Wilhelm Ernst had refused to let Bach leave). In consolation the duke appointed Vogler deputy mayor of Weimar; two years later he became mayor.

Vogler is known to have composed a *St Mark Passion*, but only three works by him have survived. These are all organ chorales, noteworthy for their elaborate style. The setting of *Jesu Leiden, Pein und Tod* (BWV Anh.57) represents perhaps the most extreme example in the entire organ repertory of an ornamental chorale, attested by the many hemidemisemiquavers and even shorter notes used to embellish the chorale tune. As numerous similarities demonstrate, this work is modelled on Bach's *Orgelbüchlein* setting of *O Mensch, bewein dein Sünde gross* BWV622. The two chorales that Vogler published as his *Vermischte musikalische Choral-Gedanken* (Weimar, 1737; ed. in Incognita organo, xxxvi (Hilversum, 1988)) also betray his teacher's influence. The first, *Schmücke dich, o liebe Seele*, begins ordinarily enough as a bicinium but concludes with a four-part harmonization whose phrases are separated by toccata-like figuration in demisemiquavers. Vogler's model here was surely Bach's 'Arnstadt' chorales BWV715, 722, 726, 729, 732 and 738 – virtually the only other Baroque organ chorales that feature such interludes. The second setting (a partita on *Machs mit mir Gott nach deiner Güt*) opens with another harmonization of this type and continues with an ornamental movement resembling some of Bach's '18', BWV651–68.

Formerly known in the Bach literature as the scribe Anonymous 18, Vogler also prepared several copies of his teacher's compositions. His copy of the Prelude and Fughetta in C major BWV870a is especially important in regard to performing practice, since it contains a full set of fingerings.

RUSSELL STINSON

Vogt, Augustus Stephen (*b* Washington, ON, 14 Aug 1861; *d* Toronto, 17 Sept 1926). Canadian organist and conductor. He studied at the New England Conservatory, Boston, and the Leipzig Conservatory under Reinecke and Jadassohn. After returning to Toronto he held an organist's post, and in 1894 founded the (Toronto) Mendelssohn Choir and conducted it, with a break from 1897 to 1900, until 1917 when he was succeeded by H.A. Fricker. Vogt was principal of the Toronto Conservatory (1913–26) and dean of the music faculty in the university (1919–26). The high reputation of the Mendelssohn Choir was the result of Vogt's brilliant abilities as a choral trainer. Under him the choir performed a wide repertory in Canada, and made successful appearances in Boston, Buffalo, Chicago, Cleveland and New York. In his memory a Vogt Society was founded in Toronto in 1937; this became the Society for Contemporary Music, which was active until 1945.

HELMUT KALLMANN

Vogt, (Auguste-Georges-)Gustave (*b* Strasbourg, 18 March 1781; *d* Paris, 20 May 1870). French oboist, teacher and composer. In 1798 he entered the class of François Sallantin at the Paris Conservatoire, and was awarded a *premier prix* the following year. He may also have studied composition with A. Reicha. Concurrent with his studies he served as second oboist at the Théâtre Montansier, and later he joined the orchestras of the Théâtre Italien (1800–02) and Opéra-Comique (1802–12). In 1809, after travelling to Italy and Austria as a member of Napoléon's *musique particulière*, he was appointed first oboe at the

Opéra-Comique, and adjunct professor at the Conservatoire. He subsequently succeeded Sallantin as both principal oboist at the Opéra (1812–34), and as *professeur titulaire* at the Conservatoire (1816–53, thence to 1868 on the *Comité des Études*). Among his students were the leading oboists, oboe makers and future Conservatoire professors of the next generation: H. Brod, A. Vény, A.-M.-R. Barret, C.-L. Triébert, S.-X. Verroust, A.-J. Lavigne, A. Bruyant (who inherited Vogt's compositional output) and C. Colin. Vogt was a member of the Chapelle Royale of Louis XVIII from its establishment in 1814; he was banished for Bonapartist sympathies, but reinstated for the period 1819–30. He was also a founding member of the Société des Concerts du Conservatoire (1828–44), and in 1829 he was awarded the Légion d'Honneur.

As well as being an orchestral musician, Vogt was also active as a soloist. Concert tours took him to Strasbourg (1818), London (1825 and 1828) and Munich and Stuttgart (1830). He performed in a wind quintet with Guilou, Boufil, Henri and Dauprat, and was an active member of the Société Académique des Enfants d'Apollon. In 1823 he was being paid over the standard wage for a principal orchestral musician at the Opéra and by 1830 his combined earnings are said to have amounted to the enormous annual income of 15,000F. Renowned for his virtuosity as much as his singing tone, Vogt was named by Vény the *premier hautboïste d'Europe* and reviews in the *Allgemeine musikalische Zeitung* compared him favourably with other oboists of his day. In 1821 Spohr admired his even tone and correct intonation and three years later Berlioz added his own praise, but not all critics shared their enthusiasm. The reviewer in *The Harmonicon* found his sound 'though the true one of the oboe ... not pleasing to English ears: we have been accustomed to a fuller and less reedy sound'. Vogt's conservatism has often been criticized. His oboe method discredited the benefit of the additional keys which were introduced around this time on German oboes, however by 1825 he was playing the most advanced oboe available in France. He remained critical of change, and in 1839 opposed the appointment of a teacher of Boehm flute at the Conservatoire due to the anxiety that it might compromise his own position and force him to accept an aesthetic he felt incapable of embracing.

The majority of Vogt's compositions were written either for his own use (concertos, fantaisies on popular operatic themes, chamber music), for pedagogic purposes (an oboe method, *c*1816–25, probably intended as part of the series of such works used at the Conservatoire, and sight-reading exercises) or *pièces de circonstance* such as works written for the Duke and Duchess of Berry, with whom Vogt was closely connected.

WORKS

most survive as MSS in F-Pn

VOCAL

Dans ce temple de deuil (cant.), 1820 [on death of the Duke of Berry]
Laisse-là les plaisirs moderne Babylone, 1820 [on death of the Duke of Berry]

GEOFFREY BURGESS

Vogt, Hans (*b* Danzig [now Gdańsk], 14 May 1911; *d* Metterich, Eifel, 19 May 1992). German composer, conductor and writer on music. He attended Georg Schumann's composition masterclass at the Prussian Academy of Arts (1929–34), while simultaneously studying at the Berlin Akademie für Kirchen- und Schulmusik (diploma 1934) and Berlin University. He went on to serve as répétiteur at the theatre in Bielefeld (1934), head of opera in Detmold (1935–8) and city music director in Stralsund (1938–44). After military service during World War II, he devoted himself primarily to composition. In 1951 he was appointed to the Städtische Hochschule für Musik at Mannheim (later the Heidelberg-Mannheim Hochschule); he also taught at Heidelberg University. Co-founder of the Gesellschaft für Neue Musik, Mannheim (1963), he served as its director until 1984. His honours include the Düsseldorf Schumann prize (1955), the Prix Reine Elisabeth de Belgique (1961, 1969), the Stuttgart

Stamitz prize (1967) and the Premio Città di Trieste (1968); he was also guest of honour at the Villa Massimo, Rome (1978–9).

Vogt's musical style, which always considered the player as well as the listener, changed little over four decades. While his early works show the influence of Hindemith, Schoenberg and Bartók, he soon focussed on what F.-G. Rössler has described as 'variational processes with rhythmic and melodic cells'. Layers of meaning and allusion in the vocal works are reflected in their musical textures, particularly in the use of collage, tone clusters and taped material. With the exception of the string quartets, few works duplicate genres or media.

HERMANN JUNG

Vogt, Martin (bap. Kulmain, 3 April 1781; *d* Colmar, 18 April 1854). German organist and composer. He trained as a musician in various Bavarian monasteries, met Abbé Vogler in 1803, and studied with Michael Haydn in Salzburg (1803–4). From 1806 he was active as a musician at the monasteries of Einsiedeln, St Trudpert, Mariastein and St Urban, and briefly in Eschenzweiler in Alsace. In 1812 Vogt became organist at Arlesheim Cathedral. He was appointed music director and cathedral organist of St Gallen in 1823, and occupied the same posts at the cathedral of St Martin in Colmar from 1837 to his death. Over 300 of his compositions have been preserved, and a number appeared in print, usually published by Vogt himself and seldom dated. His organ works, character pieces for divine service that are typical of their time in their melodious and pleasing style, were written not later than his time in St Gallen. His masses and other sacred vocal works were very much to the taste of his time and had quite a wide distribution. However, he is remembered less by his compositions than by an autobiography published shortly before his death, which contains a wealth of anecdotes.

DIETER RUCKSTUHL

Vogt, Mauritius [Joannes Georgius] (*b* Königshofen im Grabfeld, Bavaria, 30 June 1669; *d* Mariánská Týnice, nr Kralovice, 17 Aug 1730). Bohemian composer and theorist of German birth. He went to Bohemia with his father, a surveyor, and studied philosophy and theology at Prague. In 1692 he joined the Cistercian monastery at Plasy, where he studied music (possibly under Cardelius). He was ordained priest in 1698. According to his own statement in *Conclave*, Vogt learnt music in Italy and Germany with several masters (the exact time of these studies, before 1717, is not specified). As a monk at Plasy, he was also active as organist, composer and music director to Countess Marie Gabriela Lažanská at Manětín from about 1711. He visited Göttweig in 1722; in 1724 he became 'superior' of the pilgrimage church at Mariánská Týnice and held this post until his death.

Vogt's *Vertumnus vanitatis* contains 31 arias on Latin meditative texts for solo voice and continuo, in Venetian late Baroque style, using concise da capo form with short introductory passages of quasi-fugal character. Three other arias are included in Vogt's theoretical treatise *Conclave thesauri magnae artis musicae* as examples to elucidate the aria genre. The *Conclave* is by no means merely a continuation of Janovka's *Clavis ad thesaurum magnae artis musicae* (1701, 2/1715), as has been asserted: rather it is conceived historically. Its main contribution is its summary of harmonic theory in 36 rules, and in the final crystallization of the doctrine of affections and figures before Mattheson and Scheibe. An important part of the treatise deals with the organ and organ building. Vogt's *Conclave* was highly recommended by J.C. Gayer, choirmaster of the metropolitan cathedral of St Vitus at Prague. Vogt was also interested in cartography and historiography; he wrote a history of the Plasy monastery, *Tilia Plassensis*, containing sporadic mentions of music.

WORKS

In principio thema tene, aria, S, B, bc, modern copy *CZ-Pnm*; Perfida mundi pax, aria, S, 2 vn, bc, modern copy *Pnm*; Questi vaghi giovenetti, aria, S, bc: all in *Conclave thesauri magnae artis musicae* (Prague, 1719)

Vertumnus vanitatis musice in 31 fugis delusus [arias], 1v, hpd, copy dated 1740 *Ps*, modern copy *Pnm*

Litaniae lauretanae, G, *Bm*

3 masses and 27 motets listed in Osek monastery inventory (1720); other works cited in *Conclave*: lost

MILAN POŠTOLKA

Vogt [Voctuis, Voctus, Voet, Voetus, Voicius, Voigt, Voit], **Michael** (*b* ?Leipzig, 29 Sept 1526; *d* Torgau, 10 March 1606). German theorist, editor and Kantor. In 1544 he matriculated at Wittenberg University where he was a pupil and supporter of Coclico; he also held a post in the cathedral Kantorei there, serving under Johann Walter (i). In 1549 on the recommendation of Melanchthon he was appointed Kantor in Meissen, succeeding Johann Reusch. Later the same year he left to take up a similar post in Torgau as successor to Johann Walter (i); he retired from this post in 1604.

Vogt's most important work is the *Definitio, divisio musices, et eius subdivisio* (Basle, 1557); it is thought to have been reprinted twice in 1575 under different titles: *Stoicheoisis harmonica* and *Systemata seu scala harmonica*. Printed on a large sheet and folded at the centre, this presents in schematic form a classification of the whole field of music, together with humanistic poems by Coler, Diaconus, Fabricius, Melanchthon and Siberus, diagrams representing the mathematical ratios of the musical intervals, two short two-part canons and pictorial representations of legendary figures important in music (e.g. Tubal, Pythagoras, Orpheus), each of which is accompanied by two lines of Latin verse (distichs).

The definitions and much of the text are in the Pythagorean mathematical-philosophical tradition, whereby Vogt quoted, often with specific references, various ancient and medieval authorities, notably Proclus, but also Boethius, Cicero, Horace, Nicomachus, Ovid, Plato, Pseudo-Plutarch, Terence and Varro. In the schematic division of music, however, emphasis is placed on mimesis – a type of polyphony that Vogt carefully separated from the usual *musica figuralis* – which seems to refer to four-part imitative settings of poetic texts where the representation of the expressive character is paramount. Elsewhere, in the explanation of 'imitatio' as one of the efficient causes of music, he mentioned Josquin in particular. This modern attitude allies Vogt with other writers associated with Wittenberg at the time, particularly Coclico and Hermann Finck.

Vogt was also editor of a printed anthology of masses by leading contemporary Netherlands composers, *Praestantissimorum artificium lectissimae missae, 5, 6vv . . . e nobilis quibusque atque optimis musarum belarijs . . . comportatae* (Wittenberg, 1568); no complete copy of this survives. In the preface he strongly supported the use of polyphony in church services. The existence of a collection of hymns listed by Fétis has never been confirmed.

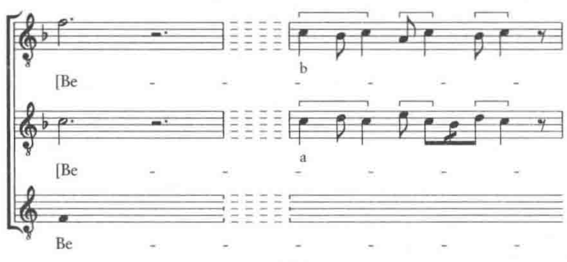
Voice. *See* SINGING and ACOUSTICS, §VI.

Voice-exchange (from Ger. *Stimmtausch*). A medieval polyphonic technique (more accurately, phrase-exchange) that involves two voices of equal range in the mutual alternation of phrases; it is easily achieved in two-part counterpoint in contrary motion for equal voices and was therefore widely practised throughout the 12th century (ex.1). Voice-exchange also appears quite often in Notre-Dame polyphony, specifically in passages that are not restricted by a pre-existing tune, e.g. in caudae of CONDUCTUS (ex.2), and in the upper voices of organal passages in organa for three or four voices (ex.3). Johannes de Garlandia gave an example of the procedure, which he described as 'repetitio diverse vocis', to be encountered 'in three- and four-part organa, and conductus, and in many other things'.



Voice-exchange was much used by 13th-century English composers in conductus, in organal settings of Alleluias, and in motets, and was a constituent element in the technique known as RONDELLUS. After 1300 the expansion of the two-voice framework beyond one octave and the consequent gradual separation of voice ranges caused

the general abandonment of voice-exchange. The last works which thoroughly exploited the technique, in both strict and varied form, were some two dozen English motets in three and four voices from the first half of the 14th century.

The first use of the German term *Stimmtausch* seems to occur in an article by Friedrich Ludwig in 1903–4 (*SIMG*, v, 177–224, esp. 220). Its English equivalent appears to have originated in Handschin's article on the Summer Canon in 1949 (*MD*, iii, 55–94, esp. 82).

ERNEST H. SANDERS/PETER M. LEFFERTS

Voice flute. A RECORDER with lowest note in *d′*, a 3rd below the treble instrument.

Voice-leading. *See* PART-WRITING.

Voicing. The means by which the timbre, attack, loudness etc., of the pipes or strings of keyboard instruments and some non-keyboard wind instruments are given their desired quality and uniformity.

1. Organ pipes. 2. Wind instruments. 3. String instruments.

1. ORGAN PIPES. Without 'voicing', it is unlikely that a newly made organ pipe, however accurately formed, would speak at all (save possibly with a rough and irregular sound). A voicer has therefore to make a number of fine manipulations and adjustments to each pipe. In flue pipes (*see* ORGAN, §III, 1, esp. fig.16), a basic adjustment concerns the amount of wind that is allowed to issue from the flue or windway. This may be controlled either by increasing or decreasing the size of the toe-hole (a method common since the mid-18th century) or by leaving the toe-hole open and widening or narrowing the flue itself. Both methods are still used, often in combination. Also of importance is the 'cut-up' of the mouth (the height of the mouth in relation to its width). A high cut-up yields a smoother, more fundamental tone, while a lower one encourages harmonic development but at a loss of fundamental. Thus flutes are usually cut up on the high side, while strings or quintadenas are on the low side, principals or diapasons being somewhere in between. Wind pressure is a factor in determining the best cut-up, because the cut-ups must be correspondingly higher or lower for a similar sound to be produced from identical pipes on higher or lower wind pressures; the exception to this would be a pipe with an extremely narrow toe-hole, usually in a string-toned stop. It is essential that the plane of the upper lip is parallel to that of the lower lip. If the languid is too low or the upper lip pulled out too far, the pipe is said to be 'quick' and in extreme cases will overblow; if the languid is too low or the upper lip pressed in too much, the pipe will be 'slow' and in extreme cases will cease speaking. Flutes are generally voiced on the quick side, strings on the slow side, and principals just barely quick enough to overblow or flutter when forced beyond their normal wind pressure. In wooden pipes the block (corresponding to the languid) is immovable, and the adjustments made by the voicer will consist in modifying the height of the upper lip, the position of the cap, the angle and width of the flue and sometimes the angle of the upper lip. Some fine adjustments that affect the tone-colour of flue pipes include arching or 'skiving' of the upper lip, changes to the height and bevel of the languid face and 'nicking' of the languid edge. Until the end of the 18th century it was customary to blunt or 'counterface' the languid edge, which tended to discourage the 'sizzle' in the sound of an unnicked or lightly nicked pipe. This practice was in many instances continued into the 19th century and has been revived by some 20th-century builders. A knife-edged languid requires shallow, widely spaced nicking to achieve the same purpose; a small amount is usually necessary to fine regulation, and does not adversely affect articulation or 'chiff'. Deep, close nicking, however, particularly when done on the lower lip as well as languid, destroys both chiff and harmonic development; this was extensively practised in the early 20th century and is still necessary for modern string-toned pipes. Many larger flue pipes have projections ('ears') at the sides of their mouths that help to focus the sound and sometimes need adjustment by the voicer. 'Beards' below the ears or 'rollers' between them were developed in the 19th century to stabilize the speech of narrow-scaled pipes and are also adjusted by the voicer.

In reed pipes the thickness and curvature of the reed tongue are the major factors determined by the voicer. The tongues are usually of 'half-hard' brass (although some tone-colours require soft brass or harder phosphor bronze) and are cut to size by the voicer. Both the width of the tongue and the opening in the shallot affect tone somewhat, but the most critical operation in reed voicing is the curving of the tongue, done with a burnisher on a wood or metal block. Too little curvature will produce weakness or silence; too much will make the attack slow.

Pipes of the trumpet type usually speak best when the tongue has a slight extra curvature at its tip. Until the late 19th century it was common to file reed tongues slightly thinner at the end, to improve attack at low wind pressures. High pressures used in the early 20th century necessitated thicker tongues, often weighted (by an amount adjusted by the voicer) at their tip in the lowest two or three octaves. Such tongues produced a smoother, more fundamental tone. The loudness of reed pipes is regulated not on the toe, which is usually fully open, but by adjusting the length of the resonator in conjunction with the vibrating length of the reed tongue. Very fine adjustments are sometimes made to the length by which the shallot projects from the block.

Organ pipes are usually pre-voiced in the builder's workshop by means of a small organ called a 'voicing jack'. This device has interchangeable racks to accommodate pipes of various sizes, so that the pipes are within easy reach of the keyboard, with the voicer's tool shelf above. Racked at the back of the voicing jack is a permanent set of pipes to which the set being voiced can be tuned, since the loudness or softness of the voiced pipe will affect its tuning length. Voiced pipes are placed in the organ while it is set up in the workshop, and further adjustments are made. Final voicing, called 'finishing', can take several months for large instruments and is done after the organ is installed.

2. WIND INSTRUMENTS. As in the case of organ flue pipes, the voicing of recorders concerns the proportions of the windway (flue) and its alignment in relation to the labium. In the finest Baroque instruments, and modern copies of them, the windway is slightly curved and the player's breath is concentrated on the labium through a fairly narrow channel, giving an intense and slightly reedy quality to the tone. In some mass-produced instruments the voicing is more 'open', giving less resistance to the player's breath; the resulting sound is relatively bland and lacking in overtones.

The term 're-voicing' is used for adjustments to the block or to the 'roof' (i.e. the upper surface) of the windway.

3. STRING INSTRUMENTS. The voicing of harpsichords and other quilled instruments involves reducing the length, width and particularly the thickness of the quill, plastic or leather plectra so as to arrive at an even touch of the desired lightness and a tone of uniform loudness without any notes having a different timbre from that of their neighbours. Thinning the plectrum reduces the loudness of the tone and lightens the touch; narrowing the plectrum tends to brighten the tone. The voicing and regulation procedure also involves adjusting the point in time at which the plectrum plucks the string as the key is depressed. Usually this is accomplished by adjusting the length of the portion of the jack below the plectrum, in such a way that the plucking order in an instrument with two or more registers is 'staggered'.

The voicing of pianos involves altering the hardness of the sub-surface felt of the hammers by pricking them with needles of appropriate size once the hammer has been properly shaped with sandpaper or a file. Additional work with a heated iron may also be done to produce a brighter timbre and to achieve a better balance between the densities of the felt on the outside and the inside of the hammer. But the part of the hammer's surface which actually strikes the string is almost never packed or ironed. The voicing of early pianos (or reproductions) with leather-covered hammers involves similar operations. Also, since the leather is usually glued only to the sides of the hammer, the tone may be made duller by inserting a needle under a layer of leather to stretch it.

Voicius, Michael. *See* VOGT, MICHAEL.

Voicu, Ion (*b* Bucharest, 8 Oct 1925; *d* Bucharest, 24 Feb 1997). Romanian violinist and conductor. After showing talent as a child he was admitted in 1938 to the Bucharest Conservatory, where he studied the violin with George Enacovici; he made his début in a Bucharest radio concert in 1940. While developing his career he studied further with Enescu in 1945, and with Abram Yampol'sky and David Oistrakh at the Moscow Conservatory, 1955–7. He became a soloist of the George Enescu PO of Bucharest from 1949, and toured with the orchestra in western Europe, making his British début in 1963; he was appointed the orchestra's artistic director from 1973. He formed the Bucharest Chamber Orchestra in 1969. As a soloist he toured North and South America, Africa and Asia as well as various European countries. He played a violin by Antonio Stradivari, and was admired for his wide range of tone, technical skill and sense of structure, although he was criticized for over-indulgence of sentiment (in Tchaikovsky's concerto). Voicu composed virtuoso pieces for the violin, and his recordings include performances of sonatas by Enescu and Ysaÿe (with Victoria Stefănescu). He gave masterclasses throughout the world and sat on the juries of many international competitions.

VIOREL COSMA/R

Voiculescu, Dan (*b* Sighişoara, 20 July 1940). Romanian composer. He studied with Toduţă (composition) and Maria Kardaş (piano) at the Cluj Academy (1957–64), Mortari in Venice (1968) and Stockhausen in Cologne (1971–2). Voiculescu became a teacher of composition and counterpoint at the Cluj Academy in 1963; he has taken masterclasses in Braşov, Bitonto (Italy) and Chişinau (Moldova). He gained the doctorate under the supervision of Toduţă with his thesis *The Polyphony*

of the 20th Century, in 1983. In his works Voiculescu employs a modal style incorporating elements of Romanian folk music as a basis from which to explore a wide range of harmonic resources. His individual style is at its most striking in his comic chamber opera *The Bald Prima Donna* (1992–4). His writings include books on Bach's use of fugue and polyphony. Further details are given in V. Cosma: *Muzicieni români* (1970).

OCTAVIAN COSMA

Voigt, Deborah (*b* Chicago, 8 April 1960). American soprano. She studied at California State University and then participated in the Merola Programme of the San Francisco Opera, where she eventually began her career in small roles, her operatic début being as the Voice from Heaven in *Don Carlos* (1986). In 1988 she won the Pavarotti Voice Competition, and in 1990 both the Rosa Ponselle Gold Medal and the Verdi Competition in Busseto. Voigt made her London début as Elvira in *Ernani* with the Chelsea Opera Group in 1990. In 1992 she caused a stir in the *Stabat mater* at a Rossini 200th anniversary concert in Avery Hall, New York, and as Chrysothemis at the Metropolitan. Voigt first sang Ariadne in Boston in 1992, and this was the role of her first appearances in Munich and Vienna. Amelia (*Un ballo in maschera*) marked her début at Chicago (1993) and at Covent Garden (1995). Among her other Verdi parts are Aida (which she sang in Verona in 1994) and Lady Macbeth, which she first performed in Bologna in 1995. She sang Chrysothemis for her South American début at the Teatro Colón (1995). Other Strauss roles in which she has made her mark include the Empress (*Die Frau ohne Schatten*) and Helen of Troy (of which she gave a concert performance with Covent Garden in 1998), both of which she has recorded. Her Wagner roles include Elisabeth (which she first sang at San Francisco in 1994), Sieglinde (1996, the Metropolitan), Senta (1996, Vienna) and Elsa (1998, the Metropolitan). Voigt has a voice of generous proportions, easily produced, but her style and acting lack specificity. Of her recordings, her Rezia (*Oberon*), Cassandra (in Dutoit's set of *Les Troyens*), Chrysothemis and Helen of Troy best display the range and power of her voice.

ALAN BLYTH

Voigt, Michael. *See* VOGT, MICHAEL.

Voigtländer, Gabriel (*b* Reideburg, nr Halle, *c*1596; *d* Nykøbing, 22/3 Jan 1643). German composer, trumpeter, singer and poet. The earliest definite information about him is that he served Wallenstein as a trumpeter. By 1626 he was in Lübeck as a civic and military trumpeter and officially became a citizen there on 20 November in that year. After serving Crown Prince Christian of Denmark in both Nykøbing and Copenhagen, he left on 16 December 1632, and the following May was a trumpeter at the wedding of the sister of Duke Friedrich III of Schleswig-Holstein in Gottorf. He apparently entered the duke's service about this time. His salary at Gottorf was more than double that of the court organist, Franz Tunder, and it is possible that he was employed as a singer and poet too. From 1636 until his death he again served Crown Prince Christian of Denmark in Nykøbing as a trumpeter, musician and poet.

Voigtländer published an important collection, *Erster Theil Allerhand Oden und Lieder* (Sorø, 1642[8], 5/1664[3]), consisting of 100 solo songs (93 different melodies). He wrote the words himself, fitting them in every case but one (no.26, which he composed himself in the new recitative style) to pieces by composers of the late 16th and early 17th centuries, among whom Johann Nauwach, Orazio Vecchi and John Dowland have been identified. They are more than simply parodies since Voigtländer reworked the melodic material in ways important to the development of the solo lied. These songs could be accompanied by a wide range of instruments: harpsichord, lute, theorbo, pandora and viola da gamba are mentioned on the title-page. Many tunes, as well as the verses, are popular in tone, including lovers' complaints, drinking-songs, proverbial sayings, parodies and satires. Voigtländer's songbook was certainly one of the most popular and influential of its time. Even before it was published Johann Vierdanck included in his *Capricci* (1641) a sonata based on the song *Als ich einmal Lust bekam*, and Hammerschmidt soon set one of his poems in his second set of *Oden* (1643). Voigtländer's texts and tunes were also used by Johann Rist (*Neuer teutscher Parnass*, 1652), Adam Krieger (*Neue Arien*, 2/1676), Christian Clodius (*Hymnorum studiosorum pars prima*, MS, 1669), C.F. Nicolai (*Eyn feyner kleyner Almanach*, 1777–8) and Arnim and Brentano (*Des Knaben Wunderhorn*, 1805–8). Some of his lieder were published as broadsides. Voigtländer also wrote a dedicatory poem for Nicolaus Bleyer's *Erster Theil Newer Pavanen …* (1642).

A copy of the songbook in the Kongelige Bibliotek, Copenhagen, also contains the so-called Voigtländer tablature, a 17th-century manuscript (ed. H. Glahn, Copenhagen, 1988) which transmits versions of works by Melchior Schildt, Heinrich Scheidemann and J.R. Rabeck, as well as a single anonymous piece. 20 of Voigtländer's lieder were translated into Danish and used by Søren Terkelsen in his *Astree Siunge-Choer* (Glückstadt, 1648, and later editions). The Danish poet Thomas Kingo reworked songs by both Voigtländer (notably *Chrysillis du mit Verdens Guld*) and Terkelsen in his *Aendelige Siung-Koor* (1674; ed. E. Sønderholm, Neumünster, 1976). A selection from Voigtländer's and Terkelsen's collections has been published in a modern edition: *Viser fra Voigtländers og Terkelsens samlinger*, ed. C. Hatting and N. Krabbe (Copenhagen, 1988).

Two lieder signed 'G.V.' appeared in a ballet, *Triumphus rationis*, performed on 4 August 1640 before the crown prince, further confirming Voigtländer's involvement in all aspects of musical and cultural life at the Danish court.

HORACE FISHBACK/MARA R. WADE

Voigtländer, Lothar (*b* Leisnig, Saxony, 3 Sept 1943). German composer. He began his musical career as a member of the Dresden Kreuzchor (1954–62) and went on to study at the Leipzig Hochschule für Musik (1962–8), where his composition teachers included Rolf Reuter, Franz Jung and Fritz Geissler. From 1970 to 1973 he was a 'master-pupil' of Günter Kochan at the DDR Academy of Arts. For a time, he served as chorus master and conductor at the Theater der Altmark, Stendal. His earliest compositions are predominantly vocal works in a traditional style; while a student of Kochan, however, he wrote large-scale orchestral pieces (*Metamorphosen*, 1970; Symphony no.1, 1970) that combine serial structures with aleatory elements. His particular affinity for the organ is reflected in a series of works exploring the timbral and technical potential of the instrument (*Orgelspiele*, 1978; *Chant à la grande cathédrale de Bourges*, 1980). A growing preoccupation with electro-acoustic and multimedia projects, such as *Guillevic-Recital* (1986) for three speakers, graphics and tape, also manifested itself in the radio plays *Maikäfer, flieg* (1985) and *Berlin-Report* (1987). During the late 1980s, he returned to purely instrumental composition, writing works in which gestural and emotional creativity are combined with stringent constructivity.

KATHRIN EBERL

Voirin, François Nicolas (*b* Mirecourt, 19 Dec 1833; *d* Paris, 4 June 1885). French bowmaker. After serving his apprenticeship in Mirecourt he worked from 1855 to 1870 for J.-B. Vuillaume in Paris. After briefly returning to Mirecourt he established his own business at 3 rue du Bouloi, Paris, where he worked until his sudden death. He was a prolific maker and his bows were of superb quality; he is generally regarded as the most important bowmaker of the second half of the 19th century.

Voirin's bows show a radical departure from the predominant Tourte model of the first half of the century. The dimensions of the stick and head are thinner and smaller, and to retain strength he used only the finest Pernambuco possible. He also began the camber directly behind the head; this feature was taken up not only by his pupils Thomassin and Lamy but also Eugène Sartory, Victor and Jules Fétique and E.A. Ouchard among others; he also influenced German makers. Voirin's early bows, i.e. those made in the Vuillaume workshop and carrying the Vuillaume brand, are somewhat stouter than his later ones. After 1870 his work exhibits a rare elegance of line; the frogs are either regular or sometimes rounded in Vuillaume's style and the buttons are normally two-banded. In more recent times players have often dismissed Voirin's bows as being too light; this is most often true of the cello and viola bows with the former ranging in weight from 70 to 75 grams. The violin bows, however, fall largely within the normal range (i.e. 58 to 60 grams) and continue to be in demand.

After his death, Voirin's widow continued the business for some years, branding his pupils' work with her husband's brandmark, F.N. VOIRIN À PARIS. Most of these bows appear to lack the strength of the originals.

CHARLES BEARE/JAAK LIIVOJA-LORIUS

Voit. German firm of organ builders in Karlsruhe-Durlach. The firm was founded in 1764 by Johann Heinrich Stein (1735–67) of Heidelsheim, and continued by his cousin Georg Markus Stein (1738–94), organ builder to the court of Baden-Durlach; after the latter's death it passed by marriage into the hands of Johann Volkmar Voit (1772–1806) of Schweinfurt. In 1807 Johann Ludwig Bürgy (1761–1838) of Niederflorstadt married Voit's widow and ran the workshop until 1835. He was succeeded by his stepson Louis Voit (1802–83) who ran the firm until 1870. It was then taken over by the latter's sons Heinrich (1834–1914) and Carl (1847–87). After Carl's death, Heinrich's sons Emil (1864–1924) and Siegfried (1870–1938) were taken into the firm as partners, and it became known as H. Voit & Söhne. In 1930 Siegfried Voit retired from the business, and the workshops were taken over by their former manager Karl Hess (1879–1943). Under the direction of his widow the firm continued in business until about 1959.

Voit was the leading firm in its field in the former Grand Duchy of Baden, at times employing about 50 staff, and by 1930 it had built more than 1500 organs. It acquired fame beyond the immediate locality through a series of organs built for various concert halls: the Treviris Hall, Trier (1900); the Festhalle, Koblenz (1902); the Rosengarten, Mannheim (1903); the Stadthalle, Heidelberg (1903); the National Hungarian Royal Academy of Music, Budapest (1907); the hôtel particulier du Comte de la Revélière, Paris (1912); the Smetana Hall, Prague (1912); and the Stadthalle, Krefeld (1917).

HERMANN FISCHER

Voit, Michael. *See* VOGT, MICHAEL.

Voix (Fr.). Voice. *See* SINGING; ACOUSTICS, §VI; and PART (ii).

Voix céleste (Fr.). *See under* ORGAN STOP.

Voix de ville. *See* VAUDEVILLE.

Voix humaine (Fr.). *See under* ORGAN STOP (*Vox humana*).

Voix mixte (Fr.: 'mixed voice'). A vocal technique involving the blending of the chest and head registers in the middle range, especially in male singers. Manuel García (*Traité complet de l'art du chant*, Paris 1840–47/*R*) was the first to define the term, although the practice is described much earlier. Tosi (1723) urged the male singer 'to leave no Means untried' to unite the two registers, 'for if they do not perfectly unite, the Voice will be of divers Registers, and must consequently lose its Beauty'. Although García defines this term as a mixture of the two basic registral mechanisms, he also considers the term 'improper' as the actual mixing of mechanisms is physiologically impossible. He argues that the effect was created by the use of a *mezzo voce* (half voice) in the chest register. *See also* VOIX SOMBRÉE.

ELLEN T. HARRIS

Voix sombrée (Fr.: 'darkened voice'). A technique of voice production. It was made famous by the singing of GILBERT DUPREZ during the 1830s. He is said to have carried the chest register up to *c''*. Duprez (1845) called this technique *voix sombre* or *voix couverte* (covered voice). 'Covering' involves the darkening of the vowels, for example, from 'ah' to 'uh', resulting in a physiological change in mechanism first described by the physicians H. Diday and J.-E. Pétrequin in their 'Mémoire sur une nouvelle espèce de voix chantée' (*Gazette médicale de Paris*, viii, 1840, pp. 305, 455) as a lowering of the larynx. Covered tone is used as an expedient to admit more of the head tone into the area of the break between the head and chest voice, allowing these to be better united. When used in the highest register, as by Duprez, the technique produces a sound of great volume and intensity but can be vocally damaging. The *voix sombrée* became highly controversial as a voice type and was vigorously attacked by Etienne Jean Baptiste (called Stéphan de la Madelaine) in his *Oeuvres complétes sur le chant* (Paris, 1875, pp.128ff). Duprez himself is reported to have tired easily because of his use of the *voix sombrée*, and had a short career.

Manuel García (1847) does not discuss *voix sombrée* as a voice type; rather, he distinguishes between *timbre clair* and *timbre sombre* as distinct vocal qualities in both head and chest voice and discusses these in terms of offering 'the student a throng of resources which permit him appropriately to vary the expression of the voice'. He equated the use of *timbre sombre* in the chest voice with VOIX MIXTE.

OWEN JANDER/ELLEN T. HARRIS

Vojáček, Hynek (Ignác František) [Voyachek, Ignaty Kasparovich] (*b* Zlín, Moravia, 4 Dec 1825; *d* Tsarskoye Selo [now Pushkin], 27 Jan/9 Feb 1916). Czech musician, active in Russia. He was brought up in Vsetín, where his father obtained a teaching post in 1830, and in Brno, as a chorister of the Augustinian monastery (from 1838). He studied for a year at the University of Vienna (1845–6) and founded a Slavonic student choral society, for which he wrote a large number of male-voice choruses. After working as a music tutor (1846–8) to the family of Count Bethlen in Hermannstadt, Transylvania (now Sibiu, Romania), he returned to Brno, conducting Czech concerts of the Brno Männergesangsverein. He returned to Vienna and in 1852 helped compile a collection of Valachian and Slovak folksongs (he had begun collecting folksongs himself in 1838). In Vienna he got to know the Russian composer Aleksey Fyodorovich L′vov, who obtained a post for him (1853) as music tutor to his sister, the wife of General Samson, in Brest Litovsk (now Brest, Belarus). Vojáček moved to St Petersburg in 1855, working at first as a military bandmaster and then as bassoonist at the Mikhaylovsky Theatre (1857–1907). He also taught theory at the St Petersburg Conservatory (1863–1912) and, during the 1870s, occasionally played and conducted at the Mariinsky Theatre.

Vojáček was important in establishing contacts between Russian and Czech musicians. He helped organize the First Panslavonic Concert in St Petersburg (1861), at which he and Anton Rubinstein conducted Russian, Polish and Czech works (some by Vojáček). He accompanied Balakirev on his visit to Prague in August 1866, taking with him the score of *A Life for the Tsar* and other Glinka works. During this period he may have introduced Balakirev to the folklore study of B.M. Kulda (whom he knew from Brno), from which Balakirev took three tunes for his *Overture on Czech Themes* (1867). In 1871 Vojáček and the Czech bass Josef Paleček facilitated the Russian première of Smetana's *Bartered Bride* at the Mariinsky Theatre. Vojáček was an occasional correspondent on Russian music in Czech periodicals (*Lumír*, *Dalibor*, *Hudební listy*, *Moravská orlice*) and with individual musicians (41 letters to Janáček survive from between 1905 and 1914). He met Janáček in 1905, during one of his regular summer trips to Moravia (1903–14), and encouraged his interest in Russian music, helping supply his Russian Circle with materials.

Vojáček began composing in 1838, mainly piano music, songs and church music, and from 1845 Valachian folk music elements began to appear in his music. Although he wrote an opera to a Russian text (*Tamara*, unperformed) and some Russian romances (to texts by A.J. Pukarov and N.A. Nekrasov) his contacts with Russian composers and his long stay in Russia left little trace. In spirit and idiom his works hardly go further than his early

patriotic Moravian music and by later years were all but forgotten. In addition to two operas (including the one-act *Zajatá*, 'The Woman Captive', given in Prague in 1869), he wrote two cantatas, marches and dances for piano, six studies for bassoon and piano and ten orchestral preludes.

JOHN TYRRELL

Vojta, Jan Ignác František (*b* ?Czernovicium, *c*1660; *d* ?Prague, before 1725). Czech composer. He attended the Jesuit seminary of St Václav in Prague and then studied philosophy at Prague University, where he took the BA on 20 May 1677. After studying medicine there, he qualified as a doctor on 26 June 1684. His text for a Christmas play appeared in print in January 1684 (*CZ-Pu*; the music is lost), as did the text for his undated cantata *Threnodia huius Temporis sive Exul Veritas*. Both works are dedicated to the dean of the faculty of medicine, Jan Jakub Václav Dobřenský, a patron of music. Between 1702 and 1705 Vojta was the doctor at the Benedictine monastery in Prague. He was apparently a very good violinist and a skilful composer. There are documentary records, mostly from monastic sources, of some 26 compositions by him, mainly sacred. However, only the following works are known to survive: *Threnodia huius Temporis* (cantata), A, B, cont, Prague, before 1697 (*A-Wn*); 3 church cantatas (*CZ-Bm*); 3 sonatas, cont (*A-Wm*); and *Parthia amabilis*, 2 vv, cont (*F-Pc*).

JIŘÍ SEHNAL

Vojtěch. Baptismal name of ADALBERT OF PRAGUE.

Vojtěch, Ivan (*b* Boskovice, 27 Nov 1928). Czech musicologist. He studied first at Brno University under Jan Racek and Bohumír Štědroň (1947–9) while continuing his cello studies at the conservatory, and then at Prague University (1949–51), where he took the doctorate in 1953 with a dissertation on programme music. Before completing his studies he became assistant lecturer in aesthetics at the Prague Academy of Musical Arts (1950–51) and lecturer at the Janáček Academy, Brno, where, with a few short breaks, he taught until 1960. From 1961 until 1975 he was assistant professor of musicology in the music history department of Prague University, where he specialized in 20th-century music. From 1948 he was active as a music organizer and journalist, and as editor and translator of works by Soviet musicologists. Later he abandoned a rigorously Marxist stance and tried to widen his scope to include concepts lying outside Marxism. In the 1960s he was attracted by the writings of T.W. Adorno, whose interpretation of the Second Viennese school he embraced at this time, translating several of Adorno's studies into Czech. In 1967 he became an editor for the Arnold Schoenberg complete edition. From 1969 to 1970 he was chief editor of *Hudební rozhledy*. In the 1970s and 80s he was subject to political persecution (he was expelled from his job and forbidden to publish in his country). In 1990 he was invited to resume his activities at Prague University and in 1993 he was appointed professor there.

JOSEF BEK

Vojvodina. *See under* YUGOSLAVIA.

Vokaleinbau (Ger.: 'vocal in-building'). A term used for a device often found in Bach's music (and, less often, in that of his contemporaries) whereby the opening ritornello, or part of it, is repeated during the course of an aria while

the singer incorporates new material into it. When the technique is employed in a chorus – as, for example, in bars 98–114 of the opening chorus of Bach's Cantata no.72 – it is usually referred to as 'Choreinbau'. An analogous procedure is also found in arias and choruses by Classical and pre-Classical composers in which a secondary theme, presented in the tonic as part of the opening ritornello, returns in the dominant or relative key as accompaniment to new material for the singers.

Volánek [Wolanek, Wollaneck, Wollanek], **Antonín (Josef Alois)** [Anton] (*b* Jaroměř, 1 Nov 1761; *d* Prague, 16 Jan 1817). Czech composer, choirmaster and theatre conductor. He was the son of an organist and cantor at Jaroměř. In Prague, where he married on 3 March 1783, he was appointed violinist at the church of St Voytěch, organist at the church of Sts Petr and Pavel in the Vyšehrad district (in the 1790s) and choirmaster of St Petr at Poříči (from 1 January 1801 to 31 December 1816). He was also a violinist in several Prague theatre orchestras, and served as music director or répétiteur for some. In this capacity he was also active in Leipzig (autumn 1797 to 30 March 1798), Karlsbad (now Karlovy Vary) and Teplice. He conducted the first Prague performance of Mozart's *Die Zauberflöte* (25 October 1792), as well as the first staging of this work in Czech (October 1794).

Volánek was a prolific and popular dance-music composer. He wrote music for the nobility ball of the Prague coronation of Leopold II and Maria Ludovica (1791, performed with a coronation cantata by Leopold Kozeluch), as well as a number of dance sets for other Prague balls (mostly in 1806–7). Of his ballets, pantomimes and divertissements, staged mostly in Prague and Vienna, the one-act comic divertissement *Der Steinhauer oder Das nächtliche Rendezvous* (1809) appears to have been the most successful, with at least 32 performances up to 1816. There is no substantial stylistic difference between his secular and sacred compositions.

Volánek's son Ferdinand (*b* Prague, 15 Jan 1789) was a music copyist, first at the Prague Theatre (1813–16) and later in Vienna, where he met Beethoven (1825).

MILAN POŠTOLKA

Volans, Kevin (*b* Pietermaritzburg, 26 July 1949). South African composer, naturalized Irish. A prodigiously talented pianist at an early age, he studied at the University of the Witwatersrand, Johannesburg, graduating in 1972; he then went to Europe for postgraduate study at the University of Aberdeen. From 1973 until 1981 he lived in Cologne where he was a pupil of Stockhausen at the Hochschule für Musik and, in 1975–6, his teaching assistant. He also studied music theatre with Kagel, the piano with Aloys Kontarsky, and electronic music with Johannes Fritsch. During this time he was associated with the Neue Einfachheit movement in West Germany. While studying electronic music at the Hoschschule für Musik from 1976 to 1979, Volans made four journeys to South Africa to record diverse kinds of African music for WDR. In 1981 he returned to South Africa for an extended stay to teach composition at the University of Natal, Durban, where he was awarded the DMus in 1985. He then moved to Paris in 1985 and Cork in 1986, working as a freelance composer and occasionally teaching. From 1986 to 1989

he was composer-in-residence at the Queen's University, Belfast, and in 1992 he was composer-in-residence at Princeton University. He became an Irish citizen in 1995 and lives in Dublin.

In his visits back to South Africa, Volans's musical perception, which had been finely honed during his study with Stockhausen, focussed upon the formal complexities of traditional styles, which he had previously overlooked. His move to Europe had led him to question his identity: having been raised, as many white South Africans, to view himself as a European, his time in Europe made him realize the extent to which he was an African. As a result in the 1980s he embarked on a series of 'African paraphrases' (his own label which he now repudiates) which allowed him to, as he put it, 'compose my way back to Europe'. The first of these works were *Mbira* and *Matepe* and they mark, with their richly flexible sense of rhythm, melody and harmony, the beginning of Volans's compositional maturity. They draw extensively from musical materials from across sub-Saharan Africa. At the same time, the teaching and music of Feldman became increasingly important to him.

As western European and American interest in 'world music' began to rise throughout the 1980s, Volans found himself increasingly popular as an 'African composer'; the Kronos Quartet's recording of *White Man Sleeps* (Nonesuch 79163, 1987) was one of the best-selling classical recordings of 1993. Perhaps as a reaction against this categorization, by the late 1980s Volans began to disavow the influence of African music on some of his earlier pieces, and most of the works from *Chevron* onwards owe little to direct quotation of African sources. Nevertheless, certain procedures of variation and permutation from his African-inspired works have continued to recur in some of his more recent works, as does a sense of melodic line and rhythmic complexity. Without losing their beguiling musical surface, Volans's compositions in the 1990s have continued to move away from overt African influences – save for the String Quartet no.5 ('Dancers on a Plane') which seems the genre in which he continues to experiment overtly with musical materials and procedures from Africa – towards more abstract issues of form and structure, as in the Piano Concerto, *One Hundred Frames* and the opera *The Man with Footsoles of Wind*.

WORKS

DRAMATIC

The Man with Footsoles of Wind (chbr op, R. Clarke, B. Chatwin, A. Rimbaud), London, Almeida, 2 July 1993; Plane-Song (film score, dir. D. May), 1993, BBC2, 1994

DANCE SCORES

Ramanujan Notebooks (Str Qt no.4) (choreog. S. Jeyasingh as Correspondences), London, 16 Oct 1990; Chevron (choreog. S. Davies as Signature), 1990, Brighton, Theatre Royal, 1990; Wanting to Tell Stories (choreog. Davies), 1993, Brighton, Gardner Centre, 13 May 1993; Blue, Yellow (choreog. J. Burrows), 1995, BBC2, 28 Dec 1995; Duetti (choreog. J. Burrows as The Stop Quartet), 1995; Ghent, Vooruit, 7 May 1996, collab. M. Fargion [now Twice Two Stop]

ORCHESTRAL

One Hundred Frames, 1991; Conc., pf, wind, 1995; Vc Conc., 1997; Double vn conc., 1999

CHAMBER

Mbira, 2 hpd, rattles, 1980; Matepe, 2 hpd, rattles, 1980; White Man Sleeps, 2 hpd, b viol, perc, 1982, arr. as Str Qt no.1; Walking Song, fl, hpd/virginal/pf, 4 hand-clappers/finger-clickers, 1984, arr. org, 1984, rev. 1986; Leaping Dance, fiedel, mar, hpd, 1984, arr. 2 pf, arr. wind ens, 1995; She Who Sleeps with a Small Blanket, perc, 1985; Into Darkness, cl, tpt, vn, vc, mar, vib, pf, 1987, rev. 1989; Arr. C. Debussy: L'isle joyeuse, wind ens, 1995; This is How it Is, wind ens, 1995 [from chbr op The Man with Footsoles of Wind]; Untitled, pf, solo, fl, ob, eng hn, 2 cl, 2 bn, 2 hn, 1996; Slow, pf, wind ens, 1996; 5:4, perc, tape, 1997; Asanga, perc, 1997

Str Qts: White Man Sleeps (no.1), 1986; Hunting: Gathering (no.2), 1987; Movt. for Str Qt, 1987; The Songlines (no.3), 1988, rev. 1993; The Ramanujan Notebooks (no.4), 1990, rev. 1994 [concert version of dance score Correspondences]; Dancers on a Plane (no.5), str qt, tape, 1994

Pf: Leaping Dance, 2 pf, 1984; Nine Beginnings, 2 pf, 1976–9, rev. 1985; Kneeling Dance, 2 pf, 1985, rev. 1987, version for 6 pf, 1992; Cicada, 2 pf, 1994; March, pf, 1996

TAPE

Studies in Zulu History, 1977–9; Kwazulu Summer Landscape, 1979; Cover Him with Grass, 1982; see also CHAMBER [5:4; Str Qt no.5]

TIMOTHY D. TAYLOR

Volbach, Fritz (*b* Wipperfürth, 17 Dec 1861; *d* Wiesbaden, 30 Nov 1940). German conductor, composer and scholar. He began his musical training at the Cologne Conservatory and in 1885 he entered the Königliches Akademisches Institut für Kirchenmusik in Berlin where his teachers included Grell, Loeschhorn and Commer. He joined the staff there in 1887 and also began his career as a choral conductor. From 1891 he conducted in Mainz as director of the Liedertafel and Damengesangverein. In 1907 he became music director of the University of Tübingen and in 1918 settled in Münster as professor at the university and conductor of the municipal orchestra. After his retirement to Wiesbaden in 1930 he continued to compose and write on musical subjects. As a conductor and scholar Volbach was particularly devoted to the works of Handel. While at Mainz he founded the first German Handel festival, an occasion that marked the first use of the Chrysander edition of the composer's works. Volbach's own compositions, written in a conventional late Romantic idiom, include a symphony in the tradition of Bruckner.

WORKS

(*selective list*)

Op: Die Kunst zu lieben, op.34, 1910

Vocal: Vom Pagen und der Königstochter, solo vv, chorus, orch, 1898; Gutenberg Kantate, op.22, chorus, orch, org, 1900; Raffael, chorus, orch, org, 1903; Am Siegfriedbrunnen, op.31, male

chorus, orch, 1907; König Laurins Rosengarten, op.38, Bar, male chorus, orch, 1913; Hymne an Maria, chorus, vn, cel, hp, org, 1922; Die Mette von Marienburg, Tr, S, T, male chorus, orch, org, 1927; Grenzen der Menschheit, male chorus, orch, 1931; lieder

Inst: Ostern, sym. poem, op.16, 1895; Es waren zwei Königskinder, sym. poem, op.21, 1901; Qnt, E♭, op.24, ob, cl, bn, hn, pf, 1902; Alt-Heidelberg, du feine, sym. poem, op.29, 1904; Sym., b, op.33, 1909; Pf Qnt, d, op.36, 1912, pf pieces

Principal publishers: Breitkopf & Härtel, Hug, Schott

GEORGE W. LOOMIS

Volckland, Franciscus [Franziskus, Franz] (*b* Berlstedt, nr Weimar, 5 June 1696; *d* Erfurt, 23 Dec 1779). German organ builder. He trained as an organ builder with J.G. Schröter in Erfurt, and became an assistant to the organ builder Lortzing in Ohrdruf. In 1718 he settled in Erfurt, where in 1720 he unsuccessfully sought a privilege as an organ builder. There followed a legal dispute, lasting several years, with Schröter, who felt himself threatened by Volckland's competition. By 1721, however, he was building organs. At the time of his death he was well-to-do and held in high repute as an organ builder.

Volckland's productivity was highest between 1725 and 1750. His organ specifications are dominated by an abundance of 8′ foundation stops, mixtures (including the third) and copious wooden pipework as well as Zimbelsterns and Glockenspiels. In addition to these typical 18th-century Thuringian features, he also made frequent use of the 4′ Hohlflöte in the Pedal division. The majority of Volckland's organs are of medium size; he did not build large or three-manual instruments. A number of his organs still survive in the area of Erfurt, including Mühlberg (1729), the Cruciskirche, Erfurt (1732–7), Bindersleben (1743), Elxleben, near Arnstadt (1750), and Tröchtelborn (1758–61).

FELIX FRIEDRICH

Volckmar, Wilhelm (Adam Valentin) (*b* Hersfeld, 26 Dec 1812; *d* Homberg, nr Kassel, 27 Aug 1887). German organist and composer. He studied at the Gymnasium in Rinteln, and in 1835 became music teacher at the teachers' training college in the small town of Homberg, a position he occupied until his death. He was both industrious and successful in this educational field, receiving an honorary doctorate in 1846 and becoming a professor in 1868. He was recognized as an able organist, theorist and teacher, and was highly regarded by Spohr, Hofkapellmeister at Kassel from 1822, and the Weimar circle around Liszt. He wrote useful books on theory, and his editions of organ music, especially by Bach, and instructive works, such as his *Orgelschule* op.50 (Leipzig, 1861), are also valuable. This 'Czerny of the organ' travelled widely as an organ virtuoso and as an adjudicator of organ competitions. His compositions, which are unremarkable, number almost 700, including 36 organ sonatas, organ symphonies, concertos and liturgical pieces, as well as a variety of orchestral and vocal works.

MARTIN WEYER

Volcyr, Nicolas. *See* WOLLICK, NICOLAUS.

Volée, Jean de la. *See* LA VOLÉE, JEAN DE.

Volek, Jaroslav (*b* Trenčín, 15 July 1923; *d* Prague, 22 Feb 1989). Czech musicologist and aesthetician. He studied composition at the Prague Conservatory (1941–6) and the Prague master class (1946–8) under Šín, Hába and Řídký. He gained his musicological and aesthetic education at the Prague and Bratislava universities (1946–52). An important stimulus for his own creative work came from Jan Mukařovský, the structuralist aesthetician, and through his own contacts with Emil Utitz, a German aesthetician of Jewish extraction who lived in Prague until his death. He took the doctorate in 1952 in Bratislava with a dissertation on theoretical bases of harmony from the viewpoint of scientific philosophy. He then became successively lecturer (1952–7), reader (1957–68) and professor (1968) in the arts faculty of Prague University. He took the CSc degree in 1958 and the DSc degree in 1968, both with works on aesthetics. While a student, Volek was active as a critic, journalist and administrator, and he never abandoned this completely, even later when he concentrated more intensely on academic work. He was chairman of the musicological section of the Czechoslovak Composers' Union (1967–9), vice-president of the Czechoslovak Society for Aesthetics (1969–71) and editor-in-chief of the journal *Estetika* (1969–71). From the 1970s his activities, especially lecturing, were restricted for political reasons. Nevertheless, he was allowed to cooperate with the Academy of Sciences, to attend domestic and foreign conferences, and to lecture at universities abroad, especially in Germany. In musicology he directed his interest above all to the theory, aesthetics and semiotics of music; in aesthetics, apart from the general theory of art, he was interested in semiotics, gnoseology and the taxonomy of art. His work made a great contribution to the development of Marxist music criticism.

JOSEF BEK

Volek, Tomislav (*b* Prague, 11 Oct 1931). Czech musicologist. He graduated from Prague University in 1955 with a dissertation on Ferdinand Heller (later obtaining the doctorate from Olomouc University in 1969) and joined the musicology institute of Prague University as assistant lecturer (1955–64). In 1964 he became a member of the musicology institute of the Czech Academy of Sciences in Prague. An outspoken and forthright colleague, he was dismissed in 1976 and allowed to return only in 1990, after the fall of the communist government. In 1997 he was appointed *docent* at Prague University. His research is chiefly on Czech music of the 18th century, with special emphasis on its European context and on archival studies. He has published important work on the history of Prague theatrical companies and of Italian opera in Prague; Mozart and his two Prague operas is a central preoccupation. He is a frequent reviewer for *Hudební věda* and other journals on a wide range of topics.

CAMILLO SCHOENBAUM/R

Volk. German firm of music publishers. It was founded by Arno Volk (*b* Würzburg, 14 Jan 1914; *d* Ingelheim, 7 July 1987), who studied music at the University of Cologne, taking the doctorate there in 1943 with a dissertation on Ernst Eichner's life and works. In 1950 he founded the Arno Volk Verlag in Cologne; it was bought by the GERIG publishing group in 1957, when it became known as the Arno Volk-Verlag Hans Gerig KG; from that year Volk held a leading position with B. Schott's Söhne in Mainz, becoming chairman of the board of directors in 1974. Since its foundation the Volk-Verlag has concentrated on publishing works on musicology and music education. The firm's most ambitious project is the series Das Musikwerk, edited by K.G. Fellerer with the collaboration of internationally known musicologists; 48 volumes were produced in the 25 years from 1950, and from 1954 to 1976 some items were issued in English as the Anthology of Music. A series of records associated with the anthology, Opus Musicum, ran from 1972 to 1983. In 1952 the firm began the Beiträge zur Rheinischen Musikgeschichte (over 150 by 1996) and the Veröffentlichungen des Staatlichen Instituts für Musikforschung Preussischer Kulturbesitz (nine volumes by 1980); the periodical *Analecta Musicologica* and the series Musik-Taschenbücher and Concentus Musicus (publications of the musicological section of the German Historical Institute in Rome, from 1973) are also noteworthy. Among the firm's performing editions are the series Polyphonia Sacra, choral music based on original texts (French chansons, German lieder, English madrigals, community songs) and solo cantatas of the 17th and 18th centuries. In 1980 Arno Volk sold the firm to Laaber-Verlag.

RUDOLF LÜCK/R

Völker, Franz (*b* Neu-Isenburg, 31 March 1899; *d* Darmstadt, 4 Dec 1965). German tenor. Discovered by Clemens Krauss, he studied singing at Frankfurt and in 1926 was engaged at the opera there. In 1931 he moved to Vienna, in 1935 to Berlin, and in 1945 to Munich. He also sang at the festivals at Salzburg (from 1931) and Bayreuth (from 1933). After he retired he taught singing at the Musikhochschule in Stuttgart. He sang Florestan and Siegmund at Covent Garden in 1934 and Siegmund again in 1937. Admired particularly as Florestan, Lohengrin and Siegmund, he also had in his prime the flexibility for lighter, more lyrical roles (Ferrando); he appeared with distinction as Max (*Der Freischütz*) and the Emperor in *Die Frau ohne Schatten*, and late in his career he was praised for his Othello and Canio.

PETER BRANSCOMBE

Volkert, Franz (Joseph) (i) (*b* Vienna, 12 Feb 1778; *d* Vienna, 22 March 1845). Austrian composer, organist and conductor. Although a score by him for a *Don Juan* play is recorded for the Theater in der Josefstadt as early as 1798, little is known about his formative years. He was organist at the Piarist church (Maria Treu) in the Josefstadt from 1801 at the latest, and at the Schottenstift from 1806. His name appears in the repertory lists of the Theater in der Leopoldstadt (from *c*1812) and the Josefstadt theatre (from 1815); he became deputy Kapellmeister to Wenzel Müller at the Leopoldstadt theatre in about 1814. Although he was replaced by Drechsler in 1824, he continued to write for this theatre: well over 100 scores for Singspiels, farces, parodies and pantomimes, some of them very successful in their day. Only *Der Eheteufel auf Reisen* (1821) seems to have been published in vocal score, though songs from many of the local plays and parodies appeared in printed series. Some of his most popular settings of Meisl (e.g. *Der lustige Fritz*, *Das Gespenst auf der Bastei*, *Die beiden Spadifankerln*) and Gleich (*Der Eheteufel*, *Der alte Geist in der modernen Welt*) notched up a large number of performances. He also wrote masses (Therese Rosenbaum sang in one at the Piarist Church on Easter Sunday 1801), organ and piano pieces, and songs.

PETER BRANSCOMBE

Volkert, (Johann) Franz (ii) (*b* Friedland [now Frýdlant], Bohemia, 4 Feb 1767; *d* Königgrätz [now Hradec

Králové], 12 March 1831). Bohemian composer and church singer. He has been frequently confused with the Viennese composer of the same name, who was 11 years younger; it is made clear by the manuscript biographical sketches (one dated Königgrätz, 21 August 1826) in the archives of the Gesellschaft der Musikfreunde, Vienna, that there was no connection between them. A list of his works is given in *MGG1* (K.M. Pisarowitz).

PETER BRANSCOMBE

Volkmann, (Friedrich) Robert (*b* Lommatzsch, nr Dresden, 6 April 1815; *d* Budapest, 29 Oct 1883). German composer. His father, a Kantor and teacher in Lommatzsch, taught him the piano and the organ. At the age of 17 he entered the Gymnasium in Freiberg, Saxony, and studied music with A.F. Anacker. In 1836 he went to Leipzig, where he studied composition with C.F. Becker; there he also met Schumann and attended many of Mendelssohn's Gewandhaus concerts: both composers had considerable influence on his stylistic development.

Volkmann settled in Budapest in 1841, where, except for a period of three and a half years in Vienna (1854–8), he spent the rest of his life. He became a prominent musical figure, frequently meeting famous musicians who visited the city. Although he never learnt Hungarian, he was sympathetic to the growing spirit of Hungarian nationalism, and in 1875 he was appointed to the faculty of the newly founded National Hungarian Royal Academy of Music, serving with Liszt and Erkel.

Volkmann composed in practically all genres, but his several attempts at opera and oratorio were left unfinished. On the whole the vocal works are simple and folklike and are less significant than the instrumental music, which occupies the greater part of his output. Many works, such as the symphonies and string quartets, adhere closely to Classical models; others, particularly the String Serenade no.3, the Cello Concerto, the Overture to Shakespeare's *Richard III* and the B♭ minor Piano Trio, reveal formal structures which might seem to link Volkmann with the New German School. The Trio was championed by Liszt, to whom it was dedicated, and admired by Bülow and Wagner. Among the piano works are several excellent collections of character-pieces for children; the best and most difficult solo piano work is a set of variations on the theme of Handel's *The Harmonious Blacksmith*. Volkmann's harmony is generally conservative and his thematic material is often nondescript; but rhythmically his music is somewhat more interesting, with its changing metres and shifting accents, at times making use of Hungarian folk rhythms.

His grand-nephew, Hans Volkmann (*b* Bischofswerda, 29 April 1875; *d* Dresden, 26 Dec 1946), a musicologist, studied in Munich and Berlin and taught in Dresden. His most significant writings are the monographs on Robert Volkmann and the two-volume study *Emanuele d'Astorga* (Leipzig, 1911–19).

WORKS

Sacred vocal: Off, S, chorus, orch; 2 masses, male vv; 6 choruses, 3 with pf acc., 3 unacc.; 2 songs, 1v, orch

THOMAS M. BRAWLEY

Volkonsky, Andrey Mikhaylovich (*b* Geneva, 14 Feb 1933). Russian composer and harpsichordist. Volkonsky is descended from a famous noble Russian family who had emigrated to Switzerland before moving to Paris in 1945. There he received lessons from Nadia Boulanger (composition) and Dinu Lipatti (piano), but these were interrupted when the family returned to the Soviet Union in 1947. He was enrolled in the Music School at Tambov and in 1950 entered the Moscow Conservatory as a composition pupil of Shaporin. Three years later his *Concerto for Orchestra* was received favourably but, a week after that event, he was expelled from the conservatory, having been denounced by another student for possessing scores by Schoenberg and Stravinsky. He then allied himself with the nascent Baroque movement in Russia, spearheaded by Rudolf Barshay and the Chamber Orchestra of Moscow. His Piano Quintet (1954–5) also received largely favourable comment, but Lina Polyakova, reviewing the work in *Sovetskaya muzïka*, 'resented the excessive complexity of writing and thought' in the third movement, a passacaglia. Volkonsky had meanwhile become acquainted with Filip Herschkowitz; he soon wrote what was probably the first serial (in the Schoenbergian sense) work in Russia – *Musica stricta* (1956). The work was dedicated to and first performed by Marina Yudina. The pointilliste and Webernian aesthetic of his following works – including *Two Japanese Songs* and *Serenade for an Insect* – was totally new to Soviet ears, as was the complexity of techniques to his composer colleagues: in *Les plaintes de Shchaza* a series of eight notes undergoes eight inversions. But his proud ignorance of official policy irritated the ideologues, and Khrennikov and Kabalevsky in particular: by 1964, performance of Volkonsky's music was in practice banned. The *Itinerant Concerto* (1963–7) remained unperformed until 1989, when it was heard in the first Festival' Alternativa organized by his friends Mark Pekarsky and Alexey Lyubimov. The career of the young conductor Igor' Blazhkov, who had given the première of *Les plaintes de Shchaza* in Leningrad, was reduced to nothing while Boulez went on to conduct the work in London and Berlin in 1967. *Replica*, a music theatre work of 1970, is an incisive satire on the current orthodox Soviet view of the Western avant garde. Volkonsky, meanwhile, had founded the Madrigal Ensemble, specializing in Renaissance music that was practically unknown in the Soviet Union, but this foray into other realms clearly did not provide a satisfying enough alternative to active musical life as a composer: he emigrated to France in 1973 where

he continued to work as an interpreter of early music and as a composer. His later works, such as *Immobile*, *Psaume 148* and *Was noch lebt...* demonstrate the increasing refinement and sensitivity of his writing. An enthusiastic, cultured and talented musician, Volkonsky reckoned that his career in Russia had been dogged by the jealousy, servility and mediocrity of others. But arriving in Western Europe he found an organization of power and silence which, with the exception of Germany, was not so different from the one he had known in Russia, with aesthetic ideology replacing the political. Highly sceptical, he devoted himself to the Belaieff Foundation and its work in supporting young and impoverished musicians, and also to the writing of a vast treatise on the basis of different methods of temperament, that in Russia is used by those involved in the renewal of early music.

FRANS C. LEMAIRE

Volkov, Kirill Yevgen'yevich (*b* Moscow, 3 Dec 1943). Russian composer. At the Music School attached to the Moscow Conservatory Volkov studied composition with Grigory Frid and Pirumov, and the cello with Aleksandr Yegorov; subsequently, he graduated from the composition class of Khachaturian at the Moscow Conservatory (1967) and completed his postgraduate studies in 1969. He taught orchestration at the conservatory and composition at the Gnesin Pedagogical Institute of Music (1969–88); in 1988 he became head of composition at the institute (now the Russian Academy of Music). He was named Honoured Representative of the Arts of Russia in 1987.

Volkov was drawn towards folklore and making arrangements of folksongs from an early stage. Subsequently, he has written regularly for the bayan, the accordion and the Russian folk instrument orchestra. Volkov's penchant for transcribing folk material was developed in his operas, which tell of a woman's endurance and the sacrifice of love against a background of Russian peasant life. The composer's first notable success was the opera *Muzhitskiy skaz* ('A Peasant's Tale'), produced for Moscow television in 1971.

Volkov attained wide recognition in the 1970s and 80s when his music was performed in the USSR and in western Europe. His concert pictures *Andrey Rublyov* were commissioned by the orchestra of Halle (former DDR) and first performed there on 20 September 1971; his Concerto for Orchestra was also performed in Halle in 1975. The opera *A Peasant's Tale* was staged in Berlin, Halle, Dresden and Dessau between 1975 and 1980.

From the mid-1980s choral music has been central to the composer's output. Indicative of his enthusiasm for Old Russian themes, a group of works are inspired by the lives of the Christian saints. Other characters are imbued with the heroism of contemporary life through the works of the Russian writers Rasputin and Rubtsov. Stylistically, the music shows influences of Myaskovsky, Prokofiev and Shaporin. From the late 1980s Volkov's interest in Russian chant has intensified. The composer's quest for an ethical ideal and moral perfection through the images of Holy Russia is accompanied by a stylistic rapprochement (in terms of expression, texture and spirit) with forms of monody dating from the Middle Ages.

WORKS
(*selective list*)

STAGE

Ops: Muzhitskiy skaz [A Peasant's Tale] (3, V. Kovda and Yu. Entin, after L. Seyfullina), 1969–70; Nash Gaydar [Our Gaydar] (2, S. Bogomazov), 1977; Zhivi i pomni [Live and Remember] (2, N. Kuznetsov, after V. Rasputin), 1982; Volïshchik iz Strakonits [The Bagpiper from Strakontsï] (2, N. Voronov, after I. Kaetan Tïl), 1984; Tyorkin, Tyorkin ... (2, Volkov, after A. Tvardovsky), 1985

Ballet: Doktor Zhivago (2, K. Ural'sky, after B.L. Pasternak); other ballet suites

VOCAL

Vocal-orch: Sym. no.1 (trad. Russ.), Mez, orch, 1969; Ladoga (V. Semernin), song cycle, Mez, orch of Russ. folk insts, 1970

YURY IVANOVICH PAISOV

Volkov, Solomon (Moiseyevich) (*b* Ura-Tyube, nr Leninabad [now Khodzent], Tajikistan, 17 April 1944). Russian musicologist and cultural historian, naturalized American. He graduated from the Leningrad Conservatory, where he studied the violin (1962–7) and did postgraduate work in musicology (1967–71). He published his first articles in the newspaper *Rīgas Balss* in 1959; these were followed by nearly 300 other articles in Soviet periodicals and collections (1959–75), as well as his book *Young Composers of Leningrad* (1971), with a preface by Shostakovich. Volkov was an early champion of nonconformist composers, such as Arvo Pärt and Giya Kancheli, and of the Soviet rock-and-roll movement. He wrote the libretto for the first Soviet rock opera, *Vai tur ir kāds?* ('Is Anybody There?', after Saroyan; music by Imants Kalniņš, 1971) and, as artistic director of the Leningrad Experimental Studio of Chamber Opera (1965–70), staged such works as Veniamin Fleishmann's *Skripka Rotshil'da* ('Rothschild's Violin'; completed by Shostakovich) for the first time. In 1972 Volkov became a member of the Composers' Union and a senior editor of *Sovetskaya muzïka*. After emigrating to the USA in June 1976, he became a research associate at the Russian Institute of Columbia University, contributed articles to numerous Western periodicals and completed additional books.

Volkov is best known as the editor of *Testimony*, the memoirs that, he claims, Shostakovich related to him during dozens of meetings (1971–4). *Testimony* changed the perception of Shostakovich's life and work dramatically and influenced innumerable performances of his music. Although the authenticity of these reminiscences has been vigorously contested by the Soviet authorities and some scholars, evidence that has come to light since the fall of the Soviet Union in 1991, including endorsements from Shostakovich's children, seems to corroborate *Testimony* and vindicate Volkov (see A.B. Ho and D. Feofanov, eds.: *Shostakovich Reconsidered*, London, 1998). *Testimony* belongs to the great tradition of Russian musical memoirs, such as those by Glinka, Rimsky-Korsakov, Prokofiev and Stravinsky. It also set a standard for the budding genre of politically charged memoirs during the Soviet era. At a time when the Soviets tried to eradicate any notion of continuity and tradition in culture, Volkov collected reminiscences of Russian emigrés in the USA (Nathan Milstein, Vladimir Horowitz, Joseph Brodsky and Sergey Dovlatov), preserving and presenting them not only as a part of Russian cultural expression (then a heretical position), but also as a distinctive Russian-American phenomenon. In *St. Petersburg: a Cultural History* (1995), the first comprehensive investigation of this topic in any language, Volkov also stresses the importance of contributions by Russian-Americans (notably George Balanchine, Brodsky, Vladimir Nabokov and Stravinsky).

ALLAN B. HO

Volkstümliches Lied (Ger.). The name frequently given to the 18th-century lied before Schubert, yet erroneously applied to the genre before the last quarter of that century. Indeed, to associate the rise of the 18th-century lied in the 1740s with the interest shown during the latter part of the century with either real or pseudo-folk poetry and music is to obscure the genre's allegiance to the burgeoning neo-classical aesthetic that in time would lead to a rejection of the Baroque in favour of musical classicism. As commentators from the 1740s onwards agreed, composers of the lied were to strive toward all things 'natürlich' and 'einfältig' (natural and artless). Only later, following James Macpherson's 1760 Ossian 'translations' and Bishop Thomas Percy's *Reliques of Ancient English Poetry* (1765), did Johann Gottfried Herder issue his poetry collection *Volkslieder* (1778–9). Inspired by the latter, the true moving forces of 'folklike' songs would appear to be J.P.A. Schulz, in his *Lieder im Volkston* (i, 1782; ii, 1785; iii, 1790), and then J.F. Reichardt, who in 1782 wrote a short article 'Volkslieder' for the *Musikalisches Kunstmagazin*. Yet another writer who took up the topic was Gottfried August Bürger, who in his *Herzensausguss über Volkspoesie* (1776) admonished German poets to embrace folk poetry as a means of expressing true German values as well as cultural identity. Despite the ubiquity of the term *Volkstümliches lied* in musicological writings of the 20th century, and of 'im Volkston' as an expressive indication in music of the 19th century, the former term, especially, should be used with care.

See also LIED, §III.

JAMES PARSONS

Vollaerts, Jan W(ilhelmus) A(ntonius) (*b* Haarlem, 5 Feb 1901; *d* Amsterdam, 1 Sept 1956). Dutch musicologist. He began studying at the diocesan minor seminary of Hageveld at Voorhout near Leiden in 1915, and later transferred to the nearby theological seminary of Warmond; in 1924 he entered the Jesuit order and attended Berchmans College at Oudenbosch and Katwijk College, The Hague. On 21 December 1929 he was ordained and began teaching music at St Canisius College, Nijmegen. He served both as director of the Nederlandsche R.K. Kerkmuziekschool of St Caecilia and as editor of the church music periodical *Sint Gregorius-blad* in Utrecht (1949–53); thereafter until his death he was director of the Schola Carolina (the school of late vocations), and conductor of the orchestra and choir at St Ignatius College, Amsterdam. His many articles and the courses he gave showed Vollaerts's interest in the palaeography of medieval Gregorian chant notation, particularly the problem of rhythmic interpretation.

In his major work, *Rhythmic Proportions* (1958), he set out to reconstruct the original rhythm of medieval chant, which he believed had perished by the year 1000. The heritage of this practice, he contended, can be traced back to the rhythmic systems used in the music of the early liturgies of the Greeks, Armenians, Syrians, Chaldees and Copts. He held that the notation in those few Western manuscripts with rhythmic indications (e.g. *D-BAs* liturg.6, *F-CHRm* 47, *CH-E* 121 and *SGs* 339, 359 and 390–91) was defective, and that their rhythmic signs represented mere graphic conventions without rhythmic meaning.

Vollaerts was a mensuralist; the metrical relationships between notes of long and short durations in his transcriptions follow a 2:1 proportional scheme. Unlike other mensuralists, such as Houdard, Dechevrens, Peter Wagner, Fleischer and Bernoulli, who systematically assigned various fixed metrical values to neumes, Vollaerts sought to establish general rhythmic principles and rules. He placed far less emphasis on the St Gallen sources than did other mensuralists and the equalists of the Solesmes school, and considered the Messine notation in an early 10th-century gradual (*F-LA* 239) to be particularly valuable because the rhythmic indications used by the notator were so coherent and consistent. He also relied heavily on the Aquitanian notation in part of a troper (*F-Pn* lat.1118) and several Nonantolan fragments from north Italy to support his theories.

JOHN A. EMERSON/KEES VELLEKOOP

Vollerthun, Georg (*b* Fürstenau, Danzig, [now Gdańsk], 29 Sept 1876; *d* Straussberg bei Berlin, 15 Sept 1945). German composer, teacher and conductor. He studied in Berlin with Tappert, Radecke and Gernsheim before becoming a theatre conductor in Prague, Berlin, Barmen and Mainz. From 1908 to 1910 he was in Paris, returning to Berlin where he taught singing before the war. After 1918 he retired from teaching until 1933 when the Nazis enforced a reorganization of the Berlin Hochschule für Musik and appointed him teacher of lieder interpretation and score reading, a post he was forced to relinquish in 1936 after a homosexual indiscretion.

Vollerthun sprang to prominence during the final years of the Weimar Republic when, as a staunch anti-modernist, he joined the Berlin section of the Kampfbund für Deutsche Kultur in order to promote National Socialist cultural policies. He earned much praise in the conservative musical press for his conventional songs and for his neo-Wagnerian *Island-Saga* (1924), regarded by many to be one of the purest forms of Nordic opera. Hitler apparently admired his third opera *Der Freikorporal* (1931) for its spirited inclusion of some of his favourite march motifs, which are employed in a rather banal manner to represent the confronting forces of Friedrich Wilhelm I and August the Strong of Saxony. That the librettist of this particular opera was of Jewish origin seems to have been of little consequence, as the opera received several performances, including a run at the Städtische Oper in Berlin under Schillings, during the early years of the Nazi regime.

WORKS
(*selective list*)

Ops: Veede (Musikdrama, 2, G. Kiesau), Kassel, 1916; Island-Saga (Musiktragödie, 3, B. Tiersch), Munich, National, 1925; Der Freikorporal (3, R. Lothar, after G. Freytag), Hanover, 1931; Das königliche Opfer (3, O. Schrenk), Hanover, 1942; Des Königs Page (Schrenk, after C.F. Meyer), unperf.
Lieder, opp.2, 11, 16, 19
Other vocal: 3 Liederkreis (A. Miegel), op.20, Mez, orch, 1927; 4 Lieder der Anmut, op.24, v, pf, 1932; Lieder der Andacht, op.31, 1936; Prooeminion (J.W. von Goethe), op.23, mixed choir unacc., 1932; Lob Gottes und der Musik (cant., W. Vesper, C. Becker), op.30, chorus, fl, vn, org/pf, 1937; Deutsches Liederspiel (Miegel, Liliencron, Anacker, Lange), op.32, male/mixed choir, 1938
Other works: Alt-Danzig Suite, op.25, orch, 1938; Barock-Suite, op.29, pf, 1936

Principal publishers: Bote & Bock, Fürstner

ERIK LEVI

Volles Werk. A 17th-century German term for FULL ORGAN.

Vollkommene Kadenz (Ger.). *See* PERFECT CADENCE.

Volodos, Arcadi (*b* Leningrad, 24 Feb 1972). Russian pianist. The son of professional singers, he began his musical studies at the Leningrad Conservatory, where he concentrated first on singing and then on conducting. It was not until he entered the Moscow Conservatory at the age of 16, when his extraordinary pianistic gifts were recognized by his piano teacher there, Galina Eguizarovo (who also taught Radu Lupu), that he dedicated himself to the piano.

At the age of 21 Volodos moved to Paris and studied with Jacques Rouvier at the Conservatoire, before studying with Dmitri Bashkirov in Madrid. Volodos's first recording (for Sony Classical), traversing a range of piano transcriptions including his own witty and irreverent treatment of Mozart's 'Rondo alla Turca', dazzles with its effortless virtuosity; this disc also includes two arrangements by Horowitz memorized from Horowitz's own recordings (they were never originally written down).

In his own arrangements of Rachmaninoff songs and Feinberg's transcription of the Largo from Bach's Trio Sonata no.5 (BWV529) Volodos also demonstrates an ear of rare refinement for sonority, colour and voicing. Indeed, it is his control of sonority, the varied quality of his sound and care for ravishing details that links him with the great tradition of Romantic pianism. His second recording, of his Carnegie Hall début (21 October 1998), contrasts further virtuoso display pieces with mature readings of Skryabin (Piano Sonata no.10) and Schumann (*Bunte Blätter*). One of the most exciting pianists of his generation, Volodos stands out among his peers for his potent combination of an extraordinary pianistic mechanism with a daring musical imagination.

TIM PARRY

Vologda. City in north-west Russia, first mentioned in 1147. Right up to the 20th century music in Vologda and the adjoining territory continued in its old patterns of church music, folklore and music associated with town life or the lives of the landed gentry, of which the most thoroughly researched is folklore. The collection and study of folk material was begun in the 17th century by the priest Richard James, a member of the English embassy headed by Duddlie Diggs, and ethnomusicological studies were vigorously pursued in the 19th and 20th centuries. As to church music, by the end of the 19th century Vologda had 47 churches, two monasteries, a seminary, an ecclesiastical school and a diocesan women's school, but there are no special studies of Russian Orthodoxy in the Vologda lands, and music on the country estates and in the town has received scant attention.

Modern musical life is centred on the Philharmonia, founded in 1944, which organizes concerts in the town and region with local and invited artists, and which has a small concert hall with superb acoustics, formerly the house of the Dvoryanskoye Sobraniye (Noble Assembly). Choral music occupies a leading place. The male choir Khorovaya Akademiya (Choral Academy) works under the aegis of the Philharmonia, and has appeared successfully in Europe and America; its repertory consists primarily of Russian Orthodox music. The town also has seven choirs attached to functioning Orthodox churches (from five to 20 members in each), the chorus of the Spaso-Prilutsk Monastery (up to ten members), and about ten amateur choirs, of which the Gorodskaya Akademicheskaya Khorovaya Kapella (Town Academic Choral Cappella, founded in 1968) and the chamber choir Soglasiye (Concord, founded in 1991 and in 1995 appointed the main public organization responsible for amateur choral singing) are close to a professional level.

The oldest music school is the Vologda Music School (founded in 1919), which has four orchestras (a chamber orchestra, a folk orchestra, a wind band and a jazz orchestra), as well as an ensemble of violinists and a mixed choir. In 1976 a faculty was opened at the Vologda Pedagogical University to train music teachers for middle general schools. There are also five music schools in the town providing a comprehensive musical education at beginners' level, and a special school for particularly gifted children, where the free training is directed towards their acquiring a profession in music. An important link in musical education is the Children's Musical Theatre Studio (opened in 1991), whose aim is to provide a comprehensive artistic education by having children put on musical productions. The boys' choir and the ballet studio (*The Firebird* is among the works staged by the latter) have acquired an independent status. Interesting premières are staged annually by the ballet studio of the Dvorets Kul'turï Zheleznodorozhnikov (Railway Workers' Palace of Culture), which was founded in 1958 and has produced ballets on Shostakovich's Fifth Symphony and Verdi's Requiem. The town has a factory, Nota, which makes bayans and accordions.

MORIS SHLYOMOVICH BONFEL'D

Voloshinov, Viktor Vladimirovich (*b* Kiev, 4/17 Oct 1905; *d* 21 Oct 1960). Russian composer and teacher. He studied composition with A.N. Butskoy at the Lysenko Institute in Kiev (1924–5) before entering the Leningrad Conservatory where he attended the classes of M. Chernov and Shcherbachyov, completing postgraduate work with the latter in 1932. He taught theory in Leningrad music colleges from 1927, and in 1932 he started teaching composition at the conservatory (from 1935 as senior lecturer and from 1952 as professor). He gained his *Kandidat* degree in 1947 for his dissertation *Printsipï garmonizatsii russkoy narodnoy pesni v svyazi s osobennostyami yevo ladovogo stroyeniya* ('The principles of harmonization of Russian folksong in connection with the characteristics of its modal structure'). After Shostakovich and Shcherbachyov were denounced in 1948, Voloshinov was appointed head of the composition department and under conditions of severe ideological pressure, he managed to withstand party dictates and preserve the high creative and academic principles of the conservatory. His pupils included Akbarov, A. Chernov, V.P. Chistyakov and Tishchenko.

WORKS

IOSIF GENRIKHOVICH RAYSKIN

Volpe [Rovettino, Rovetta, Ruettino], **Giovanni Battista** (*b* Venice, ?*c*1620; *d* Venice, late 1691). Italian organist and composer. He was the nephew of Giovanni Rovetta and is sometimes referred to as 'Rovettino' or 'Ruettino' and in documentary sources as 'G.B. Rovetta', though Volpe was his family name. He rose through the musical ranks at the basilica of S Marco, Venice, to become *maestro di cappella* in August 1690. He was first retained in 1645 to play one of the basilica's two positive organs. He substituted at the second principal organ during Cavalli's absence, 1660–62, and served as official second organist from January 1665 until January 1678, when he was named first organist. He was also a priest and held various clerical positions at S Marco. He was associated too with the orphanage-conservatory of the Mendicanti and the S Cecilia Society (a musicians' fraternity). Reports that he taught Benedetto Marcello are unlikely to be true. He was noted as a harpsichord player and in 1675 appears to have been the first S Marco musician regularly engaged to play the instrument, described as a spinetta, for lessons during Holy Week. His treatise *Il prattico al cembalo*, admired by Francesco Gasparini, cannot now be traced.

Volpe composed the music for three operas – *La costanza di Rosimonda* (Venice, 1659; Milan, 1675), *Gli amori di Apollo e di Leucotoe* (Venice, 1663; score in *I-Vnm*; excerpt in Rosand, 665–7) and *La Rosilena* (Venice, 1664) – all to librettos by Aureli and all originally presented at the Teatro di SS Giovanni e Paolo. He has sometimes also been credited with *Argiope* (Venice, 1649), otherwise attributed to Rovetta and Leardini, and in 1665 he was entrusted with conducting rehearsals of Antonio Cesti's *Tito*. He also brought out, no later than 1649, a volume of eight-part *Vesperi*, now lost. Motets by him appeared in Bartolomeo Marcesso's *Sacra corona* (1656) and Marino Silvani's *Sacri concerti* (1668). He oversaw the publication of madrigals (op.9, 1646) and motets (op.10, 1647) by Rovetta. Volpe was similarly instrumental in arranging the reprinting by Phalèse of Rovetta's *Manipule e messe musicus* (op.10) and *Bicinia sacra* (op.3, duets only) in 1648 and *Gemma musicalis* (the remainder of op.3) in 1649. In the dedication of Rovetta's op.10, Volpe praised performances of Cavalli's music for their texts, singing and accompaniment.

Volpe, Lelio della. *See* DELLA VOLPE, LELIO.

Volpi, Giacomo. *See* LAURI-VOLPI, GIACOMO.

Volta (i) [lavolta, levolto] (It.: 'turn'; Fr., Ger. *Volte*). A dance of Provençal origin popular at court from about 1550 to 1650. It was unique among court dances of the period in that the couples danced in close embrace, and it was known in France from at least the time of Henri II (1547–59). From the memoirs of Marguerite de Valois (see Michaud and Poujoilat) it is known that 'les Provençales' danced 'la volte avec les timballes [cymbals]'. Arbeau provided the only written description of the dance (*Orchésographie*, 1588) and spoke of it as 'coming into fashion'. It reached its peak of popularity during the reign of Henri IV (1589–1610), but his prudish son Louis XIII (1610–13) banned it from court, probably because of its suggestive movements (Arbeau left it to others to judge 'whether in the *Volte* both honour and health are not concerned and threatened'). This may have precipitated its decline and it was last mentioned as a contemporary dance by Mersenne in 1636.

The volta was also popular outside France and many examples appeared in German and English sources around 1600. Engravings of wedding dances, made by Heinrich Aldegrever of Westphalia as early as 1538, show some of the characteristic movements of the volta, and at Penshurst Place, Kent, there is a celebrated painting depicting the volta, probably rather earlier than Arbeau's description.

Cesare Negri's *Nuove inventioni di balli* (1604) contains a description of a dance entitled 'La nizzarda', the steps of which have much in common with the volta. Arbeau called the volta a kind of galliard, which it resembles in fitting energetic and even violent movements into a rather slow beat in triple time. In spite of the vigorous character of the dance, the music must be taken at a steady speed, with much the same swinging lilt as the galliard though not quite as slowly. The characteristic feature of the dance, from which its name derived, is a series of three-quarter turns, partly executed with a high

Ex.1 Volta from *III. Livre d'airs de cour* (1619[10]), f.58*v*

jump by each partner and partly in the following, still more exhilarating manner: the gentleman throws his left arm round the lady's back, clasping her round her waist; with his right hand placed firmly beneath her busk, and his left thigh pushing her forward, he helps her with a powerful thrust to rise into the air. If this thrust and her spring are timed to perfection, she will rise with surprising ease to a remarkable altitude, while both partners turn rapidly; but it is evident that any disposition to hurry the music can lead only to catastrophe.

The music for the volta is commonly written with six crotchets in a bar, but should be taken as a simple 3/4, with each bar mentally divided into two. The reason for this notation is that the dance itself falls into units of two bars of 3/4 time, as is also the case with the galliard, usually written in 3/2 time. As with many of the older dances, the term was originally applied to a single-line melody, such as the one in the *III. livre d'airs de cour et de différents auteurs* (1619[10]; ex.1). Voltas appeared in arrangements for lute, keyboard and ensembles. Adrian Le Roy included in his *Instruction* (1568) a lute arrangement of one of the earliest surviving Provençal melodies called 'La volte', which appeared in Jean d'Estrée's *Tiers livre de danseries* (1559), and the Italian lute tablatures of G.C. Barbetta (1585) and G.A. Terzi (1599) also include examples. Michael Praetorius's *Terpsichore* (1612) includes 48 voltas and Robert Ballard's first and second books (1611 and 1614) contain seven. The Dolmetsch family possess a lute manuscript of about 1610 which contains 27 voltas, but in the entire Fitzwilliam Virginal Book there are only two examples, neither elaborately treated; one is by Morley, the other by Byrd (ex.2). Although the early 17th-century volta appeared occasionally as the last movement of an ensemble suite (e.g. Thomas Simpson's *Opusculum newer Pavanen*, 1610), unlike many court dances of the Renaissance and later it apparently did not develop into a more or less independent instrumental form during its declining vogue in the ballroom. By the middle of the century it appeared only seldom; Louis Couperin's keyboard compositions, for example, include only one volta.

ROBERT DONINGTON

Volta (ii) (It.). In the Italian poetic forms of the 13th–15th-century BALLATA and the 16th-century BARZELLETTA, a couplet or quatrain at the end of the stanza similar in structure to the *ripresa*; the last line of the *volta* always rhymes with the first line of the *ripresa*, so that it acts as a bridge to the return of the refrain.

□

Volta (iii) (It.: 'time'). The indications 'prima volta' and 'seconda volta' are used, particularly at the ends of repeated sections, to instruct the performer that the bars so marked are to be played only the first or the second time through; they are often abbreviated to *1ma* and *2da* or to *1* and *2*.

□

Voltage control (Fr. *commande par tension*; Ger. *Spannungssteuerung*; It. *controllo di tensione*). In electronic music, a means by which the functions of certain electronic devices may be controlled by the application of external voltages. A change in the voltage applied results in a proportional change in the behaviour of the signal-producing or processing device that is being controlled. Theoretically any function of such a device that can be controlled manually (for instance, by turning a knob) can be made to respond to applied voltages. In practice the most usual applications are to be found in the voltage-controlled oscillator (VCO) and the voltage-controlled amplifier (VCA), in which respectively frequency and amplitude may be controlled by an external voltage. The range of voltages used in musical applications of voltage control is normally quite small: in the case of the voltage-controlled oscillator it is typical to find a ratio of one volt per octave. The lack of a global standard for voltage ratios, however, meant that it was often impossible to create such links between devices produced by different manufacturers.

One of the first pioneers of electronic music to appreciate the importance of the principle of voltage control was the Canadian inventor Hugh Le Caine. His 'electronic sackbut', completed in 1948, incorporated a VCO; in 1955 he designed a multichannel tape recorder whose speed could be varied by control voltages operated from a three-octave keyboard or a ribbon controller. In the USA Harald Bode made limited applications of voltage control in a modular 'signal processor' or sound synthesizer constructed in 1959–60, which in turn influenced Robert A. Moog when he began experimenting in 1964 with what was to become, at the end of that year, the first

commercially manufactured analogue synthesizer. In 1962 Donald Buchla constructed independently several voltage-controlled modules, from which the Buchla synthesizer was developed.

The principle of voltage control is central to the operation of analogue (especially modular) synthesizers, many of whose component devices are voltage-controllable. Thus a device may be used to control one or more others, which in turn may control further devices. To take a simple example, a low-frequency oscillator (that is, one producing frequencies below the audible spectrum) may be used as the source of a varying voltage to control another oscillator that operates within the audio spectrum; the frequency of the latter oscillator tracks the waveshape of the former, producing an audible variation in pitch (or, if applied to its amplitude, as a vibrato). This kind of automated frequency control led to the development of the sequencer, which is a device designed to deliver sequences of control voltages. Any piece of equipment capable of delivering a variable voltage within an appropriate range could be used as the controller of voltage-controlled devices, leading to a proliferation of control equipment employing many different principles of interaction between the user and the electronic circuitry.

Keyboards and ribbon controllers were available with the first analogue synthesizers. A synthesizer keyboard is generally of conventional design; to each key is assigned a voltage from a pre-set range of voltages divided into equal fractional steps, which can often be increased or decreased by the user, so that any desired interval steps (including microtones) can be delivered to a voltage-controlled oscillator. Some keyboards can deliver a second control voltage by means of a circuit that tracks the speed of the key as it is depressed. Typically this is sent to a voltage-controlled amplifier, so that a faster stroke gives a louder sound. However, the decision as to what is controlled by what is normally the choice of the user: the second control voltage could as easily control a second oscillator or a voltage-controlled filter. In other keyboards, pressure on the keybed or lateral movement of the key provides further sources of control voltages.

The glide strip or ribbon controller consists of a contact strip (usually of metal) placed above a strip of electrically resistive material. A single contact, made by pressing the finger down on the ribbon, causes a certain voltage to be sent to the receiving device, and the signal continues until the contact is broken by lifting the finger. By sliding the finger along the strip, continuous transitions between control voltages may be effected, resulting in glissandos if the output is sent to a voltage-controlled oscillator. Later control devices included the joystick, which simultaneously controls two voltage outputs, touch-plates, which deliver voltages proportional to the degree of capacitance between the performer and the plate, and photoelectric cells, the action of which is dependent upon the amount of light falling on them. External signals, such as those created by an acoustic musical instrument, can be converted into control voltages by means of an envelope follower or a frequency-to-voltage converter. A random voltage source, externally triggered, delivers unpredictable voltages from a source of white or pink noise. More unusual sources of control voltages have been tapped, for example the earth's magnetic field (by Charles Dodge), and the alpha waves of the brain (by David Rosenboom and others), gathered by means of electrodes attached to the scalp.

In the early 1980s the American composer Morton Subotnick developed a system of control voltages in which amplitude-modulated oscillator tones were pre-recorded on tape (normally three to each track). During performance or recording, the voltage-control information was extracted by band-pass filters and envelope followers and relayed to the appropriate sound modules. In this way, several control voltages could be applied concurrently. This system, called 'ghost electronics' because only the effects, and not the sounds, of the pre-recorded tracks are heard, was used both for tape compositions (for instance the *Butterfly* series) and live electronic pieces. Voltage control provided composers and performers with many means of controlling their electro-acoustic sound material. The greater precision of control permitted by digital technology led to the development of a wider diversity of controller interfaces for composition and performance. Moog's Big Briar company has mainly concentrated on this area, which is also featured in some non-commercial digital synthesizers. Voltage control has been superseded by MIDI (Musical Instrument Digital Interface), introduced in 1983, a far more wide-ranging digital system that can be applied to all MIDI-equipped devices, regardless of manufacturer.

RICHARD ORTON/HUGH DAVIES

Volte (Fr., Ger.). *See* VOLTA (i).

Volti subito (It.: 'turn [the page] immediately'). A direction found particularly where the player might suppose that the piece finished at the end of the page. It is usually abbreviated to *V.S.* J.S. Bach used the macaronic form *volti cito* (*cito*, Lat.: 'quickly') in, for instance, the Anna Magdalena book. The correct Latin form, which is also occasionally found, is *verte*.

Voluda, Ginés de. *See* BOLUDA, GINÉS DE.

Volumier [Woulmyer], **Jean Baptiste** (*b* ?Spain, *c*1670; *d* Dresden, 7 Oct 1728). Flemish violinist and composer. He was educated at the French court, and in 1692 became a violinist in the Elector of Brandenburg's court chapel in Berlin, where he was soon appointed Konzertmeister and

given charge of dance and ballet music. As court dancing-master he was required to compose music for various ballets; he or C.F. Rieck composed *Florens Frühlingsfest* (1696), and he provided the entrances, dances and arias in the marriage opera of the crown prince Friedrich Wilhelm I in 1706, *Der Sieg der Schönheit über die Helden* (the remainder was written by Finger and Stricker). In neither case does the music survive, although the texts by the court poet Johann von Besser were published (Leipzig, 1732). Volumier was dismissed in 1708 after a dispute and entered the service of the Saxon court at Dresden, where in 1709 he was appointed Konzertmeister. He introduced there, as he had at Berlin, the French style of performance, to suit the fondness for French culture at the court. Volumier built up an orchestra of French profile, dividing the strings in to six parts (playing with uniform bowing) and using flutes instead of recorders, oboes instead of cornetts, and bassoons and horns. Under his direction the development of the Dresden chapel reached a new peak and the golden age of the Dresden violin school began. Veracini and Pisendel contributed to this improvement; the latter succeeded Volumier and raised the standard of the orchestra's performance still further, now, after an Italian increase in the orchestra, cultivating an amalgamation of French, Italian and German style elements, the so-called mixed or German style. Quantz stated in his autobiography (in F.W. Marpurg: *Historisch-kritische Beiträge*, i, Berlin, 1754/*R*) that he never heard an orchestra better than the Dresden one under Volumier. Volumier was an excellent violinist, and a friend of Bach's; he initiated the competition between Bach and Louis Marchand (from which Marchand withdrew). None of his music survives; his many ballets and his violin works were mostly destroyed during the Prussian bombardment of Dresden in 1760.

DIETER HÄRTWIG

Voluntary. A freely composed or improvised piece, usually for the organ in the context of a church service. The term is occasionally met with outside the church, as for example when Burney extemporized at the harpsichord before a distinguished audience in Venice: 'I played a Voluntary, for I could neither see, nor remember anything, I was so frightened' (*Dr Burney's Musical Tours in Europe*, ed. P.A. Scholes, London, 1959, i, p.135). In his remarks about improvisation Roger North discussed the aptitudes necessary in an organist who would create such a piece and the chief characteristics of the style. In the Anglican church the voluntary has been played at the Offertory (at which point before the Commonwealth the choral part of the Communion service often ended) and after the psalms or the second lesson at Matins and Evensong, as well as before and after the service, as is usual today.

As a musical term the word 'voluntary' is imprecise. At various times it has overlapped with 'verse', 'fancy' and 'fugue' as well as with less frequently used terms. The word 'verse', indicating a short organ piece, is derived from the custom whereby the organ provided a substitute for the chant in the Latin rite, playing the odd-numbered verses of a hymn or other item in alternation with the choir (*see* ORGAN HYMN). There is no necessary formal distinction between the voluntaries and verses of Thomas Tomkins and John Blow, for example, although 'voluntary' was generally adopted for works in two or more sections. 'Fancy' is an anglicization of the Italian 'fantasia'; it too was used by Tomkins interchangeably with voluntary and 'verse'. The word 'fugue' (or 'fuge') is found in copies of some works of Blow and his contemporaries. They are of course fugal in character; but they are highly irregular, and the term, then and later, did not exclude the possibility of an independent prelude (the expression 'prelude and fugue' seems to have been unknown). The word appears on the title-pages of publications by Philip Hart (1704), Thomas Roseingrave (1728, 1750), Handel (1735), Burney (*c*1790) and others, sometimes as an alternative to 'voluntary'.

The first piece to be called a 'voluntary' is a short movement in the Mulliner Book (*c*1550–75) by Richard Alwood (MB, i, 1966, no.17). It is freely composed and semifugal in style; but it is not unique in these respects. An untitled piece in a contemporary manuscript (*GB-Och* 1034A) by John Ambrose, for example, displays similar characteristics. From the so-called golden age of English keyboard music we may cite Byrd and Weelkes, as well as Tomkins, as composers of voluntaries in a fugal style. Gibbons preferred the term 'fantasia' or 'fancy' and applied it to a work (MB, xx, 1962, no.7) in which the two manuals of the early 17th-century English organ were exploited, apparently for the first time. The main fugal entries are on the little (or 'Chair') organ; but from time to time an entry appears on the Great organ in the left hand and is developed rather in the manner of a solo on the division viol. Towards the end both hands play together on the Great. It is surprising that so few double voluntaries (as the form came to be known) have come down to us from the first half of the 17th century. The only other surviving examples are three by John Lugge and one by Richard Portman.

Matthew Locke published seven voluntaries in *Melothesia* (1673). No.7 is a double voluntary in which a solo for the right hand appears for the first time. Nos.2 and 3 are introductions and fugues, the introduction itself being fugal in the latter. Most of Blow's voluntaries are slow or quick fugues. Purcell's voluntaries in G major and D minor both end with fast italianate fugal movements, the first after a rhapsodic introduction, the second after a slow fugue and a free middle section. The voluntary on the 'Old Hundredth' by Blow or Purcell is an unusual English example of chorale variation.

William Croft's 13 voluntaries are more straightforward in rhythm and texture than those of some of his contemporaries, such as Barrett and Hart. Roseingrave represents a continuation of Hart's idiom modified by a certain Handelian influence, while Croft's manner was perpetuated by Greene and Stanley. Greene established the form of the slow introduction followed by an Allegro which was either fugal or in concerto style (his published voluntaries have also been attributed to Boyce, but this is unlikely: Boyce himself composed a distinguished set, published posthumously). The majority of 18th-century voluntaries are in two movements, but many are in four, while Stanley contributed a three-movement work (op.5

no.8) in Italian concerto style. Among other 18th-century composers the names of Travers, Bennett, Walond, Burney, John Alcock the elder and Dupuis stand out. Early 19th-century composers include William Russell, Samuel Wesley and Thomas Adams. The term has often been used since then, but with no special implication beyond that of suitability for service use.

JOHN CALDWELL

Vomáčka, Boleslav (*b* Mladá Boleslav, 28 June 1887; *d* Prague, 1 March 1965). Czech composer and critic. He studied the organ (1906–9), composition with Novák (1909–10) and singing with Josef Krummer at the Prague Conservatory, concurrently studying law at the university (doctorate 1913). Thereafter he worked successively as a solicitor, a judge and a civil servant: he headed a department at the Ministry of Social Security after World War II, and he also fulfilled various functions in the Ministry of Education, Science and Arts and the Ministry of Culture. He wrote a great deal of music criticism for such journals as *Hudební revue*, *Listy hudební matice*, *Tempo*, *Hudební rozhledy* and *Auftakt*; his essays include a series on outstanding Czech musicians of the 20th century. As a member of numerous music organizations he had a wide influence on Czech musical life; he was an honorary member of several choral associations, and he received the title Artist of Merit (1955) and the Order of Work (1957). After World War I Vomáčka was in the vanguard of Czech music, achieving great success in songs and choral pieces whose melodic lines were rooted in folk patterns, while his instrumental music showed a bold handling of dissonance and unusual brevity. Later he abandoned his avant-garde position, and after World War II his music became extremely clear and simple. One of his most important compositions is the opera *Vodník* ('The Watersprite'), which borrows from the folksong tradition.

WORKS
(*selective list*)

VOCAL

Ops: Vodník [The Watersprite], op.29 (4, after K.J. Erben, A. Wenig), 1934–7, Prague, National, 17 Dec 1937; Boleslav I, op.61 (4, Vomáčka, after M. Jaris), 1953–5, Prague, National, 8 March 1957; Čekanky, op.62 (3, Vomáčka, after F.X. Svobody), 1939, 1956–7, unperf.

Cants.: Romance svatojiřská [St George Romance] (S. Hanuš), op.12, 1920, 1943; Živí mrtvým [The Living and the Dead] (Hanuš), op.16, 1927–8; Mládí [Youth] (A. Sova), op.20, 1914–16, 1930; Strážce majáku [The Lighthousekeeper] (J. Wolker), op.24, 1931–3; Prapor míru nad Duklou [The Banner of Peace over Dukla] (J. Moucha), op.55, 1951; Bojka partyzánka [The Guerrilla Struggle], op.56, 1952

Several song cycles, most with pf/orch; numerous choral pieces

INSTRUMENTAL

Orch: Ciaconna, op.5, 1910: Sym., F, op.47, 1945; Dukla, op.50, ov., 1948; Idylka, op.54, str, 1906–7; Estrádní suita, op.59, 1909–45; Fanfáry míru [Peace Fanfares], op.69, tpt, orch, 1960

Chbr: Sonata, op.3, vn, pf, 1912; Duo, op.14, vn, vc, 1925–7; Sonatina, op.31c, 2 vn, 1936, arr. as op.31b, vn, va, arr. as Kvartetino, op.31a, str qt, 1941; Nokturno, Selanka, op.53, vn, pf, 1907; Nonet, op.64, 1957; Str Qt, op.66, 1959; hp pieces

Pf: Hledání [The Quest], op.4, 1913; Intermezzi, op.6, 1915–17; Sonata, op.7, 1917; Z války [From the War], op.15, 1916–20; Obnovené obrazy [Renewed Pictures], op.28, 1907, rev. 1910, 1939; Sonata quasi fantasia, op.40, 1942; other pieces

Principal publisher: Hudební Matice

Vonk, Hans (*b* Amsterdam, 18 June 1942). Dutch conductor. He studied the piano and conducting at the Amsterdam Conservatory and began his conducting career in 1966 with the Netherlands National Ballet. He had appointments with the Concertgebouw and the Netherlands Radio PO (1973–9), during which he made his début at the Netherlands Opera with Fortner's *Don Perlimplin* (1971). From 1976–9 he was also associate conductor of the RPO in London. His American opera début was at San Diego in 1979 with *La traviata*. He was music director of the Netherlands Opera from 1976 to 1985; he then became principal conductor of the Dresden Staatskapelle and artistic director of the Staatsoper at the reopened Semper Oper, Dresden. A recording of his performance there of *Der Rosenkavalier* (1985) was much praised for its lively spirit and superb orchestral playing. Vonk remained at Dresden until 1990, and in 1991 became chief conductor of WDR, Cologne (Cologne Radio Orchestra). Vonk's work in other European centres has included conducting a revival of Jommelli's *Fetonte* at La Scala in 1988. In 1996 he became conductor of the St Louis SO. His recordings include works by Dutch composers, notably Diepenbrock, Henkemans and Zweers.

NOËL GOODWIN

Von Ramm, Andrea (*b* Pärnu, Estonia, 8 Sept 1928; *d* Munich, 30 Nov 1999). German singer. After study with Margarethe von Winterfeldt in Freiburg and Adelaide Saraceni in Milan, she began her career in oratorio before becoming a co-founder of the STUDIO DER FRÜHEN MUSIK in Munich in 1960. In 15 years of intensive performance with the lutenist Thomas Binkley, the string player Sterling Jones and various tenors, she covered a broad repertory from early monophony to the Renaissance, documented

in many recordings. From 1972 to 1978 she taught at the Schola Cantorum in Basle, and she also taught phonetics and recitation at Basle University for 12 years. Meanwhile she focussed her concert work on the broader concept of *Wortmusik* (music in words), ranging from medieval poetry through early Baroque monody to contemporary music, sometimes to her own texts. Her singing displayed virtuoso technique, control of vibrato, flexibility, stylistic differentiation and a wide range that reached from mezzo-soprano into the tenor register. In early music her innovatory interpretations were decisive in making the repertory known to a wider public and had a major influence on many younger singers.

DAGMAR HOFFMANN-AXTHELM

Von Seckendorff, Karl Siegmund. *See* SECKENDORFF, KARL SIEGMUND VON.

Von Stade, Frederica (*b* Somerville, NJ, 1 June 1945). American mezzo-soprano. She studied at the Mannes School, New York, making her début at the Metropolitan in 1970 as the Third Boy in *Die Zauberflöte*; later roles there included Suzuki, Lola (*Cavalleria rusticana*), Stéphano (*Roméo et Juliette*) and Nicklausse. At Santa Fe she sang Cherubino, Zerlina and Mélisande, and created Maria in Villa-Lobos's *Yerma* (1971). A spirited Cherubino, notably at the Paris Opéra and Glyndebourne (both 1973) and at Salzburg (1974–5), she was also admired as Octavian. She made her Covent Garden début in 1975 as Rosina and returned in 1985 as Ellen (*La donna del lago*). Her repertory included Mozart's Sextus, Idamantes, Dorabella, Cenerentola (of which she made an outstanding video recording from La Scala in 1981), Adalgisa, Charlotte, Monteverdi's Penelope, Hänsel, and the Composer (*Ariadne*). In 1974 she created Nina in Pasatieri's *The Seagull* at Houston, and in 1988 created Tina in Argento's *The Aspern Papers* at Dallas. In 2000 she was an admired Hanna (*Die lustige Luiture*) at the Metropolitan. Her musicianship and personal charm are evident in her many recordings, not only of her principal roles (notably Cherubino, Charlotte, Hänsel and Mélisande) but also in *mélodies*, of which she is a gifted interpreter.

HAROLD ROSENTHAL/ALAN BLYTH

Von Tilzer [Gumm], **Albert** (*b* Indianapolis, IN, 29 March 1878; *d* Los Angeles, 1 Oct 1956). American songwriter and publisher, brother of HARRY VON TILZER. He adopted his brother's pseudonym in 1899. He taught himself the piano, and became a pianist and arranger in Chicago for the publishing firm of Shapiro, Bernstein & Von Tilzer. In 1900 he went to New York, where he directed a vaudeville company before joining his brother's newly established publishing house as an arranger; in 1903 he formed the York Music Co. with another brother, Jack Von Tilzer. He wrote some of the most popular songs of the early 20th century, including *Teasing* (1904), *Take me out to the ball game* (1908), *Kentucky Sue* (1912), and *I'll be with you in apple blossom time* (1920). He contributed songs to a number of films and also wrote works for Broadway, including the popular musical comedies *Honey Girl* (1920) and *The Gingham Girl* (1922). Typical of early 20th-century Tin Pan Alley, Von Tilzer's songs have deceptively simple melodies and harmonies, and incorporate dance rhythms and slang idioms that were popular at the time; many have become standards.

WORKS
(*selective list*)

Stage (all musical comedies first performed in New York; where different, writers shown as: lyricist; book author): The Happiest Night of his Life (S. Rosenfeld; J. McCree), 20 Feb 1911; Honey Girl (N. Fleeson; E. Clark), 3 May 1920; The Gingham Girl (Fleeson), 28 Aug 1922 [incl. As Long as I have You]; Adrienne (A.S. Brown), 28 May 1923; Bye, Bye, Bonnie (B. Dudley; L. Simon), 13 Jan 1927

Films (including one or more songs by Von Tilzer): Birth of a Nation, 1930; Rainbow over Broadway, 1933; Gift of Gab, 1934; Here Comes the Band, 1935; Sing me a Love Song, 1936; Rawhide, 1938; Sundown on the Prairie, 1939; The Naughty Nineties, 1945; Skirts Ahoy, 1952

Songs: Teasing (C. Mack) (1904); Honey Boy (J. Norworth) (1907); Take me out to the ball game (Norworth) (1908); Put your arms around me, honey (J. McCree) (1910); I'm the lonesomest gal in town (L. Brown) (1912); Kentucky Sue (Brown) (1912); Oh, how she could yacki hacki wicki wacki woo (S. Murphy and C. McCarron) (1916); I may be gone a long, long time (Brown) (1917); Oh, by Jingo (Brown) (1919); I used to love you (Brown) (1920); I'll be with you in apple blossom time (Fleeson) (1920)

Principal publishers: Broadway Music, York Music

DEANE L. ROOT

Von Tilzer, Harry [Gumm, Harold] (*b* Detroit, 8 July 1872; *d* New York, 10 Jan 1946). American songwriter, publisher and performer. He added 'Von' to his mother's maiden name and used this as a professional pseudonym. He worked in a circus and medicine show as a singer and tumbler and published his first song in 1892 (*I love you both*). In the same year he went to New York, where he performed his songs in vaudeville. The success of *My Old New Hampshire Home* (1898) was such that he was made a partner in the publishing firm Shapiro, Bernstein & Co., for whom he then wrote *A Bird in a Gilded Cage* (1900); he worked for the firm as a song plugger. In 1902 he founded the Harry Von Tilzer Music Co., which became one of the most successful American popular-music publishers in the early 20th century, earning him the nickname 'the Man who Launched a Thousand Hits'. Von Tilzer engaged Irving Berlin as a song plugger, issued George Gershwin's first song and is reputed to have published about 2000 of his own songs, including *Down where the Wurzburger Flows* (1902), *I want a girl just like the girl that married dear old dad* (1911), *When my Baby Smiles at Me* (1920), and many other sentimental and moralistic ballads. He also wrote 'coon' songs for blackface minstrel and vaudeville acts. He may have been responsible for the invention of the name 'Tin Pan Alley' in about 1903, when a journalist noticed that he had stuffed paper between the strings of his office's upright piano to produce a more percussive sound. Von Tilzer was one of few publishers in the late 1920s to remain independent of the radio and cinema companies that bought up music firms and their songwriting staffs. He wrote an introduction to E.M. Wickes's manual *Writing*

the Popular Song (Springfield, MA, 1916), giving a brief philosophy of the profession.

Von Tilzer's brothers were also involved in music publishing and adopted his pseudonym: Julie Von Tilzer was a manager of Remick's and later president of the Harry Von Tilzer Music Co.; Will Von Tilzer was a lyricist and head of Broadway Music Co.; Jack Von Tilzer was a co-founder and director of the York Music Co. together with ALBERT VON TILZER, who was also a successful songwriter.

WORKS
(*selective list*)

Stage (where different, writers shown as: lyricist; book author): The Fisher Maiden (comic op, A.J. Lamb), New York, 5 Oct 1903; The Jolly Baron, or The Miller's Daughter (musical comedy, Lamb; A. Burkhardt and A. Hoffman), 1904 (New York, 1904); Heigh Ho (revue, D. Singer and L. Donnelly), 1905 (New York, 1929); The Kissing Girl (comic op, V.P. Bryan; S. Stange), Chicago, 25 Oct 1909

*c*2000 songs, incl. I love you both (1892); My Old New Hampshire Home (A.B. Sterling) (1898); I'd leave my happy home for you (W.A. Heelan) (1899); A Bird in a Gilded Cage (Lamb) (1900); Down where the Wurzburger Flows (Bryan) (1902); In the Sweet Bye and Bye (Bryan) (1902); The Mansion of Aching Hearts (Lamb) (1902); On a Sunday Afternoon (Sterling) (1902); Please go 'way and let me sleep (H. Von Tilzer) (1902); Wait 'til the sun shines, Nellie (Sterling) (1905); Where the Morning Glories Twine (Lamb) (1905); I want a girl just like the girl that married dear old dad (W. Dillon) (1911); They always pick on me (S. Murphy) (1911); In the Evening by the Moonlight (Sterling) (1912); A Little Bunch of Shamrocks (W. Jerome, Sterling) (1913); When my Baby Smiles at Me (Sterling) (1920); Just Around the Corner (D. Singer) (1925)

DEANE L. ROOT

Von Toesky, Johann Baptist. *See* TOESCHI family.

Voorberg, Marinus (*b* Hook of Holland, 7 May 1920; *d* Hilversum, 29 July 1985). Dutch conductor. He studied the piano and the organ at The Hague Conservatory, graduating in 1940. He first appeared in public as a pianist when he was ten, and he later toured Europe, Israel, India and Indonesia. From 1950 to 1952 he studied choral conducting in Italy, and in 1952 became conductor of the NCRV Vocal Ensemble (later the Netherlands Vocal Ensemble), remaining in the post until the choir ceased to exist in 1978. He was also appointed conductor of the Amsterdam Chamber Orchestra and appeared at festivals with both these ensembles, and as a guest conductor. With his choir, apart from the traditional *a cappella* repertory, he specialized in avant-garde music and introduced many works by Dutch and foreign composers, such as Ton de Leeuw, Antoniou, Tona Scherchen and others. Voorberg made several recordings and in 1970 he was awarded the Edison Prize for his recording of madrigals and responsories by Monteverdi. He was conductor of the Stuttgart Radio Choir, 1975–1981, in addition to his Dutch appointment. In 1971 he was made a Knight of the Order of Oranje Nassau.

TRUUS DE LEUR

Voormolen, Alexander (Nicolaas) (*b* Rotterdam, 3 March 1895; *d* Leidschendam, 12 Nov 1980). Dutch composer. He studied composition in Utrecht with Johan Wagenaar and with Willem and Martinus. In 1916, on the recommendation of Rhené Baton (who conducted his overture to Maeterlinck's *La mort de Tintagiles* at The Hague in 1916), he went to Paris, where he worked with Roussel and became close to Ravel, Casella, Delius and Florent Schmitt. He returned to settle in the Netherlands in 1920, first in Veere and moved to The Hague in 1923. For many years he was music critic for the *Nieuwe Rotterdamsche Courant*, and then from 1938 to 1955 he was librarian of the Conservatory of The Hague.

Voormolen's first works (those from the years 1915–25) show a chromatic harmonic style influenced by Debussy, Ravel and Delius, and also an early return to Baroque forms. In addition, after 1919 he drew increasingly on Dutch folksong, as in the piano suite *Tableaux des Pays-Bas* (1919, 1924). In the 1920s Voormolen searched for a more individual, typically Dutch style, one that was permeated with old tunes and the sound of the Dutch carillon, and that could evoke the atmosphere and elegance of the Dutch Baroque. This resulted in such popular scores as the *Baron Hop* suites (1924, 1931), the orchestral variations *De drie ruitertjes* (1927), the concertos for one or two oboes (1938) and the symphonic poems *Een zomerlied* (1928), *Arethuza* (1947) and *Eline* (1957).

WORKS
(*selective list*)

ORCHESTRAL

La mort de Tintagiles, ov., 1913; 2 Baron Hop suites, 1923, 1931; Variations on 'De drie ruitertjes', 1927; Een zomerlied, 1928; 2-Ob Conc., 1933; Ob. Conc., 1938; Kleine Haagse suite, chbr orch, 1939; Sinfonia, 1939; Pastorale, ob, str, 1940; Arethuza, 1947; Conc., 2 pf, str, 1950; Spiegel-suite, chbr orch, 1950; Sinfonia concertante, cl, hn, str, 1951; Eline, 1957; Chaconne and Fugue, 1958

CHAMBER AND INSTRUMENTAL

For 2–4 insts: Pf Trio, 1920; Sonata, vn, pf, 1920; Suite, vc, pf, 1920; Sicilienne et rigaudon, vn, pf, 1923; Divertissement, vc, pf, 1925; Romance, vc, pf, 1927; Sonata no.2, vn, pf, 1934; Str Qt no.2, 1942; Sonata, va, pf, 1953

Pf: Suite no.1, 1918; Tableaux des Pays-Bas, 2 vols., 1919, 1924; Le souper clandestin, 1922; Scène et danse érotique, 1923; Livre des enfants, 2 vols., 1924, 1925; Berceuse, 1927; Sonata, 1944; Eline, nocturne, 1951; Domanda e risposta, 1954

Hpd: Suite, 1924

VOCAL

Choral: 3 nederlandse gedichten, male vv, 1948; Wanderers Nachtlied (J.W. von Goethe), 1950; Aux baigneurs, chorus, 1967

Songs for 1v, pf: 2 moralités (C. Perrault), 1919; 3 liederen van Isoude (P.C. Boutens), 1921; In den nacht (Boutens), 1921; 3 poèmes (R. Chalupt), 1921; 3 gedichten (J. Luyken), 1932; 4 Oud-Nederlandse gedichten, 1932; 3 poèmes (H. de Régnier), 1938; 5 Nederlandse gedichten, 1947; 3 Rilke-Lieder, 1948; 3 Songs on British Verse, 1948; Canzonetta (Voormolen), 1950; Obsession (Voormolen), 1952; L'élue d'Amsterdam (Voormolen), 1964: Madrigal, 1969; Ave Maria, 1973

Other solo vocal works: Beatrijs (Boutens), spkr, pf, 1921; La sirène, 1v, orch, 1949

Principal publishers: Alsbach, Donemus, Rouart

JOS WOUTERS/LEO SAMAMA

Vopa, Giovanni Donato (*b* ?Bari; *fl* c1585). Italian composer. He was one of a small circle of composers gathered around Stefano Felis during the latter's period as *maestro di cappella* at Bari Cathedral. He is represented in Felis's *Primo libro de madrigali a cinque voci* (R/Venice, 1585, ?lost formerly in *PL-GD*) by a setting of *Voi piagge e verdi prati*, and both composers together with Giovanni Battista Pace, another of Felis's pupils, produced a volume of madrigals jointly in 1585 (RISM 1585[30]). The seven pieces that Vopa contributed to the book are florid, nimble examples of the light canzonetta style, providing a foil to the more contrapuntal, retrospective writing of Pace. The dedications of both publications suggest that they are the products of a small musical academy that met at the house of Paolo Grillo, a Genoese nobleman who lived in Bari.

IAIN FENLON

Vopelius, Gottfried (*b* Herwigsdorf, nr Zittau, 28 Jan 1645; *d* Leipzig, 3 Feb 1715). German music editor and composer. He attended the Gymnasium in Zittau and showed such promise that in due course he was promoted choir leader. He later studied at Leipzig University. On 3 July 1671 he was appointed *collaborator ultimus* at the Nikolaischule at Leipzig, and on 31 March 1677 he became Kantor there and at the Nikolaikirche. He taught syntax, Latin etymology, prosody, Greek Testament and geography as well as music, and he also supervised Bible reading and poetry exercises. He remained there until his death, in spite of the comment in a visitation of 1712 that he had become an embarrassment to the institution. He published *Neu Leipziger Gesangbuch, von den schönsten und besten Liedern verfasset . . . mit 4. 5. bis 6. Stimmen, deren Melodeyen theils aus Johann Herman Scheins Cantional, und andern guten Autoribus zusammen getragen, theils aber selbsten componiret* (Leipzig, 1682). This compendium, comprising 1104 pages and important for the study of church music in Leipzig in the later 17th century, contains 55 pieces for solo voice, two in three parts, 241 in four, 14 in five and four in six, as well as two Passions (after Johann Walter (i)) and a Resurrection history (after Scandello); there are also 113 items of which only the texts are given. Where necessary, Latin and German texts are both printed. Among the composers represented are Joachim a Burck, Johannes Crüger, Demantius, Melchior Franck, Hammerschmidt, Tobias Michael, Michael Praetorius, Rosenmüller, Schelle, Heinrich Schütz and Schein, whose *Cantional* (1627), from which 96 pieces were taken, was the mainstay of the collection. Vopelius included three pieces of his own, among them the chorale aria *Also hat Gott die Welt geliebt*, which Bach used (BWV68). An interesting development of a theme of Vopelius by Rosenmüller is given by Moser.

PERCY M. YOUNG

Vorberg, Gregor (*b* Lauban [now Lubań, Poland]; *d* Trautenau [now Trutnov, Czech Republic]; *fl* 1579–94). German theologian and composer. He enrolled at Leipzig University in 1579. After completing his studies he became a master at the Gymnasium in Thorn where he remained until 1593. He was ordained at Frankfurt an der Oder in 1594, subsequently becoming the Lutheran minister in Trautenau, Bohemia. A mass for six voices, *Missa Domine, quando veneris*, survives in manuscript (*Pl–WRu*). Another mass and several motets are included in tablature in Vienna (*A–Wm*).

Vordergrund (Ger.). *See* FOREGROUND. *See also* LAYER.

Vordersatz (Ger.). Antecedent phrase. *See* ANTECEDENT AND CONSEQUENT.

Vorhalt (Ger.). *See* SUSPENSION.

Vorimitation (Ger.: 'prior imitation'). The process whereby a principal theme, stated in long note values in one part of a polyphonic texture, is anticipated by an imitative section in the other parts, usually based on a rhythmic diminution of the theme. In certain of Bach's chorale preludes, for instance (e.g. *Vor deinen Thron tret' ich* BWV668), a *Vorimitation* of each line of the chorale melody precedes the section of which that line is the dominating part.

□

Vořišek, Jan Václav (Hugo) [Worzischek, Johann Hugo] (*b* Vamberk, north-east Bohemia, 11 May 1791; *d* Vienna, 19 Nov 1825). Bohemian composer, pianist and organist.

1. LIFE. He was the youngest son of Václav František Vořišek (1749–1815), a schoolmaster in Vamberk and choirmaster and organist of the local church. The eldest son, František (1785–1843), a priest, was also musical, and the two daughters, Eleonora and Anna, played the piano. Of the composer's mother, Rozálie, little is known other than her maiden name (Matiášová) and the date of her death (1807). From the age of three Jan Václav was taught the piano and singing by his father, a stern and severe man; he later studied the organ and the violin and began to compose. By the age of seven he deputized as organist for a neighbouring church and in his youth he toured on foot throughout Bohemia as a pianist. On these journeys he travelled as far as Prague, where his repertory included at least one Mozart piano concerto, as well as his own youthful compositions. None of these early works is extant.

Capturing the attention of the Countess Rozina Kolowrat-Libstejnsky, owner of the Vamberk estate, Vořišek moved in October 1802 to Prague, where under the

patronage of the countess he attended the classical Jesuit Gymnasium in the Malá Strana district; he completed his elementary education and in 1806 embarked on his secondary education there. He served as the school organist and composed music to Latin texts. During this period he made a manuscript collection of organ works, part of which is extant.

From 1810 to 1813 Voříšek studied philosophy, aesthetics and mathematics at the University of Prague; he later switched to law but did not graduate. During those years he developed a local reputation as a pianist, performing J.L. Dussek's Piano Sonata in A♭ ('Le retour à Paris') to great acclaim. He was also active as a composer, producing a set of 12 German dances, a song, *Nevinnost*, to a Czech text by Václav Hanka, and a long piano march in honour of the death of the General Moreau (1813).

The essential thrust of Voříšek's musical personality was established during his university years. Three elements appear to have been decisive: his studies with Václav Tomášek; his involvement with the music of J.S. Bach; and the music of Beethoven. Voříšek began to study with Tomášek about 1804, apparently free of charge. Tomášek was impressed by his talent and made a special note to that effect in his diary ('Grosses Talentumsonst'). At first lessons were limited to the piano; later he studied harmony and composition. These lessons must have been brief, for in later years Voříšek is reported to have remarked, 'unfortunately, we only got as far as the 7th chord'. (Tomášek's notes towards a course in harmony, preserved in the Czech National Museum, indeed do break off after the introduction of the 7th chord.) Although short-lived, his studies with Tomášek were of crucial importance and for the remainder of his life Voříšek considered himself to be Tomášek's student.

About 1812 Voříšek's compositions began to appear in print. These included the German dances and the funeral march. He also composed and had performed his first cantata, *Gefühle des Dankes*, a farewell to one of his teachers. It was during Voříšek's later years in Prague that Tomášek began to compose the piano eclogues, rhapsodies and dithyrambs upon which his reputation as a composer largely rests. Voříšek's 12 Rhapsodies op.1 were begun at this time (about 1813) and were modelled on Tomášek's similarly titled works. With the Rhapsodies, Voříšek established an idiom for his own lyrical piano pieces from which he never substantially deviated.

During his studies with Tomášek Voříšek came to know and admire the keyboard works of Bach, especially the preludes and fugues of *Das wohltemperirte Clavier*. He also admired the music of Beethoven, whose 'Eroica' Symphony was performed in Prague in 1806. According to Tomášek's autobiography Voříšek visited Beethoven several times when he was in Vienna (about 1814), and Beethoven commented favourably to Tomášek about some of Voříšek's Rhapsodies.

On the advice of J.N. Zizius, a Bohemian-born, music-loving professor of statistics at the University of Vienna, Voříšek moved to Vienna in autumn 1813, ostensibly to complete his law studies there but also in order to have a wider avenue for his musical development. He enrolled in the law faculty, but his attention was soon drawn towards a musical career and for a time his legal studies lapsed. He was active as a pianist and as a violinist, and gradually developed a reputation as one of the finest keyboard players in the city. A rival of Moscheles and Meyerbeer, he was known for his virtuoso technique, his sensitive musicianship and, especially, for his extemporization. The height of his fame was during the early 1820s when he was described by the *Wiener Zeitung* (1822) as 'our pre-eminent master of the piano'.

His first appearances in Vienna as a pianist were at the soirées held by Zizius. There he met Beethoven and others who were to influence the direction of his career. These included Joseph and Ignaz Sonnleithner and Raphael Kiesewetter, all of whom held their own private concerts at which Voříšek became a regular performer. In the 1820s he established his own semi-private Sunday string quartet concerts, at which he performed the works of Mozart, Haydn, Hummel and Onslow.

Through Zizius and Kiesewetter, both founder-members of the Gesellschaft der Musikfreunde, Voříšek became associated with the society, appearing first as a pianist in Hummel's fashionably virtuoso *Rondo brillant* in A major (op.56) for piano and orchestra at the initial concert of December 1815. In 1818, on the recommendation of Kiesewetter, he became assistant conductor of the society's orchestral concerts and in 1819 a principal conductor and member of the advisory council. He conducted the orchestra twice in 1819, including performances of Beethoven's Second Symphony and an overture by Tomášek. He also remained active as a performer there, appearing regularly at the Thursday evening chamber concerts, playing his own works. His only symphony was composed for the Gesellschaft der Musikfreunde concerts and was first performed in 1823. In 1825 he was formally elected to membership of the society, at the same time as Schubert.

Through Zizius, Voříšek made the acquaintance of Hummel (a regular participant at Zizius's salon concerts), towards whose music and approach to piano playing he was strongly drawn. He probably studied with Hummel, and when Hummel left Vienna in 1816, he gave Voříšek his class of piano students. About 1817 Voříšek was invited to become a regular performing member of Kiesewetter's *Historische Hauskonzerte*, initially sharing the duties of continuo player and choirmaster with Franz Gebauer. When Gebauer founded his own *concerts spirituels* in 1819, Voříšek became the conductor of Kiesewetter's concerts, a position he held with distinction until his final illness. Voříšek was known for his fluent figured-bass performance and his sensitivity to and knowledge of historical styles.

It was in this context that Voříšek probably met Aloys Fuchs (a bass in Kiesewetter's choir), who became the principal collector of his manuscripts and his first biographer. Despite his successes, Voříšek returned to his legal studies with a view to obtaining a civil service position. He completed his law degree and on 4 May 1822 was appointed a clerk in the maritime division of the Imperial War Department, probably through the influence of Kiesewetter. Previously, in 1818, he had applied for the position of court organist but had been refused. On the death of the assistant organist, Johann Henneberg, in November 1822, Voříšek successfully competed for the position, defeating seven other notable musicians (including Ferdinand Schubert and Simon Sechter) in an examination that included improvisation, figured bass and fugue. He was appointed on 10 January 1823 and promptly resigned from the civil service. In July

1823, Václav Růžička, the principal court organist, died and in August Voříšek assumed the position with a salary of 800 florins.

The period 1818 to 1823 was Voříšek's most active time as a composer. He completed the 12 Rhapsodies, op.1 (1818) and six Impromptus op.7 for the piano (1820), the Violin Sonata op.5 (1819), the Symphony in D (1823) and fashionable virtuoso works for piano and orchestra. After his appointment to the court chapel, he began to compose sacred choral works, including a Mass in B♭.

Never physically strong, Voříšek appears to have suffered seriously from tuberculosis about 1820 and went to Carlsbad for a cure. In 1823 his health began to deteriorate again and in the summer of 1824 he went to Graz to recover. While in Graz he was made a member of the Steiermärkischer Musikverein. On his return to Vienna in autumn 1824, his illness became much worse and he was forced to relinquish his duties as court organist in January 1825. During this time he composed his last important work, the Mass in B♭, finishing it in January 1825. After a long illness, he died on 19 November that year.

Fuchs's description of Voříšek is worth noting: 'Voříšek was small and slender and would have been visually unremarkable were it not for his intellectually alert, unusually bright blue eyes and pleasant round face. He was sanguine, cheerful, heartily friendly, and unassuming towards everyone'. At his funeral, Court Dietrichstein, director of the court music, observed: 'Art thus loses a noteworthy, pre-eminent composer; the court chapel, perhaps, the first among living organists.' Voříšek was buried in the Währing cemetery (now the Franz Schubert Park).

2. WORKS. Although he was born in Bohemia, Voříšek's music bears hardly a trace of what was later considered to be Czech national style. Well versed in Viennese classicism, he was among the last of the many Bohemian émigrés of his time to compose in the internationalized late-Classical style associated with Vienna. Voříšek's music provides a remarkably accurate picture of the musical trends prevalent in Biedermeier Vienna, especially during the decade 1815–25. His early piano pieces were completed shortly after he moved to Vienna in 1813; they (including the 12 Rhapsodies, begun about the same time) demonstrate post-Classical thematic styles and keyboard virtuosity that also characterize the piano music of Hummel, Moscheles and Spohr. With his teacher Tomášek, Voříšek was among the first to cultivate the genre of the piano miniature. His Impromptus op.7 (published 1821) continue a line of development established in Tomášek's earlier sets of eclogues (1807–17) and contain delicate pastoral moods. They are in ternary form, their internal harmonic and thematic make-up derived from the Classical minuet and trio. In their mixture of Classical shaping and proto-Romantic feeling, they are transitional works in the evolution of the Romantic ternary-form lyric piano piece.

Jan Václav Voříšek: lithograph by A. Kunike

Because Voříšek's impromptus predate Schubert's more famous ones by several years, it is customary (following Kahl) to ascribe to Voříšek (and Tomášek) an important role in stimulating Schubert's cultivation of the genre. Manuscript evidence shows, however, that neither Voříšek nor Schubert used the title 'impromptu', in both cases it was the choice of the publishers. Any connection that may exist is therefore more likely to be the composers' need to satisfy their publishers' desire for easily accessible trifles than any direct musical influence.

Compared to the short piano pieces, Voříšek's single three-movement Sonata in B♭ minor (published in 1825) is more Classical in style. The two single-movement works with programmatic titles, *Le plaisir* and *Le désir* (both *c*1819) and bravura pieces such as the *Fantasie* in C (op.12) are stylistically post-Classical and similar to Hummel's music of the same period. Voříšek's comparatively few songs are closer to the aria-inflected Viennese songs of the early part of the 19th century than to those of Schubert. Among them is *An Sie*, a multi-sectioned scena, and *Liebe* (*c*1815), which had some currency in its day.

Voříšek contributed to the development of the *brillante* style of piano music with accompanying ensemble that emerged in Vienna after 1815. Here he continued along a path blazed by Hummel and Moscheles, both of whom were active in Vienna during Voříšek's time. These works, including the *Variations brillants* (op.6), the *Variations di bravura* (op.14) and the *Introduction et rondo brillant* (all for piano and orchestra), consist of single-movement allegros preceded by slow introductions. Containing extremely rapid right-hand figurations and favouring the upper reaches of the keyboard, they are fearsomely difficult and attest to Voříšek's prowess as a pianist.

Apart from the solo piano works, Voříšek's most important compositions are his chamber and symphonic music and, to a lesser extent, his church music. These works, all in traditional forms, include the Symphony and the Violin Sonata, both of which resemble early Beethoven in their dynamism and harmonic idiom, and in their imaginative handling of period structure. The Mass in B♭ is finely constructed, with attractive solos and contrapuntal choruses; fitting effortlessly into the tradition of Viennese Hofkapelle music, it takes Mozart's final church

works or Hummel's Mass in B♭ as its point of departure. It was performed annually at the Hofkapelle between 1830 and 1860 and intermittently until the early 20th century.

More generally, Voříšek's music expresses a Biedermeier sensibility. Its attractive melodic surface, piquant touches of harmony, graceful, decorative figurations and, above all, its evocation of the music of the recent past (especially Mozart, Haydn and early Beethoven) appealed to the middle-class public of the time. Like the music of Hummel and Moscheles, however, it fell out of fashion with the advent of the Romantic idiom of the 1830s.

KENNETH DeLONG

Vorlová, Sláva [Johnová, Miroslava] (*b* Náchod, 15 March 1894; *d* Prague, 24 Aug 1973). Czech composer. She studied singing at the Vienna Conservatory and took private lessons with Vítězslav Novák (composition) and Václav Stěpán (piano). She passed the state examinations in 1918, but discontinued composing until 1932; the following year she wrote her op.1 string quartet, which was given its première by the Ondříček Quartet. Its success encouraged her to continue her studies with František Maxian (piano) and Jaroslav Řídký (composition). After World War II she graduated from Řídký's class at the Prague Conservatory (1948) with *Symphony JM* op.18, dedicated to Jan Masaryk. Some works written during the war, such as the cantata *Maličká země* ('Little Country'), contributed to the Czech war resistance; at the same time her chamber works gained recognition in Europe.

To avoid the frustration imposed by doctrinal mass culture after the communist regime took power in the 1950s, she turned to folksongs and historical themes in her works, as in the operas *Zlaté ptáče* ('The Golden Bird', 1949–50), *Rozmarýnka* (1952–3) and *Náchodská kasace* ('Náchod Cassation', 1955). She also wrote works in a jazz style (under the pseudonym Mira Cord) in an attempt to earn money, but they were never performed.

She was the first modern Czech composer to employ the trumpet and bass clarinet as solo instruments in concertos. Her late works employ modernist techniques without sacrificing sonority and melodic charm; beginning with *Bhukhar* ('Feverish Birds', 1965), Vorlová devised her own numerological method for serial music, producing some of her best works.

WORKS
(*selective list*)

Stage: Zlaté ptáče [The Golden Bird] (fairy-tale op, prol, 6 scenes, V.H. Roklan), op.27, 1949–50; Rozmarýnka (folk op, Roklan, after V. Hálek), op.30, 1952–3; Náchodská kasace [Náchod Cassation] (historical op, Roklan, after A. Jirásek), op.37, 1955; Dva světy [Two Worlds] (1, Roklan, after B.V. Ron), op.45, 1958

Orch: Sym. JM, op.18, 1947–8; Božena Němcová, op.24, suite, 1950–51; Symfonická předehra FOK [Sym. Prelude FOK], op.25, 1951; Pastorální koncert, E♭, op.28, ob, orch, 1952; 3 české tance, op.29, 1952–3; Tpt Conc., a, op.31, 1953; Slovácký Conc., op.35, va, orch, 1954; Doudlebské tance [Dances from Doudleby], op.36, 1953–4; Cl Conc., d, op.41, 1957; Duryňské tance [Dances from Thuringia], op.44, 1957; Fl Conc., b, op.48, 1959; Conc., op.50, b cl, str, 1961; Kybernetické studie, op.56, 1962; Double Conc., op.59, ob, hp, orch, 1963; Dedikace [Dedication], op.64, 1965; Bhukhar [Feverish Birds], op.67, 1965; Model Kinetic, op.69, ballet, 1966–7; Chbr Conc., op.74, db, str, 1968; Korelace [Correlation], op.75, b cl, pf, str, 1968; Polarizace [Polarization], op.84, hp, wind, perc, 1970; Emergence, op.92, vn, orch, 1973

ANNA ŠERÝCH

Vorobchievici, Isidor (*b* Czernowitz [now Chernovtsy], 18 May 1836; *d* Czernowitz, 18 Sept 1903). Romanian composer, teacher and writer. After studying with Krenn at the Vienna Music Academy, he taught music in the Romanian schools of Czernowitz. He wrote a handbook of harmony (1869, the first of its kind in Romanian) and a textbook of music theory (in German, 1871); both were intended for teachers and amateurs alike. His choral works, folk pieces and patriotic songs were written for schools and the many amateur music societies, which came to represent after 1830 an important national artistic movement. Taking some ideas from folk music and from old Romanian church chant, Vorobchievici used modal techniques in much of his work. As a writer he is known particularly for a study of Romanian music; his articles, poetry, dramas and editorial work also played an important part in the cultural development of Romania. Among his pupils were Eusebius Mandyczewski, Ciprian Porumbescu and Tudor Flondor.

Vorob'yova, Anna Yakovlevna. *See* PETROVA, ANNA YAKOVLEVNA.

Vorschlag (Ger.). *See* APPOGGIATURA. *See also* NON-HARMONIC NOTE and ORNAMENTS (esp. §8).

Vorspiel (i) (Ger.). Prelude. The term appears frequently in German operatic scores from Wagner's *Lohengrin* (1846–8) onwards. Following Wagner's prescriptions in *Oper und Drama*, the Vorspiel was invariably linked closely with the musical and dramatic events of the opera. The two that function as symphonic prologues to the first and third acts of *Die Walküre*, for instance, depict respectively the storm that drives Siegmund to seek shelter in Hunding's hut and the ride of the Valkyries before their assembly. The Vorspiel was not necessarily purely orchestral, however. That to Act 1 of *Götterdämmerung* embraces the Norns' scene, Siegfried and Brünnhilde's duet and the Rhine Journey. This structure was probably influenced by the opening of Marschner's *Hans Heiling* (1833), where the Vorspiel, consisting of choruses flanking a solo for Heiling, precedes the overture. The term is also used of preludes in general (e.g. *Choralvorspiel*, denoting a chorale prelude).

MICHAEL TILMOUTH/R

Vorspiel (ii) (Ger.). Performance. In this sense the word derives from the verb *vorspielen*, meaning 'to perform (in public)' or 'to audition'.

MICHAEL TILMOUTH/R

Vortakt (Ger.). *See* UPBEAT.

Vos [Voz], **Laurent de** (*b* Antwerp, 1533; *d* Cambrai, Jan 1580). Flemish composer, brother of the painter Marten de Vos the elder. After spending his early years at the

cathedral in Antwerp, in 1566 he was director of music and master of the children at Cambrai Cathedral. At Cambrai in 1580 Vos composed a motet for a large choir in which the text was chosen from the psalms in such a manner as to describe the banishment of Archbishop Louis de Berlaymont, the usurpation of Baron d'Inchy, his iniquities, the murder of citizens, the vain hope of release through the Duc d'Alençon, and the probability that the reign of the wicked would be brief. The motet was performed after Vespers in the presence of d'Inchy, who seized Vos and, despite his clerical status, had him hanged without a trial.

Vos's *Chansons à 4, 5, parties et un dialogue à 8 parties* (Douai, 1603) contains 30 works, and the five-part motet *Comeditis carnes* and its second part *Non Moyses dedit* is no.29 in *Florilegium sacrarum cantionum* (RISM 1609[1]).

LAVERN J. WAGNER

Voss, Friedrich (*b* Halberstadt, 12 Dec 1930). German composer and pianist. He studied the piano and composition at the Hochschule für Musik, Berlin (1949–54), and continued to live in Berlin as a freelance composer until 1969, when he moved to the Black Forest. In 1955 his *Concerto da camera* won first prize in the Munich Chamber Orchestra Competition. Among other awards, he has received the Stuttgart Music Prize (1960), the Düsseldorf Schumann Prize (1962) and, on two occasions, the German Rome Prize (1964–5, 1977). His orchestral works have received first performances from the Berlin PO and the Berlin RSO, under Karajan and Maazel among other conductors; his music has also been performed in the USA, Latin America, Japan and Australia. With its extended tonality and strong links to tradition, Voss's musical language seeks immediate communication with the listener, renouncing structural devices as ends in themselves.

JOSEPH CLARK/R

Voss, Johann Heinrich (*b* Sommersdorf, Mecklenburg, 20 Feb 1751; *d* Heidelberg, 29 March 1826). German poet. The son of a farmer, he studied theology and later philology at Göttingen University (1772–5), where he became a member of the 'Göttinger Hainbund', a literary circle led by H.C. Boie. Voss frequently contributed poetry to Boie's journal, the *Musenalmanach*, and from 1775 to 1800 was its editor. During these years he also served as headmaster at schools in Otterndorf (1778) and Eutin (1782). In 1802 he went to Jena to improve his health; three years later he was appointed to the faculty of Heidelberg University to teach classical philology. He remained in Heidelberg until his death.

Voss is best known for his German translations of Homer, Virgil, Horace, Ovid and (with the help of his two sons) Shakespeare. His chief contribution to music is his lyric poetry, which was frequently set by 18th-century composers including C.P.E. Bach, J.F. Reichardt and J.A.P. Schulz; many of these settings were published in the *Musenalmanach*. His correspondence with Schulz shows their shared aim of a folklike style in lied composition. Although this ideal fell from fashion in the 19th century, Voss's lieder were still occasionally set (by, among others, Mendelssohn, Weber and Brahms).

RAYMOND A. BARR

Vossius [Voss], **Gerhard Johann** (*b* nr Heidelberg, 1577; *d* Amsterdam, 19 March 1649). Dutch polymath and writer on music of German birth. He received a master's degree and a doctorate from the University of Leiden. He became rector of the grammar school at Dordrecht in 1600 and director of the theological college at Leiden in 1615 but in 1619 he was suspended as an Arminian. He held professorships at the University of Leiden and at the newly established Athenaeum Illustre, Amsterdam. When he was in England in 1629 Charles I granted him a private audience in recognition of his learning.

Vossius wrote many theological, philological and historical works, a complete edition of which was published in six volumes over 40 years after his death (Amsterdam, 1695–1701). Five of his works (all published at Amsterdam) contain observations on music: *De theologia gentili* (1642); *De artis poeticae natura et constitutione* (1647); *Institutiones poeticae* (1647); *De artium et scientiarum natura et constitutione* (1650); and *Etymologicon linguae latinae* (1662). He also wrote a *Carmen panegyricum* in elegiac couplets referring to figures in classical mythology as a commendatory poem prefacing HENDERICK SPEUY's *De psalmen Davids* (Dordrecht, 1610; facs. of the poem in *Psalm Preludes for Organ or Harpsichord*, ed. F. Noske, Amsterdam and Philadelphia, 1962; also repr. by Dekker).

Vossius's son Isaac (*b* Leiden, 1618; *d* Windsor, 21 Feb 1689) settled in England in 1670, moving extensively in court and intellectual circles. On 12 May 1673 he was installed as a canon of St George's Chapel, Windsor. In that year he wrote a paper, *De poematum cantu et viribus rhythmi*, discussing music, like his father, mainly from a philological point of view. His work still influenced a number of musicians in the 18th century, among them Bach.

HEINRICH HÜSCHEN

Vostřák, Zbyněk (*b* Prague, 10 June 1920; *d* Strakonice, 4 Aug 1985). Czech composer and conductor. He studied conducting with Dědeček at the Prague Conservatory (1939–43), taking composition lessons with Karel at the same time. From 1943 to 1945 he was a member of the Prague RSO, then a professor at the conservatory (1945–8) and head of the Orchestral Association (1946–7). Thereafter he devoted himself principally to composition, although he conducted occasionally for Prague radio and for the National Theatre, Prague. For the 1959–60 season he directed the Ústí nad Labem opera company. Between 1963 and 1973 he conducted Musica Viva Pragensis, an ensemble specializing in new music. A talent for composition was apparent in his youth, when he wrote spontaneously in an idyllic romantic style, sometimes with neo-classical and wider influences. He continued in this manner until the late 1950s; then, as with many other Czech composers, the contact with Webern's works brought about a profound change in his music. His first 12-note and serial chamber pieces were written in 1962. Shortly thereafter he became acquainted with the work of Boulez, Cage, Stockhausen and Varèse, and from 1966 his output progressed under these influences.

JOSEF BEK

Votey, Edwin Scott (*b* 1856; *d* Summit, NJ, 21 Jan 1931). American organ builder. He received his earliest training in the Estey reed organ factory. In 1883, in partnership with William R. Farrand (1854–1930), he purchased the Whitney Organ Co. of Detroit (a maker of reed organs), and in 1887 the firm began building pipe organs under the name of Farrand & Votey. In 1893 Farrand & Votey purchased the business and patents of the Roosevelt firm of New York, and that year built one of their largest instruments for the World's Columbian Exposition in Chicago. Other notable instruments included those in the Aeolian Hall, New York (1893), St Ignatius, San Francisco (1896), and the residence of Andrew Carnegie, New York (1900). Votey patented many improvements in organ mechanism, and in 1895 he invented the pianola, an exterior automatic piano-playing device which was one of the first of its kind. A patent was applied for in 1897 and issued in 1900. In 1897 Farrand & Votey merged with Aeolian of Garwood, New Jersey, although they continued to work around Detroit. Reed organs were made under the Farrand name, pipe organs under the Votey name, and pianolas were manufactured in quantity for Aeolian. After the turn of the century Votey turned his attention increasingly to the improvement of player piano mechanisms, and in 1901 sold his organ interests to George S. Hutchings of Boston, who reorganized his own firm under the name of Hutchings–Votey. Votey remained with Aeolian, however, becoming the firm's first vice-president in 1916.

BARBARA OWEN

Votive ritual (from Lat. *votum*: 'vow', 'prayer'). Devotional ritual with a restricted or private intention. In the Latin

rite votive ritual is regarded as a class apart from the texts and chant prescribed for the calendar of church festivals because it can be performed at any time and, following the appropriate formalities, in any place. It includes not only antiphons and masses, but also Offices, processional chant, psalms without antiphons, litanies and prayers. Votive material often appears as a supplement towards the end of books for Mass and Office or in individual books, such as collections of masses or books of Hours, but it may be interleaved with similar but non-votive material, as in the case of votive Offices. Its history intersects with that of the private Mass.

1. Votive ritual and liturgy. 2. History. 3. Texts, chant and use. 4. Polyphony.

1. VOTIVE RITUAL AND LITURGY. The extent to which votive ritual is liturgy is unclear, and has changed with time. The term 'liturgy' was applied in Christian antiquity to official (in the East, priestly) or communal worship, as opposed to private devotion. Later definitions of the word, for instance, the use in the 16th century in titles of collections describing the Church's worship, do not allow the inclusion of Offices for the Dead or other commemorative prayer read as liturgy by a private individual for personal intercession.

The increasing prominence throughout the Middle Ages of commemorations for the dead and other intercessory rituals (such as masses tied to indulgences) corresponded to the introduction on the Continent of the Celtic practice of tariff-penances, the granting of indulgences (beginning in the 11th century) and the newly recognized idea of the existence of purgatory, changes that prompted further increases in the numbers and types of such 'non-liturgical' devotions. At the same time, congregational participation in official worship disappeared as priests began to act as deputies, and perhaps as a consequence individuals came to shape their local rites by way of bequests for new celebrations whose content was not always regulated by religious authorities. Votive ritual did not need to include more than a single text, such as a litany or prayer. It could be performed by a single person (not necessarily a priest, as only the Mass included the Eucharist); individual priests celebrated votive masses throughout the Middle Ages.

2. HISTORY. The oldest votive devotions are those for the dead, and are attested from the 2nd century onwards. Pope Gregory I provided the first known reference to a series of (30) Masses for the Dead (*PL*, lxxvii, 416–21). Numerous different prayers for votive masses are included in the Leonine and Gelasian sacramentaries as well as in early lectionaries. Other prayers are in Benedict of Aniane's supplement to Hadrian's sacramentary, and in a supplement prepared by Alcuin for the abbey of St Martin in Tours. The prayers attributed to both Benedict and Alcuin contain older material (Deshusses, 1971 and 1972); Alcuin's prayers include the first known cycle for the days of the week, which is found with a Requiem Mass attributed to him in the Sacramentary of Trent (*I-TRmp*). It is possible that sung votive Mass Ordinaries and Propers were used alongside the prayers, but the sources for this material are only from the 10th century.

Votive antiphons, psalms and Offices are attested from the 9th century. Antiphon texts are found at the end of 9th-century graduals from Compiègne (*F-Pn* lat.17436), Senlis (*Psg* 111) and Corbie (*Pn* lat.12050). Neumed votive processional antiphons are found in the 10th–11th-century manuscript *CH-E* 121. By the end of the 9th century a Saturday Marian Office was used in some continental monasteries. The small Office of the Virgin (*officium parvum*), used if there was no feast with nine lessons, dates from the 10th century; it was included in the reformed breviary of the papal chapel by Innocent III in 1215. In the 13th century it was adopted by the Franciscans and then by the Third Order; it is found in many late-medieval books of Hours and remained in the Roman breviary until 1960. Other Marian Offices are known to have been established in the 11th century. Commemorative Offices of the Virgin, patron saints and relics were celebrated from the 12th century. By about 1200 the Cistercians had established their own formulary for a full Office with Vespers and Matins.

13th-century France, and Paris in particular, witnessed the greatest proliferation of votive Offices and antiphons. The best-known antiphons introduced at this time were the four for the Virgin: *Alma redemptoris mater*, *Ave regina caelorum*, *Regina caeli* and *Salve regina*, each of different origin (*see* ANTIPHON, §5(v)). The association of the oldest, the *Salve regina*, with commemorations for the dead dates back to one of the earliest manuscript sources, the pontifical *F-Pn* lat.944 (Aurillac, 12th century). Marian antiphons were sung as part of the burial ritual in the later Middle Ages as well, but they were sung customarily at the close of Compline. In the 13th century Hours of the Holy Ghost, Holy Cross, Trinity, St John the Baptist, St Catherine and the Passion of Christ came to complement the Marian Office and Office of the Dead.

Weekly cycles of votive masses and antiphons gained currency in the 14th and 15th centuries. There was a tendency to associate some masses with particular days; Requiems (generally performed on Mondays) and masses for the Virgin (Saturdays) were the most frequently celebrated. Many benefactors requested votive masses for the Virgin to be replaced by Requiems after their death. Masses for the Virgin and for the Holy Ghost are also known to have been sung with Requiems at state funerals. Cycles of votive antiphons, sung every evening after Vespers or Compline, may have consisted only of Marian antiphons, or of a series of different antiphons (such as those for the Dead, All Saints, the relics and so on). Also known were antiphons for the Holy Ghost, patron saints, and, in England especially, for Christ. Votive devotions reached the height of their popularity in the 15th and early 16th centuries, when extraordinary salutary powers were attributed to them and indulgences granted to those who heard them. Persons with sufficient means founded votive rituals to benefit them after their death, and confraternities, guilds and other corporations were also prominent among founders.

Post-Tridentine reforms sought to control the number and kinds of votive masses, and to regulate their celebration, as is evident from the new Roman Missal of 1570. Subsequent reformed editions, among them the *Liber usualis*, include votive material; the *Codex rubricarum* of 1960 revised the 1570 regulations on votive masses.

3. TEXTS, CHANT AND USE. The texts and chant of votive material may change with the season of the Church's year. By the high Middle Ages votive masses and Offices prescribed alternative material for the changing seasons,

or at least for Lent and Easter. The Marian votive Mass was the most richly supplied, with four sets of Propers, whereas non-Marian votive masses provided a tract to replace the alleluia during Lent. Propers for the Mass and Office for the Dead did not change according to the seasons of the Church's year.

Votive antiphons were sung without accompanying psalms or canticles. Their texts were drawn mostly from the antiphoner, processional and sequentiary, but after 1350 they were taken from devotional texts in books of Hours and prayer books. Votive antiphons were customarily followed by a versicle and collect; they were sung at the end of Matins, Lauds, Vespers or Compline, or were used in procession. English anthems (i.e. votive antiphons) concluded Lauds or the Lady Mass from the 15th century onwards, and were sung in the Anglican tradition at the end of Matins or Evensong in later centuries.

4. POLYPHONY. Despite the fact that Masses and Offices for the Dead are the oldest of the votive rites, early polyphonic settings are rare. The earliest known setting of the Mass and the Office was by Du Fay, but this does not survive, and Ockeghem's setting is the earliest to be extant. Polyphonic settings of the Requiem proliferated throughout Europe in the 16th century, but the Office was set most often by later Spanish composers, who also set individual responsories. Victoria set the entire Office for the Dead, as did Lassus, who even set the lessons (*see also* REQUIEM MASS, §2).

Many polyphonic settings of Marian Ordinaries survive, but often circumstantial evidence alone helps to distinguish votive polyphony from that for Marian feasts, since the rubrics in early kyriales do not make the distinction. Complete plainchant Ordinaries with the ambiguous rubric 'for Marian feasts' are known from 13th-century kyriales; it is not clear whether the same chants were used for the Saturday Marian Mass that was held at the high altar and in prominent side chapels in many churches by this time. In any case, this 'Lady Mass' was certainly the most important from a musical point of view, since it was the first to attract a complete setting of its Ordinary, that by Machaut. Early polyphonic settings probably include the mainly troped Marian Ordinaries in the 13th-century manuscript 'W_1' (*D-W* 677) and certainly include the early 14th-century Tournai Mass. Polyphonic Marian votive Propers are represented in the plenary mass by Reginaldus Libert and by the many settings of the introit *Salve sancta parens* from the 13th century onwards, as well as later settings of different introit texts by Binchois, Brassart, Arnold de Lantins and others. The earliest polyphonic settings of offertories and communions, from the 15th century, are also for the Marian votive Mass. Unfortunately, scholars have not attempted to distinguish polyphony for Marian feasts from that for votive Marian devotions; it seems possible, for instance, that Monteverdi's vespers setting of 1610 could have been used in votive devotion, as it does not fit the mould for a single Marian feast.

Votive Marian antiphons were used in polyphonic compositions beginning in the 13th century, as cantus firmi or borrowed texts; antiphons for other saints, the peace and Christ were set to polyphony in the 15th century and later. Beginning in the 15th century, antiphon texts were set with little or no reference to the plainchant melody. Such settings appeared first in England, and then, around 1420, on the Continent: early continental settings include Binchois' *Ave regina celorum*, Arnold de Lantins' *Tota pulchra es*and *O pulcherrima mulierum* and Hymbert de Salinis's *Salve regina*. After the late 15th century the chant was frequently omitted and the texts were set freely; the Eton Choirbook and *GB-Lbl* Harl.1709 contain many such polyphonic votive antiphons.

Non-Marian masses and cycles of votive masses were set to polyphony beginning in the 15th century. Polyphonic votive cycles were founded by Duke Jean of Berry (1405), Duke Philip the Good of Burgundy (1432) and Duke René of Anjou (1436); polyphony for Philip's votive cycle is probably in *I-TRmp* 88 (masses for the Holy Ghost, Trinity, St Andrew, the Holy Cross, the Angels and the Virgin Mary). Byrd's *Gradualia* includes Saturday Lady Masses for a whole year, hymns for Marian Vespers and a votive Mass of the Blessed Sacrament. Compère's *Officium de Cruce* is probably votive (masses for the Holy Cross by Regis (lost) and La Rue are known, but may have been sung on feast days), as are the other items published by Petrucci in his motet collection of 1503 (RISM 1503[1]), including Weerbeke's motet cycles for the Virgin and the Holy Ghost.

Beginning with Josquin, polyphonic settings of texts in books of Hours proliferate. These settings include psalm-motets (whose musical form places them outside the daily Office and in a votive context), the penitential psalms and litanies. Lassus's setting of the penitential psalms, which was restricted for private use, was copied into the most lavish choirbook of the Munich court library (*D-Mbs* A), a book whose illuminations are similar to those in a book of Hours. The Marian text *Te matrem Dei laudamus* and other prayers found in books of Hours, such as the sequence *Stabat mater*, were also set to polyphony; settings of the Marian Litany of Loreto are of a slightly later date.

Although the setting of votive polyphony declined dramatically after the Renaissance, settings of Marian antiphons by composers such as Handel, Haydn and Liszt are known; few votive mass settings have appeared, but there have been isolated settings of masses *in tempore belli* and for peace.

BARBARA H. HAGGH

Vötter, Romanus. Composer of 30 melodies in the *Mirantische Maul-Trummel* by Laurentius von Schnüffis.

Vötterle, Karl (*b* Augsburg, 12 April 1903; *d* Kassel, 29 Oct 1975). German music publisher. He had no formal academic training. A crucial factor in his development was his joining the 'Wandervogel' at the age of 11, where his love for folksong was aroused. His spontaneous enthusiasm for 'natural' music led in 1923 to his meeting with Walther Hensel, with whom he jointly founded the Finkensteiner Bund, an association of singers; it also spurred him to embark on publishing ventures in connection with the revival movements in German musicology, at first particularly in association with Gurlitt and his pupils. This activity grew into the Bärenreiter-Verlag, set up by Vötterle at Augsburg in 1924 and since 1927 based at Kassel. His many pioneering activities, which gave him a world-wide status in the music trade, reflected and made a significant contribution to important periods of German musicology: in the 1920s, when old music was revived; after the war, when musical interests widened and complete editions were begun and a reappraisal of 19th-century music was made; and, more recently, when a cautious probing of modern music was undertaken.

Vötterle was founder and president of the Internationale Heinrich Schütz-Gesellschaft and an honorary member of many other societies, notably the German Association of Music Publishers and the Internationale Stiftung Mozarteum. He received honorary doctorates from Kiel and Leipzig universities in 1953, and was made an honorary senator of Marburg University in 1968. Among his many awards are the Bundesverdienstkreuz Erster Klasse, the Grosse Silberne Ehrenzeichen of the Austrian Republic and the Golden Medal of Czechoslovakia.

HANS HEINRICH EGGEBRECHT

Votto, Antonino (*b* Piacenza, 30 Oct 1896; *d* Milan, 9 Sept 1985). Italian conductor. He studied at the Naples Conservatory and made his conducting début in 1923 with *Manon Lescaut* at La Scala, Milan, where he was engaged as répétiteur and assistant conductor to Toscanini. He first appeared at Covent Garden in 1924, conducting *Pagliacci* and *Madama Butterfly*, and was soon admired as one of the finest conductors of Italian opera in major centres in Italy, as well as touring elsewhere in Europe and appearing at the Teatro Colón, Buenos Aires. From 1948 he worked mainly at La Scala, and for over 20 years (until 1967) was a respected teacher at the Milan Conservatory.

During the 1950s Votto conducted several of the spectacular productions at La Scala, mounted for Callas by Visconti, Salvini and Wallmann, including Spontini's *La vestale* (1954), *Norma* (1955) and *La sonnambula* (1957), and the Florence production of *Don Carlos* (1956). *Norma* and *Andrea Chénier* (also with Callas) were recorded from live Scala performances in 1955; his other recordings with Callas included *Un ballo in maschera* and *La bohème* (both 1956), *La sonnambula* (1957) and *La Gioconda* (1959). Other live recordings from La Scala were *Cavalleria rusticana* with Simionato (1955) and Boito's *Mefistofele* with Siepi (1957). Votto made his American début only in 1960, at the Chicago Lyric Opera, with *Aida* and *Don Carlos*.

CLAUDIO CASINI, NOËL GOODWIN

Vounderlich, Jean-Georges. *See* WUNDERLICH, JEAN-GEORGES.

Vowles, William Gibbons (*b* Bristol, 1826; *d* Churchill, Somerset, 25 Feb 1912). English organ builder. He was trained by Joseph Munday, whose business was founded by John Smith in 1814. In 1856 Vowles founded the Bristol firm of W.G. Vowles Ltd. His early work included the rebuilding of the organs of Bristol Cathedral (1861) and St Mary Redcliffe (1867). In 1860 the firm moved from Castle Street to extensive premises in St James's Square and developed factory production methods. After his retirement in 1908 the firm became a limited company, whose catalogue of that year offered a range of 17 standard specifications from one to three manuals and gave details of 510 instruments supplied to locations principally in Bristol, Gloucestershire, Somerset and South Wales. Some organs were exported to South Africa, India and the West Indies. On 29th March 1924 the factory was destroyed by fire; the firm suffered further damage during the war and was eventually absorbed by J.W. Walker & Sons in 1959. For further information, see 'Messrs. Vowles' Organ Works', *Work in Bristol: a Series of Sketches of the Chief Manufactories of the City* (Bristol, 1883), 162–77.

CHRISTOPHER KENT

Vox. American record company. It was founded in New York in 1945 by George H. Mendelssohn. Recording began in New York with 78 r.p.m. discs, issued on vinyl as well as on shellac. In 1946 the owner moved to Paris and associated his firm with French Polydor. In July of that year Klemperer conducted his first recordings in 15 years for these labels, joined by Eugène Bigot, Anatole Fistoulari, Paul Paray and Manuel Rosenthal. The company was early in adopting the LP format, in mid-1949. Vox parted from Polydor in 1950 and became associated with Pathé, whose recordings appeared on Vox until early 1954. Vox began to record in Vienna in early 1950, using the facilities of the Vienna SO, and later in Stuttgart and Milan. After 1952 the Vienna SO continued to record for Vox pseudonymously. Ferdinand Grossmann, Rudolf Moralt and Clemens Krauss were Vox's first conductors in Vienna; in 1951 Klemperer made a renowned group of recordings with the orchestra. In 1952 Jascha Horenstein began a long series of recordings for the label, including versions of then rarely heard symphonies by Bruckner and Mahler. Pianists included Guiomar Novaës, Alexander Borovsky, Alfred Brendel, Vlado Perlemuter and Ingrid Haebler (in a series of Mozart concertos); violinists included Ivry Gitlis and Aaron Rosand. Vox issued the first stereo discs in June 1958, then launched its Vox Box series, usually of three discs at a reduced price, with complete sets of works in most categories of the Baroque, Classical and Romantic repertories. After promoting the revival of Baroque music, Vox took up the cause of obscure 19th-century composers. A low-priced label, Turnabout, was added in 1965 and a mid-priced one, Candide, in 1968. Vox made the first recordings of Zubin Mehta and Leonard Slatkin, among others. From 1975 the company engaged numerous American orchestras, including the Utah SO, Minnesota Orchestra, St Louis SO and others. Mendelssohn sold the company to Moss Music Group in 1978; it passed to Pickwick in 1988 and to Essex Entertainment in 1989. The firm made the transition to compact disc and continues to produce new recordings.

JEROME F. WEBER

Vox angelica (Lat.). *See under* ORGAN STOP.

Vox humana (i) (Lat.: 'human voice'). A tenor oboe in F. *See* OBOE, §III, 4(ii).

Vox humana (ii) (Lat.: 'human voice'). *See under* ORGAN STOP.

Voyachek, Ignaty Kasparovich. *See* VOJÁČEK, HYNEK.

Voytik, Viktor Antonovich (*b* Grodno, 3 Oct 1947). Belarusian composer. He graduated from Bahatïrow's class at the Conservatory of Belarus (1972) and completed his training as an assistant lecturer under Leman at the Moscow Conservatory (1975). Since 1971 he has been a member of the Composers' Union of Belarus; from 1976 he was secretary-in-chief, and from 1978 deputy chairman of this organization. Since 1980 he taught at the Conservatory of Belarus. His works are principally instrumental (he has made significant achievements in music for the Belarusian cimbalom) and works which first gained him recognition in the mid 1970s (such as the *Neo-Classical Suite* for Belarusian cimbalom and chamber orchestra and the oratorio *Pamyats' Khatïni* ('Remembering Khatïn'), a prizewinning work at the all-Union competition of young composers, Moscow, 1973) are dramatic compositions devoted to the theme of World War II. The most significant works of the 1980s best display the peculiarity of his style which resides in the organic combination of contemporary techniques, neoclassical devices and elements of ancient Belarusian folklore. In the 1990s vocal concerns – reflecting the composer's interest in folk poetry and the traditions of old Belarusian culture – take on greater significance and define the character of his chamber symphony *Aposhnyaya vosen' paėta* ('The Last Autumn of the Poet') and the *Patrïyatïchnï kant* ('Patriotic Chant').

WORKS

OPERAS

Vyasnovaya pesnya [Spring Song] (S. Klimkovich), Minsk, 1995; Puteshestviye v zamok alfavita [Journey to the Alphabet Castle] (Klimkovich), Minsk, 1996

VALENTINA ANTONEVICH

Voz, Laurent de. *See* VOS, LAURENT DE.

Voz humana (Sp.). *See under* ORGAN STOP (*Vox humana*).

Voznesensky, Ivan Ivanovich (*b* Voznesensk, Kostroma province, 5/17 Sept 1838; *d* Kostroma, 8/21 Dec 1910). Russian writer on church music. Voznesensky graduated from the Kostroma Seminary in 1860 and from the Moscow Theological Academy in 1864. He served as teacher of chant in the Kostroma Seminary until 1883, when he became an inspector of the Riga Seminary until 1894; he then served as head priest of the cathedral of the Trinity, Kostroma. In the late 1880s and in the 1890s he published several volumes of studies dealing with the different varieties of chant in Russian churches. His works are basically compilations, and eclectic in nature. He did only a minimal amount of original research on the historical evolution of Russian chant, but he was among the first in Russia to investigate the melodic traditions of south-western Russian provenance from the 17th and 18th centuries preserved in Western staff notation. He translated into Russian a treatise of the 'method' of the Greco-Slavonic chanting originally written in Latin by

Ioan de Castro (Rome, 1881; Russ. trans., Moscow, 1899). Among Voznesensky's writings probably the most significant is his study *Osmoglasnïye rospevï tryokh poslednikh vekov pravoslavnoy russkoy tserkvi* ('Russian Orthodox osmoglasniye chant during the last three centuries'), published in four volumes, each of which deals with a different tradition: *Kiyevskiy rospev* ('Kievan chant'; Kiev, 1888, 2/1898); *Bolgarsky rospev* ('Bulgarian chant'; Kiev, 1891); *Grecheskiy rospev v Rossii* ('Greek chant in Russia'; Kiev, 1893); and *Obraztsï rospevov* ('Examples of chant'; Riga, 1893).

Vredeman [Vredman, Vreedman]. A 16th- and 17th-century Flemish family of composers, performers and instrument makers. The leading members were Sebastian and his two sons, Michael and Jacob.

(1) Sebastian Vredeman (*b* Mechelen, *c*1542; *d* Leiden, late 16th or early 17th century). He was probably a chorister at the collegiate church of St Rombouts in Mechelen; he is documented in that city from at least 1574 until 1578. In 1580 he left on account of religious troubles, moving to Brussels, then Antwerp and eventually settling in Holland, where he lived with his son, Michael. By April 1586, on the latter's marriage, he had moved to Leiden, where on 12 May 1589 he signed a five-year contract as the city's carillonneur and composer for the carillon. His duties were to play psalms or other *liedeken*, and to notate them in a book kept by the town hall caretaker. Prior to his departure for the north, he published with Phalèse two volumes of fantasias, dances, Dutch folksong settings and intabulations, arranged for solo cittern: *Nova longeque elegantissima cithara ludenda carmina* (RISM 1568[24]; ed. in *Die Tablatur*, xxviii–xxix, 1980–81) and *Carminum quae cythara pulsantur liber secundus* (1569[37]; ed. *Die Tablatur*, xxx–xxxi, 1980–81). The 1568 volume provides the only extant source for some of the Dutch folk songs.

(2) Michael Vredeman (*b* Mechelen, *c*1564; *d* Utrecht, 12 Jan 1629). Son of (1) Sebastian Vredeman. He received his early musical education in Mechelen under his father's tutelage. In 1580 he left with his family and eventually settled in Utrecht where he acquired citizenship in 1583 and married three years later. He was a maker of viols and citterns, and he published a book describing one of his inventions, *Der violen cyther met vijf snaren en nieuwe sorte melodieuse inventie, twe naturen hebbende, vier parthijen spelende* (Arnheim, 1612).

(3) Jacob Vredeman (*b* Mechelen, *c*1563; *d* Leeuwarden, 1621). Son of (1) Sebastian Vredeman. He studied music at St Rombouts in Mechelen between 1572 and 1577. He left the city in 1580 and eventually settled in Leeuwarden where he acquired citizenship in 1589. He taught music in the city school there, directed the collegium musicum, and, from 1608 until his death, sang in the Grote Kerk. He published a treatise on the fundamentals of music, *Isagoge musice* (Leeuwarden, 1618), and two volumes of music with Friesan texts, *Musica miscella, sive Mescolanza di madrigali, canzoni & vilaneli in lingua frisica* (Franeker, 1602) and *Friesche lusthof, beplant met verscheyde stichtelyke minneliedekens, gedichten ende boertige kluchten door Jan Jansz Starter . . . de noten ofte musycke gevoecht door Mr. Jacques Vredeman* (Amsterdam, 1621). In addition, five of his works (four in Dutch, one in French) were added to an Amsterdam edition of the popular *Livre septième des chansons vulgaires* (1608[11]).

HOWARD MAYER BROWN/KRISTINE FORNEY

Vredenburg, Max (*b* Brussels, 16 Jan 1904; *d* Laren, nr Hilversum, 9 Aug 1976). Dutch composer. He studied with Henri Geraedts in The Hague and, from 1926 to 1927, with Dukas in Paris, where he was directly influenced by Roussel. He settled in The Hague, where he taught at the conservatory, was active as a pianist and choral conductor, and founded the Modern Music Study Circle. From 1936 to 1940 he was back in Paris as musical correspondent of the *Nieuwe Rotterdamsche courant* and AVRO Radio. Because of his Jewish background he fled in 1941 to Batavia (now Jakarta), where he was interned by the Japanese. During this period he took part in musical activities arranged for his fellow internees. Several of his earlier works seem to have been confiscated or destroyed by the Nazis. Among Vredenburg's lost scores is the orchestral prelude to a Palestinian open-air play (successfully performed in The Hague before the war). From 1946 he lived in Amsterdam, where he was director of the Dutch branch of the Fédération Internationale des Jeunesses Musicales (1953–69), which embodied the National Youth Orchestra. Besides pieces for this orchestra he wrote songs and piano works, many in a French idiom. One of his early works was a chamber music score for Joris Ivens's experimental silent feature film *Branding* (1929, lost). Inspired by the cinema, he was active in the avant-garde Film-Liga. From 1947 he wrote scores for Dutch films, notably documentaries by Bert Haanstra without commentary or dialogue.

WORKS
(*selective list*)

Film scores: Branding (dir. J. Ivens), 1928; Walvis in zicht (dir. H. de Boer, R. Roland, Polygoon documentary), 1947; Boven in de Kerselaer, 1948; Het oerwoud van Suriname (Polygoon), 1948; Paramaribo (Polygoon), 1948; Het Polderland van Suriname (Polygoon), 1948; Spiegel van Holland (dir. B. Haanstra), 1950; Panta Rhei (dir. Haanstra), 1951; De zwarte stroom (dir. U. Bolzi), 1952; 2 Shell documentaries, 1954; Dijkbouwers (dir. Haanstra), 1955

Incid music: In Neêrlands tuin, 1948; Herodes (A. Herzberg), 1955; Sabattai Tsewi

THEODORE VAN HOUTEN

Vreese, Frédéric de. *See* DEVREESE, FRÉDÉRIC.

Vreuls, Victor (Jean Léonard) (*b* Verviers, 4 Feb 1876; *d* St Josse-ten-Noode, Brussels, 26 July 1944). Belgian composer and conductor. He studied at the conservatories of Verviers and Liège, and then went to Paris to complete his studies with d'Indy. He was professor of harmony at the Schola Cantorum (1901–6) and then director of the Luxembourg Conservatoire (1906–26); he was elected to the Belgian Royal Academy in 1925. Of Belgian composers of his generation, he was the closest to the Franckian tradition. His songs are powerfully affecting, and his orchestral writing is on a massive, Wagnerian scale. He often took material from Walloon folk music.

HENRI VANHULST

Vriend, Jan (*b* Benningbroek, 1938). Dutch composer, conductor and pianist, active in Great Britain. He studied the piano with Else Krijgsoman, music theory with Anthon van der Horst and Jan Felderhof, and composition with Ton de Leeuw at Amsterdam Conservatory (1960–67). He also studied sonology with Koenig at the University of Utrecht. He has conducted several choirs, ensembles and orchestras which perform either music from antiquity or contemporary works. In 1965 he founded the well-known ASKO Ensemble. Awarded the composition prize of the Amsterdam Conservatory in 1967, he then received a grant to study in Paris; there Xenakis became an important inspiration.

In 1970 he won the Gaudeamus composition prize for *Huantan*. He studied mathematics and related natural sciences, with a view to applying them in musical composition. This led to his multi-layered, atonal and complex musical style, of which *Vectorial* (1983, revised 1987) is a good example. *Heterostase* (1981) is structured less densely and is therefore more accessible. In his monumental *Hallelujah I*, 'a symphony of the North' for bass clarinet and large orchestra, he tries to paraphrase the evolution of the universe. The double score is of a complexity not even approached by Xenakis or Ligeti. The symphony's dramatic programme, though quite abstract, aids the listener's comprehension of the work, as all the different compositional techniques seem to have a place in the story being told.

MICHAEL H.S. VAN EEKEREN

Vries, Han (Libbe [Samuel]) de (*b* The Hague, 31 Aug 1941). Dutch oboist. He was a pupil of Jaap and Haakon Stotijn, and continues their playing traditions in the best manner. After his studies he received various prizes, including the *prix d'excellence* in 1962. He was a member successively of the Concertgebouw Orchestra and the Netherlands Chamber Orchestra and was a founder-member of the Netherlands Wind Ensemble in 1960. In 1973 he joined the Danzi Quintet and from 1974 has played only as a soloist and chamber musician, admired for his brilliance and flexibility. As a soloist he has toured Europe, Japan, Australia, and North and South America, with a repertory of Classical, Romantic and contemporary music. Maderna wrote one of his last works, the Third

Oboe Concerto, for de Vries, who gave the first performance under the composer's direction in 1973. Peter Schat, Louis Andriessen and Morton Feldman have also written works for him. He has recorded music by Telemann and 20th-century works, and has edited Baroque oboe repertory. Many of his pupils hold positions in the leading Dutch orchestras. He owns a fine collection of old oboes. In 1964 he was appointed to teach at the Amsterdam Muziekl yceum and the Amsterdam Conservatory.

TRUUS DE LEUR

Vries, Klaas de (*b* Terneuzen, 15 July 1944). Dutch composer. He studied the piano at Rotterdam Conservatory and continued his composition studies with Ketting at the Royal Conservatory in The Hague, winning the prize for composition there in 1974. He subsequently studied with Kelemen in Stuttgart. In 1972, he began to teach music and in 1979 was appointed to teach analysis, instrumentation and composition at Rotterdam Conservatory; in 1995 he was guest composer at the Tanglewood Festival of Contemporary Music. He was awarded the Matthijs Vermeulen Prize in 1983 for his orchestral *Discantus*.

De Vries is typical of postwar Dutch composers in his rejection of Expressionism and in his empirical approach, which has remained undogmatic and open to a variety of influences. Beginning from the immediacy of the late-Stravinsky-like *Refrains* for two pianos and orchestra (1968), his self-critical development has been one of action and reaction, both to his own work, in which more or less complex pieces alternate, and to impulses from outside: for example, early music in *Organum* (1971), minimalism in *Moeilijkheden* ('Difficulties') (1977), jazz in the trumpet solos of *A King, Riding*, or a specific composition, for instance Strauss's *Metamorphosen* in *Interludium* (1977). His earlier ideal of an extrovert, objectified sound is brilliantly accomplished in works such as *Follia* (1973) and *Discantus* (1982) with their homogeneous blocks, elementary contrasts, montage-like forms and rhythmic physicality. In the following decade De Vries added a more inward-looking lyrical component, the basis for a family of 'dream pieces': *... sub nocte per umbras ...*, *Eclips*, and the first part of the String Quartet of 1994, in which pale echos and fleeting references evoke a half-historical, half-mythical musical past.

The Sonata for piano (1987), inspired by the dramatic conflict between tradition and renewal in Mann's *Doktor Faustus*, represents a turning-point. In subsequent works, De Vries has increasingly questioned the avant-garde belief in progress, without resorting to postmodern nostalgia. Under the influence of Borges and Stravinsky – whom he calls 'fantastic liars' – he has probed musical history and memory: for example, *Diafonía, la creación* (1989) results in 're-invented folk music', while *... sub nocte per umbras ...* (1989) employs a number of archetypal formulas and motifs, which, like the shadows of Vergil's *Aeneid* to which the title refers, repeatedly return. (Together with *De profundis* these two works form part of an important trilogy.) A form of shadows plays a part too in *Eclips* (1992), an instrumental postscript which embarks from within the final reverberation of Skryabin's piano work *Vers la flamme* and can only be performed with that piece. Debussy, Messiaen, Stockhausen and Boulez, present in the form of brief quotations, bear witness, in this reflective and essentially pessimistic essay-in-sound, to a view of a future which has become past.

Despite De Vries's evolution in technique and style, certain elements have remained constant: his brilliant instrumentation, a flexible harmonic interplay between the chromatic and the diatonic, and a characteristic repertory of musical figures, of which the sustained note, the fanfare-like signal and the percussive rhythm are among the most notable. His most significant work, to date, is the 'scenic oratorio' *A King, Riding*, a summation of previous intellectual and technical concerns. Based upon Virginia Woolf's *The Waves*, the work explores through seven characters – or seven parts of an autobiographical 'I' – his preoccupation with the question of identity, artistic and otherwise.

ELMER SCHÖNBERGER

Vrieslander, Otto (*b* Münster, 18 July 1880; *d* Tegna, nr Locarno, 16 Dec 1950). German composer and musicologist. He studied with Buths in Düsseldorf (1891–1900) and with Max van de Sandt and Otto Klauwell at the Cologne Conservatory (1901–2); he was particularly influenced by his studies with Schenker (1911–12). From 1904 to 1924 he lived in and near Munich, then in Naples and Vienna until 1929, when he moved to Switzerland.

Vrieslander was highly regarded as a lieder composer and was closely associated with the leading poets of his day. His works include settings of poems by Goethe, Dehmel, Gottfried Keller, Theodor Storm and C.F. Meyer and two song cycles, *Des Knaben Wunderhorn* and *Pierrot lunaire* (eight years before Schoenberg's setting). His musical-poetic sensibility, especially in the song cycles, shows the influence of Wolf, while his highly disciplined

control of musical forms and techniques reveal his admiration of Brahms. His melodic inventiveness, changing between aria-like arcs and recitative style, is often supported in the accompaniment by complex textures and adventurous harmony (he was himself a keyboard performer). Vrieslander also wrote the important monograph *Carl Philipp Emanuel Bach* (Munich, 1923; see also 'Carl Philipp Emanuel Bach als Theoretiker', *Von neuer Musik*, ed. H. Grues, E. Kruttge and E. Thalheimer, Cologne, 1925, 222–79) and produced several critical and analytical editions of his music which reflected Schenker's influence (e.g. *Kurze und leichte Clavierstücke*, Vienna, 1912). These and other writings helped to establish the eminence of C.P.E. Bach as a composer and theorist.

SAUL NOVACK

Vronsky, Vitya (*b* Evpatoria, Crimea, 22 Aug 1909; *d* 1992). Duo-pianist partner and wife of VICTOR BABIN.

Vroye, Théodore Joseph de. *See* DEVROYE, THÉODORE JOSEPH.

V.S. *See* VOLTI SUBITO.

Vuataz, Roger (*b* Geneva, 4 Jan 1898; *d* Geneva, 2 Feb 1988). Swiss composer, conductor and organist. He studied at the Geneva Academy and at the Geneva Conservatoire (with G. Delaye, A. Mottu and Otto Barblan). From an early age he was a leading figure in the musical life of Geneva. He was organist of the Protestant Église Nationale (1917–18), and between 1920 and 1942 he was choirmaster in Nyon and Yverdon. He conducted many orchestras, both in Switzerland and abroad. He worked for Radio Geneva in various capacities (1927–71) and from 1944 to 1964 he was head of its music department. In 1961 he became a professor at the Geneva Conservatoire. He took an interest in all kinds of innovations, particularly of a technical nature; he studied the ondes martenot in Paris in 1931 and became the first qualified ondes martenot player in Switzerland. In 1936 he won the Jaques-Dalcroze diploma of eurhythmics. He also worked as a journalist and music critic, and was an active member of many musical organizations. In 1967 he was awarded the music prize of the city of Geneva, and in 1975 the music prize of the Musicians' Union. During World War II he did not conform to national opinion, and defended Hermann Scherchen against unjustified attack.

His work as a composer was extremely prolific and he wrote in all genres. Sacred music is at the heart of his output, and in particular a concern with the music of Bach. Vuataz's arrangement of the *Art of Fugue* attracted much interest in the 1930s. Later he adopted a free tonal style, picking up 20th-century currents in a very individual manner.

ROMAN BROTBECK

Vučković, Vojislav (*b* Pirot, 18 Oct 1910; *d* Belgrade, 25 Dec 1942). Serbian composer, musicologist and conductor. He studied composition with Karel and conducting with Malko at the Prague Conservatory (1929–32), continuing his studies in Suk's composition masterclasses (1933); in 1934 he took the doctorate in musicology at Prague University and then returned to Belgrade. There he taught at the Stanković School of Music, wrote music criticism, gave popular lectures and broadcasts, and conducted the Belgrade PO and university choral societies. An active communist, he went into hiding during the occupation, but was found and killed. Despite the brevity of his career, he left a considerable body of music and theoretical work. The early pieces are atonal and expressionist, and sometimes make use of quartertones; the Two Songs for soprano and woodwind trio were given at the 1938 ISCM Festival in London. Later Vučković attempted to put into effect his views on the place of music in society. In his writings he took a Marxist approach to aesthetic questions; his collected essays were published in 1968.

Vuillaume, Jean-Baptiste (*b* Mirecourt, 7 Oct 1798; *d* Paris, 19 Feb 1875). French violin maker and dealer. His activities in the middle of the 19th century dominated the trade and made a major contribution in the field of new instruments and bows. He was born of an old but undistinguished violin-making family in Mirecourt, a flourishing centre of French lutherie in the Vosges. In 1818, having trained with his father, he went to Paris to work with François Chanot, moving to the workshop of Lété in 1821. There he progressed, and in 1823 began to sign his own instruments, giving each one a serial number. In 1827, after he had made about 80 new instruments with the help of his brother Nicolas-François, the connection with Lété was dissolved, and Vuillaume established his own workshop at 46 rue Croix des Petits-Champs. He remained there until 1858, when there was a final move to a large and elegant house in the rue Demours at Les Ternes.

Vuillaume's first instruments were heavily varnished a deep, dark red all over, but were otherwise excellently made, rather in the style of Lupot or Pique. By the 1830s he had begun to make imitations of models by Stradivari, Guarneri 'del Gesù' (including Paganini's violin, of which he made several copies from 1838 onwards), Nicolò Amati and Maggini, in response to the prevailing demand for old Italian violins as opposed to new instruments. He was greatly helped in this by Luigi Tarisio, a connoisseur and collector of Italian instruments. Vuillaume quickly became the pioneer of imitation and trade began to flourish. He developed an excellent eye for old instruments, and his increasing expertise and understanding of the old Cremonese makers contributed largely to the success, tonal as well as visual, of his own copies. His was soon the leading Paris violin shop, and by 1850 the first shop in Europe conducting business in every country. His instruments won distinction at several world fairs, including the Great Exhibition, London (1851) and the Exposition Universelle, Paris (1855), and he was awarded the cross of the Légion d'Honneur in 1851.

In his dealings in old instruments, Vuillaume had the opportunity of handling many of the world's finest. In 1855, after the death of Tarisio, Vuillaume was able to purchase his entire collection, including fine examples of all the best Italian makes. The greatest of these was the 'Messiah' Stradivari, made in 1716 but in unused condition, a violin of which Tarisio had often spoken in Paris, though the dealers there doubted its existence (the authenticity of this violin, now in the Ashmolean Museum, Oxford, is still disputed; *see* STRADIVARI, esp. fig.2). As was his habit with the more spectacular instruments that he was able to acquire, Vuillaume made a number of very good copies of the 'Messiah'. Vuillaume's imitations have seldom if ever been mistaken for the originals. They have a distinctive appearance, and, since there are so many, they are easily recognized. After the first few years of experiment, he developed firm ideas about how worn varnish should look. He did not, however, make any but the most half-hearted attempt to reproduce knocks and scratches and other normal signs of centuries of use. His instruments are copies, therefore, rather than fakes. All but a very few bear Vuillaume's own label, and a minute brand on the interior of back and table, the serial number and the date of manufacture. In addition he created two less expensive lines of instruments for pupils and amateurs, the 'Sainte Cécile' and the 'Stentor'; most of these were made for him by his brother Nicolas in Mirecourt.

Vuillaume was also an innovator and he developed many new instruments and mechanisms, most notably the three-string 'octobass' (1849–51), a huge double bass standing 3·65 metres high, and the 'contralto' (1855), a large viola. He also created the hollow steel bow, and the 'self-rehairing' bow. For the latter the hair, purchased in prepared hanks, could be inserted by the player in the time it takes to change a string, and was tightened or loosened by a simple mechanism inside the frog. The frog itself was fixed to the stick, and the balance of the bow thus remained constant when the hair stretched with use. He also designed a round-edged frog mounted to the butt by means of a recessed track, which he encouraged his bowmakers to use; other details of craft, however, make it possible to identify the actual maker of many Vuillaume bows. The bows are stamped, often rather faintly, either VUILLAUME À PARIS or J.B. VUILLAUME. These innovations did not survive beyond the end of the century; the instruments were too large to be played easily, the hollow steel bow was inadequate, though the 'self-rehairing' bow was at least a good idea.

After he moved to Les Ternes in 1858, Vuillaume concentrated far less on imitations. Many of his later instruments were left fully varnished: his reputation made, it was no longer necessary to simulate age. He built 3000 instruments in total, and, with Lupot, was one of the foremost French violin makers of the 19th century. During his lifetime he engaged numerous assistants and many of the best French makers of violins and bows were his workmen and pupils. These included (dates indicate approximate duration of employment): the violin makers Hippolyte Silvestre (1827–31), Honoré Derazey (from 1830), Charles Buthod (1830–40), Charles Adolphe Maucotel (1833–44), Joseph Germain (1845–60) and Télesphore Barbé (1845–75); and the bowmakers Clément Eulry (1823), J.P.M. Persoit (1823–41), Dominique Peccatte (1826–37), Joseph Fonclause (1830–*c*50), Nicolas Maline (1840–50), Pierre Simon (1840–47), François Peccatte (1850–53), F.N. Voirin (1855–70), and Charles Peccatte (1865–9). A hard worker, a wonderful craftsman and a wily businessman, Vuillaume achieved honours and earned a large fortune. His instruments are increasingly sought after nowadays. (For illustration of a Stradivari model instrument by Vuillaume, *see* VIOLIN, fig.13.)

Vuillaume had two younger brothers who were also violin makers. Nicolas Vuillaume (*b* Mirecourt, 21 May 1800; *d* Mirecourt, 14 April 1872) worked with Jean-Baptiste in Paris from 1832 until 1842 before moving back to Mirecourt. He made a few instruments of his own but mainly worked for his brother. Nicolas-François Vuillaume (*b* Mirecourt, 3 May 1802; *d* Brussels, 16 Jan 1876) moved to Paris in 1824 to work with Jean-Baptiste, before settling in Brussels in 1828 where he remained until his death. He was appointed luthier to the Brussels Conservatory and had a great influence on the Belgian school of violin making. He was primarily a copier, and if he did not quite have the talent of his brother, his instruments are nevertheless very good and much sought after. A nephew, Sébastien Vuillaume (*b* Mirecourt, 18

June 1835; *d* Paris, 17 Nov 1875), who married Dominique Peccatte's daughter in 1859, was also a violin maker of some note.

CHARLES BEARE, JAAK LIIVOJA-LORIUS/SYLVETTE MILLIOT

Vuillermoz, Emile (*b* Lyons, 23 May 1878; *d* Paris, 2 March 1960). French music critic. After reading literature and law at the University of Lyons, he studied the piano and organ with Daniel Fleuret and then harmony with Antoine Taudou and composition with Fauré at the Paris Conservatoire. He achieved a moderate success with a number of operettas, *mélodies* and folksong harmonizations before abandoning composition for criticism. In 1909 he played a key role, along with Fauré, in setting up the Société Musicale Indépendante. He became editor-in-chief of the *Revue musicale* (1911) and contributed prolifically to *Mercure musical*, *L'illustration*, *Le temps*, *Paris-presse* and especially *Excelsior* and *Candide*. After World War I his interests widened to include drama, cinema and gramophone records. He was among the first to exploit new techniques of sound reproduction to bring music to a wider audience; he created and supervised the CINÉPHONIES (short films juxtaposing musical compositions with images). He was also a member of the committee for broadcasting of the French Radio Service and a founder member of the *Grand Prix du Disque*. He was made an Officier of the Légion d'Honneur. He was a conspicuous figure in French cultural life for more than half a century on account of the bulk and scope of his journalism and his efforts on behalf of contemporary music; among those he championed were his friends Debussy, Ravel and Schmitt and, in a later period, Schoenberg, Stravinsky, Bartók, Malipiero and Szymanowski. His influential literary style and broad interests earned him a unique place as a writer on French music.

JOHN TREVITT/R

Vukdragović, Mihailo (*b* Okučani, 8 Nov 1900; *d* Belgrade, 14 March 1986). Serbian composer and conductor. He studied composition with Milojević at the Serbian School of Music, Belgrade, and with Jirák and Vítězslav Novák at the Prague Conservatory, where he was also a conducting pupil of Talich; he graduated in 1927. He worked as a choirmaster and as conductor of the Stanković Orchestra, the Zagreb Opera, the Belgrade RO (at which he was particularly successful) and the Belgrade PO. In addition he held appointments as professor and director of the Stanković Music School, professor of conducting (1944–72) and rector (1947–51) of the Belgrade Academy of Music, and also of the Belgrade Academy of Arts (1958–9); and he was chief of the Belgrade radio music programme. He was elected to corresponding (1950) and full (1961) membership of the Serbian Academy of Arts and Sciences. His other activities included guest conducting, occasional criticism and important work in promoting amateur choral singing. Strongly opposed to new developments, he composed in a style oscillating between Czech romanticism and French impressionism, frequently basing his melody on folk music. His expressive and lucid *Vokalna lirika* excels in its colourful orchestration.

STANA DURIC-KLAJN/ROKSANDA PEJOVIĆ

Vulfran. *See* SAMIN, VULFRAN.

Vulpen, Van. *See* VAN VULPEN.

Vulpius [Fuchs], **Melchior** (*b* Wasungen, nr Meiningen, *c*1570; *d* Weimar, bur. 7 Aug 1615). German composer, schoolmaster and writer on music. He was the most important composer of Protestant hymn tunes in Germany in his day and one of the most productive and popular of lesser Lutheran composers.

1. LIFE. Together with one of his brothers, Vulpius latinized the family name, Fuchs, but still occasionally used that form. He was the son of poor parents and as a result was only able to attend the small Lateinschule in his home town, where he was a pupil of Johann Steuerlein. In 1588 he was at Speyer as a fellow pupil of Christoph Thomas Walliser, whom he instructed in the elements of *musica poetica*, and he was there again in 1589. In that year he was appointed, on the recommendation of the Wasungen preacher A. Scherdiger and in spite of his not having attended a university, to a position as a supernumerary teacher of Latin at the Lateinschule at nearby Schleusingen, the former residence of the counts of

Henneberg (who had become extinct in 1583). He was generally referred to, however, as 'composer', for he had already distinguished himself as such at Wasungen in the sphere of church music. His salary at Schleusingen was at first extremely modest, and it rose only slightly even after he secured a permanent appointment in the lowest grade of teacher in 1592 and had to assume the duties of Kantor. He was required to write music for the Lutheran service, chiefly motets and hymns. While at Schleusingen he no doubt became acquainted with the three Passions of Jacob Meiland, which survive in manuscripts copied there between 1567 and 1570, for his own *St Matthew Passion* is influenced by them (see below). From 1596 until his death he was municipal Kantor and a teacher at the Lateinschule at Weimar.

2. WORKS. With nearly 200 motets and some 400 hymns and similar pieces to his credit, not to mention various other works, Vulpius was a prolific composer, and he was also a popular one, as is shown by the second and later editions of some of his publications and the appearance of his works in 17th-century anthologies. He flourished towards the end of the period in which the motet was pre-eminent, at a time that in the context of Lutheranism saw a transition from the Latin to the German motet. He wrote all of his music for Lutheran services, and he remained impervious to stylistic changes associated with the development of the continuo. His three books of Latin *Cantiones sacrae*, the first two of which are his earliest extant works, betray the influence both of the age of Lassus and of Venetian polyphony. The pieces in them are scarcely original, but many are undeniably attractive. Historically more important, though intrinsically less so, are his Protestant *Sprüche* for the church year (1612–21), the first four-voice collections of their kind (though there are pieces for more voices towards the end of the second book); they thus complement the five- and six-voice volumes of Andreas Raselius (1594) and Christoph Demantius (1610) respectively. He here showed that he was aware of the needs of smaller choirs, yet his use of only four voices was clearly no bar to the interpretation of the text through skilful alternation of graphic polyphony and expressive homophony. His *St Matthew Passion* belongs to the genre of the responsorial Passion, and in it he effectively continued the dramatization of the turbae initiated by Meiland; here too he showed consideration for modest choral resources by including four-voice settings as well as five- and six-voice ones. The unaccompanied narrative parts of this work were taken over by Christian Flor into his *St Matthew Passion* (1667).

The two editions of Vulpius's 1604 hymn collection belong to the series of hymnals containing basically homophonic settings with clearly audible descant cantus firmi that was inaugurated by Lucas Osiander in 1586. The practice of including second and third arrangements is much in evidence, as are settings for equal voices, again no doubt with a view to accommodating limited choral resources. The homophonic nature of the writing does not preclude light and charming figuration in the subsidiary parts. The two volumes include a number of the staple hymns from the Reformation period, but there are also more than 30 by Vulpius himself, several of which are still reckoned among the most admired of Protestant hymns and reveal him as the leading composer of hymn tunes between Luther and Johannes Crüger. Following the publication of the *Amorum filii Dei decades duae* (1594–8) by Johannes Lindemann, which shows for the first time the influence of ballettos and other Italian dance-song forms on the texts of German hymns, Vulpius was the first composer to use the rhythm of the balletto in hymn tunes, and in doing so he introduced a new type of Protestant hymn of great originality; the tunes of *Gelobt sei Gott im höchsten Thron* and *Lobt Gott den Herrn, ihr Heiden all* are two examples. Two notable characteristics of this new style are its marked tonal feeling and the close relationship between words and music as determined by the first strophe of each such hymn; Vulpius's tunes for *Die helle Sonn leucht jetzt herfür*, *Hinunter ist der Sonnen Schein* and *Christus der ist mein Leben* in particular display both features. The important *Cantionale sacrum* (Gotha, 1646–8) still contains more than 30 of his hymns.

Although Vulpius did not receive the academic education that most 16th- and 17th-century Lutheran Kantors enjoyed, he was nevertheless held in the highest regard during his lifetime, and he had some success as a writer as well as a composer. His most sought-after publication was his expanded edition of Heinrich Faber's extremely popular *Compendiolum musicae* (1548), which, like the original version, went through numerous editions.

WALTER BLANKENBURG

Vuori, Harri (*b* Lahti, 10 Jan 1957). Finnish composer. He studied composition at the Sibelius Academy, Helsinki (1978–89) with Rautavaara, Heininen and Hämeenniemi, and subsequently spent a year of further study in Paris. In 1993 he began teaching music theory at the Department of Musicology of Helsinki University, and in 1997 he was appointed composer-in-residence of the Hyvinkää orchestra. His orchestral works *Kri* (1988) and *S-wüt* (1991) have received awards in both Nordic and national competitions.

Vuori's orchestral and chamber music are characterized by a shimmering surface resulting from vivid orchestration and post-serial density of events. His harmonic thinking is influenced by French spectral music, but as the harmonic rhythm is fast, the music never comes to a standstill; even in field-type textures there is a nervousness that gathers energy for fervent outbursts (*Kri*, 1988). His vocal melodies, as exemplified in *Unen ja kuoleman laulut* ('Songs of Dreaming and Death') of 1990, favour large intervals and phrases with marked attacks; mathematical functions and their visual representation (B. Mandelbrot: *The Fractal Geometry of Nature* (San Francisco, 1982)) inspire his approach to form, as in *Mandelbrotin kaiut* ('The Mandelbrot Echos') of 1995. His expressive world often stems from his attraction to the dark side of life, or indeed to the inexplicable and the absurd.

ILKKA ORAMO

Vuota (It.: 'empty', 'void'; feminine adjective). A term that has two meanings in music: either that a note in string music is to be played on an open (empty) string; or that of an Italian equivalent of an empty bar or bars (*misura vuota*), the 'general pause' usually marked 'G.P.'

ERIC BLOM

Vurnik, Stanko (*b* Šentvid, Slovenia, 11 April 1898; *d* Ljubljana, 23 March 1932). Slovene musicologist and ethnologist. He studied art history at Ljubljana University (PhD 1925) and from 1923 until his death was an assistant at the ethnographical museum in Ljubljana. His writings, on ethnomusicology, aesthetics and the history of music, emphasize the fact that Slovenian musical folklore is an integral part of the central European cultural past and not an isolated phenomenon. In his treatment of style and the musical systems he followed Adler and Schering and the Slovenian art historian I. Cankar.

DRAGOTIN CVETKO

Vurstisius, Emanuel. *See* WURSTISEN, EMANUEL.

Vustin, Aleksandr Kuz′mich (*b* Moscow, 1943). Russian composer. He studied at the Moscow Conservatory, attending Fere's composition classes, but at the same time was given encouragement from Denisov and Gubaydulina. His works, however, show little sign of being influenced by either of these composers; many of his compositions reflect his Jewish background. His pieces, nearly every one of which is strikingly different, combine stylistic refinement, careful structure, an original approach to rhythm and a fondness for an almost shamanic intensity of vision (rather than espressivity). He often works within an elaborate network of post-serial or modal structures that nonetheless usually sound chromatic. However, in certain works (*Hommage à Beethoven* and others) similar structures are made to yield ordinarily modal and even tonal results. For over 20 years he worked on what is probably his greatest – though in the year 2000 still unperformed – work, the opera *Le diable amoureux*, based on the 18th-century novella by Jacques Cazotte. Nearly every other piece written during the years leading up to its completion in 1989 is a satellite to the opera, developing ideas from it in a wealth of different ways (*Capriccio*, *Nocturnes*, *In memoriam Boris Klyuzner*). That the non-musical ideas behind the opera were also important to him is evident in some of the works written since its completion (*Music for Ten*, *White Music*). He wrote several works during the 1990s for Gidon Kremer.

GERARD McBURNEY

Vyčichlová, Libuše. *See* DOMANÍNSKÁ, LIBUŠE.

Vycpálek, Ladislav (*b* Prague, 23 Feb 1882; *d* Prague, 9 Jan 1969). Czech composer.

1. LIFE. He studied Czech and German at Prague University (1901–6), taking the doctorate in 1906 with a dissertation on legends in Czech literature about the youth of Mary and Jesus, *Apokryfy z mládosti Mariině a Ješížově, zvláště staročeské*. He learnt the violin and piano from the age of six and played in string quartets at school and university. For 30 years from 1909 he was a regular member of the amateur quartet led by Josef Pick. In 1905 he prepared for the state examination in singing (a teaching diploma covering a wide range of musical subjects); instead of then going on to qualify as a German teacher, he obtained a post at Prague University Library (1907).

The first year was unpaid, but as soon as he began earning he took lessons with Novák (1908–12); he became a member of Novák's circle and attended the twice-weekly meetings of the so-called Podskalská Filharmonie (at Podskalská street), where music from Bach to contemporary French and German novelties was played through on two pianos. During his time with Novák he composed songs, piano pieces and a string quartet, and Novák supervised all his works up to op.9. The 'Podskalská Filharmonie' broke up during the war, and Vycpálek himself fell out with Novák in 1917 through his critical stance towards Novák's opera *The Lantern*. Later he developed a friendship with Suk.

During the postwar years Vycpálek increased the range and dimensions of his output with a series of string pieces (opp.19–22) and the three large-scale cantatas culminating in the *České requiem* (1940). In 1922 he founded the university library's music department, which he directed up to his retirement in 1942. He was a member of the Czech Academy (from 1924, chairman of the music section 1950–51), chairman of the music section of the Umělecká Beseda (from 1928) and a member of the advisory committee of the National Theatre. These functions ceased either with the war or with the communist administration from 1948. As a result of the Czechoslovak response to Zhdanov's edict, Vycpálek's *Kantáta o posledních věcech člověka* ('Cantata of the Last Things of Man') was denounced in 1950 for its 'subjective and mystical' tendencies, and his music disappeared from the concert halls until his 70th birthday in 1952. He then received the titles Artist of Merit (1957) and National Artist (1967). After the deaths of Foerster and Novák he was recognized as the most important living Czech composer, and he continued composing to an advanced age.

2. WORKS. Vycpálek's output is small, narrow in its range and contains no music for church or stage. His time for composition was limited but his own cautious and fastidious nature also inhibited him. It is surprising, however, that as an accomplished violinist and violist who played regularly in a quartet he did not write more instrumental music. Apart from the four string pieces of the late 1920s and the later Violin Sonatina (1947) he left only two small sets of piano pieces, an early string quartet and a late orchestral work. Vocal music interested him more, perhaps because it involved more of his talents and could bring into play his literary tastes, refined by extensive reading and a literary education. All the poetry he set was of high quality. His own literary ability is attested by his many reviews in *Hudební revue* (1912–19), *Lumír* and *Národ* and by the translations he occasionally made (for Novák and Suk as well as himself). Apart from

Czech and German symbolist poets, who provided texts for most of his songs, a major source of inspiration was Moravian folk poetry, an enthusiasm derived from Novák though well prepared for in his doctoral work on folk legends. His *Cantata of the Last Things of Man*, Vycpálek's greatest work, is one of his most approachable because of the simplicity and directness of the folk text and drew from Vycpálek some of his most deeply felt music.

Vycpálek's musical thought is primarily contrapuntal. He had an almost passionate belief in the fugue and used it generously in all his major cantatas and in many of the smaller works. *The Cantata of the Last Things of Man*, for instance, is a monumental fugue with subjects derived from variations of a single motif. He also used other contrapuntal forms; the Violin Sonata op.19 includes an unaccompanied chaconne on a four-bar motif which rises a tone or a semitone on each repetition, a device also employed in *Vzhůru srdce* ('Lift up your Hearts'). Contrapuntal forms appear even in the songs: 'Mír' ('Peace') from op.5 is a vocal fugue; 'Hlídka' ('The Watch') from op.14 a vocal chaconne. Vycpálek's harmonic texture derives almost entirely from contrapuntal complications. Consecutive dissonant formations are frequent and, especially in the interwar years, there are many passages of considerable bitonal tension, or momentary atonality. The lack of clear diatonic polarity in his music meant that the sonata form had little appeal. He avoided it, especially in all works designated sonatas; the Violin Sonata, for instance, is a large-scale set of variations. Vycpálek's melody, too, is shaped by contrapuntal necessity. It is frequently modal, lacking tonal drive and clear periodicity. His instrumental writing is similarly conditioned by the claims of balanced and blended contrapuntal voices rather than imaginative and vivid colours. It is not surprising that he wrote only one independent orchestral work.

Vycpálek's course as a composer, though isolated from the main currents of Czech music of the time, was remarkably direct and assured. He seldom revised works and, apart from student exercises, did not destroy or suppress any. His association with Novák ensured early performances of his works; most were published soon after composition. Though Novák had a strong influence, it was Vycpálek's studies of Bach and d'Indy which proved more lasting, for his interests were polyphonic rather than harmonic. His disciplined approach and consistent artistic success meant that within 15 years of his first composition he had, steadily and organically, found a very personal style that fitted his needs exactly. If it lacked charm and seemed narrow in its emotional range this was more than compensated for by the depth and seriousness of his conceptions, the technical mastery of their execution and his eloquent brand of spiritual luminosity.

WORKS

op.	
1	Tichá usmíření [Quiet Reconciliation] (J. Karásek ze Lvovic; A. Sova; P. Verlaine, trans. J. Vrchlický), 4 songs, 1v, pf, 1908–9; arr. 1v, chbr orch, 1942, 1944, unpubd
2	Dívka z Lochroyanu [The Maid of Lochroyan] (W. Scott, trad., trans. L. Quis), reciter, pf, 1907, rev. 1911; orchd 1918, unpubd
3	String Quartet, C, 1909
4	Světla v temnotách [Lights in the Darkness] (Sova), 3 songs, 1v, pf, 1910
5	Tuchy a vidiny [Forebodings and Visions] (A. Mombert, trans. Vycpálek), 5 songs, 1v, pf, 1910–16; nos.2, 4 arr. 1v, chbr orch, 1942, 1944, unpubd
6	Tři smíšené sbory [3 Choruses for Mixed Voices] (O. Březina; R. Dehmel, trans. Vycpálek; J.W. Goethe, trans. Vycpálek), SATB, 1911–12
7	Čtyři mužské sbory [4 Choruses for Male Voices] (Březina; O. Theer; Dehmel, trans. Vycpálek), TTBB, 1911–12
8	Slavnosti života [Celebrations of Life] (Dehmel, trans. Vycpálek), 4 songs, Mez/Bar, pf, 1912–13
9	Cestou [On the Way], 5 pieces, pf, 1911–14
10	Tuláci [Tramps] (K. Toman), TTBB, 7 wind ad lib, 1914
11a	Z Moravy [From Moravia], 7 folksong arrs., 1v, pf, 1910–14
11b	Majolenka [Magdalena] (Cz. trad.), TTBB, 1914; Stojí hruška v oudolí [A Pear Tree Stands in a Valley] (Cz. trad.), SSAA, pf, 1914; Sirotek [The Orphan] (Cz. trad.), SATB, 1914, arr. SATB, 3 va, vc, 1917 or 1918

JOHN TYRRELL

Vysloužil, Jiří (*b* Košice, 11 May 1924). Czech musicologist. He studied at the philosophy faculty at Brno University (1945–9) under Racek (musicology), Arnošt Bláha (philosophy and sociology) and Josef Macůrek (history), and took the doctorate in 1949 with a dissertation on music ethnography. He worked until 1952 at the department for Ethnography and Folklore in Brno, then at the Janáček Academy as lecturer and vice-dean. He next moved to the department of musicology at the arts faculty of Brno University as assistant lecturer (1961–4), reader and professor (1973); he was head of the department from 1963 to 1990. He took the CSc degree in 1959 with a dissertation on Janáček and folksong, and the DSc degree in 1974 with a work on Hába. He was active in organizing the Czechoslovak Composers' Union and was president of the Brno International Musical Festival (1976–90) and chairman of the Brno International Colloquia (1976–95). His research was first directed towards the study of Moravian folksong, but later his interests extended to include Janáček and Czech music of the 20th century and earlier. He has been president of the Janáček Society since 1974, and has overseen the critical edition of Janáček's works. He was co-editor of *Slovník české hudební kultury* (1997).

JOSEF BEK

Vyvyan, Jennifer (Brigit) (*b* Broadstairs, 13 March 1925; *d* London, 5 April 1974). English soprano. She studied at the RAM, and with Roy Henderson and Fernando Carpi. Her first professional stage engagement was as Jenny Diver in the première of Britten's version of *The Beggar's Opera* (1948), and this was followed by Nancy in *Albert Herring* and the Female Chorus in *The Rape of Lucretia*, all with the English Opera Group. In 1951 she created the Matron in Easdale's *The Sleeping Children* at Cheltenham. She came fully into her own in 1952 with a secure and brilliant Konstanze in *Die Entführung aus dem Serail* at Sadler's Wells; the same season she sang Donna Anna in that house. In 1953 she created the role of Penelope Rich in Britten's *Gloriana* at Covent Garden, which she sang many times thereafter; that year, with Glyndebourne at the Edinburgh Festival, she sang Electra in *Idomeneo*. She created the Governess in Britten's *The Turn of the Screw* (1954, Venice), Titania in his *A Midsummer Night's Dream* (1960, Aldeburgh), the Countess de Serindan in Williamson's *The Violins of Saint-Jacques* (1966, Sadler's Wells), various roles in his *Lucky-Peter's Journey* (1969, Sadler's Wells) and Miss Julian in Britten's *Owen Wingrave* (1971, BBC television). Two other Britten roles, Miss Wordsworth and Lady Billows in *Albert Herring*, gave full scope to her comic gifts.

Vyvyan sang in concerts and broadcasts in Europe and the USA, specializing in such choral works as Beethoven's Ninth Symphony, Britten's *Spring Symphony* (which she recorded under the composer) and *War Requiem*, Bach's Passions and Handel's oratorios; she gave distinguished performances in Handel's operas, staged and in concert. She sang in the first performance of Bliss's *The Beatitudes* at Coventry Cathedral in 1962, and was a noted interpreter of British music. Her singing was marked by astonishing flexibility in florid music, secure intonation and subtle phrasing. In opera she always displayed her dramatic gifts in vividly individual portrayals, as can be heard in her superb recordings of the Governess and Miss Julian.

ALAN BLYTH

Waart, Edo de. *See* DE WAART, EDO.

Wachmann, Eduard (*b* Bucharest, 22 Feb 1836; *d* Bucharest, 23 Dec 1908). Romanian composer and conductor of German origin. After early lessons in Bucharest with his father, the composer and conductor Ioan Wachmann (1807–63), he studied in Vienna with Nottebohm and Dachs, and in Paris with Reber, Marmontel and Carafa. Returning to Bucharest, he taught piano and harmony at the conservatory, and founded the orchestra of the Philharmonic Society (1868). In his 35 years as conductor he was successful in educating a new public for symphonic music. His compositions include a string quartet, secular and sacred choruses (among them two liturgies), a folksong collection and many vaudevilles for the Bucharest theatres, where he often conducted. For his pupils he wrote handbooks of solfège, theory and figured bass.

WORKS

many MSS in RO-Ba

Stage: Păunaşul codrilor [The Forest Peacock] (vaudeville, 3), 1857; Despot-Vodă (ov. and incid music, V. Alecsandri), 1860; Spoielile Bucureştilor [The Treasures of Bucharest] (vaudeville, 5, M. Millo), 1863; other incid music

Other works: Sonatine, pf; Str Qt; 5 comic canzonettas, 1v, pf; Barbu Lăutaru, Romanian folk melodies, pf; songs, choruses

ROMEO GHIRCOIAŞIU

Wachsmann, Franz. *See* WAXMAN, FRANZ.

Wachsmann, Klaus P(hilipp) (*b* Berlin, 8 March 1907; *d* Tisbury, Wilts., 17 July 1984). British ethnomusicologist of German birth. After reading law for four years at his father's urging, he studied musicology at the University of Berlin with Blume and Schering and comparative musicology with Hornbostel and Sachs (1930–32). In spite of a Lutheran upbringing, he was prohibited as a person of Jewish background from attending German universities after 1933. He moved to Switzerland in 1934 and took the doctorate under Fellerer at the University of Fribourg in 1935 with a ground-breaking dissertation on pre-Gregorian chant. Forced to leave Germany permanently in 1936, he fled to London and enrolled at the London School of Oriental and African Studies for work in linguistics, notably on the Bantu languages. He moved with his wife to Uganda in 1937 and spent several years supervising missionary education. He was then appointed curator of the Uganda Museum, Kampala (1948), a post which enabled him to return to ethnomusicology and travel throughout Uganda collecting musical instruments and making recordings. Wachsmann turned the Uganda Museum into the first 'living' museum in Africa: he employed professional musicians as museum attendants who performed daily (a practice which continued after he left Uganda), hired musicians as research assistants and established the practice of aiding scholars who visited the museum. After 20 years in Uganda, he returned to London and was scientific officer in charge of ethnological collections at the Wellcome Foundation, London (1958–63). Unable to find an academic post in England, he was invited by Ki Mantle Hood in 1963 to teach at the department of music and Institute of Ethnomusicology, UCLA. While he was at UCLA he was a guest lecturer in African universities (University of Ghana, 1965; Makerere University, Kampala, 1966). In 1968 he was appointed professor in the school of music and department of linguistics of Northwestern University, Evanston, Illinois. He became professor emeritus in 1975, but continued to teach as a visiting professor and lecturer at the University of Texas, Dallas (1976–7), the University of Edinburgh (1978), Queen's University Belfast (1978) and Cologne University (1978–9). His professional appointments included president of the Society for Ethnomusicology (1967–9) and president of the international Folk Music Council (1973). He received many honours, including the bronze medal and an honorary life membership from the Royal African Society (1958), serving as Huxley Memorial Lecturer and medal recipient at the nomination of the Royal Anthropological Institute and the Grosses Verdienstkreuz der Bundesrepublik Deutschland (1984).

Wachsmann was a pioneer in the study of African music and a leader in the development of organological methodology. Isolated from the Western scholarly world while in Africa, he became an idiosyncratic thinker who was later dubbed 'humanist' for his readings and citations of works from many fields (see his Festschrift, 1977). Focussing primarily on Ugandan examples, his theories

and methodologies, particularly those in *Tribal Crafts of Uganda* (1953) and 'Ethnomusicology in Africa' (1970), came to be known for their applicability to the study of any music. He directed the compilation of *A Select Bibliography of Music in Africa* (1965) and was editor of *Essays on Music and History in Africa* (1971), a collection of articles dealing with the problem of writing the music history of oral cultures. His lecture 'The Changeability of Musical Experience' (delivered to the Society for Ethnomusicology, 1981; published 1982) was one of the first reflexive explorations of ethnomusicology. Of equal importance are his field recordings. He earned the respect of the Ugandan musicians he had known, and his 1600 recordings (compiled 1949–52), are outstanding examples of Ugandan music and comprise one of the most important collections of African music available. The recordings are housed in the National Sound Archive in London, with copies at the Uganda Museum and at UCLA.

PAULA MORGAN/SUE CAROLE DEVALE

Wachtel, Theodor (*b* Hamburg, 10 March 1823; *d* Frankfurt, 14 Nov 1893). German tenor. He studied with Julie Grandjean and made his début at Hamburg in 1849. After singing in Hanover, Schwerin, Dresden and other German cities, he appeared at the Berlin Hofoper between 1862 and 1879, but could not be given a permanent engagement because of a broken contract at Kassel. He made his London début on 7 June 1862 as Edgardo in *Lucia di Lammermoor* at Covent Garden, where he also sang Salvator Rosa in Flotow's *Stradella* (4 June 1864) and Vasco da Gama in Meyerbeer's *L'Africaine* (22 July 1865), both first London performances. He returned to Covent Garden in 1870 and sang at Her Majesty's Theatre in 1877. His roles included Arnold in *Guillaume Tell*, Manrico in *Il trovatore*, John of Leyden in *Le prophète*, Pollione in *Norma*, Raoul in *Les Huguenots* and Elvino in *La sonnambula*; but his favourite part, and the one he sang most often, was Chapelou in Adam's *Le postillon de Lonjumeau*, which showed off not only his stentorian top notes (he commanded a powerful chest high C), but also his ability to crack a whip. His son Theodor (1841–74) was also a tenor.

ELIZABETH FORBES

Wächter (Ger.). *See* DIRECT.

Wachter, Georg (*b* ?Bamberg; *d* Nuremberg, 24 July 1547). German printer. By his marriage on 15 December 1527 to Kunegunde, widow of Hans Hergot, he became a citizen of Nuremberg and acquired the latter's printing business, which continued to issue Reformation songs under her name until 1538. After her death (Nuremberg, 7 Feb 1547), Wachter married Kunegunde Hermann, who later became the wife of VALENTIN NEUBER.

THEODOR WOHNHAAS

Wächter, Johann Michael (*b* Rappersdorf, 2 March 1794; *d* Dresden, 26 May 1853). Austrian baritone. He sang in various church choirs in Vienna and made his stage début in 1819 at Graz in the title role of Mozart's *Don Giovanni*. Engagements at Bratislava, Vienna and Berlin followed; then in 1827 he joined the Dresden Hofoper, where he remained for the rest of his career. His roles included Mozart's Figaro, and he sang in three Wagner premières: *Rienzi* (1842, as Orsini), *Der fliegende Holländer* (1843, title role) and *Tannhäuser* (1845, Biterolf). Berlioz, who heard *Der fliegende Holländer* in Dresden, considered Wächter's baritone 'one of the finest I have ever heard, and he uses it like a consummate singer. It is of that rich and vibrant timbre that has such a wonderful power of expression, provided that the artist sings with soul and feeling, which Wächter does to a high degree' (*Mémoires*). His wife, the mezzo Thérèse Wächter-Wittman (*b* Vienna, 31 August 1802), also sang at Dresden; she created Mary in *Der fliegende Holländer*.

ELIZABETH FORBES/R

Wackenroder, Wilhelm Heinrich (*b* Berlin, 13 July 1773; *d* Berlin, 13 Feb 1798). German writer. He studied at Erlangen and Göttingen (art history and Middle High German, as well as law which his father had prescribed for him), and with his friend Tieck paid a fruitful visit to the Dresden galleries in 1796. In Berlin they were members of the circle that included Reichardt and Zelter, whose encouragement and practical help would have been still more fruitful but for Wackenroder's early death.

He studied the piano and composition but it is the visual arts that figure most prominently in his two books, *Herzensergiessungen eines kunstliebenden Klosterbruders* (Berlin, 1797) and *Phantasien über die Kunst, für Freunde der Kunst* (Hamburg, 1799). The latter was edited and enlarged by Tieck, but the sections on Joseph Berglinger and on church music and instrumental music contain the essence of the early Romantic musical aesthetic, which is perhaps best and most succinctly summed up in a phrase in 'Die Wunder der Tonkunst' (from the *Phantasien*) as 'that land of faith ... where all our doubts and our sufferings are lost in a resounding ocean'. The earlier book contains a lengthy study of Joseph Berglinger, an imaginary composer whose otherworldliness and naivety in some respects foreshadow Hoffmann's Kreisler and other Romantic portraits of the musician. It is perhaps surprising, in view of Wackenroder's conviction that the work of art itself is what matters, that most of the *Herzensergiessungen* consists of biographical sketches, largely based on Vasari, of the great masters of the Italian Renaissance. The later work contains a number of passages describing the eternal and heavenly realm of music drawing man upwards and revealing 'all the motions of our soul, incorporeal, in golden clouds'. The ideal sounds produced, rather than the work of the composer and performer or the mediation of the listener, were what Wackenroder understood by music. In his last essay on the inner nature of music he was deeply conscious of the conflict between 'the deep-based, unchanging holiness' of music, and 'the pure, formless being ... and ... the thousand-fold transition of sensations'. The influence of his thinking, incompletely realized as it was, continued to be felt directly or indirectly far into the 19th century.

Waddington, Geoffrey (*b* Leicester, 23 Sept 1904; *d* Toronto, 3 Jan 1966). Canadian conductor, violinist and music administrator. He was the pioneer of music broadcasting in Canada. He began to study the violin at the age of seven in Lethbridge, Alberta, where his family had settled in 1907. In 1921 he toured Canada as a soloist, then studied with Healey Willan, Luigi von Kunitz and Leo Smith at the Toronto Conservatory. From 1922 to 1926 he taught there and was a member of the Toronto SO. In 1925 he was appointed music director of the Toronto radio station CKNC, and in 1933 became music director of the Canadian Radio Broadcasting Commission, forerunner of the CBC. Through hundreds of broadcasts he had become the most widely known conductor in Canada, and from 1936 he pursued a freelance career.

In 1947 he was appointed music adviser to the CBC and organized the CBC Opera Company. As CBC director of music from 1952 his principal responsibility was the CBC SO (formed in 1952, disbanded in 1964), which became one of the foremost in Canada. The orchestra performed numerous works by Canadian composers, including many commissions, and introduced new works by composers from all over the world. In its time it was the only symphony orchestra in North America supported solely by a broadcasting organization. Sargent called it 'one of the four great orchestras of the Americas', and Stravinsky chose it to record several of his important works that had originally been scheduled for New York.

T. BROWN

Wade, Bonnie C(laire) (*b* Nashville, TN, 29 March 1941). American ethnomusicologist. She took the BMus at Boston University (1963) and at UCLA she completed the MA (1967) and the PhD (1971), the last with a dissertation

on *khayāl*. She taught at Brown University (1971–5) and then joined the faculty of the University of California, Berkeley, where she established the internationally respected ethnomusicology programme. She was made professor at California in 1981 and has served as chairman of the music department (1983–88), undergraduate dean (from 1992), and chair of the deans (from 1994). She has held offices in a number of professional societies, including that of vice-president of the AMS (1990–93), board member of the IMS (1987–97) and president of the Society for Ethnomusicology (1999–2001).

A pioneer in her field, Wade wrote one of the first standard ethnomusicological textbooks, *Music in India* (1979), which emphasises the classical music traditions of Hindustani and Karnatak music. Her early work focussed on genres, particularly the Japanese *tegotomono* (a genre of chamber music) and the North Indian classical vocal genre *khayāl* (1971, 1984), as performed by traditional *gharānās* (both groups and individuals). Her later writings, such as *Imaging Sound* (1998), use a multidisciplinary approach, studying historical documentation and miniature paintings from the Mughal period; she has also written on the influence of Western music in Japan. A prolific writer and distinguished scholar, teacher and administrator, she has influenced a generation of younger ethnomusicologists.

GEORGE RUCKERT

Wade, John Francis (*b* ?England, 1711/12; *d* ?England, 1786). English plainchant scribe and publisher. He is best known as the composer and author of *Adeste fideles*. He was almost certainly a convert to Roman Catholicism and attended the Dominican college at Bornem (Belgium) where, presumably, he learnt to copy plainchant. His extant works, which date from the period 1737–74, divide into three types: plainchant manuscripts, printed books with hand-notated plainchant, and printed liturgical books without plainchant. The manuscripts, which substantially outnumber his other works, serve a wide range of functions and include antiphonals, graduals, vesperals, offices for the dead and books of diverse chants. The printed books with plainchant comprise a gradual, psalter and confraternity handbook; printed liturgical books without plainchant include two vesperals, one for general use and another for Holy Week. Internal evidence in the manuscripts suggests that they were used in practically all of London's foreign embassy chapels; by extension it can be assumed that Wade volumes circulated among many Catholic aristocratic families. Wade's influence is considerable in contemporary and later manuscript and printed sources, from *An Essay of the Church Plain Chant* (London, 1782) to Novello's plainchant publications of the 1850s.

BENNETT MITCHELL ZON

Wade, Joseph Augustine (*b* Dublin, *c*1801; *d* London, 15 July 1845). Irish composer. He claimed to have been a student at Trinity College, Dublin, and the Irish College of Surgeons, but his name is not recorded at these institutions. Having decided to devote himself to poetry and music, he moved to London in 1821, and for a short time conducted the opera at the King's Theatre, then under the management of Monck Mason. In 1826 his comic opera *The Two Houses of Grenada* was successfully produced at Drury Lane with John Braham as Don Carlos. In the same year, his song *'Meet me by Moonlight alone'* was launched by Lucia Vestris and, revealing Wade's natural melodic gift, it became immensely popular.

After these initial successes, however, Wade's tendency to indolence gave way to dissipation. The Rev. John Richardson recalled him as 'A wise man in theory and a fool in practice … increasing the confusion of his brain by copious potations of any fluid which at the moment might be before him'. Yet Wade's musico-poetic talents were of a high order: he wrote the words of the great majority of his songs, and of *The Two Houses of Grenada*. This work's two best-known numbers, 'Love was once a little boy' and the duet 'I've wandered in dreams',

demonstrate Wade's knack of hitting upon the kind of quasi-folktune that is immediately memorable. Though influenced by Henry Bishop, Wade's style betrays the eccentricities of the self-taught dilettante: in the final movement of the *Grand Duet* for piano this results, typically, in oddly attractive rhythmic effects and modulations, which contrast vividly with the canonic second movement's funereal and parodistic 'Marche grotesque'. The magical atmosphere of the eight-part canon *Spirits we of Fairy Land* reveals an authentic touch of Weber, though Wade's words are often more Romantic than his music, which, as in *Songs of the Flowers*, frequently distils the strong late 18th-century continental influences which shaped England's pre-Mendelssohnian musical style.

With William Crotch and George Macfarren, Wade was responsible for the accompaniments of Chappell's *National English Airs*. His later dramatic works were unsuccessful. He also wrote *The Handbook to the Pianoforte* (London, 1844/*R*) and an unpublished history of music, and contributed articles to *Bentley's Miscellany* and the *Illustrated London News*. Increasingly reliant upon opium as well as alcohol, Wade died penniless and in a state of mental derangement, which the obituary in the *Musical World* generously attributed to 'intense study'.

WORKS

printed works published in London unless otherwise stated

STAGE

The Two Houses of Grenada (comic op, J.A. Wade), London, Drury Lane, 31 Oct 1826, selections (1826)
The Convent Belles (comic op, T.H. Bayly), London, Adelphi, 8 July 1833, collab. W. Hawes
The Yeoman's Daughter (musical play), London, Lyceum, 14 July 1834, collab. Hawes [1 no. only] (?1834)
The Pupil of Da Vinci (burletta, M. Lemon), London, St James's, 30 Nov 1839

OTHER WORKS

Orats: Jerusalem, London, 1823, collab. J. Stevenson; The Prophecy (after A. Pope: *Messiah*), London, CG, 24 March 1824
Vocal: *c*73 songs, pubd separately, incl., I'll cull ev'ry Flow'ret that grows (Dublin, n.d.), Morning around us is beaming (1825), The Vesper Bell (1826), Songs of the Flowers (Wade) (1827), Sing not my song yet (1829), A Series of Select Airs (Wade) (Dublin, ?1830), Polish Melodies (Wade) (1831), The Glow Worm and the Star (1832), resignation (sacred song) (?1840); Spirits we of Fairy Land, eight-part canon [from a Masque, lost] (1827); 2 trios; 8 duets; arrangements
Inst: Grand Duet, pf (1827); fantasias, waltzes, pf; other works

NIGEL BURTON

Waechter, Eberhard (*b* Vienna, 9 July 1929; *d* Vienna, 29 March 1992). Austrian baritone. After study at Vienna University and the Music Academy (piano and theory) he took singing lessons from Elisabeth Rado. His début at the Volksoper in 1953 as Silvio in *Pagliacci* led to his engagement at the Staatsoper the following season. His career advanced rapidly: a fine Posa in *Don Carlos* at the Staatsoper in 1956 helped to establish him. The same year he enjoyed considerable success as Count Almaviva in *Le nozze di Figaro* at Covent Garden, in 1958 he was heard as Amfortas and Wolfram at Bayreuth, and engagements followed at the principal houses of Europe and the USA, where he made his Metropolitan début as Wolfram in 1961. Although he was not always wise in his choice of parts (in 1964 he was not ready for a role such as Wotan in *Das Rheingold*), his warm, expressive voice and fine bearing brought him success in such varied roles as Escamillo and Kurwenal, Don Giovanni and Masetto, Ford and Boccanegra, Scarpia, Danilo, Mandryka and Danton (von Einem's *Dantons Tod*). In 1980 he created Joseph in von Einem's controversial *Jesu Hochzeit* in Vienna. Waechter was also a fine lieder singer, as his recording of *Dichterliebe* confirms. He became Intendant of the Vienna Volksoper in 1987 and artistic co-director of the Vienna Staatsoper in 1991.

PETER BRANSCOMBE/R

Waefelghem, Louis van (*b* Bruges, 13 Jan 1840; *d* Paris, 19 June 1908). Belgian violinist, viola player, viola d'amore player and music editor. After completing his formal education in Bruges he entered the Brussels Conservatory in 1857, studying the violin with Meerts and composition with Fétis. Three years later he gave successful concerts in Weimar and Dresden and subsequently accepted the position of leader of the opera orchestra in Budapest. In 1863 he went to Paris, where he learnt the viola (an instrument whose tonal qualities had long attracted him) and after winning a viola competition he joined the opera orchestra in Paris in 1868; he was later elected viola professor at the Paris Conservatoire. He journeyed to London in 1871 to play in the opera orchestra at Her Majesty's Theatre and also participated in the concerts at the Musical Union; there he played the viola in chamber concerts with Joachim, Auer, Sarasate, Vieuxtemps and Sivori.

In 1895 van Waefelghem resigned the position he had held for 14 years in Lamoureux's orchestra, to devote full-time study to the viola d'amore, an instrument about which Berlioz had written glowingly and which Meyerbeer had used effectively in *Les Huguenots*. His research unearthed many solo and chamber pieces for the instrument. With Louis Diémar (harpsichord), Jules Delsart (viola da gamba) and Laurent Grillet (vielle), he formed the Société des Instruments Anciens, which gave highly acclaimed concerts throughout Europe. His original compositions include a *Pastorale* and a *Rêverie* for violin and piano and a *Romance* and *Soir d'automne* for viola d'amore and piano; his arrangements for the viola d'amore of works by Bach, Ariosti, Scarlatti, Martini, Widor and Saint-Saëns were a substantial addition to its repertory. His playing on the viola d'amore is reported to have been superb, and his efforts as performer, music historian and editor account in part for the revival of the viola d'amore in the early 20th century. He was made a Chevalier of the Légion d'Honneur and received the Order of Leopold from the King of Belgium.

MYRON ROSENBLUM

Waelput, Hendrik [Henri, Henry] (*b* Ghent, 26 Oct 1845; *d* Ghent, 8 July 1885). Belgian conductor and composer. He studied philosophy and literature at the University of Ghent and music at the Brussels Conservatory with Fétis and Hanssens. In 1867 he won the Prix de Rome with his

cantata *Het woud*. In 1869 he became assistant director of the music school at Bruges, where he also organized and conducted popular concerts. A disagreement with the school's governing body led to his resignation in 1871; he went abroad for five years, appearing with great success as a conductor in the theatres of The Hague, Dijon, Boulogne-sur-Mer, Douai, Issoudun, Fécamp and Lille. Returning to Belgium, he became principal conductor at the Grand Théâtre in Ghent, and at the same time was appointed professor of harmony and counterpoint at the Antwerp Conservatory. In 1884 he was made director of the Ghent Opera.

Waelput also won recognition as a composer of operas, cantatas and symphonic music; the cantata *De pacificatie van Gent* (1876), written in the style of Peter Benoit, is generally regarded as his masterpiece.

ANNE-MARIE RIESSAUW

Waelrant [Waelrand], **Hubert** [Huberto] [Waelrandus, Hubertus] (*b c*1517; *d* Antwerp, 19 Nov 1595). Flemish composer, music editor, singer and teacher. He was an innovator among mid-16th-century Flemish composers, and his style bridges the period between that of Gombert and the mature Lassus. His works are characterized by careful attention to the relationship between text and music, reflecting the current humanistic outlook, and by chromatic harmony and inventiveness in the use of dissonances.

1. Life. 2. Waelrant as editor. 3. Works.

1. LIFE. Waelrant's name appears with numerous spellings, including Waelrans, Waelramst, Waelranck, Waralt and Vuaelrant, but in his own publications he consistently used the forms Waelrant, Waelrand or Waelrandus. His life and activities were centred in Antwerp, but much confusion arises from the fact that there were several men with this name in the city at the time, including at least two lawyers named Hubertus Waelrant: a father and son (*c*1521–74 and *c*1546–1621). Persoons (1979, p.147) argued the existence of a third lawyer with this name; Spiessens (1995) maintains that this is not a separate man but is the elder of the father and son pair. The composer, some of whose children practised law, may have been related to the lawyers of this name. He was married at least three times: to Maria Loochenborch (*c*1547), with whom he had ten children, to Anna Ablyt (or Van Covelen, 28 July 1564) and to Johanna Cleerhaghen on 3 May 1581. Spiessens posits a fourth wife, Maeyken Corecopers, married to the composer on 23 July 1551 (1995, p.53). Three of the composer's sons, Raymond, Peter and Paul, had careers as organists.

It is unclear where Waelrant received his musical training, although it has frequently been suggested that he studied in Italy, a suggestion supported by his close personal association with the Italian patron B.D. Inurea and by his preference for a progressive style in his madrigals. However, the claim that he studied with Willaert in Venice seems to have been based on a misreading, by Fétis and Kiesewetter, of Berardi and de Arteaga.

Early in his career Waelrant was active as a singer and teacher. The records of Antwerp Cathedral and the St Jacobskerk indicate that in 1544–5 he received payments as a tenor, and rent contracts show that from 1553 to 1556 he taught music in a school managed by his landlord, Gregorius de Coninck. Traditionally he has been credited with the extension of the hexachord to an octave system by the addition of the two syllables *ni* and *ba* (later altered to *si* and *o*), and with the invention of a new seven-syllable solmization system called bocedization (or *voces belgicae*). Sweerts, who claimed to have been his pupil, was the first to link him with the latter; other reports of the time attributed its invention to other musicians (see Benndorf, 1894; Lange, 1899–1900; and Lowinsky, 1946).

From about 1554 (possibly 1552) until 1558 Waelrant was associated with the printer JEAN DE LAET (Weaver, 1995, pp.113–17). The dedications to their volumes indicate that Waelrant served as the publisher and bookseller, caring for finances, selection of repertory and, most likely, sales. Laet, as owner and printer, saw to the purchase of paper, layout, type-setting, operation of the press and proof reading. In two books (1556[6] and 1556[7]) Waelrant called himself 'typographus', suggesting that he also took on some aspects of the role of printer. 16 products of this joint venture are extant. The type is notable for its elegant and simple face, as well as for its unique sharp sign on a space and for the unusual form of the G clef (see illustration).

Almost nothing is known of Waelrant after 1558 apart from his publications, although the Antwerp Cathedral archives show that he served as a consultant for the tuning of three new bells acquired in 1563. A number of documents mark his participation in family events, including the weddings of his daughter Maria, in 1571, and his son Raymond, in 1574. In 1583–4, along with Trehou, Pevernage and Verdonck, Waelrant composed music to poems from Jan Van der Noot's *Lofsang van Braband* (1580, the settings are lost). In 1585 he served as the editor for Phalèse and Bellère's *Symphonia angelica* (RISM 1585[19]), a highly successful collection of four- to six-voice madrigals (a revision of 1590[17] went through three more editions). Five of the 55 madrigals are by Waelrant himself. In the last years of his life Waelrant fell into debt; according to Sweerts, he died on 19 November 1595 at the age of 78, and was buried in front of the choir in the Church of our Lady on 22 November.

Certain aspects of Waelrant's life and work suggest that he entertained Protestant sympathies. Becker pointed to the vernacular psalms and stressed that several of his

Superius of Waelrant's 'Ogni giorno' from 'Il primo libro de madrigali' (Antwerp: Waelrant and Laet, 1558)

volumes were confiscated by the Catholic authorities at Mons and Courtrai in 1568. Lowinsky (1946 and 1972) argued that in view of his preference for New Testament texts dealing with Christ's life and teachings (see below), he may have been associated with the Anabaptists. Many of his texts certainly do seem to be in agreement with certain Protestant movements, in their emphasis on personal piety and morality grounded in the teachings of the life of Christ. But the multifarious theologies in the Netherlands in his time create difficulties in identifying a particular heresy, such as Anabaptism, Calvinism or some form of spiritualism, with the composer. Furthermore, a legal document of 1596 states that the Waelrants were Catholics (Persoons, 1979 and Weaver, 1995, pp.338–40).

2. Waelrant as editor. Waelrant and Laet initiated their printing venture with a series of motets that eventually extended to eight volumes; five anthologies consist of five- and six-part works (RISM 1554[6], 1555[6], 1555[7], 1556[6], 1556[7]), one is devoted entirely to Waelrant's works for five and six voices, and the other two are anthologies of four-part works (1556[4], 1556[5]). Waelrant's own music did not appear in this series until the fourth and fifth volumes, where he is represented by one and two motets respectively. Other composers presented in these anthologies include Crecquillon and Clemens non Papa; the remaining composers are mostly minor contemporaries from the Franco-Flemish region. In 1555 Waelrant and Laet published their first editions of French music: Jean Louys's five-part settings of 50 psalms, in three volumes. They followed these with the *Jardin musical*, a collection of sacred and secular music to French texts in four volumes, one for three voices (RISM 1555[22]) and three for four (1556[17]–;[19]). These include 14 of Waelrant's own works, eight of which are settings of psalm texts by Marot. The other three composers well represented in these books are Jean Caulery, Clemens and Crecquillon. The last extant publications by Waelrant and Laet (1558) are wholly devoted to five-part Italian madrigals, *canzoni francesi* and five- and six-voice motets, all by Waelrant himself.

The repertory that Waelrant and Laet published is much smaller than those of Susato and Phalèse. It is distinguished by its choice of progressive music, by the quality of the type used and by the care that Waelrant took over text underlay and *musica ficta*. For example, in his edition of Crecquillon's *Sancte Maria virgo* he altered the original text placement so that speech and musical accents would be coordinated better.

3. Works. Waelrant's styles as editor and composer are closely related. His experience as a singer and teacher made him highly sensitive to the needs of the performer. An important feature of his editorial technique was his approach to text underlay. Wherever possible, he divided words into syllables and aligned them with the correct notes; he employed ligatures to clarify text setting and avoided the use of numerous shorthand *iterum* signs, often preferring to repeat the text in full. He was also explicit in his use of accidentals, which were applied in his own works to create colourful chords, many for the purposes of text expression. His plaintive setting of the scene from the story of Lazarus, *Pater Abraham* (*Liber sextus*), for example, makes extensive use of accidentals to create cross-relationships and dissonances as well as to realize for the performer the principles of *musica ficta*. His application of accidentals in his role as editor of the works of others was more cautious, revealing his respect of a composer's personal style.

Interestingly, Waelrant's sacred chansons often bear features of the *note nere* madrigal in their textures. In his setting of *Donne secours*, black notes feature in imitative textures or in homophonic semiminim pairs, with repeated chordal harmonies that create parlando rhythmic effects. The French texts with serious moods match the serious Italian compositions in their style; on the other hand, amusing texts, such as *Un jour passé*, have more lively rhythms and more passages in chordal style. In *Moys amourex* short four-note rhythmic units are repeated

numerous times without harmonic change, resulting in a liveliness not present in the madrigals (see Slenk, 1965).

In the nine madrigals of the *Primo libro* Waelrant combined Netherlandish polyphonic techniques with typical madrigal devices, such as speech-like rhythms (in short imitative phrases, in homophony and in textures that mix the two) and chromatic harmonies (augmented triads, false relationships and strong dissonances), to emphasize words like 'pain' and 'grief'. In the second parte of *Ferma speranz'e fe pur*, for example, cross-relations and unexpected chords, built on chromatic-shifting bass lines, illustrate the text 'Grave travagli' e afflitta gelosia'. To add further interest, Waelrant shifts between strict and free contrapuntal textures.

ROBERT LEE WEAVER

Waesberghe, Jos Smits van. *See* SMITS VAN WAESBERGHE, JOS.

Wagele, Antonia. *See* BERNASCONI, ANTONIA.

Wagemans, Peter-Jan (*b* The Hague, 7 Sept 1952). Dutch composer. He attended the Hague Conservatory, where he studied organ with Wim van Beek, composition with van Vlijmen and music theory with van Dijk, and where he was also introduced to electronic music. After studying with Klaus Huber in Freiburg, he taught music theory at the Hague Conservatory (1978–84) and composition at the Rotterdam Conservatory (since 1982). Since 1990 he has been promoting 20th-century music in Rotterdam, including concerts at De Doelen concert hall and the project 'The Unanswered Question' in De Unie Hall, in which the work of young composers is combined with rarely heard works by older composers.

Partly prompted by the work of Bernd Alois Zimmermann (whose *Die Soldaten* greatly impressed him in a performance of 1971), Wagemans attempts to combine sensitivity, mobility and well thought-out counterpoint with strong emotional expression. His music has a narrative function, in which great importance is attached to melody. In *Muziek II* (1977, revised 1979), Wagemans distances himself from the serialism of Stockhausen and Boulez. Using the principles of Messiaen's modes of limited transposition he developed his own fixed note rows from which he constructed short successions of notes with different intervals. He uses primary numbers to determine durations of individual notes and length ratios of passages or parts. Other influences include German late Romanticism (Reger, Strauss, Schreker), French Romantic organ music, Skryabin, jazz, Bach, Stravinsky and Perotinus. Wageman quotes the work of historical composers extensively and uses stylistic mixture in order to reflect the pluralism of society. His music is characterized by sudden mood changes, ranging from unrestrained violence to mysticism and ironic capriciousness. In 1990 he won the Matthijs Vermeulen Prize from the city of Amsterdam for *Rosebud*.

WORKS
(*selective list*)

Choral: Cantata (Apocrypha: *Ecclesiasticus* iv.1–3), chorus, 2 cl, 2 bn, 1979; Muziek III 'Europa na de regen' (Bible: *Revelation*, S. Mallarmé, A. Tennyson), op.19a, solo vv, chorus, ens, 1984; Al de stromen vrolijk handen (after Ps xcviii), chorus, fl, 1989

TON BRAAS

Wagenaar, Bernard (*b* Arnhem, 18 July 1894; *d* York, ME, 19 May 1971). American composer, conductor and violinist of Dutch origin. He studied for five years at Utrecht University, where he was a pupil of Gerard Veerman (violin), Lucie Veerman-Bekker (piano) and Johan Wagenaar (composition). He began his career teaching and conducting in various Dutch towns from 1914 until 1920, when he moved to the USA (he took American citizenship in 1927). After a period as a violinist in the New York PO (1921–3) he taught fugue, orchestration and composition at the Institute of Musical Art (later the Juilliard School, 1925–68); among his pupils were Druckman, Schuman and Siegmeister. The first performance of his Symphony no.1 by the New York PO under Mengelberg (1928) marked the beginning of a public career during which Wagenaar received many awards and commissions. Of the latter, the most notable came from the Netherland America Foundation for the *Song of Mourning*, 'a memoriam for orchestra for fallen Dutch patriots', which was introduced under Hans Kindler at the Metropolitan Opera House in 1944. Wagenaar's compositions, in a style that can be described as neoclassical in its use of formal structures, modified to suit his artistic purpose, include tonal and polytonal pieces demonstrating lyrical melodic grace, finely wrought counterpoint and pungent harmonies. Some use of jazz idioms is evident in the Triple Concerto. After exploiting the resources of a large orchestra in the Symphony no.2 he moved towards more compact, economical means. His works have been praised for fine technique and craftsmanship, but also criticized for a derivative style and for a tendency to the episodic which limits the expressive canvas of larger movements. He was a member of the executive committee of the American section of the ISCM, an active member of the League of Composers and other

associations devoted to contemporary music, and an officer of the Order of Oranje-Nassau in the Netherlands.

WORKS

Chbr op: Pieces of Eight (2, E. Eager), New York, 9 May 1944

HERBERT ANTCLIFFE/BARBARA A. RENTON

Wagenaar, Diderik (*b* Utrecht, 10 May 1946). Dutch composer. He studied music theory with Jan van Dijk, Hein Kien and Rudolf Koumans, and the piano with Simon Admiraal at the Royal Conservatory in The Hague. As a composer he is essentially self-taught. He was appointed as a teacher of theory and 20th-century music at the Royal Conservatory in 1969.

Wagenaar is, along with Louis Andriessen and Cornelius de Bondt, one of the central figures of what has become known as the Hague School. His works represent the typical approach of this group of composers in its most austere form, with their exploitation of homogenous textures, their clearly defined, though irregular rhythmic structure, and their dissonant, but centripetal harmonies. He is especially remarkable for his handling of long, purely unison passages, which significantly influenced the work of Andriessen.

Wagenaar is the author of a modest but significant output, which shows a very constant development. The early works display abrupt shifts between different textures and still show traces of his interest in jazz music. From this period, *Liederen* (1976) is a convincing example of cyclic development within a mosaic-like framework. His exploration of the ambiguity between harmonic and rhythmic density reached its apex in *Metrum* (1984), a complex, polyrhythmic work for four saxophones and orchestra for which he was awarded the Kees van Baaren Prize in 1989. In the works that followed he reconciled a rich, chromatic harmony with a ritualistic, Stravinskian formal clarity. *Solenne* (1992), for six percussionists, marked a new phase, where his musical language, though in essence unchanged, assumed an expressive tranquillity and a lyrical vein. This development led to his first full-scale vocal work, *Trois poèmes en prose* (1995), which earned him the Matthijs Vermeulen Prize in 1996.

FRITS VAN DER WAA

Wagenaar, Johan(nes) (*b* Utrecht, 1 Nov 1862; *d* The Hague, 17 June 1941). Dutch composer and teacher. He studied at the Toonkunstmuziekschool in Utrecht, taking composition lessons from Richard Hol. On graduation in 1885, he immediately began his career as a teacher there, simultaneously studying the organ with Samuel de Lange. He replaced Hol three years later as organist of Utrecht Cathedral, earning renown for his Bach performances, and in 1896 succeeded him as director of the Toonkunstmuziekschool, retaining both of these posts until 1919. In 1892 he spent a year in Berlin (studying with Herzogenberg) and Vienna. Wagenaar conducted the Toonkunst choirs of Utrecht (1904–27), Arnhem, Leiden and The Hague, also a male voice choir in Utrecht, often in large-scale choral or orchestral music by composers such as Berlioz and Mahler. In 1916 he received an honorary doctorate from the University of Utrecht, and in 1919 was appointed director of the Royal Hague Conservatory, where he remained until 1937. Among his composition pupils were van Anrooy, Pijper, Bernard Wagenaar, Voormolen, Enthoven and Orthel.

Around 1900, together with Zweers and Diepenbrock, Wagenaar gradually re-established the role of the composer in Dutch musical life. He was active in lay musical clubs, and attempted to popularize music through humour. His cantata *De schipbreuk*, full of social and musical caricature, was performed widely in the Low Countries.

His wit is further displayed in the cantatas *De fortuinlijke kist* and *Jupiter Amans* and two operas, *De doge van Venetië* and *De Cid*, which resort to parody and satire, emphasizing the surface sentimentality and absurdity of so many Romantic operas. Wagenaar generally composed to suit the tastes of his own generation, rather than current fashions; as a result, his late works received little attention. Those pieces which have remained in the Dutch repertory (such as the overtures *Cyrano de Bergerac* and *De getemde feeks*, and *Wiener Dreivierteltakt*) are programmatic or theatrical in origin. The writing shows a remarkable feeling for tone-colour, with strong overtones of Berlioz and Strauss. A serious, arguably more original aspect of his talent appears in compositions such as the symphonic poem *Saul en David* and the vocal scene *Aveux de Phèdre*.

For his services to music Wagenaar was decorated six times by the Dutch Queen and twice by King Albert of Belgium: a striking contrast with his youth when, as one

of six illegitimate children of a prominent aristocrat, he had known poverty and social discrimination (Roest, 1988).

JOS WOUTERS/HARRISON RYKER

Wagenmann, Abraham (*b* Öhringen, *c*1570; *d* Nuremberg, 19 March 1632). German printer. He was a printer at Öhringen, but became a citizen of Nuremberg on his marriage to Ursula Adelhart in 1593. He printed or published over 150 items, of which almost a third are music. His publications include works by German and Italian composers, notably Vecchi; he was a particularly staunch promoter of the music of Austrian exiles. His work is discussed in T. Wohnhaas: 'Nurnberger Gesangbuchdrucker und -verleger im 17. Jahrhundert', *Festschrift Bruno Stäblein*, ed. M. Ruhnke (Kassel, 1967), 301–15.

THEODOR WOHNHAAS

Wagenseil, Georg Christoph (*b* Vienna, 29 Jan 1715; *d* Vienna, 1 March 1777). Austrian composer, keyboard player and teacher. He can be considered one of the pivotal figures in the development of the Classical style in Vienna with a compositional career that spanned a period from Fux, his teacher, to Haydn and W.A. Mozart, for whom he served as a precursor.

1. LIFE. Wagenseil's father and maternal grandfather were functionaries at the Viennese imperial court. In his teens he began to compose keyboard pieces and to receive keyboard instruction with the organist of the Michaelerkirche in Vienna, Adam Weger. His accomplishments brought him to the attention of the court Kapellmeister, Johann Joseph Fux, who recommended him for a court scholarship in 1735; for the next three years he received intensive instruction in keyboard playing, counterpoint and composition from his sponsor and from Matteo Palotta. As a result of an enthusiastic endorsement from Fux, Wagenseil was appointed composer to the court on 6 February 1739, a post he held until his death. He also served as organist from 1741 to 1750 in the private chapel of Empress Elisabeth Christine (widow of Charles VI), and in 1749 became *Hofklaviermeister* to the imperial archduchesses. To the latter he dedicated four sets of divertimentos, which were engraved and issued as opp.1–4 by Bernardi of Vienna (1753–63).

Wagenseil travelled to Venice in 1745 to supervise the production of his first opera, *Ariodante*, and in 1759–60 he was in Milan for a performance of *Demetrio*. In the mid-1750s uncommonly generous publication privileges granted by Parisian printers brought about a flood of instrumental compositions, particularly symphonies (see illustration), which raised him to international prominence, and which were undoubtedly responsible for Burney's high opinion of him. Among those acquainted with his music was the young Mozart, who played one of Wagenseil's concertos before Maria Theresa in 1762 and several keyboard pieces at the English court in 1764. Haydn was likewise familiar both with numerous instrumental works, as entries in the so-called *Quartbuch* show, and with Wagenseil's operas, which found their way to Eisenstadt.

Wagenseil was also renowned as a keyboard virtuoso, and elicited the highest praise from contemporaries such as C.F.D. Schubart (who remarked that Wagenseil 'played with extraordinary expressive power and was capable of improvising a fugue with great thoroughness'). But from about 1765 steadily worsening lameness and an attack of

Title-page of Wagenseil's 'Six simphonies' op.3 (Paris: J.-P. Le Clerc, Bayard and Castagneri, c1760)

gout which affected his left hand curtailed his activities at court and eventually confined him to his quarters where, according to Burney, who visited him on several occasions, he continued to compose and to teach.

Among Wagenseil's pupils were Leopold Hofmann, J.A. Štěpán, F.X. Dušek, Johann Gallus-Mederitsch, G.A. Matielli, P. le Roy, the brothers Franz and Anton Teyber, and J.B. Schenk. The last, who began instruction in 1774, provided in his autobiography a detailed account of his mentor's teaching methods which, not surprisingly, were based on Fux (a legacy Schenk was then to transmit to Beethoven later in the century) but which were also remarkable for their time in drawing on Handel and Bach.

2. WORKS. Wagenseil's earliest creative efforts (up to about 1745) appear to focus on sacred music, particularly masses, both *a cappella* and concerted. Some of those in the latter style were brilliantly scored for four trumpets, timpani, cornetto, two trombones, bassoon, strings and organ. The choral writing displays a formidable contrapuntal skill (canons, strettos, fugatos and double, triple and quadruple fugues abound), and the predominantly lyric and contemplative solo and ensemble sections deftly fuse voices and concerting instruments.

Beginning with his first opera in 1745, Wagenseil expended considerable efforts on stage works over the next five years. Many of these were composed for festivities celebrating the nameday or birthday of various members of the imperial family. His operas are remarkable for their stylistic development that transcends the traditional norms of *opera seria*. He soon introduced diminutive arias in folk or *galant* style, expressive accompanied recitatives and finely wrought choruses to disrupt the traditional sequence of secco recitatives and da capo arias. But the most significant progressive feature is the welding of aria, ensemble, recitative and chorus into large unified tableaux, exemplified in its most mature form by the central scene between Orpheus and Eurydice which Wagenseil wrote in 1750 for the pasticcio *Euridice* and which pointed the way to Gluck's operatic reform of 1762.

In the solo keyboard music a clear stylistic development is discernible from the early dance suites which open with an overture or arpeggiated prelude, through miniature sonatas (also called divertimentos) employing successions of tiny repeated melodic fragments, to the late works which have acquired fluency, breadth and definition of structural details. Wagenseil seldom deviated from full recapitulations, although he frequently begins these in the subdominant key. Though he experimented with two-, four- and five-movement cycles, he preferred a three-movement sequence, either fast–minuet–fast or fast–slow–minuet, similar to the early keyboard compositions of Haydn. The sonatas juxtapose improvisatory, dance, folk and cantabile elements which are distributed over the keyboard in colourful and imaginative fashion. Though the prevalent tone is one of delicacy and charm, he was capable of depth of expression and, on occasion, striking departures from the usual facile harmonic conventions. The numerous string trios, offered for sale over several decades by publishers in London, Paris and Leipzig and singled out for praise by Hiller (*Wöchentliche Nachrichten*, 3 October 1768), also range from conservative works written for ecclesiastical use to pieces in *galant* style.

Most of the keyboard concertos are chamber works intended for the dilettante, reflecting his position as court keyboard instructor. The harpsichord is the preferred solo instrument, although the sources often designate the organ, or less frequently the piano (and even the harp), as also appropriate. Thin accompaniments comprising two violins and bass and ever-present minuet finales point to the influence of the divertimento. The music bristles with a variety of ornaments, as well as with triplets, short trills and patterns of very short note-values; the repetition of phrases in the minor (a hallmark of the composer's style) is especially in evidence, and Wagenseil introduced fresh keyboard figurations and patterns which served as pedagogical models for the coming decades. The finales, with their innocuous melodic substance and limited rhythmic vocabulary, are the least effective units in the cycle, and a number of the initial movements are marred by a certain predictability in the disposition of material between solo and tutti, weaknesses which are offset by impressive sustained cantilenas or highly ornamented coloratura writing in the slow movements. Among concertos for other solo instruments, the one for cello in A major (dated 1752) is worthy of mention for its extraordinary sweep and expressive power, and the concerto for alto trombone remains one of the most significant early concertos for this instrument.

Wagenseil's symphonies offer more diversity, and are of greater consequence in his total output. They draw on a wide variety of influences: opera sinfonia, trio sonata, divertimento, solo concerto, concerto grosso, *opera buffa* and suite. Here, as in the majority of his other instrumental works, Wagenseil favoured a three-movement scheme, although there are examples in four movements. The opening movements reflect a continuous stylistic development from the triadic unisons, common to the Italian sinfonia of the 1740s, to a series of sequential *galant* motifs, to a final form in which segmenting and development of thematic ideas within an overall sonata form appears to dominate. The grand Baroque gestures of his earlier slow movements later became ingratiating and delicate utterances, and Wagenseil began to depart from the customary dance finales in 3/8 or 3/4 by infusing them with greater rhythmic, melodic and textural interest, or by substituting rondo designs or extended movements in duple metre. That his symphonies were popular on an international scale can be seen by the uncommonly wide distribution of their sources.

Wagenseil's numerous contributions to most of the forms then current and the international dissemination and success of these works assure him a central position in the development of the Classical style.

WORKS

printed works published in Paris unless otherwise stated

DRAMATIC

unless otherwise stated, first performed in Vienna and MSS in A-Wn

Ariodante (dramma per musica, 3, A. Salvi, after L. Ariosto), Venice, S Giovanni Grisostomo, aut. 1745, facs. in IOB, lxxiii (1981)

La clemenza di Tito (dramma per musica, 3, P. Metastasio), Burg, 15 Oct 1746

Demetrio (dramma per musica, 3, Metastasio), Florence, Pergola, 26 Dec 1746, *I-Nc*

Alessandro nell'Indie (op, 3, Metastasio), Burg, 11 Aug 1748

Il Siroe (dramma per musica, 3, Metastasio), Burg, 4 Oct 1748

L'olimpiade (op, 3, Metastasio), Hof, 14 May 1749

Antigono (dramma per musica, 3, Metastasio), Vienna, Schönbrunn, 14 May 1750

Vincislao (dramma per musica, 3), Schlosstheater, 8 Dec 1750

Le cacciatrici amanti (festa teatrale, 2, G. Durazzo), Laxenburg, 25 June 1755
Prometeo assoluto (serenata, G.A. Migliavacca), bei Hofe, 24 March 1762
Contribs. to: Andromeda, 1750; Euridice, 1750, facs. in IOB, lxxv, 1983); Armida placata, 1750; Catone and Merope, cited in *MGG1* (H. Scholz-Michelitsch)

VOCAL

MSS in A-Wn unless otherwise stated

Orats: Gioas, re di Giuda (Metastasio), 1755; La redenzione (Metastasio), 1755; Il roveto di Mosè (Abbate Pizi), 4 March 1756
Masses: Missa spei, 1736; Missa 'Domine libera animam meam', 1737; Missa, 5vv, 1738; Missa 'Panem quotidiam', 4vv, 1739, *A-Wgm*; Missa S Antonii, 1741; Missa S Francisci Salesii, 1742; Missa solenne Immaculatae conceptionis, 4vv, insts, 1743, *D-Bsb*; Missa solenne, C, 1746; Missa 'Transfige cor meum'; Missa S Catharinae, *A-Wn, D-OB*; Missa 'Obscura', *A-Wn, D-OB*; Missa S Theresiae; Missa brevis, *Bsb**; 4 masses, 4vv, *A-Wn, CH-FF*; 1 mass, e; Requiem, 4vv, *D-Bsb*
Other sacred: *c*90 liturgical works, 1737–55, incl. 9 Marian ants, *c*20 offs, hymns, grads, seqs, ints, canticles, *A-KR, Wgm, Wn, CH-EN, D-Bsb, MÜs, H-P*; 14 songs
Cants.: Al consiglio d'un fonte; Clori bell'idol mio; Ecco l'infausto lido; I lamenti d'Orfeo (C.G. Pasquini), Vienna, Hof, 26 July 1740, *A-Wgm, Wn*; La gelosia (Metastasio); Il quadro animato, 2vv, *Wgm*; La pesca; L'inciampo; Poiche morir
Other vocal: 3 duets; *c*30 arias, 1 in *L'écho ou journal de musique* (Liège, 1764), *CH-Bu, EN, D-DO, RH, I-MAav*

ORCHESTRAL

thematic catalogue in Scholz-Michelitsch, 1972

Syms.: 6 trio en symphonie, op.2 (1756); 6 simphonies à 4 parties obligées, op.3 (*c*1760); Sinfonia à più stromenti (*c*1765); 64 others, *A-Gmi, GÖ, KR, SF, Wgm, Wn, B-Bc, CH-Bu, CZ-Pnm, D-KA, RH, ROu, Rtt, SWl, GB-Lbl, H-Bn, I-BGc, US-Wc*, 2 ed. in DTÖ, xxxi, Jg.xv/2 (1908/*R*); 15 ed. in The Symphony 1720–1840, ser. B, iii (1981); 15 others in anthologies (*c*1755–*c*1762); 3 cited in catalogues
Hpd concs.: Concert choisie 'La Haye' (n.d.); 4 concerti, hpd, 2 vn, b (*c*1760); 2 concerts choisis, op.7 (1761); 2 concerto (*c*1764); 6 Concertos, hpd/org, 2 vn, b (London, 1761); 6 Concertos, org/hpd (London, *c*1765), some from 4 concerti, *c*1760; 3 quartetti concertanti, hpd/pf, 2 vn, b, op.10 (*c*1776); 2 concerto (1781); 53 others, *A-GÖ, Sn, ST, Wgm, Wn, CZ-KRa, Pnm, D-Bsb, Dl, DO, MT, RH, I-BRc, CHc, SK-BRnm, US-LOu, Wc*: 12 others cited in catalogues; 1 for 4 hpd, *A-Wn*; 6 for 2 hpd, *Wgm, Wn, CZ-KRa*
Other concs.: 4 for fl, *D-KA, Rtt*; 2 for 2 vn, *A-GÖ, B-Bc*; 1 for vn, *A-Sn, Wgm*; 2 for vc, 1752, 1763, *Wst*, ed. in Diletto musicale, lxi (Vienna, 1960), cxxi (Vienna, 1963); 1 for bn, for alto trbn, *CZ-KRa*, ed. P. Angerer (Zumikon, 1990)

CHAMBER

Thematic catalogues in Michelitsch, 1966, and Scholz-Michelitsch, 1972 and 1980.
Str: sestetto, qnt, 4 qts, *A-Wn*; 6 sonates en trio, 2 vn, b, op.1 (n.d.); 6 Sonatas, 2 vn, vc/hpd (London, 1760); 33 other trios, *Wgm, Wn, Wst, CH-BEb, CZ-Bm, KRa, I-Gl, S-HÄ, L, Uu, US-BEm*; 15 other trios cited in catalogues
Str, kbd: 2 vn sonatas, 1 in 6 Sonatas, hpd, vn, op.2 (London, *c*1756), 1 in *B-Bc*; 2 divertimentos, hpd, vn, b, op.5 (Vienna, 1770); suite, kbd, 3 str, *CZ-KRa*; 4 terzettos, 1 vn sonata, cited in catalogues
Wind: 7 divertimentos, *A-Wgm, D-SWl*; Partita a 8, *A-Wgm*; 2 fl sonatas, *DK-Kk, F-Pn*
Kbd divertimentos, sonatas, suites: Suavis artificiose elaboratus concentus … continens 6 parthias (Bamberg, 1740); 4 in Musaeum pantaleonianum, *c*1750, *H-Bn*; 6 as op.1 (Vienna, 1753); 6 as op.2 (Vienna, 1755), ed. H. Scholz-Michelitsch (Vienna, 1996); 9 in Cymbalum jubilationis, *c*1755, *Bn*; Divertissement musical contenant 6 sonates (Nuremberg, 1756); 4 in Raccolta di sonate, *c*1760, *D-Dl*; 6 as op.3 (Vienna, 1761); 3 divertimentos (Vienna, 1761); 6 as op.4 (Vienna, 1763); 3 divertimentos, 2 pf, *CZ-KRa, D-Bsb*; 18 others, *A-GÖ, Wgm, Wn, CH-E, MÜ, CZ-KRa, D-BFb, Bsb, LEm, DK-A, Kc, Sa, GB-Lam, NL-DHgm, SI-Pk, S-L, Sm, US-AAu*; 3 ed. in RRMCE, xxxii–xxxiii (1889); 7 others in contemporary anthologies
Other kbd: 97 Versetten aus verschiedenen Tönen … samt einer Fuge, *A-Wn*; Praeambula 8 tonorum (8 verset cycles), *Wn*; 14 preludes, *GÖ, D-Bsb*; 1 prelude and fugue, *Bsb*; 1 prelude, 1 fugue, in Musaeum pantaleonianum *c*1750, *H-Bn*; 18 single pieces, *A-Wgm, B-Bc, CH-E, D-Bsb, Dl, DS, SWl, S-L*; 15 arrs. of concs., 2 pf, *D-Dl*; 6 orch works arr. pf, *A-Wn, KR*, and in contemporary anthologies

JOHN KUCABA/BERTIL H. VAN BOER

Wagenseil, Johann Christoph (*b* Nuremberg, 26 Nov 1633; *d* Altdorf, 9 Oct 1708). German scholar. His work on the Meistersinger is of interest to musicians. Because of his comprehensive knowledge he was described as 'Polyhistor celeberrimus' (by Will) in the 18th century; he gained

much of his knowledge during extensive travels in nearly all European countries as a 'Hofmeister', i.e. a travelling companion of young patricians. He accordingly became a member of several learned societies and a doctor of laws of the University of Orleans (in 1665). He was professor of public and canon law, history and oriental languages at the Civic University of Nuremberg at Altdorf, of which he was twice rector and law dean. For a time he also had charge of the university library. His list of works, large even for a polymath, runs to 88 titles, including the appendix to his Latin history of Nuremberg, *De civitate noribergensi commentatio* (Altdorf, 1697/*R*1975); the appendix (pp.433–5) bears the German title *Buch von der Meister-Singer holdseligen Kunst Anfang, Fortübung, Nutzbarkeiten, und Lehrsätzen* and contains an engraved portrait of Wagenseil by J. Sandrart (dated 1680). It deals with the origin of the Meistersinger, their *Tabulaturen* and their customs, and includes examples of music by Müglin, Frauenlob, Marner and Regenbogen. Wagenseil's reliability and scholarly accuracy were doubted even by his contemporaries. Nevertheless, his treatise on the Meistersinger of Nuremberg, the first of its kind, is a very important account of the subject and provided the basis for texts by Jean Paul and E.T.A. Hoffmann, as well as the text, and the musical substance too, of Wagner's opera.

HEINZ ZIRNBAUER

Waghalter, Ignatz (*b* Warsaw, 15 March 1881; *d* New York, 7 April 1949). Polish-German conductor and composer. Having completed his apprenticeship at the Berlin Komische Oper (1907–11) and the Stadttheater in Essen (1911–12), he rose to prominence in Berlin as a conductor at the Deutsche Oper (1912–23) and opera composer. His three major operas, all composed in a richly melodic vein, received their premières at the Deutsche Oper: *Mandragola* (1914), inspired by the Renaissance comedy by Machiavelli; *Jugend* (1917), adapted from the realist tragic drama by Max Halbe; and *Santaniel* (1923), based on a Polish fantasy tale. In 1925 Waghalter succeeded Josef Stransky as principal conductor of the New York State SO. Despite his favourable critical reception, Waghalter returned to Germany where he was active as a guest conductor and composer. He fled from Germany in 1934, first to Czechoslovakia and then to Austria, where he composed his last opera, *Ahasaverus und Esther* (1937). Emigrating to the USA in 1938, Waghalter established an orchestra of black musicians, but the enterprise found little support in the prevailing social climate. He died in obscurity at the age of 68. But the centenary of his birth was commemorated by the Deutsche Oper, which also, in 1989, offered a public performance of *Jugend*. Other works by Waghalter include a String Quartet in D op.3; a Sonata for Violin and Piano op.5; a Violin Concerto in A op.15; and several operettas (including *Der später Gast*, *Wem gehört Helena*, *Bärbel*), lieder and pieces for the piano. He left behind an autobiography, *Aus dem Ghetto in die Freiheit* (Marienbad, 1936).

DAVID W. GREEN

Wagner. German family of musicians.

(1) (Wilhelm) Richard Wagner (*b* Leipzig, 22 May 1813; *d* Venice, 13 Feb 1883). Composer. One of the key figures in the history of opera, Wagner was largely responsible for altering its orientation in the 19th century. His programme of artistic reform, though not executed to the last detail, accelerated the trend towards organically conceived, through-composed structures, as well as influencing the development of the orchestra, of a new breed of singer, and of various aspects of theatrical practice.

1. THE FORMATIVE YEARS: 1813–32. It is both fitting and psychologically congruous that a question mark should hover over the identity of the father and mother of the composer whose works resonate so eloquently with themes of parental anxiety. Richard Wagner's 'official' father was the police actuary Carl Friedrich Wagner, but the boy's adoptive father, the actor-painter Ludwig Geyer, who took responsibility for the child on Carl Friedrich's death in November 1813, may possibly have been the real father. Wagner himself was never sure, though any concern he may have had about Geyer's supposed Jewish origins would have been misplaced: Geyer was of incontrovertibly Protestant stock. Recent research has further established that Wagner's mother Johanna was not the illegitimate daughter of Prince Constantin of Saxe-Weimar-Eisenach, as previously believed, but his mistress (Gregor-Dellin, 1985).

Wagner's formal education began on 2 December 1822 at the Kreuzschule in Dresden, where his mother and stepfather had moved to enable Geyer to undertake engagements for the Hoftheater. On returning to Leipzig with his mother and sisters he entered the Nicolaischule on 21 January 1828, but school studies were less enthusiastically pursued than theatrical and musical interests, which resulted in a 'vast tragic drama' called *Leubald* and conscientious perusal of Logier's composition treatise. Harmony lessons (initially in secret) with a local musician, Christian Gottlieb Müller (1828–31), were followed by enrolment at Leipzig University (23 February 1831) to study music, and a short but intensive period of study with the Kantor of the Thomaskirche, Christian Theodor Weinlig (about six months from October 1831).

In his autobiographical writings Wagner later played down the significance of his musical education in order to cultivate the notion of the untutored genius. But its fruits were evident in a series of keyboard and orchestral works written by spring 1832 and particularly in the Beethovenian Symphony in C major which followed shortly after. A genuine passion for Beethoven, while confirmed by such works and the piano transcription of the Ninth Symphony made in 1830–31, was exaggerated in another typical piece of mythification: Wagner's account of a supposedly momentous portrayal of Leonore by the soprano Wilhelmine Schröder-Devrient in Leipzig in 1829 is undermined by the unavailability of any evidence that

the singer gave such a performance. Yet the fable (probably a semi-conscious conflation of two separate events) attests to the young composer's ambition to be proclaimed the rightful heir to the symphonic tradition embodied in Beethoven.

Wagner's first attempt at an operatic project was a pastoral opera modelled on Goethe's *Die Laune des Verliebten* (? early 1830); the work was aborted with only a scene for three female voices and a tenor aria written. His second project, *Die Hochzeit*, was conceived in October–November 1832, while he was visiting the estate of Count Pachta at Pravonín, near Prague. Based on a story from J.G.G. Büsching's *Ritterzeit und Ritterwesen*, *Die Hochzeit* was a grisly tale of dark passions, treachery and murder. The libretto, according to Wagner's autobiography, *Mein Leben*, was destroyed by him as a demonstration of confidence in the judgment of his sister Rosalie. Such music as was completed, between December 1832 and February 1833 – an introduction, chorus and septet – survives.

2. Early career: 1833–42. Wagner's first professional appointment, secured by his brother Albert, was as chorus master at the theatre in Würzburg. There he encountered repertory works by Marschner, Weber, Paer, Cherubini, Rossini and Auber, of which composers the first two influenced him most strongly in his musical setting of *Die Feen* (1833–4), a working by Wagner himself (he was to write all his own librettos) of Gozzi's *La donna serpente*. Returning to Leipzig at the beginning of 1834, he came into contact with the charismatic radical Heinrich Laube (a family friend) and other members of the progressive literary and political movement Junges Deutschland. The writers associated with this uncoordinated grouping, including Karl Gutzkow, Ludolf Wienbarg, Heinrich Heine and Ludwig Börne, rejected not only the Classicism of Goethe and Mozart but also what they regarded as the reactionary, socially irrelevant and sentimentally conceived Romanticism of Weber and E.T.A. Hoffmann. They turned instead for inspiration to Italy and to the French Utopian socialists, especially the Saint-Simonists, spurning Catholic mysticism and morality in favour of hedonism and sensuality. It was under these influences that Wagner wrote his essays *Die deutsche Oper* (1834) and *Bellini*(1837), celebrating the italianate capacity for bel canto expressiveness, and his next opera *Das Liebesverbot* (1835–6), relocating Shakespeare's *Measure for Measure* in a sun-soaked, pleasure-filled Mediterranean setting; the chief musical models adopted were, appropriately, Bellini and Auber.

It was carnal rather than aesthetic considerations, according to Wagner, that persuaded him to accept a post as musical director of the travelling theatre company run by Heinrich Bethmann: he had fallen instantly in love with one of the leading ladies, Christine Wilhelmine ('Minna') Planer. However, during his term with Bethmann's company (1834–6) he also gained valuable conducting experience and saw *Das Liebesverbot* onto the boards (29 March 1836) for what was to be the only performance in his lifetime.

Minna continued to pursue her theatrical career with engagements at the Königstädtisches Theater in Berlin and then in Königsberg. Negotiations for Wagner to secure the musical directorship of the opera in the latter town were protracted until 1 April 1837, but in the meantime he had sketched a prose scenario for a grand opera, *Die hohe Braut*, which he sent to Scribe in Paris in the hope that a libretto by him might inspire an Opéra commission. It was Wagner who eventually produced a libretto for *Die hohe Braut* (in Dresden in 1842); it was offered first to Karl Reissiger and then to Ferdinand Hiller, but was finally set by Jan Bedřich Kittl. An already tempestuous relationship with Minna was sealed by their marriage on 24 November 1836. Within months she had abandoned him in favour of a merchant called Dietrich; the rift had been healed only in part when Wagner took up a new post as musical director of the theatre in Riga, a Latvian town (part of the Russian Empire) colonized by Germans. He made the journey alone, arriving on 21 August 1837, but subsequently shared his cramped apartment not only with Minna, but also with her sister Amalie (who had taken up an appointment as singer at the theatre) and a wolf cub. Conditions at the small theatre were similarly constricted and the management unimaginative, though Wagner's enterprise and initiative did result in a series of subscription concerts.

In the summer of 1838 he turned his attention to a comic opera based on a tale from *The Thousand and One Nights*, calling it *Männerlist grösser als Frauenlist, oder Die glückliche Bärenfamilie*. He completed the libretto and began to set it in the manner of a Singspiel, but abandoned it in order to concentrate on a major project that had been simmering since he had read, the previous year, Bulwer-Lytton's novel about the Roman demagogue Rienzi. The poem and some of the music of the five-act grand opera *Rienzi*had been written by August 1838. The Riga appointment turned out to be as precarious for Wagner as his marriage, and after a contractual wrangle he determined to try his luck in the home of grand opera, Paris.

The departure from Riga had to be clandestine; Wagner and his wife were heavily in debt and their passports had been impounded. Under cover of night, Wagner, Minna and their Newfoundland dog, Robber, clambered through a ditch marking the border, under the noses of armed Cossack guards. Then, reaching the Prussian port of Pillau (now Baltiysk), they were smuggled on board a small merchant vessel, the *Thetis*, bound for London. The dangerous, stormy crossing and the crew's shouts echoing round the granite walls of a Norwegian fjord were later represented by Wagner as the creative inspiration for *Der fliegende Holländer*. If any ideas for text or music were jotted down at the time of the sea crossing (July–August 1839), the evidence has not survived. Crossing the Channel from Gravesend to Boulogne, Wagner was received there by Meyerbeer, who listened to Wagner's reading of the libretto of *Rienzi* and promised to provide letters of introduction to Duponchel and Habeneck, respectively the director and conductor of the Paris Opéra.

Wagner spent a dismal, penurious two and a half years (September 1839 to April 1842) in Paris, a victim of the sharp social divisions of Louis-Philippe's July Monarchy which reserved wealth and privilege for a bourgeois élite. He was forced to earn his keep by making hack arrangements of operatic selections and by musical journalism in which he lambasted the mediocrities perpetrated by the Opéra. In March 1840 the Théâtre de la Renaissance accepted *Das Liebesverbot*, but the theatre was forced into bankruptcy two months later. There is no evidence to support Wagner's suggestion (made subsequently in *Mein Leben*) that Meyerbeer, through whose

Mit hoher obrigkeitlicher Bewilligung
wird
Unterzeichneter
heute, Sonnabend den 19. März 1838,
ein großes
Vocal- und Instrumental-
CONCERT
im Saale der löblichen Schwarzhäupter
zu geben die Ehre haben.

Erster Theil.

1. Columbus, Ouvertüre von Richard Wagner.
2. Arie aus „Jessonda", von L. Spohr, gesungen von Madame Pollert.
3. Variationen von de Beriot, vorgetragen von Herrn Gold.
4. Monolog aus Schillers „Jungfrau von Orleans", mit Musikbegleitung von B. A. Weber, gesprochen von Minna Wagner.
5. Erstes Finale aus „Oberon", von C. M. von Weber, vorgetragen von Madame Pollert, Demoiselle Planer und dem Gesang-Personale des hiesigen Theaters.

Zweiter Theil.

1. Rule Brittania, große Ouvertüre von R. Wagner.
2. Concertino auf dem Contrebaß, vorgetragen von Herrn Siegert.
3. „Die Seemänner", Duett aus den Soirées musicales von Rossini, instrumentirt von R. Wagner, vorgetragen von den Herren Janson und Günther.
4. Das Lied von der Glocke, Gedicht von Schiller, gesprochen von Herrn v. Holtei.
5. „Nicolai", Volkshymne, gedichtet von H. v. Brackel, komponirt von R. Wagner, vorgetragen von Madame Pollert, Demoiselle Planer, Herrn Janson und dem Gesang-Personale des hiesigen Theaters.

Das Orchester ist durch die gefällige Mitwirkung vieler geschätzten Dilettanten, so wie des Siegertschen Corps bedeutend verstärkt.

Billets à 1 Rbl. S.M. sind in der Bude des Herrn Aeltesten Hollander, und Abends an der Casse zu haben.

Anfang 7 Uhr.

Richard Wagner,
Kapellmeister des Rigaschen Stadttheaters.

1. Programme from Wagner's Riga concert of 19 March 1838: the soloists included Minna Wagner and her sister, Amalie Planer

agency the work had been accepted, was aware of the imminent bankruptcy. Nor, apparently, did Wagner believe so at the time: on 20 September 1840 he wrote to Apel, 'Meyerbeer has remained untiringly loyal to my interests'. It is psychologically more plausible that Wagner's shameless obsequiousness before an influential patron was later transmuted by frustration and jealousy into the venomous bitterness seen, for example, in *Das Judentum in der Musik*.

In May 1840 Wagner sent Eugène Scribe a copy of his sketch of *Der fliegende Holländer*, and the following month he mentioned it to Meyerbeer, in the hope that he might use his influence to have the work put on at the Opéra. Meyerbeer introduced him to the new director of the Opéra, Léon Pillet, who bought the story for 500 francs, supposedly to have it made into an opera by one of the composers under contract to him. In fact, the two librettists given the sketch, Paul Foucher and Bénédict-Henry Révoil, did not, as generally stated, base their work *Le vaisseau fantôme* primarily on it but on a variety of sources including Captain Marryat's *The Phantom Ship* and Sir Walter Scott's *The Pirate*. Wagner meanwhile proceeded to elaborate his scenario into a work of his own and initially he worked on the *Holländer* in tandem with *Rienzi*, which was completed in November 1840.

It was at this time that Wagner was threatened with imprisonment for debt, but the available evidence strongly suggests that the threat was never executed. Partly through Meyerbeer's influence, *Rienzi* was accepted by the Dresden Hoftheater. Preparations were under way by April 1842, when Wagner, deeply disillusioned with Paris, began to make his way back to the fatherland.

3. KAPELLMEISTER IN DRESDEN: 1843–9. The première of *Rienzi* on 20 October 1842 was an immense success, catching, as the work did, the rebellious spirit of the times. The darker, introspective quality of the *Holländer*, which followed at the Hoftheater on 2 January 1843, proved less appealing. Nevertheless, he was an obvious candidate for the post of Kapellmeister at the King of Saxony's court in Dresden, which had become vacant at that time. The prospect of financial security finally outweighed any doubts he had about accepting a liveried post in the royal service. Technically, Wagner's status as

2. *Richard Wagner in Paris: drawing by Ernst Benedikt Kietz, pencil, 1840–42*

second Kapellmeister was commensurate with that of the first Kapellmeister, Reissiger, but by the 1840s the latter was content to rest on his laurels while younger colleagues undertook the more onerous duties.

Those duties included conducting operatic, instrumental and orchestral performances and composing pieces for special court occasions. Among the latter works are numbered *Das Liebesmahl der Apostel* (1843), a biblical scene for male voices and orchestra; *Der Tag erscheint* (1843), a chorus for the unveiling of a monument to the king; *Gruss seiner Treuen an Friedrich August den Geliebten* (1844), another choral tribute to the king; and *An Webers Grabe* (1844), a chorus for the ceremony attending the reburial of Weber's remains in his home town (the campaign to effect which Wagner had vigorously supported).

Wagner had begun work on his next major project, *Tannhäuser*, in the summer of 1842, when a detailed prose draft was worked out at Aussig (now Ústí nad Labem) in the Bohemian mountains. It was not versified until the spring of the following year, and the composition occupied Wagner between July 1843 and April 1845. The first performance took place at the Hoftheater on 19 October 1845. Wagner then spent three months analysing the conditions under which court music was produced at Dresden. His proposals, including a series of winter orchestral concerts, were eminently reasonable, but after a year's delay Wagner was informed that they had been rejected.

Wagner's library in Dresden embraced a broad range of literature, both ancient and modern, from Calderón to Xenophon and from Gibbon to Molière. It also contained versions of Gottfried von Strassburg's *Tristan*, editions of the *Parzival* and *Lohengrin* epics, and a number of volumes on the medieval cobbler-poet Hans Sachs. The subjects of *Lohengrin* and each of the music dramas to follow the *Ring* were thus germinating in his mind during these years; a first prose draft was actually made for *Die Meistersinger* at Marienbad in 1845.

An event of major importance for Wagner was his organization in 1846 of a performance of Beethoven's Ninth Symphony (still at that time considered an unapproachable work) for the traditional Palm Sunday concert in the old opera house. Against considerable opposition from the administration he secured a notable financial and artistic success. The existence of sketches dating from 1846–7 for at least two symphonies bears witness to the inspirational effect the preparations for the Ninth had on Wagner himself.

During these years too he was working on the composition of *Lohengrin*, as well as studying Aeschylus (*Oresteia*), Aristophanes and other Greek authors in translation. In February 1847 he conducted his own arrangement of Gluck's *Iphigénie en Aulide*. His meagre salary (1500 talers per annum) was not enough to cover essential outgoings, but Minna managed the household efficiently and enjoyed the status of Kapellmeister's wife. They remained involuntarily childless (probably as a result of an earlier miscarriage) but in general the marriage was at its most stable at this period.

The insurrectionary outbreaks in Paris in February 1848 and in Vienna the following month were greeted with zealous approbation by the ranks of middle-class German liberals, indignant at the indifference of their princely rulers to social deprivation among the working classes, and motivated by fear of their own proletarianization. In Dresden barricades were erected and the king presented with demands for democratic reform. Wagner's plan for the organization of a German national theatre, which proposed that the director of such an institution be elected, that a drama school be set up, the court orchestra expanded and its administration put under self-management, was a reflection of such democratic principles, and consequently rejected. It is mistaken to see such a proposal – or, indeed, Wagner's involvement in the revolution generally – simply as opportunist. He naturally wished to see the role of the opera house enhanced in a reconstructed society, but such a desire sprang from the conviction that art was the highest and potentially most fruitful form of human endeavour.

He threw in his lot with the insurrectionists when in June 1848 he delivered a speech to the Vaterlandsverein, the leading republican grouping, on the subject of the relation of republican aspirations to the monarchy. The evils of money and speculation were denounced as barriers to the emancipation of the human race, and the downfall of the aristocracy was predicted. The notion that the Saxon king should remain at the head of the new republic, as 'the first and truest republican of all', was not an idiosyncratic one, but in tune with the limited demands of the bourgeois liberals for constitutional government.

Wagner remained for the time being at his post, and began to set down a prose résumé of what was to become the *Ring*. The manuscript, dated 4 October 1848, was headed *Die Nibelungensage* (*Mythus*), though it was subsequently renamed *Der Nibelungen-Mythus: als Entwurf zu einem Drama*. A prose draft of *Siegfrieds Tod*

(later to become *Götterdämmerung*) was made the same month, followed (not preceded, as previously supposed) by the essay *Die Wibelungen: Weltgeschichte aus der Sage* (winter 1848–9). Other projects of the period included *Friedrich I* (in five acts, possibly intended as a musical drama), *Jesus von Nazareth* (probably also intended as a five-act opera, though only a prose draft was completed), *Achilleus* (sketches for a work in three acts) and *Wieland der Schmied* (a heroic opera in three acts; prose draft). *Wieland* and, in particular, *Jesus von Nazareth* espouse the ideas of Pierre-Joseph Proudhon and Ludwig Feuerbach: ownership of property as the root of evil, supremacy of love over the law, and a new religion of humanity.

Wagner's assistant conductor, August Röckel, was no less of a firebrand, and the weekly republican journal he edited, the *Volksblätter*, contained various inflammatory tirades by Wagner and others. Through Röckel, Wagner came to know Mikhail Bakunin, the Russian anarchist, who in turn was acquainted personally with Marx and Engels. The fact that no works of Marx were contained in Wagner's library at Dresden provides no proof that Wagner was unfamiliar with his ideas: radical theories would have circulated freely in a major city such as Dresden.

Wagner's active role in the Dresden insurrection obliged him to flee for his life when the Prussian troops began to gain control in May 1849. He was sheltered by Liszt at Weimar before making his way on a false passport to Switzerland. A warrant had been issued for his arrest.

4. Zürich essays. Even after the savage crushing of the 1848–9 uprisings, Wagner continued to believe that both social and artistic reform were imminent. In the first years of his exile in Zürich – he was not to enter Germany again until 1860 – he formulated a set of aesthetic theories intended to establish opera in a radically recast form as at once the instrument and the product of a reconstructed society. In the first of this series of Zürich essays, *Die Kunst und die Revolution* (1849), written under the influence of Proudhon and Feuerbach, Wagner outlined the debasement of art since the era of the glorious, all-embracing Greek drama. Only when art was liberated from the sphere of capitalist speculation and profit-making would it be able to express the spirit of emancipated humanity. The vehicle envisaged to effect this transformation process, namely the 'art-work of the future', was elaborated, along with the concept of the reunification of the arts into a comprehensive *Gesamtkunstwerk* ('total work of art') on the ancient Greek model, in two further essays, *Das Kunstwerk der Zukunft* (1849) and *Oper und Drama* (1850–51).

In the former, Wagner argued that the elements of dance, music and poetry, harmonized so perfectly in Greek drama, were deprived of their expressive potential when divorced from each other. In the 'art-work of the future' they would be reunited both with each other (in the 'actor of the future', at once dancer, musician and poet) and with the arts of architecture, sculpture and painting. Allowance was even made for the occasional use of the spoken word. Theatres would need to be redesigned by aesthetic criteria rather than those of social hierarchy. Landscape painters would be required to execute the sets. Above all, the new work of art was to be created, in response to a communal need, by a fellowship of artists, representative of *das Volk* ('the people').

The philosophical basis of *Das Kunstwerk der Zukunft* is multi-faceted. The *völkisch* ideology, which urged a return to a remote primordial world where peasants of true Germanic blood lived as a true community, had evolved with the rise of national consciousness in the 18th century. Notions such as that of the *Volk's* creative endeavours arising spontaneously out of sheer necessity – a process of historical inevitability – owe much to Feuerbach and to such revolutionary thinkers as Marx. Nor was the concept of the *Gesamtkunstwerk* new: writers such as Lessing, Novalis, Tieck, Schelling and Hoffmann had previously advocated, either in theory or in practice, some sort of reunification of the arts, while the idea of the regeneration of art in accordance with classical ideals can be identified with Winckelmann, Wieland, Lessing, Goethe and Schiller.

Oper und Drama is an immense discourse on the aesthetics of drama-through-music (see Music drama). A new form of verse-setting (*Versmelodie*) is outlined, in which the melody will grow organically out of the verse. It will use *Stabreim* (an old German verse form using alliteration) and a system of presentiments and reminiscences, functioning as *melodische Momente* ('melodic impulses'); see Leitmotif. Only rarely will one voice serve as harmonic support for another; choruses and other ensembles will be eliminated. Wagner's claim that the new ideas and techniques had 'already matured' within him before the theory was formulated is something of an exaggeration, as is suggested by his willingness to adapt the theoretical principles in the light of practical experience. Their formulation did, however, enable him to grapple with the central issue: how to reconcile his own fundamentally literary and dramatic inspirations with the Classical symphonic tradition.

Two other important essays of the period should be mentioned. *Das Judentum in der Musik* argues that the superficial, meretricious values of contemporary art are embodied, above all, in Jewish musicians. The rootlessness of Jews in Germany and their historical role as usurers and entrepreneurs has condemned them, in Wagner's view, to cultural sterility. The uncompromisingly anti-Semitic tone of the essay was, in part, provoked by repeated allegations that Wagner was indebted artistically, as well as financially, to Meyerbeer. The preoccupations and prejudices of *Das Judentum* also place it in an anti-Jewish tradition, often of otherwise impeccably liberal and humanitarian credentials, going back via Luther to the Middle Ages. Even the idea that Jews should, as part of the process of assimilation, undergo a programme of re-education was not novel, though the refinement (stated elsewhere) that that education programme should largely consist of the Wagnerian music drama was original.

In 1851 Wagner wrote an extensive preface to accompany the projected publication of the librettos of the *Holländer*, *Tannhäuser* and *Lohengrin*. This autobiographical essay, called *Eine Mitteilung an meine Freunde*, is of interest for the insights it offers into Wagner's own view of his life and works to that date.

5. Composer in exile: 1849–63. In Zürich, Wagner made the acquaintance of a number of cultured individuals, some of whom provided pecuniary as well as intellectual sustenance. A pair of female admirers, Julie Ritter, a widow from Dresden, and Jessie Laussot (née Taylor), an Englishwoman married to a Bordeaux wine merchant, jointly offered him an annual allowance of

3000 francs (equivalent to 800 talers, or approximately half his Dresden salary) for an indefinite period. Such benefactors showed the kind of disinterested generosity and confidence in his artistic endeavours that he found lacking in his wife, Minna, whose constant reproaches he found increasingly hard to bear. A love affair between Wagner and Jessie (who, according to him, was also unhappily married) briefly blossomed. When, on the intervention of Jessie's mother and death threats from her husband, it ended, one source of financial support dried up. But an unexpected legacy then enabled Julie Ritter to confer the full amount herself, which she continued to do from 1851 to 1859.

Lohengrin received its world première at Weimar under Liszt, with the composer necessarily absent. A drastic water cure at nearby Albisbrunn failed to relieve the dual complaints of erysipelas (a skin disease) and severe constipation, and further depression resulted from the failure of the revolution to materialize in France, or elsewhere in Europe. Several of Wagner's letters of the period speak of a loveless, cheerless existence; more than once he contemplated suicide.

By February 1853 he was able to recite the completed text of the *Ring* to an invited audience at the Hotel Baur au Lac in Zürich; 50 copies of the poem were printed at his own expense. Financial assistance from Otto Wesendonck, a retired silk merchant to whom Wagner had been introduced early in 1852, allowed him to present and conduct three concerts of excerpts from his works (May 1853) and to make a trip to Italy. Wagner's account (in *Mein Leben*) of the dream-inspired onrush of inspiration for *Das Rheingold* while he lay half-asleep in a hotel room in La Spezia has been dismissed as a further example of mythification (Deathridge and Dahlhaus, H1984), though Darcy (N1993) has argued that the documentary evidence neither supports nor contradicts Wagner's account. The story bears witness, in any case, to the perceived importance of the new artistic phase being entered, and it was indeed in the succeeding months that the music of the *Ring* began to take shape.

In September 1854 Wagner reckoned his debts at 10,000 francs – by this time he was supporting not only Minna and her illegitimate daughter Natalie, but also Minna's parents. Wesendonck agreed to settle most of these in exchange for the receipts from future performances of Wagner's works. Appeals for clemency made on his behalf to the new King of Saxony, Johann, were rejected, no doubt on the advice of the Dresden police, whose agents still had him under surveillance. Several of his acquaintances were regarded as dangerous political refugees, not least Georg Herwegh. Ironically it was Herwegh who in September or October 1854 introduced him to the quietist, renunciatory philosophy that was to so influence his future outlook on life: that of Arthur Schopenhauer.

Schopenhauer's influence was twofold: his philosophy (which had many parallels with Buddhist thinking), advocating the denial of the will and consequent release from the cycle of suffering, was profoundly to affect the ideological orientation – and even the locution – of each of Wagner's remaining dramatic works. Schopenhauer's aesthetics, which elevated music above the other arts, made a similarly forceful impact. But Wagner's abandonment of the concept of the egalitarian co-existence of the arts should be seen not so much as a wholesale *volte face* from *Oper und Drama* principles as a shift of emphasis from the realization of those principles in *Rheingold* and *Walküre*.

An invitation from the Philharmonic Society to conduct a series of eight concerts in London resulted in a four-month stay in England in 1855. A hostile press campaign, the uncongenial weather and the philistinism of the English combined to make the visit an unhappy one. On returning to Zürich he completed his severely disrupted work on *Walküre* (1856) and made a short prose sketch for an opera on a Buddhist subject: *Die Sieger*. The latter project was never completed, but its themes – passion and chastity, renunciation and redemption – were later subsumed into *Parsifal*.

Otto Wesendonck put at Wagner's disposal a small house adjacent to the villa he was having built in the Enge suburb of Zürich. Wagner and Minna moved in at the end of April 1857 and Wesendonck and his wife Mathilde to their own home in August. A love affair developed between Wagner and Mathilde, though their love – celebrated and idealized in *Tristan und Isolde* – was probably never consummated. To begin work on *Tristan* (20 August 1857) Wagner abandoned *Siegfried*, returning to sustained work on it only in 1869. An eruption of marital strife necessitated Wagner's move out of the 'Asyl' (as, following Mathilde's suggestion, he had called the little house). In the company of Karl Ritter he travelled to Venice; the second act of *Tristan* was completed there (in draft) on 1 July 1858 and the third act in Lucerne on 16 July 1859.

Preparing another offensive against Paris, Wagner conducted, at the beginning of 1860 in the Théâtre Italien, three concerts of excerpts from his works. Through the intervention of Princess Pauline Metternich *Tannhäuser* was eventually staged at the Opéra on 13 March 1861; a politically inspired demonstration, combined with Wagner's refusal to supply the customary second-act ballet, caused a débâcle and the production was withdrawn after three severely disrupted performances. A partial amnesty (Saxony remained barred until the following March) allowed Wagner to return to Germany on 12 August 1860.

In February 1862 he took lodgings in Biebrich, near Mainz, and set to work on the composition of *Die Meistersinger von Nürnberg*, for which he had made two further prose drafts (elaborating that of 1845) the previous November. Surrounded as he now was by female admirers, he yet baulked, on compassionate grounds, at putting a decisive end to his irreparably broken marriage. Instead, he installed Minna, with a not ungenerous allowance, in Dresden; they last met in November 1862 and Minna died in January 1866.

Renting the upper floor of a house in Penzing, near Vienna, in May 1863, he furnished it in luxurious style, heedless of the consequences. His generosity to friends was equally unstinting and by March the following year he was obliged to leave Vienna under threat of arrest for debt.

6. Munich and Bayreuth: 1864–77. A plea for pecuniary assistance published by Wagner along with the *Ring* poems in 1863 was answered in spectacular fashion when a new monarch ascended the throne of Bavaria in March 1864. The 18-year-old Ludwig II discharged Wagner's immediate debts, awarded him an annual stipend of 4000 gulden (comparable to that of a ministerial

3. Beginning of Act 3 of Wagner's 'Tristan und Isolde' in the developed draft (orchestral sketch), page dated 1 May 1859 (Richard–Wagner–Museum, Bayreuth)

councillor) and continued his support for many years, making possible the first Bayreuth festivals of 1876 and 1882.

A plea to Mathilde Maier to join him in the Villa Pellet, his new home overlooking Lake Starnberg, was less successful. But by now Wagner was on intimate terms with Cosima von Bülow, Liszt's daughter unsuitably married to the conductor Hans von Bülow, and their union was consummated some time between the arrival at Starnberg of Cosima (with two daughters and nurserymaid) on 29 June 1864 and that of Hans on 7 July. The child that resulted, Isolde, was born on 10 April 1865.

In October 1864 a more spacious house at 21 Briennerstrasse in Munich was made available to Wagner by Ludwig; it was decked out extravagantly, as was Wagner himself, in silks and satins supplied by a Viennese seamstress. When Ludwig summoned Gottfried Semper to Munich to design a Wagnerian festival theatre, local vested interests opposed the scheme. Difficulties were also encountered with Franz von Pfistermeister and Ludwig von der Pfordten, respectively Ludwig's cabinet secretary and prime minister, and eventually there was resentment from the court circles and populace generally. Wagner's proposal for a music school to be established in Munich, appropriate for the nature of German music and drama, was seen as opportunistic, and Ludwig's support of the première of *Tristan* at the Hof- und Nationaltheater merely fuelled the hostility that accompanied the work's unveiling to a bemused public.

Castigation of Wagner for 'cynical exploitation' of Ludwig can be overplayed. It is true that he was as skilled at manipulating people in real life as in his dramas, and that he seized the opportunity to acquire the domestic comforts he had been so long denied. But his overriding concern was to obtain the best possible conditions for his art. And as Manfred Eger (I1986) has pointed out, the total amount received by Wagner from Ludwig over the 19 years of their acquaintance – including stipend, rent and the cash value of presents – was 562,914 marks, a sum equivalent to less than one-seventh of the yearly Civil List (4.2 million marks). It is a sum that also compares modestly with the 652,000 marks spent on the bedchamber alone of Ludwig's castle of Herrenchiemsee, or

4. Scene from Act 1 of Wagner's 'Tristan und Isolde', Hof- und Nationaltheater, Munich, 1865: lithograph by Michael Echter after stage design by Angelo Quaglio (ii), 1867

with the 1.7 million marks spent on the bridal carriage for the royal wedding that never took place.

Ludwig, however, recognized that his close association with Wagner was costing him popular support, and in December 1865 reluctantly instructed him to leave Munich. Accompanied by Cosima, Wagner discovered and acquired a house called Tribschen (or Triebschen, to adopt Wagner's idiosyncratic spelling) overlooking Lake Lucerne. His cohabitation with Cosima (permanent from October 1868) was initially concealed from Ludwig and a scandal-mongering article in the Munich *Volksbote* drove the couple to blind the king with a charade of lamentable mendacity.

From Tribschen Wagner continued to offer Ludwig the political advice with which he had always been generous. Now that Bavaria was caught up in the war between Prussia and Austria, Wagner's opinion, which was strongly influenced by the views of the conservative federalist Constantin Frantz, was that Bavaria should remain neutral. Bavaria, however, ultimately sided with Austria; its defeat not only enabled Prussian hegemony to be established, but also brought about the collapse of the German Confederation.

The impact on Wagner of Frantz's views was crucial to the ideological background of *Meistersinger* as it took shape during the 1860s. Schopenhauer's ethic of renunciation had by now given way to a more positive, more nationalistic outlook, reflecting the mood of optimism in the country at large arising from Germany's increasing industrial growth, national wealth and social cohesion, coupled with the rise of Bismarck. In *Was ist deutsch?* (1865), written for the private edification of the king, Wagner articulated the concern of many members of the middle class for traditional German values, apparently under threat. The divided religion effected by the Reformation, and the near-collapse of the German race, have led to an invasion by 'an utterly alien element', namely the Jews. The result is a 'repugnant caricature of the German spirit', which, according to Wagner, is beautiful and noble, not motivated by profit or self-interest.

Shortly after *Was ist deutsch?* was written, Wagner received a letter from Frantz telling him that in his music he had recognized 'the fundamental chord of German being'. A subsequent essay, *Deutsche Kunst und deutsche Politik* (1867), endorses Frantz's assertion that it is the 'mission' of Germany to forge a 'nobler culture, against which French civilization will no longer have any power', and goes on to propose that German art is a manifestation of that indomitable 'German spirit' which alone is capable of steering Germany and its politics through these difficult days. *Meistersinger* is the artistic component of Wagner's ideological crusade of the 1860s: a crusade to revive the 'German spirit' and purge it of alien elements.

The première of *Meistersinger* on 21 June 1868 was a triumph for Wagner. At Ludwig's insistence, but to Wagner's dismay when he realized how inadequate the performances would be, *Rheingold* and *Walküre* were also staged in Munich in 1869 and 1870 respectively. A second child, Eva, had been born to Wagner and Cosima on 17 February 1867, and after the birth of the third, Siegfried, on 6 June 1869, Cosima asked her husband for a divorce; Bülow immediately agreed, though Cosima's marriage to Wagner could not take place until 25 August 1870.

Wagner's anti-Gallic sympathies were given their head when in July 1870 war broke out between France and Prussia (supported by the south German states, including Bavaria). His farce, *Eine Kapitulation*, making tasteless capital out of the suffering endured by the Parisians during the siege of their city, returned to a favourite theme: the swamping of German culture by frivolous French art.

In the essay *Beethoven*, published in 1870 to coincide with the centenary celebrations of the composer, Wagner completed a process of rapprochement, initiated with '*Zukunftsmusik*' ten years earlier, between the aesthetics of *Oper und Drama* and those of Schopenhauer. In '*Zukunftsmusik*' Wagner continued to elevate his own species of text-related musical discourse above pure instrumental music, but the claim is modified by a

5. Richard Wagner at Tribschen, 1867

reappraisal of the worth of symphonic music, particularly that of Beethoven. In *Beethoven* he finally accepts that words and music cannot enjoy totally equal status: with Schopenhauer, he maintains that music is the ultimate vehicle of expression. However, the union of music and words does permit a range of emotional expression far wider than that yielded by each alone. As Carl Dahlhaus has pointed out, Wagner returned, with this formulation, to something akin to the traditional Romantic conception of the aesthetic of music which he had espoused about 1840, long before his encounter with Schopenhauer.

Settling on the Upper Franconian town of Bayreuth for his planned festival enterprise, Wagner began to secure the support both of the local authorities and of 'patrons' across the country. The foundation stone of the theatre was laid on 22 May 1872 (Wagner's birthday); Beethoven's Ninth Symphony was performed. Wagner and Cosima moved to a temporary home in Bayreuth, and then, in April 1874, into 'Wahnfried'. The first festival, announced for 1873, had already been postponed for lack of funds. After an unsuccessful appeal to the Reich, the enterprise was saved only by a loan of 100,000 talers from Ludwig. Admission tickets would have to be sold, however, in contravention of Wagner's original ideal of free access for the populace.

The score of *Götterdämmerung* was completed on 21 November 1874; rehearsals were initiated in the summer of the following year. The part of Siegfried went not to Albert Niemann, Wagner's Paris Tannhäuser, but to the untried Georg Unger, who required close supervision from a singing teacher. The Brünnhilde, Amalie Materna from Vienna, also had to be coached, though the Wotan, Franz Betz, having sung the Munich Hans Sachs, was more familiar with Wagner's demands. In charge of movement and gesture on the stage was Richard Fricke, Wagner retaining overall control of the direction; his instructions were recorded in detail by Heinrich Porges. There were three cycles, beginning on 13 August 1876, attended by musicians, critics and notables from all over Europe. The reaction, predictably, was mixed, admiration for the realization of such an enterprise being tempered by criticism of details. Wagner himself was far from satisfied with the staging, which he vowed to revise in future years; nor were the tempos of the conductor, Hans Richter, to his liking.

An intimacy with the French writer Judith Gautier continued from the time of the 1876 festival until February 1878, when it was brought firmly but diplomatically to a halt by Cosima. A scarcely less intense relationship with Friedrich Nietzsche continued from 1869, when the latter first visited Tribschen, until Nietzsche's so-called 'second period' (1876–82), when he turned against art as romantic illusion and excoriated Wagner for betraying what he had identified as his challenging, affirmative spirit.

In the hope of discharging the deficit of the festival (148,000 marks) Wagner undertook a series of concerts in the newly opened Royal Albert Hall in London. He was well received, but the net profits of £700 (approximately 14,300 marks) were disappointingly low, thanks to miscalculations by the inexperienced agents.

7. 'Regeneration' writings. In January 1878 appeared the first issue of the *Bayreuther Blätter*, a journal devoted to the Wagnerian cause, set up by Wagner under the editorship of Hans von Wolzogen. Its viewpoint was described, by Wagner, as 'the decline of the human race and the need for the establishment of a system of ethics'. That 'system of ethics' was expounded in the series of essays known as the 'regeneration' writings, beginning with *Modern* (1878) and ending with *Heldentum und Christentum* (1881). The salient themes are as follows. The human species has degenerated by abandoning its original, natural vegetable diet, and absorbing the corrupted blood of slaughtered animals. Regeneration may be effected only by a return to natural food and it must be rooted in the soil of a true religion. Even the most degenerate races may be purified by the untainted blood of Christ, received in the sacrament of the Eucharist. The miscegenation of the pure Aryan race with the Jews has also contributed to the degeneration of the species.

The last notion Wagner owed to Count Joseph-Arthur de Gobineau, whose acquaintance in these years he greatly valued. Their respective philosophies diverged, however, in as much as Gobineau held that miscegenation was a necessary evil for the continuation of civilization, whereas in Wagner's more optimistic view the human race was redeemable by Christ's blood. Racialist philosophies of this kind were rampant in Wilhelminian Germany. With the unification finally achieved in 1871, there had emerged an industrial bourgeoisie that usurped the privileged position of the former liberal nationalists who had struggled for it. Wagner was one of many whose allegiance shifted from liberalism to a form of romantic conservatism. A new wave of anti-Semitic sentiment swept Germany, if anything intensified rather than tempered by the emancipation legislation of the early 1870s. This is the ideological background against which *Parsifal* was written.

6. Richard, Cosima and Siegfried Wagner at Bayreuth, c1873

8. THE FINAL YEARS: 1878–83. The Bayreuth deficit was eventually cleared by an agreement, dated 31 March 1878, according to which Wagner confirmed Ludwig's right to produce all his works in the Hoftheater without payment, the king voluntarily setting aside 10% of all such receipts until the deficit was discharged. In a further clause, Wagner agreed that the first performance of *Parsifal* (either in Bayreuth or Munich) should be given with the orchestra, singers and artistic personnel of the Hoftheater, after which Munich was to have unrestricted rights over the work. It was this clause that compelled Wagner to accept the Jewish Hermann Levi as the conductor of *Parsifal* in 1882.

In August 1879 Wagner responded to an appeal for his support in a campaign against vivisection by writing a sympathetic open letter to Ernst von Weber on the subject (fig.7). However, he refused to sign Bernhard Förster's 'Mass Petition against the Rampancy of Judaism', partly out of self-interest and partly out of a preference for addressing the issue in a more theoretical manner. In the early 1880s his health began to deteriorate: cardiac spasms were followed by a major heart attack in March 1882. After the second Bayreuth festival, which consisted of 16 performances of *Parsifal* in July and August 1882, Wagner and his family took up residence in the Palazzo Vendramin, Venice. His final, fatal heart attack occurred there on 13 February 1883, following an uncharacteristically bitter row with Cosima, which was apparently provoked by the announcement of a visit from one of the *Parsifal* flowermaidens, Carrie Pringle, with whom it has been alleged Wagner may have been unduly intimate. His body was taken in a draped gondola to the railway station, from where it was conveyed to Bayreuth. The burial was a private ceremony held in the grounds of Wahnfried.

9. WRITINGS. Few composers can ever have devoted so much time to the written word as Wagner. His essays, gathered alongside the poems for his dramatic works in the 16 volumes of collected writings, cover a wide range of subjects. Those dealing with aesthetics and social and political issues have been considered in the biographical section of this article (§§1–8).

7. *Wagner receives the homage of Ernst von Weber and the animal kingdom (including Fafner the dragon) after the publication of his open letter against vivisection: caricature by C. von Grimm, 1879*

(i) Journalism. The main body of Wagner's journalistic writings dates from his Paris years (1839–42). Finding that artistic success was slower in coming than he had anticipated, Wagner turned his hand to journalism – as to the making of hack arrangements – in an attempt to stave off penury. Maurice Schlesinger, the publisher of the *Revue et gazette musicale*, provided him with both. In addition to the *Revue* (where his articles appeared in French translation), Wagner wrote for the journal *Europa*, published in Stuttgart by August Lewald, Schumann's *Neue Zeitschrift für Musik*, and the Dresden *Abend-Zeitung*.

Wagner's initial reason for turning to journalism may have been financial, but – like Berlioz – he soon developed a flair for it. In fact, although his novellas, such as *Eine Pilgerfahrt zu Beethoven* and *Ein Ende in Paris*, are in the style of E.T.A. Hoffmann, the music criticism – for all that its satirical tone seems to be modelled on Heine's – is closer to that of Berlioz, at that time the leading musical feuilletonist in Paris. The preoccupations of the two composers are remarkably similar, reflecting a disdain for the commercial imperatives driving contemporary artistic life and an idealistic vision of a society in which art was accorded its true place.

Eine Pilgerfahrt zu Beethoven is a humorous, fictional account of a visit by a young composer to Beethoven in Vienna. The element of autobiographical wish-fulfilment is evident not only in the designation of the young composer ('R . . .' from 'L . . .') but in the imputing to Beethoven of aesthetic principles identifiable as the incipient music drama. Thus the choral finale of the Ninth Symphony is characterized as a transition from abstract symphonic music to a new genre of 'musical drama', eschewing arias, duets, terzettos and the like in favour of a radical synthesis of vocal and instrumental categories.

In *Ein Ende in Paris*, the Beethoven-worshipping 'R . . .' from the previous novella is starving to death in Paris (a scenario that only marginally exaggerates Wagner's personal situation). The triviality of present-day music-making in the French capital is excoriated in a defiant

artistic credo: 'I believe in God, Mozart and Beethoven, and also in their disciples and apostles . . . I believe in a Day of Judgment, upon which all those who presumed to make extortionate profits in this world from such sublime, pure art . . . will be fearfully punished. I believe that they will be condemned to listen to their own music for all eternity.' Humour and piquant irony are salient features of these novellas – a lightness of touch that deserted Wagner in his later prose writings – and it is even conceivable (Weiner, I1995) that the philistine, mercantilist Englishman in these stories is modelled on Schlesinger. A third novella, *Ein glücklicher Abend*, also deals with Beethoven and the boundaries of abstract music.

A group of essays addressing aesthetic questions introduces a significant polemical note in its appeal to national difference. *Über deutsches Musikwesen* suggests that instrumental music is the domain of the Germans, whereas vocal music is that of the Italians. In a word: 'the Italian is a singer, the Frenchman a virtuoso, the German – a musician'. That is to say, the German supposedly loves music for its own sake, not as a means of delighting an audience or making a reputation. Adumbrated here is the notion of German art as uniquely true, profound and spiritual, in contrast to latinate culture, which is superficial and concerned with display. *Der Virtuos und der Künstler*, comparing the artistry of a Grisi or a Lablache with the virtuosity of Rubini, mocks the latter's preposterous trilling on a high A–B♭ in *Don Giovanni*, launched like a trapeze artist and received like a circus act by a stunned audience. *Der Künstler und die Öffentlichkeit* depicts the humiliations the true artist has to endure in presenting his work to the public. The principles enunciated here, often in satirical form – the idealist struggle against the debased values of contemporary musical life, the authenticity of true German artistic feeling, the threat posed by foreign (specifically Franco-Jewish) influence – were to inform the writings, and indeed the operas, of Wagner throughout his life.

Wagner's essays on music and musical life from this period have to be read against the background of their intended audience. When writing for the *Revue et gazette musicale*, Wagner was addressing the Parisian musical establishment that held the key to his own fortunes in that city. Moreover, the journal's publisher, Schlesinger, had a vested interest in promoting those composers – primarily Meyerbeer and Halévy – whose works provided him with a major source of income. As a result – and the *Revue* was, of course, far from unique in this respect – criticism of such house composers tended to be muted (Ellis, M1995). A comparison of Wagner's two articles on Halévy's *La reine de Chypre* – that for the *Revue* in February/May 1841, and that for the Dresden *Abend-Zeitung*shortly before (26/29 January) – is indicative of the constraints under which he was working. Wagner's criticism of the work is that, for all its incidental beauties and often impressive effects, *La reine* is compromised by its libretto, which lacks the compelling poetic quality of *La Juive*. In his report for the *Abend-Zeitung*, Wagner deals with this perceived failing at considerable length, mentioning the music only in passing. His *Revue* article, by contrast, deals with the music at much greater length and is far more complimentary. Wagner even adopts here the persona of a French writer, describing the Opéra as 'our great lyric stage', which will one day be open to 'true talents', when 'all those who have at heart the interests of great and true musical drama will take Halévy as their model'. Wagner's admiration for aspects of Halévy's art was doubtless genuine; indeed, he retained it throughout his life. But whereas the *Revue* critique reflects its proprietor's interests as well as revealing Wagner's own ambitions, the *Abend-Zeitung* article probably expresses with more honesty his disappointment at the opera's shortcomings.

The *La reine* review is contained in a series of reports filed to the Dresden *Abend-Zeitung* in 1841, in which Wagner comments acerbically – though giving credit where he believed it due – on musical life in Paris. His review of the production of Weber's *Der Freischütz* at the Opéra, for example (16/21 July 1841), deplores the practice of adding recitatives (spoken dialogue not being allowed at the Opéra), but Wagner acknowledges that the man employed to commit this desecration – Berlioz, no less – probably did less damage than many others might have done. In an earlier essay (14/17 June 1841) Wagner describes his reaction to the *Symphonie fantastique* and *Roméo et Juliette*. They were, he considered, rich in inspiration and imagination; flawed but the work of a genius. Significantly, Wagner's appraisal of Berlioz is coloured by his prejudices about national identity. In that he does not write for material gain, Berlioz is held to be uncharacteristic of the French. But the lapses of taste and artistic blemishes Wagner perceives alongside passages of pure genius in *Roméo et Juliette* are, he considers, the result of an internal conflict. Berlioz is an essentially private artist, dedicated to exploring the profound and mysterious depths of his inner being; yet his audience, irredeemably French as they are, expect to be entertained. Thus, according to Wagner, Berlioz instinctively attempts, against his true nature, to create effects with which he might 'stupefy and conquer the gaping crowd'.

(ii) Diaries. Given Wagner's concern that he be accorded an appropriate place in history, it is scarcely surprising that he should at various times have kept – or in latter years ensured that his wife kept – a diary to provide raw material for future biographers. His first systematic attempt to log the events of his life is contained in the so-called 'Red Pocketbook', a volume begun in August 1835, when Wagner was scouting for singers for Heinrich Bethmann's Magdeburg-based travelling theatre company. The sketchy notes of this 'diary' were continued until the winter of 1865–6, by which time Wagner had begun to dictate his autobiography *Mein Leben* to Cosima (17 July 1865), drawing on them as an *aide-mémoire*. That they were also intended to serve some biographical purpose is clear from the fact that the notes begin by sketching in the salient details of Wagner's life and work from his birth to the present day. The succinctness of the notes – frequently just a name or a place, or a phrase such as 'whips, pistols', for the furious pursuit of his recently absconded wife, Minna, with the merchant Dietrich – often requires cross-checking with some other biographical source to provide elucidation. Only the first four sides of the 'Red Pocketbook' have survived, taking the story to 17 September 1839. These pages were reproduced, with annotation, in volume i of the *Sämtliche Briefe*.

Only three entries have survived of another diary kept by Wagner – a record of his experiences in Paris in the summer of 1840, when he was reduced to penury – namely those for 23, 29 and 30 June (reproduced in volume xvi of the *Sämtliche Schriften*). The function

served by the 'Red Pocketbook', on the other hand, was continued by the so-called Annals, which take up the story from Easter 1846 and continue it up to the end of 1867. These Annals, which were transferred at a later date to the 'Brown Book' (a leather-bound notebook given to Wagner by Cosima in 1864 or 1865), were apparently subjected to a certain amount of editing during that process. Wagner's predisposition to mythologize the conception of his major works – perhaps exacerbated in the editing by the epigrammatic brevity of some of the entries – requires the exercising of considerable caution in drawing on the Annals for information relating to the genesis of such works. Sketch studies have suggested that the genesis of *Das Rheingold*, for example, is rather more complex than is intimated by the account of the La Spezia 'dream inspiration' here (Deathridge, N1977, and Darcy, N1993), while the implication that *Parsifal* was conceived on the Good Friday of 1857 has long been refuted (*Sämtliche Werke*, xxx, and Millington, 1992). The Annals for the relevant period (1864–8) were published by Otto Strobel in his edition of Wagner's correspondence with King Ludwig II (Strobel, D1936–9). The Annals were first published complete in Joachim Bergfeld's edition of the 'Brown Book' (A1975; Eng. trans., 1980). Between 21 August 1858 and 4 April 1859 Wagner kept another diary for a quite different purpose. This was the 'Venice Diary' – or, to give it Wagner's full title: *Tagebuch seit meiner Flucht aus dem Asyl am 17 August 1858*. Having been obliged to leave the 'Asyl', adjacent to the Wesendonck villa in the Enge suburb of Zürich, on account of the embarrassment caused by his intimacy with Mathilde, Wagner kept a diary, to which he confided his feelings for her. He had been discouraged from communicating with Mathilde during this sojourn in Venice and she had returned his letters unopened. The 'Venice Diary' takes the form of a series of letters, but they were sent to their recipient not at the time of writing, but in two instalments, the first on 12 October 1858 and the second the following April. The 'Venice Diary' is interesting for its elaboration of the philosophical themes of fellow-suffering, renunciation and redemption, particularly in relation to *Parsifal*, characters and scenes of which were evidently taking shape in the composer's mind at this time. The text was published by Wolfgang Golther in his edition of Wagner's correspondence with Mathilde Wesendonck (D1904; Eng. trans., 1905). Between 14 and 27 September 1865 Wagner kept a journal in which he set down his thoughts on political issues for the benefit of King Ludwig II. The thrust of these reflections was that the German princes had lost touch with their people; the role of Ludwig was to lead his subjects once again to a true understanding of nationhood and of cultural responsibility. This journal was published, in part, under the title *Was ist deutsch?* in the *Bayreuther Blätter* (1878) and subsequently in the collected writings.

If the journal for Ludwig scarcely constitutes a diary in the conventional sense, nor does the 'Brown Book'. Nevertheless, Wagner made use of Cosima's calf-bound gift in such diverse ways – it contains sketches, essays, poems and outlines of works in addition to the aforementioned Annals – as to render it an indispensable primary source. The original purpose of the book was to enable Wagner to address himself intimately to Cosima at a time when they were frequently forced apart. The first section of the book served that purpose, but between February 1866 and April 1867 they were together for most of the time at their new house Tribschen on Lake Lucerne, and the entries in the 'Brown Book' were temporarily discontinued. The final entry addressed to Cosima is a telegram of 17 February 1868 (the first birthday of their second daughter, Eva).

Among the most interesting items in the 'Brown Book' are the following: the first prose sketch for *Parsifal*; sketches for 'a Luther drama' and for the farcical play *Eine Kapitulation*; musical sketches entitled '*Romeo u. Julie*' and '*Sylvester 68–69*' (the latter a cradle song subsequently used in the *Siegfried Idyll*); and a series of jottings on culture and race related to the 'Regeneration Writings' of the last years.

The 'Brown Book' was entrusted by Cosima to Eva, who in turn presented it, after her mother's death, to the town of Bayreuth, with the wish that it be kept in the Richard-Wagner-Gedenkstätte. Regrettably, however, Eva (who married the English historian Houston Stewart Chamberlain in 1908) had seen fit to cut out and destroy seven pages (14 sides), pasting over a further five sides to render the contents illegible – the latter were subsequently recovered. The censored pages contain uncharacteristically ill-tempered remarks aimed at Cosima, Liszt, Gottfried Semper and King Ludwig II.

By far the most important source in this category are the diaries kept by Cosima from 1 January 1869 to the penultimate day of Wagner's life (12 February 1883). Recording, as they do, the minutiae of Wagner's life and thought processes, they represent not only an invaluable tool for Wagner scholarship but also an unparalleled documentation of bourgeois life of the period. The diaries consist of 21 identically bound volumes (black cardboard covers secured by green ribbons). None of the pages has been removed or pasted over, though in a few places whole sentences have been crossed out and rendered illegible, probably by Eva Chamberlain (they have been restored in the published edition, edited by Martin Gregor-Dellin and Dietrich Mack, A1976–7; Eng. trans., 1978–80).

The diaries were presented by Cosima to Eva, or so the latter swore on oath, as part of her dowry. At the time of her wedding (1908) the diaries were in Riga, where they were being consulted by Carl Friedrich Glasenapp for the final volume of his official biography of Wagner. They entered her possession in October 1911 and remained there until 1935, when she presented them to the city of Bayreuth, 'as a gift to the Richard-Wagner-Gedenkstätte'. Among her conditions for the gift was one that the distinguished Wagner scholar Otto Strobel should never be employed by the Gedenkstätte. (It was Strobel who had reported the loss of correspondence between Wagner and Cosima to the police. Eva subsequently admitted that she was responsible, asserting on oath that she had burnt the letters shortly after the death of her brother Siegfried in 1930 and on his explicit wishes.) In her will of 28 April 1939 Eva further stipulated that Strobel never be allowed to see the diaries, and that they be deposited in a bank (the Bayerischer Staatsbank in Munich) until 30 years after her death. After further legal delay following the expiry of the embargo in 1972, the diaries finally entered the public domain on 12 March 1974, when they were transferred, under police escort, from the bank in Munich to Bayreuth.

While for Wagner the diaries provided an intimate and reliable record of the events of his everyday life, for Cosima they served as a confessional. Addressed to her children, they were intended to make it possible for them to understand why she had left Hans von Bülow in favour of Wagner. Wracked by a guilty conscience, Cosima interpreted every misfortune as a punishment (accepted willingly) for sinful behaviour. Her penitential self-mortification is the obverse of her slavish adulation of Wagner, and both are exemplified on every page, as is an obsessive, but revealingly casual, anti-Semitism.

The immense value of the diaries is twofold. On a simple biographical level, they confirm or correct data regarding multifarious aspects of Wagner and his works. But no less importantly, they also offer us the kind of 'fly-on-the-wall' observation of the composer and his immediate environment that enables every reader to construct for him- or herself an image of Wagner as a social being. Thus his occasional bouts of irritability can be seen alongside the discomfort caused by his bodily complaints and insomnia, his well-publicized self-centredness alongside striking demonstrations of generosity.

(iii) Autobiographies. The diary notes Wagner began in 1835 (the 'Red Pocketbook') for a future autobiography are described above. But the first of his published autobiographical writings was the *Autobiographische Skizze*, which appeared in Heinrich Laube's Leipzig journal *Zeitung für die elegante Welt*, in two instalments, on 1 and 8 February 1843, prefaced with an introduction by Laube. This was the period of Wagner's first major productions in Dresden – *Der fliegende Holländer* had been given on 2 January and *Rienzi* the previous October – and Laube's purpose was to profile the newcomer for the German public. In the *Autobiographische Skizze* Wagner describes, in some detail, the events of his life from his birth in Leipzig in 1813 to the time of his return to Germany (from Paris) in April 1842. The tone is lighthearted and dilettantish, blending the confidence of an ambitious young man with a touch of self-deprecatory candour regarding his juvenilia.

Wagner's next autobiographical essay, *Eine Mitteilung an meine Freunde*, was written to introduce the librettos of his three Romantic operas – *Der fliegende Höllander*, *Tannhäuser* and *Lohengrin* – on their publication in December 1851. Concerned that he had been 'misunderstood' in his artistic intentions, he wished, he told his friends, to clarify them. *Eine Mitteilung* thus describes and offers interpretative insights into those operas, as well as mentioning, in lesser detail, the earlier operas (*Die Feen*, *Das Liebesverbot* and *Rienzi*), the prose sketches for *Die Meistersinger* (1845), *Friedrich I* (1846–9), *Jesus von Nazareth* (1849) and *Wieland der Schmied* (1850), and the Nibelung project, which was even then undergoing transformation from a single drama to a tetralogy.

However, the opening paragraph of *Eine Mitteilung* betrays a hidden agenda. The need had arisen, Wagner suggests there, to account for the contradiction between the 'character and form' of the Romantic operas and the theoretical principles laid down in the recently published essay *Oper und Drama*. Wagner's approach to operatic composition was undergoing a critical change at this time, and *Eine Mitteilung* can be seen, on one level, as an attempt to make the three earlier operas conform to the aesthetic criteria propounded in *Oper und Drama*. Thus all three are characterized as incipient through-composed music dramas, with the entire score of the *Holländer* germinating from the 'thematic seed' planted in Senta's Ballad.

More problematic is the philosophical underpinning of these works, in particular of *Lohengrin*. Wagner's exegesis of what we would now call the gender relations of *Lohengrin* – his empathy with Elsa as the unconscious, implicitly loving female principle capable of redeeming conscious, egoistic man – owes a good deal to both Feuerbach and the revolutionary, *völkisch* ideals which were ostensibly not embraced by the composer until the late 1840s. It should be pointed out, however, that although the text of *Lohengrin* was completed in November 1845, the work as a whole took a further two or three years to finish; that Feuerbachian/revolutionary ideals were in the air earlier in the decade too; and that Wagner's retrospective interpretation of his work is not necessarily invalidated by the chronology, since every great work of art contains more than its creator could consciously intend.

One of the purposes behind Wagner's chief autobiographical project, *Mein Leben*, was similarly to 'refute all the distortions & calumnies' supposedly circulating about him. However, in attempting to provide a corrective to the many scurrilous reports that had indeed been launched even before his controversial relationship with King Ludwig II, Wagner succumbed all too readily to the temptation prevalent among autobiographers to paint an idealized picture of their lives. Thus Wagner's predisposition to place himself in a line of succession that ran through Aeschylus, Shakespeare, Goethe and Beethoven caused him to misrepresent, either consciously or unconsciously, certain key experiences. The implausibility of it being Schröder-Devrient's Leonore that made such an indelible impression on the 16-year-old composer (as opposed to her Romeo in Bellini's *I Capuleti e i Montecchi*) has been well documented, as has the real inspiration for Wagner's *Faust Ouvertüre*. Other examples of mythologization – concerning the geneses of *Der fliegende Holländer*, *Das Rheingold* and *Parsifal* – have been noted above.

In spite of – or perhaps in the light of – such distortions, *Mein Leben* remains an invaluable testimony to the aspirations and achievements of a composer determined to place himself at the centre of the world stage. The period covered by the autobiography is 1813 (Wagner's birth) to 1864 (his 'rescue' by Ludwig II). In response to a request from the king, Wagner began, on 17 July 1865, to dictate it to Cosima, using notes from his 'Red Pocketbook' (see above). The dictation occupied some 15 years (albeit with interruptions), being completed on 25 July 1880. The work was divided into four volumes, of which the first three were published by G.A. Bonfantini of Basle between 1870 and 1875. Volume 4 was published by Theodor Burger of Bayreuth in 1880. Only 15 copies of the first volume were ordered, and 18 of each of the remaining volumes. They were sent to close friends and associates but recalled by Cosima after Wagner's death. An extra copy of the first three volumes had, however, been made by Bonfantini for himself, and these were subsequently acquired (in 1892) by the collector Mary Burrell. *Mein Leben* finally entered the public domain with the edition of 1911, which was severely compromised by numerous printing errors (for which Cosima's handwriting was partly responsible) and by the suppression or

falsifying of some 17 passages, largely concerning people still alive at the time. Martin Gregor-Dellin's 'first authentic edition' of 1963 (A, English translation by Andrew Gray, 1983) was a marked improvement, though a fully annotated, critical edition is still awaited.

10. DRAMATIC WORKS. Nothing more vividly demonstrates the multiplicity of genres available to composers of opera in the first decades of the 19th century than the stylistic variety of Wagner's first three operas, *Die Feen*, *Das Liebesverbot* and *Rienzi*. In *Die Feen* the model was German Romantic opera, especially as developed by Weber and Marschner: the supernatural subject matter, the enhanced role of the orchestra and the shift away from static, closed forms towards organic growth are all evident, to at least some degree. Acts 2 and 3 each contain a fine scene and aria, the latter, depicting the mental derangement of Arindal, a complex in which recitative, arioso and aria are juxtaposed. One of the work's most inventive numbers, the comic duet for Drolla and Gernot in Act 2, is untypical in its *opera buffa*-style patter. *Die Feen* is marked by the return of a few characteristic melodic ideas, but scarcely with a persistence such as to merit the term 'leitmotif'.

Das Liebesverbot has a handful of recurring motifs, of which the most prominent is that associated with Friedrich's ban on love; it occasionally returns to make an ironic comment on the dramatic situation, as when Friedrich himself is tempted by passion (Act 1 finale). Wagner's models in the case of *Das Liebesverbot* were Italian and French opera, especially Bellini and Auber; vestiges remain of the *opéra comique* convention of spoken dialogue. German influences should not, however, be overlooked. That Wagner was absorbed at this period in the works of, particularly, Marschner is evident, and there are direct reminiscences of Beethoven, including an imitation of Leonore's 'Töt' erst sein Weib!' at the climax of the trial scene ('Erst hört noch mich').

With *Rienzi* Wagner turned his attention to grand opera, his explicit intention being to gain a popular success at the Opéra in Paris. Meyerbeer, with his spectacular large-scale effects, was naturally a primary model, but the influence of Spontini, Auber and Halévy, all of whom Wagner admired, is also evident. In his desire to 'outdo all previous examples' with the sumptuousness of his own grand opera, Wagner imposed a grandiosity of scale on material scarcely able to support it. The powerful but empty rhetoric that results has been seen as both a reflection of the extravagant pomp with which the historical Rienzi surrounded himself, and as an emblem of totalitarianism inherent in the work. Wagner's resumption of work on *Rienzi* after his move from Riga to Paris coincided with his growing dissatisfaction with the discrete number form of conventional opera. Acts 3 and 5 begin to embody the principles of unified poetry and music enunciated in such Paris essays and novellas as *Eine Pilgerfahrt zu Beethoven* (1840); the change is subtle, but is seen in a more expressive, more poetically aware use of recitative that foreshadows the arioso of the mature style, and in the occasional use of the orchestra to comment independently on the action.

Wagner's intention, in *Der fliegende Holländer*, to sweep away the 'tiresome operatic accessories' altogether was not completely realized, but there is a further shift towards the kind of organic continuity that was already evident in such German Romantic scores as *Euryanthe* (1822–3) and that was to distinguish the mature Wagnerian music drama. Recitative is still present in the score of the *Holländer* and referred to as such. Arias, duets, trios and choruses are also present, but such divisions as, for example, 'scene, duet and chorus' (Daland and the Dutchman, Act 1) have suggested the designations 'scene opera' in preference to 'number opera'. In the treatment of the duets for Erik and Senta and for the Dutchman and Senta (both Act 2) there are already signs of the greater precedence to be accorded the setting of words, though quadratic phrase structure (i.e. in regular multiples of two or four bars) is still the norm. As for ensembles, the Sailors' Chorus at the end of Act 1 and the Spinning Chorus in Act 2, despite their clever linking by the orchestra's development of a dotted figure common to both, are not closely integrated into the work's structure; the choruses of the Norwegian and Dutch crews in Act 3, on the other hand, do serve a more dramatic function in their vying for supremacy. Significantly, the fidelity to, and departure from, conventional operatic norms is related to the two strikingly contrasted worlds of the *Holländer*: the exterior world of reality to which belong Daland, Erik, the spinning girls and the sailors, and the interior world of the imagination inhabited by Senta and the Dutchman. Erik's two arias, for example, represent the most old-fashioned writing in the work, while the Dutchman's Act 1 monologue frequently manages to break free from the constraints of regular periodic structure.

A similar dualism is evident in *Tannhäuser*, where traditional operatic structures are associated with the sphere of the reactionary Wartburg court, while a more progressive style is associated with the Venusberg. To the former belong, for example, the more or less self-contained arias of the song contest, Elisabeth's two set-piece arias, her conventional duet with Tannhäuser, and Wolfram's celebrated aria 'O du mein holder Abendstern', highly conservative in its regular eight-bar periods and tonal scheme. Venus's music, by contrast, is more radically advanced: her contributions to the duet with Tannhäuser (Act 1) continually breach the constraints of quadratic periods (notably contrasting with Tannhäuser's own more formal utterances), and both that scene and the preceding Bacchanal are progressive in their harmonic vocabulary and rhythmic structure – especially in the Paris version. The most advanced writing in *Tannhäuser*, however, occurs in the Rome Narration (Act 3), where the expressive demands of the text are satisfied by a flexible form of dramatic recitative or arioso responsive to verbal nuance; the orchestra also assumes a major illustrative role here, bearing the burden of the dramatic argument. Another primary dualism present in *Tannhäuser* (related to that of Venusberg and Wartburg) is the traditional struggle between sensuality and spirituality – a dualism reflected in an 'associative' use of tonality. E major is associated with the Venusberg, and E♭ with the pilgrims, holy love and salvation. Thus Wolfram's E♭ hymn to 'noble love' (Act 2) is abruptly interrupted by the delayed fourth verse of Tannhäuser's Hymn to Venus in E. Similarly, the Rome Narration reaches E♭ as Tannhäuser recounts how he stood before the Pope; after a series of modulations the enticements of the Venusberg reappear in E, but the final triumphant return to E♭ confirms Tannhäuser's salvation.

8. Part of Senta's ballad from the autograph full score of Wagner's 'Der fliegende Holländer', composed 1841 (Richard-Wagner-Museum, Bayreuth)

The 'associative' use of tonality is also evident in *Lohengrin*. Lohengrin himself and the sphere of the Grail are represented by A major, Elsa with A♭ major (and minor), while Ortrud and her magical powers are associated with F♯ minor (the relative minor of Lohengrin's tonality), and the King's trumpeters on stage with C major. In the second and third scenes of Act 1, the tonalities of Lohengrin and Elsa, a semitone apart, are deployed skilfully to symbolic and expressive effect. *Lohengrin*, like the *Holländer* and *Tannhäuser*, contains various motifs associated with characters or concepts, but in general (the motif of the Forbidden Question is an exception) these do not conform to the strict prescriptions to be laid down in *Oper und Drama*; they also tend to be fully rounded themes rather than pithy ideas capable of infinite transformation, and do not therefore serve the vital structural function of the leitmotifs in the *Ring*. For all that *Lohengrin* marks a stylistic advance over the earlier operas, it fails to fulfil several criteria of the fully fledged music drama. Vestiges of grand opera are still present in the use of diablerie, spectacle and crowd scenes, with minster, organ, fanfares and bridal procession. Traces of old-fashioned number form are still evident, but recitatives, arias, duets and choruses (even those numbers, such as Elsa's Dream or Lohengrin's narration, which have become celebrated as independent set pieces) are in fact carefully integrated into the musical fabric. The two latter pieces, at least after their conventional openings, display a greater propensity for irregular phrase structures than most numbers in *Lohengrin*. The quadratic phrase patterns that dominate the work, together with the virtual absence of triple time, impart a uniformity of rhythmic impulse that may be perceived as ponderousness.

Several fundamental changes characterize the musical language of the *Ring*, as Wagner began, in *Das Rheingold*, to implement the principles enunciated in the theoretical essays of 1849–51. In the first place, regular phrase patterns give way to fluid arioso structures in which the text is projected in a vocal line that faithfully reflects its verbal accentuations, poetic meaning and emotional content. On occasion in *Rheingold*, the rigorous attempt to match poetic shape with musical phrase results in pedestrian melodic ideas. But in *Walküre* the musico-poetic synthesis is found at its most ingenious, interesting

melodic lines registering the finer nuances of the text with no unnatural word stresses. The Forging Song in Act 1 of *Siegfried* gives notice of a shift towards musical predominance, while Act 3 of *Siegfried* and *Götterdämmerung*, for all the fine examples of scrupulous matching of words and music, exhibit a tendency towards quick-fire exchanges, as found in *Die Meistersinger* but modified in accordance with the elevated tone of the tetralogy.

Hand in hand with this evolution of musico-poetic synthesis go developments in formal structure and in the use of leitmotif. The excessively rigid symmetries of Lorenz's analyses (an over-reaction to charges of formlessness in Wagner's music) have now been rejected, or rather radically modified to take account also of such elements as period and phrase structure, orchestration and tempo. Lorenz's arch-(*ABA*) and *Bar*-(*AAB*) forms are indeed present in Wagner, but like the other traditional forms of strophic song, rondo and variation, they are constantly adapted, often in midstream, creating new, hybrid forms notable for their complexity and ambiguity.

The leitmotif (though never actually called that by Wagner) takes on a structural role in the *Ring*, whereas, in *Lohengrin*, its function was purely dramatic. As Wagner suggested in his 1879 essay *Über die Anwendung der Musik auf das Drama*, motivic transformation provides a key to the analysis of his music dramas; but he went on to say that his transformations were generated according to dramatic imperatives and as such would be incomprehensible in a symphonic structure. It is the dramatic origination of the motifs that is responsible for their frequent association with specific tonalities. The Tarnhelm motif, for example, is associated with G♯ minor and that of the Curse with B minor. Modulatory passages are common in which the primary tonality of an important motif is engineered. Sometimes, too, the tonality in question becomes the determining key of a whole section or structural unit (the return of B minor for the Curse motif in Scene 4 of *Rheingold*, as Fasolt is murdered by Fafner, is an example of this).

The deployment of motifs in the *Ring* underwent a change during the course of composition. In *Rheingold* the identification of motifs with specific objects or ideas is at its most unambiguous. In *Walküre* and the first two acts of *Siegfried*, motivic representation is still made according to reasonably strict musico-poetic criteria, but without quite the literal-mindedness of *Rheingold*. In Act 3 of *Siegfried* and *Götterdämmerung*, however, written after the long break in composition, the motifs frequently aspire to an independent life of their own. They are combined in such profusion and with such contrapuntal virtuosity that it is clear that the principles of *Oper und Drama* are no longer being strictly adhered to. In *Rheingold* the thematic transformations that take place in the passages that link the scenes are not typical of the work; the score of *Götterdämmerung*, however, is characterized by congeries of motifs drawn on for a brief thematic development.

Just as certain leitmotifs are associated with specific tonalities, so groups of characters (though, unlike the earlier operas, not individual characters) are also identified with particular keys: the Valkyries with B minor, the Nibelungs with B♭ minor. The entire Nibelheim Scene (Scene 3) of *Rheingold*, for example, is dominated by B♭ minor, which even interrupts Loge's A major music as Alberich asserts himself. The B♭ minor of the Nibelheim Scene is framed by the D♭ major in which Scene 2 begins and Scene 4 ends. The relative key, contrasting but intimately connected, denotes the relationship of Wotan (Light-Alberich) to Alberich. If the first scene of *Rheingold* is excluded (since it is in the nature of a prelude, outside the main action and its time zone), the tetralogy both begins and ends in D♭ major; it should not be regarded as the chief tonality to which all others are related, but it does provide a framework of sorts, and at the end affords a sense of homecoming. *Rheingold* was originally conceived by Wagner as a drama in three acts with a prelude, a structure which replicates not only that of *Götterdämmerung* (three acts and a prologue) but also that of the *Ring* as a whole.

The tendency towards the non-specificity of leitmotifs in the course of the *Ring* is continued in *Tristan und Isolde*. Aptly for a work dealing in metaphysical abstractions, motifs are not used in the latter to symbolize swords and spears; nor can they generally be confined to a single concept (the motifs associated with 'death' and 'day' are exceptions). The elusiveness of the motifs and their associations is reflected in their propensity for interrelation by means of thematic transformation. And if the abstract nature of the motifs in *Tristan* enhances their flexibility, making them more conducive to 'symphonic' development, they are also more closely integrated into the harmonic structure of the work: the melodic line of the motif associated with the words 'Todgeweihtes Haupt! Todgeweihtes Herz!' is a product of the chromatic progression A♭–A, not vice versa.

The elevation of motivic interplay to an abstract level in *Tristan*is accompanied by a further shift in the balance of music and text towards the former. There are still many examples of musico-poetic synthesis that conform to *Oper und Drama* principles, but there is also an increased tendency towards vowel extension, melisma, and overlapping and simultaneous declamation of the singers, not to mention the opulent orchestration with triple wind – all of which conspire to reduce the clarity with which the text is projected. The extended vowels of Brangäne's Watchsong, for example, render her words virtually inaudible; the text is not irrelevant, but has been absorbed into the music to create an intensified line that is then reintegrated into the orchestral fabric.

The temporal values of society represented by Marke and Melot, and the earthly humanity of Kurwenal, are often matched by foursquare diatonicism. Conversely, the neurotic self-absorption of Tristan and Isolde and their unassuageable yearning are reflected in the work's prevailing mode of chromaticism; suspensions, unresolved dissonances and sequential variation are ubiquitous and chromatically heightened. Every element, poetical and musical, is geared to the generation and intensification of tension – the tension of promised but evaded fulfilment.

The vocal line undergoes a further development in *Die Meistersinger*. For much of the time it is little more than recitative, but its bareness is counteracted by the orchestra's richness of detail; the orchestra is by now firmly established as the chief commentator on the dramatic action. The improvisatory nature of the musical texture corresponds to the principle that Wagner was to codify in *Über die Bestimmung der Oper* (1871), whereby the improvisatory element in acting was to be harnessed to the essential improvisatory ingredient in musical composition, resulting in a 'fixed improvisation'.

The subject matter of the music drama – the creation of a mastersong – might seem to lend weight to Lorenz's formal analysis in terms of *Bar*-form. But this would be to reckon without the more flexible, more sophisticated structures that Wagner had been developing throughout his career, and without the element of parody that is central to the work (Voss in Csampai and Holland, N1981). Aspects of *Bar*-form are indeed present but often in an ironic context: the variation entailed in the *AAB* structure of 'Am stillen Herd', for example, is absurdly florid.

A similar distancing tendency is at work in Wagner's persistent use in *Die Meistersinger* of such traditional forms as set-piece arias, ensembles and choruses; all three acts end with a massed finale worthy of grand opera. The forms of Walther's arias or of Beckmesser's Serenade tell us as much about the characters and their dramatic predicament as the notes themselves. The irregular phrase lengths, false accentuations and disorderly progress of the Serenade depict Beckmesser's agitation and supposed artistic sterility, and should not be regarded as symptomatic of an 'advanced' musical style (unlike the Act 3 'pantomime' in Hans Sachs's study, which does look to the future in its graphic musical pictorialism).

Old and new are fused also in the musical language: the work's predominant diatonicism has an archaic tendency, largely as a result of the penchant for secondary triads with their modal flavour. If this challenge to the traditional tonic-dominant hierarchy is a musical metaphor for *Die Meistersinger*'s nostalgic retrospection, it is at the same time a means of rejuvenating tonality.

In *Parsifal* Wagner the librettist supplied Wagner the composer with some of his freest verse, ranging from sonorous, measured lines to violently expressive ones. The vocal lines which resulted similarly range from more or less melodic arioso (though often the primary idea is in the orchestra and the vocal line functions rather as counterpoint) to a form of recitative-like declamation (for example in Gurnemanz's Act 1 narration). There are leitmotifs which can be identified with objects or concepts,

9. 'Die Meistersinger': beginning of Act 1 scene i in the developed draft (orchestral sketch), 1862 (Richard–Wagner–Museum, Bayreuth)

such as the Spear, the Last Supper or the Grail, but the associations are not rigidly consistent: as in *Tristan*, the function of the motifs is less representational than to provide raw material for 'symphonic' development.

Again as in *Tristan* and *Die Meistersinger*, the modes of chromaticism and diatonicism are counterposed, but whereas in those two works the signification was relatively clear, in *Parsifal* the relationship of the two is more equivocal. The realms of the Grail and of Klingsor are associated with diatonicism and chromaticism respectively, but between these two poles are many cross-currents: Amfortas's suffering, for example, conforms exclusively to neither category, confirming that his experience, while ultimately the catalyst for the redemptive process, is tainted by depravity. The propensity for tonal dissolution, in *Parsifal*, for diatonicism to yield to chromaticism, is a potent metaphor for the theme of spiritual degeneration. Tritones, augmented triads and mediant tonal relationships, which all undermine the tonic-dominant hierarchy, contribute to the uncertain nature of a tonal continuum that veers between diatonicism and chromaticism, stable and unstable tonality. Ambiguity also surrounds the polarity of A♭ major and D (major and minor), which are evidently not to be viewed as irreconcilably opposing forces but as complementary spheres to be brought into resolution. The final stage in that process takes place at the setting of Parsifal's last words, 'Enthüllet den Gral', which effects a modulation from D major to the A♭ with which the work unequivocally concludes.

11. Non-dramatic works.

(i) Orchestral. Like all composers of his era, Wagner grew up in the shadow of Beethoven and the Classical symphonic tradition. His obsession with Beethoven, revealed both in the autobiographical writings and in fictional stories such as the novella *Eine Pilgerfahrt zu Beethoven*, reflected a perceived need to confront that tradition, acknowledging the legacy of Beethoven and at the same time staking a claim as his natural successor.

The music drama was, of course, the genre evolved by Wagner as the ideal vehicle for reconciling symphonic principles with a literary and philosophical content. Before arriving at that solution, he made various attempts to address the problem in purely orchestral terms, and at different periods in his life he gave serious consideration to the possibility of symphonic composition. Some nine or ten orchestral pieces, mostly overtures (of which half have not survived), were conceived by Wagner between 1830 and 1832, the student years during which he took composition lessons from C.T. Weinlig. The first significant landmark, however, was the Symphony in C major of 1832, an impressively constructed work, full of Beethovenian gestures yet strongly individual in its dramatic impulse and colouring. Of a second symphony, in E major, dating from 1834, only the first movement – influenced by Beethoven's Pastoral Symphony and the overtures of Weber – was completed. The autograph is lost, but a score in the hand of Mottl resurfaced in Munich in the late 1980s. Mendelssohn was the undoubted influence in the overture to Apel's play *Columbus* (1834–5), while the self-parodying attempts to outstrip Beethoven in the *Rule Britannia* Overture (1837) have an unintentionally comic effect in performance. The chief inspiration for the *Faust-Ouvertüre* (1839–40, revised 1855) came, *pace* Wagner's account in *Mein Leben*, probably not from Beethoven's Ninth Symphony (though there are some undoubted similarities), but from Berlioz's *Roméo et Juliette*, which impressed Wagner at the time as a potential solution to the problem of reconciling a literary impulse with abstract symphonic form.

Beethoven's Ninth, on the other hand, probably was a major factor in the reawakening of Wagner's symphonic ambitions in 1846–7, from which period sketches exist for at least two symphonies. At this time Wagner was engaged in the composition of *Lohengrin* in Dresden, but he was also making assiduous preparations for the performance of the Ninth at the traditional Palm Sunday concert in the old opera house in the same city. There seems little doubt that his close study of the work stimulated this brief burst of symphonic inspiration.

From Wagner's maturity date three occasional marches. The *Huldigungsmarsch* was composed to celebrate the birthday of Ludwig II on 25 August 1864. The original version was for military band; an orchestral arrangement was made in part by the composer and in part by Joachim Raff. The *Kaisermarsch* of 1871 pandered to the mood of militant nationalism following the proclamation of the Second Reich and the German victory in the Franco-Prussian war. This piece too was originally scored for a military band, but subsequently arranged, in this case by the composer himself, for a full orchestra. An optional jingoistic 'people's chorus' was also added later. The *Grosser Festmarsch* ('Centennial March') was composed in 1876 to a commission to celebrate the hundredth anniversary of the American Declaration of Independence.

In marked contrast, the *Siegfried Idyll* is one of Wagner's most intimate works, conceived as it was as a birthday present for Cosima in 1870 and as a retrospective celebration of the birth of their son Siegfried and of the composition of Act 3 of *Siegfried*, both the previous year. The first performance of the *Idyll* took place on the staircase at Tribschen, outside Cosima's bedroom, and the modest forces involved (probably 15 players rather than the oft-cited 13) were doubtless, in part, the result of logistical considerations. Certainly, in spite of the intimate associations of the work for the composer and his wife, Wagner intended it to be performed by a rather larger ensemble: for a private performance in Mannheim in 1871 he requested at least 23 strings rather than the original eight, while in 1874 he was planning an arrangement for 'a large orchestra'. The phrase 'symphonic birthday greeting' in the title-page inscription in the autograph, taken together with the structure of the work (a broadly based, modified sonata form), further confirms the relevance of the *Idyll* to Wagner's symphonic ambitions.

That such ambitions had not been relinquished even in the last years of his life is evident from the plans (none of which was realized) to compose overtures and symphonies. The former were conceived, between January 1874 and February 1875, as a set of large-scale orchestral overtures with programmatic titles, such as 'Lohengrin's Ocean Voyage' (later 'Lohengrin's Journey') and 'Tristan the Hero'. The symphonies which Wagner planned and sketched between autumn 1877 and his death in February 1883 were intended as a continuation of the Beethovenian tradition, though they were to be single-movement structures. As for the symphonic process itself, Wagner's comments (reported by Cosima in various diary entries) are somewhat contradictory. Originally he proposed to

call his pieces 'symphonic dialogues' because they would consist of theme and countertheme in conversation; later, however, he suggested that ideas should emerge out of one another – a process more akin to thematic metamorphosis.

(ii) Choral. Between 1834 and 1836 Wagner was attached to a theatrical troupe in Magdeburg. The troupe's stage director, Wilhelm Schmale, wrote a festival play to celebrate the new year, and Wagner was required, in a short space of time, to contribute incidental music. The five numbers he wrote were an overture (incorporating music from the slow movement of the C major Symphony), choruses and 'allegorical music'. In 1837, during his period in Riga, Wagner was commissioned to write a *Volks-Hymne* (national anthem) for the birthday celebrations of Tsar Nicholas. Giving the music 'as despotic and patriarchal a colouring as possible', he achieved a popular success that was performed on the same day in subsequent years.

Demonstrating further a pragmatic but impressive stylistic flexibility in these early years, the chorus 'Descendons gaiment la courtille' was written to be interpolated in the two-scene vaudeville *La descente de la courtille*, which had its first performance at the Théâtre des Variétés in Paris on 20 January 1841. The light French style, popularized subsequently by Offenbachian operetta, could hardly be more alien to the weighty Teutonic idiom soon to be embraced by Wagner.

Four choral pieces date from Wagner's years as Kapellmeister in Dresden. *Der Tag erscheint* for male chorus (1843) was composed for the unveiling of a memorial to King Friedrich August I of Saxony. The chorus was sung *a cappella* on that occasion, but Wagner also made a version, probably at about the same time, for male chorus and brass instruments. The most substantial work of the group is *Das Liebesmahl der Apostel* (1843), a 'Biblical scene' on the subject of the first Pentecost, written for a gala performance given by all the male choral societies in Saxony. At the first performance, in the Dresden Frauenkirche, there were some 1200 singers and 100 orchestral players. The male chorus *Gruss seiner Treuen an Friedrich August den Geliebten* (1844) was composed to celebrate the return of King Friedrich August II of Saxony from England. Its refrain combines two melodic ideas shortly to be used in Act 2 of *Tannhäuser*. Another male chorus, *An Webers Grabe* (1844), was written for the occasion of the reinterment of Weber's remains in Dresden. A torchlit procession on 14 December 1844 was accompanied by Wagner's *Trauermusik* (based on three themes from *Euryanthe*) for wind band (including 20 clarinets, 10 bassoons and 14 horns) and muffled drums; on the following morning, by the side of the grave in the Friedrichstadt cemetery, Wagner gave an oration and conducted his chorus.

With the exception of the nine-bar *Wahlspruch für die deutsche Feuerwehr* ('Motto for the German Fire Brigade') of 1869, Wagner wrote no more choral pieces until the small group, all for children's voices, celebrating marital bliss (and more specifically Cosima's birthdays), dating from the last decade. The *Kinder-Katechismus* (1873), for which Wagner's verse was in question-and-answer form, exists in two versions, the second with an accompaniment for a small orchestra. The eight-bar chorus *Willkommen in Wahnfried, du heil'ger Christ* (1877) was performed in Wahnfried for Cosima by the children, as was *Ihr Kinder, geschwinde, geschwinde* three years later.

(iii) Chamber. An early string quartet in D major (1829) has not survived, and the so-called 'Starnberg Quartet', supposedly dating from the 1860s, has been shown to be a mythical creation (Voss, N1977, and Millington, I1992), despite a putative 'reconstruction' by Gerald Abraham published in 1947. The Adagio for clarinet and string quintet, formerly attributed to Wagner, is in fact by Heinrich Joseph Baermann, belonging to his Clarinet Quintet, op.23.

(iv) Solo voice and orchestra. The only surviving works in this category are a series of interpolations for operas by other composers, all dating from Wagner's prentice years. 'Doch jetzt wohin ich blicke', an effective display piece, was a new allegro ending for Aubry's aria 'Wie ein schöner Frühlingsmorgen' in Marschner's *Der Vampyr*, which Wagner was responsible for rehearsing in Würzburg (1833). He opened his first season as music director of the theatre in Riga (1837) with Carl Blum's comic opera *Mary, Max und Michel*, for which he composed an extra bass aria entitled 'Sanfte Wehmut will sich regen'. Another bass aria, composed for insertion in Joseph Weigl's 'lyrical opera' *Die Schweizerfamilie*, is lost, while 'Norma il predisse, O Druidi' was intended to be sung by the celebrated bass Luigi Lablache (who politely declined) in Bellini's *Norma*.

(v) Solo voice and piano. Among Wagner's earliest compositions are a set of seven pieces for either solo voice or chorus (or both) and piano for inclusion in a performance of Goethe's *Faust* (1831). More significant is the group of songs Wagner wrote between 1838 and 1840, in the hope of making his reputation in Paris. The idea that celebrated singers should include these songs in their concerts came to nothing, however. *Extase*, *La tombe dit à la rose* and *Attente* (the first two of which exist only in fragmentary form) were all settings of poems by Victor Hugo. *Dors mon enfant* and *Mignonne*, together with *Attente*, were published in Paris by Durand, Schoenewerk et Cie in 1870. *Tout n'est qu'images fugitives* is a setting of a poem entitled *Soupir* by Jean Reboul, while *Les deux grenadiers* sets a French translation of the poem by Heine, more famously set by Schumann. The song with the grandest operatic gestures of all is *Adieux de Marie Stuart*, evoking the tearful farewell to France of Mary Queen of Scots. Various of the above songs are included in recitals from time to time, but their fame is dwarfed by that of the *Wesendonck Lieder*, a set of five songs to texts by Mathilde Wesendonck (1857–8). Two of the songs were designated by Wagner 'studies for *Tristan and Isolde*': *Im Treibhaus*, which anticipates the bleak prelude to Act 3, and *Träume*, which looks forward to the Act 2 duet. As a birthday present for Mathilde, Wagner also arranged *Träume* for solo violin and chamber orchestra, and conducted it at the Wesendoncks' villa in Zürich on 23 December 1857. The orchestral version of the other four songs generally performed today is by Felix Mottl, though Henze also made a version of the complete set – a more radical but sensitive rescoring – in 1976.

(vi) Piano. Wagner's works for piano fall into two groups: those dating from his student years and those written for and dedicated to particular individuals at various points in his life. The works in the first group – disregarding a pair of lost sonatas from 1829 – were

composed in Leipzig in 1831 and 1832. The primary influence in the sonatas in B♭ and A is Beethoven, but the more quirkily individual Fantasia in F♯ minor also betrays Wagner's fascination at that time with Bellinian bel canto.

The earliest work in the second group was the Albumblatt in E major (the title 'Lied ohne Worte' was added on its first publication in 1911), apparently written for Ernst Benedikt Kietz in 1840. Further Albumblätter were composed for Princess Pauline Metternich (1861), Countess Pourtalès ('Ankunft bei den schwarzen Schwänen', also 1861) and Betty Schott (1875). Wagner's most substantial work for piano, however, is the sonata for Mathilde Wesendonck (*Sonate für das Album von Frau MW*), a comparatively rare example in the 19th century of a single sonata-form movement (as opposed to the Lisztian model of several movements integrated into one).

12. Projected and unfinished dramatic works. The five-act tragedy *Leubald* (1826–8), dating from Wagner's adolescence, was the earliest of his ambitious dramatic schemes, drawing, as he later reported in *Mein Leben*, on *Hamlet*, *Macbeth* and *King Lear*, as well as Goethe's *Götz von Berlichingen*. He planned incidental music for it in the style of Beethoven's *Egmont*, but if any was written, it has not survived.

Die Hochzeit (1832–3) was specifically conceived as an opera, but the poem is lost, and of the music only an introduction, chorus and septet were written. The prose scenario for *Die hohe Braut, oder Bianca und Giuseppe*, a grand opera in four or five acts, was probably sketched by Wagner in Königsberg in 1836. He subsequently sent it to Scribe in Paris, in the hope that the librettist might develop it into a text which Wagner could then be commissioned to set to music for the Opéra. *Die hohe Braut* was eventually elaborated into a libretto, however, by Wagner himself in Dresden, in 1842, and set to music by J.B. Kittl.

Männerlist grösser als Frauenlist, oder Die glückliche Bärenfamilie ('Man's Cunning Greater than Woman's, or The Happy Bear Family', ?1838), based on a story from *The Thousand and One Nights*, was intended as a comic opera, in the form of a Singspiel, with prose dialogue and individual numbers, of which only two were composed. *Die Sarazenin* ('The Saracen Woman'), a projected five-act opera, on the subject of the Hohenstaufen prince Manfred, son of Friedrich II, and a mysterious Saracen prophetess, Fatima, was conceived almost certainly in Paris, late in 1841. Wagner subsequently elaborated his draft in Dresden, in 1843, but proceeded no further, and wrote no music for it. *Die Bergwerke zu Falun* ('The Mines of Falun', 1842), based on a story by E.T.A. Hoffmann, was another aborted project also dating from Wagner's Paris years. The years surrounding the Dresden uprisings of 1848–9 produced four different attempts to find a satisfactory vehicle for ideas that achieved final form in the *Ring*: the historical subject of Friedrich I (the 12th-century emperor Friedrich Barbarossa) was abandoned (though not quite as readily as Wagner later suggested) in favour of the greater potential afforded by the Nibelung myth, while a three-act drama on the subject of Achilles, with its themes of a free hero and of the gods yielding to humanity, the five-act *Jesus von Nazareth*, with its advocacy of a new religion of humanity, and the 'heroic opera' *Wieland der Schmied* were similarly all superseded by the *Ring*. The Buddhist subject matter of *Die Sieger* ('The Victors'), dealing with the conflict between passion and chastity, preoccupied Wagner from the mid-1850s until the end of his life, but again the theme was treated definitively in another work, *Parsifal*.

Only prose sketches exist for the drama *Luthers Hochzeit* (1868), treating one of the decisive acts of the Reformation – Luther's rejection of his priestly celibacy and his marriage to Catharina von Bora – and Wagner appears not to have attempted to compose any music; ten years later he considered writing a prose play on the subject. *Eine Kapitulation* (1870), described as a 'comedy in the antique style', was a heavy-handed farce in somewhat dubious taste, set in Paris at the time of the siege in that city. Wagner did not set the text himself, but he may have tinkered with the setting undertaken by Hans Richter, which has not survived (possibly destroyed by Richter himself).

13. Orchestration. A paradox lies at the heart of Wagner's orchestration. As his compositional ambitions developed through the three early operas, the trio of German Romantic operas and the *Ring* tetralogy, culminating in the final three masterpieces, so the tonal resources of the existing orchestra were expanded. Yet larger forces did not – contrary to the impression given by contemporary caricatures – simply lead to greater volume and cruder effects. On the contrary, to compare the exuberant tambourines and castanets of *Das Liebesverbot*, or the bombastic, massive rhetoric of *Rienzi*, with the rich, velvety textures of the *Ring* or the refined sonorities of *Parsifal*, famously described by Debussy as 'illuminated as from behind', is to realize just how central the art of orchestration was to Wagner's project.

On one level, this development reflects Wagner's own progress towards mastery. Again, one may compare the overwrought triangle part in the early concert overture *Rule Britannia* with the single stroke of the instrument in the closing bars of Act 2 of *Siegfried* – praised by Strauss as a 'wise application of the triangle'. Similarly, the insistent cymbals of *Das Liebesverbot*, the massed brass of *Rienzi* or the extravagant six trumpets of the early *Columbus* Overture may be compared with the magical *pianissimo* brushing of the cymbals at the start of the long final descent in the *Lohengrin* prelude, or the delicate touches on a solo trumpet in the second stanza of Elsa's Dream (Act 1 of the same opera).

On another level, the increased sophistication of Wagner's scoring accords with developments in the 19th century generally. The beginning of the century heralded the liberation of woodwind and brass instruments, whose sonorities, both solo and in combination, now made more distinctive contributions to the orchestral texture. In opera, more specifically, such composers as Spontini and Weber were employing these timbres imaginatively, adding new colours to the tonal palette; such innovations were soon extended by Berlioz and Meyerbeer as well as Wagner.

The demands of narrative and characterization in opera fuelled these developments, the Wagnerian technique of leitmotif underlining further the association between particular timbres and characters, objects, concepts or emotions. In *Lohengrin*, according to Liszt, the work's first conductor, each of the elements has its own distinctive colouring: strings for the Holy Grail, wind for Elsa, brass for Heinrich. Richard Strauss also admired *Lohengrin*, in particular for Wagner's deployment of the *dritte Bläser* – i.e. the addition of the cor anglais to the two oboes, and

the bass clarinet to the two clarinets, to form homogeneous and potentially autonomous choruses alongside the three flutes and three bassoons.

In accordance with the general trend in the 19th century, Wagner's mature orchestra was notable for its considerable reinforcement of strings in relation to woodwind. For the *Ring* he asked for 16 first violins, 16 seconds, 12 violas, 12 cellos and 8 double basses. Admittedly he called also for quadruple woodwind in the *Ring*, as in *Parsifal*, though only triple for *Tristan*, and double (plus piccolo/third flute) for *Die Meistersinger*. The ensuing carpet of string sound is a characteristic feature of Wagner's scores, but there are also countless examples of subtle, delicate effects obtained in a variety of ways.

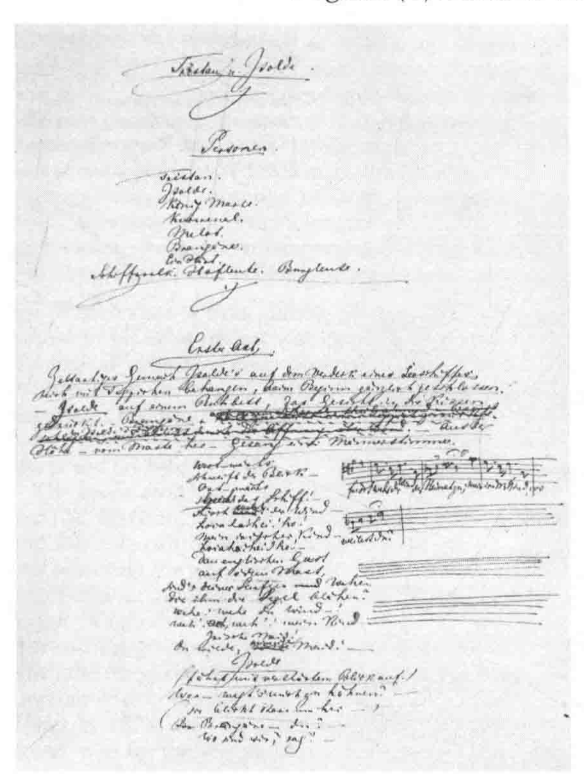
Expanding the tonal resources of the orchestra involved both the redeployment of existing instruments and experimentation with new ones. In the first category belong the trombones. If trombones were becoming standard in opera house orchestras throughout Europe in the 19th century, then it was Wagner above all who gave them an independent voice. Their enunciations of the striding Spear motif, or that of the baleful Curse, in the *Ring* proclaimed a new freedom that made possible even more radical innovations in subsequent eras. Perhaps the most significant of the 'new' instruments were the 'Wagner tubas'. Called tenor and bass tubas in the score, they are generally blown, with horn mouthpieces, by a quartet of horn players, and were intended to bridge the gap between horns and trombones. Wagner's 'invention' of these instruments owed much to the experiments of Adolphe Sax and others, just as the bass trumpet and contrabass trombone he had constructed for the *Ring*also drew on military band precedents. Wagner called for an alto oboe to be specially constructed for the *Ring* and *Parsifal*, but the instrument failed to establish itself permanently. The bass clarinet was not a Wagnerian invention, but it was exploited as a melodic instrument in *Tristan* and as a useful bass to the woodwind choir elsewhere.

Other special instruments used by Wagner include the 18 anvils in the *Ring*; the cow horns in *Die Walküre*, *Götterdämmerung* and *Die Meistersinger*; the wind machine in *Der fliegende Holländer*; and the Grail bells which are not the least of the many problematic issues in *Parsifal*.

14. Sources.

(i) Manuscripts. The myth, originated by Wagner himself, that the text and music of his works were conceived in a simultaneous flight of inspiration has long since been demolished. It is true, of course, that text and music are fused indissolubly in Wagner's works – certainly in the mature music dramas – but the principle of fusion can be traced back to the point of conception only by a selective, and ideologically driven, reading of the evidence.

To separate the discussion of Wagner's textual and musical sources is therefore to do little violence to the artistic process. Wagner's general procedure in evolving a text for setting consisted of the following stages: an initial prose sketch (this stage applies only to the works from *Das Rheingold* onwards), an elaborated prose draft, a verse draft and a fair copy of the poem. Clearly it was the complexity of the mythological sources deployed in the *Ring* that persuaded Wagner of the need for a preliminary prose sketch for *Das Rheingold* and *Die Walküre*. The resulting documents outline the dramatic action in succinct manner and presage its final form with remarkable clear-sightedness. One or two less plausible initial inspirations – including that of Wotan revealed bathing in the Rhine in the opening scene of *Das Rheingold*, and witnessing the congress of Siegmund and Sieglinde in Act 1 of Die *Walküre* – were subsequently jettisoned. The latter notion was contained in a series of supplementary prose sketches that Wagner made for *Das Rheingold* and *Die Walküre* in a pocket notebook. For *Siegfried* (at that time called *Der junge Siegfried*), Wagner also made some brief, fragmentary prose sketches, but for *Götterdämmerung* (originally called *Siegfrieds Tod*) he made no prose sketch as such, having already organized the material for what was to become the whole cycle in a prose scenario of 1848, entitled *Der Nibelungen-Mythus: als Entwurf zu einem Drama*.



The first prose sketch of *Die Meistersinger*, dating from 1845, is a detailed scenario, with a coherent outline of the plot, lacking some key names (Walther, Eva and Beckmesser are called 'the young man', 'the girl' and 'the Marker') but frequently breaking into dialogue. The initial prose sketches for *Tristan* and *Parsifal* have not survived.

In his prose drafts (the first stage for *Der fliegende Holländer*, *Tannhäuser* and *Lohengrin*, the second for all subsequent operas) Wagner set down a detailed outline of the story, again punctuated by fragments of dialogue (still in prose form). Most important elements of the text are in place by this time, though Wagner was still capable of making radical changes at a later stage. There is, for example, as Darcy (N1993) has pointed out, no mention in the prose draft for *Das Rheingold* of either Wotan's emblematic spear or Loge's identity as the god of fire.

The next stage was the versification of the text, at which point any vestigial prose dialogue, and indeed the entire text, would be rendered in poetic verse: *Stabreim* (alliterative verse) in the case of the *Ring*, *Endreim* (end-rhyme) in the earlier operas, and a composite form in the later works. Examination of the relevant sources shows that sometimes Wagner would find the ideal wording immediately; on other occasions he would subject the text to considerable reworking. The scene directions were also expanded, sometimes revised, at this stage.

The final stage in the preparation of the text was that of the fair copy – an accurate description in Wagner's case, since his hand was elegant and his work generally free of corrections. Occasionally he did decide on late amendments and, if sufficiently radical, as in the case of *Siegfrieds Tod*, he would make a further fair copy; there were no fewer than four fair copies of the latter text.

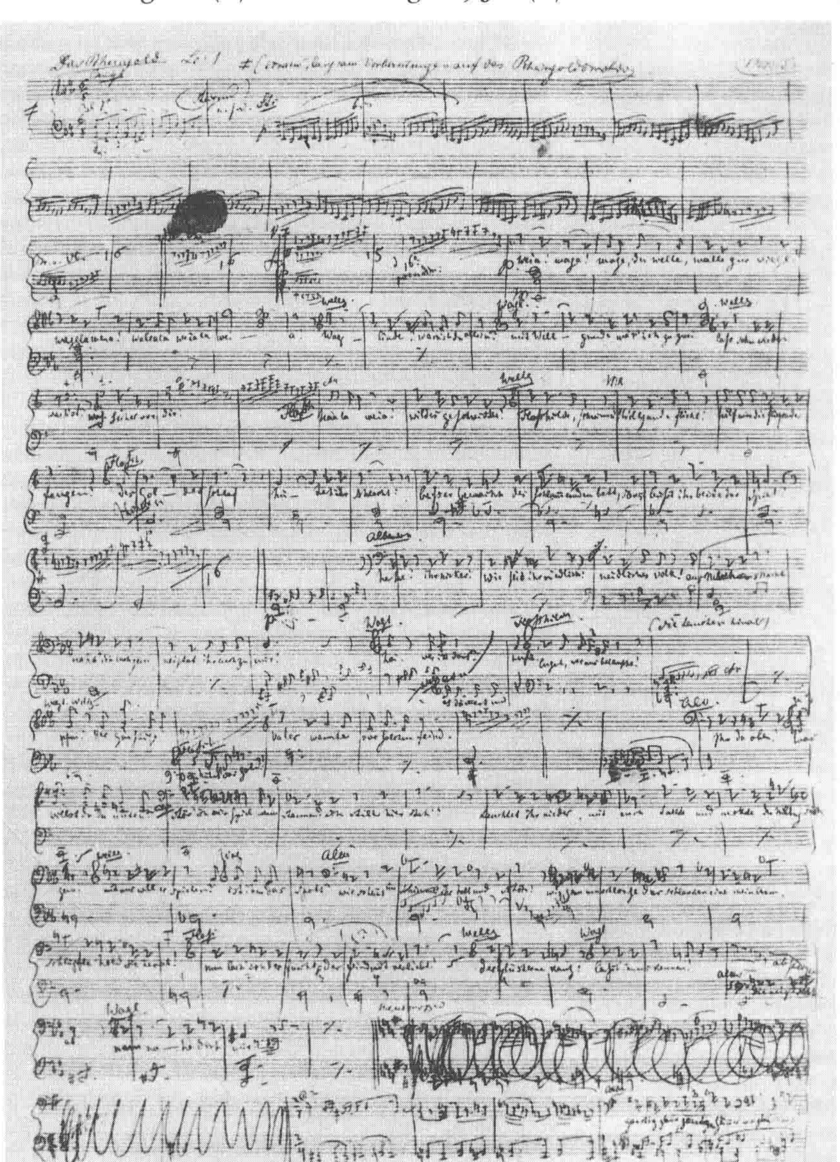
The nomenclature of the musical sketches and drafts is a more problematic affair, partly because Wagner's compositional process altered over the course of his career, partly for ideological reasons (briefly, Wagner scholars of the protectionist school used to follow the composer in presenting *Der fliegende Holländer*, *Tannhäuser* and *Lohengrin* as incipient music dramas). Thus Otto Strobel, the Bayreuth archivist between the wars, used the terms *Kompositionsskizze* (composition sketch) and *Orchesterskizze* (orchestral sketch) indiscriminately for both the Romantic operas and the music dramas, implying moreover (erroneously) that the compositional process was limited to the first stage, while the second stage saw an immediate elaboration into an orchestral score. Strobel's terms held sway for several decades,

10. Part of the first page (with sketch for the Sailor's song) from the prose sketch of Wagner's 'Tristan und Isolde', 1857 (Richard-Wagner-Museum, Bayreuth)

though others were proposed in the 1960s and 70s. The nomenclature now generally established is that adopted by the *Wagner Werk-Verzeichnis*. For the early operas (*Die Feen*, *Das Liebesverbot* and *Rienzi*) and for *Der fliegende Holländer*, Wagner used various scraps of paper to jot down preliminary musical ideas, then sketching individual numbers or whole scenes. These sketches, sometimes in pencil, sometimes in ink, set the text generally using two staves – one for the vocal line, the other indicating the bass, occasionally with embryonic harmony in between. Then came the crucial complete draft, made in ink: a setting of an entire act, incorporating the preliminary sketches and filling in any gaps. For this draft Wagner added staves as required to show all the vocal and choral parts. The next, and final, stage, for the four works in question was the making of a full score, a relatively easy process that could be undertaken whenever convenient, the real composition having already been completed.

For *Tannhäuser*, where Wagner began to move away from construction in numbers, he made a large number of sketches for individual sections – not necessarily in chronological order – next making a complete draft, which survives only in fragmentary form. In this case, a further complete draft preceded the making of the full score. For *Lohengrin*, apart from some preliminary sketching, Wagner went straight to a first complete draft, on two staves, working from the beginning to the end of an act, and following it with a second complete draft incorporating amendments and elaboration but stopping short of detailed orchestration. Here again Wagner moved direct to a full score.

His procedure in *Das Rheingold* was also to make a complete draft, in pencil, setting the text on one stave, with little more than a bass line on another stave (sometimes two; fig.11). The need to elaborate the scoring of *Das Rheingold*, with its expanded orchestra, led Wagner to move next to a draft of a full score, initially (prelude) in ink and resembling a full score, but from Scene 1 in pencil and with staves added as necessary (the intermediate nature of this draft has led some scholars to term it 'instrumentation draft'). The final stage was a fair copy of the score.



Wagner began sustained work on *Die Walküre* with a complete draft that was elaborated to a greater degree than that for *Das Rheingold*, with the orchestral part sketched generally on two staves rather than one. He did not feel the need to make the same kind of draft full score as he had for *Das Rheingold*; however, because the composition of *Die Walküre* was extended over a much longer period, he had some difficulty remembering exactly what the 'unfamiliar hieroglyphics' of the complete draft stood for, with the result that some passages had to be recomposed.

Determined never to make the same mistake again, Wagner changed his procedure thereafter. Thus from *Siegfried* onwards he not only made two complete drafts, the second in ink, on at least three staves, before moving to a full score, but he also worked one act at a time, alternating between the two drafts.

With *Tristan* Wagner ensured that each act was completed and engraved before beginning the next. But for acts 2 and 3 of *Die Meistersinger*, as well as Act 3 of *Siegfried*, *Götterdämmerung* and *Parsifal*, he changed his procedure once again, in that the entire opera was finished in its second complete draft before the full score was begun. This second complete draft was, moreover, extremely elaborate – to the extent that it is sometimes called a 'short score'.

Most of Wagner's preliminary sketches and jottings – made on scraps of paper, in diaries or sometimes on manuscripts or copies of the poems – are undated and undatable. The complete drafts, on the other hand, are meticulously dated. With the exception of those in private collections, Wagner's surviving autograph manuscripts reside in libraries and archives in various locations in Europe and the USA. The majority are housed in the Nationalarchiv der Richard-Wagner-Stiftung in Bayreuth. Among the autographs that have not survived, the most celebrated are the scores of *Die Feen*, *Das Liebesverbot* and *Rienzi*, and the fair copies of *Das Rheingold* and *Die Walküre*. These were all presented to Ludwig II of Bavaria, from whose estate they passed to the Wittelsbacher Ausgleichsfond. The German Chamber of Industry and Commerce purchased them from the Ausgleichsfond and presented them to Hitler on his 50th birthday in 1939. It is assumed that they were destroyed in April 1945, though repeated rumours of their survival give cause to hope that they may one day resurface. In any case, 'the whole incident', in Darcy's words, 'must be judged as Hitler's final contribution to the cause of Wagner scholarship'.

(ii) Printed editions. The first 'complete edition' of Wagner's works was undertaken by Michael Balling and published by Breitkopf & Härtel between 1912 and 1929. Only ten of the projected 20 or more volumes appeared. A modern reprint was published by the Da Capo Press in

11. Beginning of the preliminary draft (composition sketch) for the opening scene with Alberich and the Rhinemaidens in Wagner's 'Das Rheingold', page dated 1 November 1853 (Richard-Wagner-Museum, Bayreuth)

1971. The edition lacks several major scores, including those of *Rienzi*, *Der fliegende Holländer*, *Die Meistersinger*, *Parsifal* and all four *Ring* operas. On the other hand, it does include the early operas *Die Hochzeit* (only an introduction, chorus and septet were composed), *Die Feen* and *Das Liebesverbot*. (The editions of the first and last were the first to be printed.) Balling's edition of *Lohengrin* includes in a supplement the second part of the Grail Narration, which was cut by the composer before the première, and consequently omitted from the first printed, and all subsequent, editions. The Breitkopf project also includes valuable editions of the orchestral works, lieder, choral and piano music, as well as Wagner's interpolations for operas by Marschner, Blum and Bellini. Balling was hampered by the unavailability of many crucial sources and his edition, while creditable, falls short of modern critical standards.

The second complete edition, by contrast – still in progress – maintains the highest critical standards. *Richard Wagner: Sämtliche Werke* was initiated in 1970 by B. Schott's Söhne of Mainz, in cooperation with the Bavarian Academy of Fine Arts. The original general editors were Egon Voss and the late Carl Dahlhaus. Volumes i–xxi will contain the scores of all the works (including those uncompleted), volumes xxii–xxxi the relevant texts and documents associated with the stage works. The decision to opt for the original (1841) version – set in Scotland and with Senta's Ballad in A minor – in Isolde Vetter's scrupulous edition of *Der fliegende Holländer* is idiosyncratic, given that the work is very rarely performed in that version. Indeed, other volumes in the series have also been criticized – for example in terms of impracticable page turns – as being less useful for performing musicians than for scholars.

All the operas from *Der fliegende Holländer* to *Parsifal* are available both in the form of miniature scores (published by Eulenburg) and as full-size, softback reprints of selected early editions (published by Dover

Publications Inc.). Editions of the *Ring* operas are bedevilled by the fact that not all of the alterations to the text made by Wagner subsequent to his 1853 limited edition – i.e. during the process of composition – found their way into the 1863 public printing and 1872 *Gesammelte Schriften* version of the libretto. As a result, the supposedly authoritative 1872 version – the *Gesammelte Schriften* were assembled under Wagner's own supervision – frequently corresponds neither to the earliest editions of the text nor to that found in the musical scores.

15. WAGNERISM. Even during Wagner's lifetime, appraisal of his achievement was clouded by political and ideological considerations, professional jealousies and extra-musical factors of various kinds. Thus was the pattern set for the next century and more, for rarely has a composer excited such extreme passions among cognoscenti and lay listeners alike.

The opera criticism of writers such as Fétis, Hanslick and J.W. Davison, publishing respectively in Paris, Vienna and London, can be dismissed as the reactionary, parti pris posturing for which the profession is celebrated, but it reflected an influential strand of public opinion which found Wagner's aesthetic theories hard to stomach. Davison himself came to a more measured view of Wagner when the *Ring* received its first staging in 1876, while his German-born colleague Francis Hueffer, who joined *The Times* in 1878, was an enthusiastic and well-informed proselytiser for the Wagnerian cause.

The fact that every cultural figure of any standing, from Marx to William Morris, and Ruskin to Tolstoy, had an opinion on Wagner and his music is indicative of the composer's influence, and if that particular quartet remained unconvinced of his genius, there were countless others who took a contrary view. The partisanship of Liszt, Wolf and Bruckner is well known, though Tchaikovsky, Grieg and Saint-Saëns were also among the first *Ring* audiences.

Nor was the polarity any less marked after Wagner's death. The intensity of Nietzsche's apostatic diatribes may be accounted for, in part, by neurosis and, finally, insanity, yet his arguments cannot be dismissed out of hand. Indeed, his exposition of a morally suspect, alluringly decadent art, that offered 'strange enchantments' and 'sweet infinities' even as it paralysed the intellect, is all the more poignant as that of a former acolyte who has lost his faith. Thomas Mann's later reflections on the subject were to echo Nietzsche's formulation, though Mann did not preclude the possibility of intellectual engagement as well as emotional.

Ironically, given Wagner's barely concealed antipathy to the country, France was from an early stage a significant outpost of Wagnerism. In the 1880s Wagner's music was a staple ingredient of the French orchestral repertory, thanks largely to the efforts of conductors such as Edouard Colonne and Charles Lamoureux, and in due course the operas came to be more frequently staged too.

12. 'The effects of Wagner on the listener', Munich: lithograph by Honoré Daumier

The doyen of 19th-century French music, César Franck, studied Wagner's scores closely and was clearly influenced by them, but he maintained a certain distance from the Wagner cult, deciding, for example, not to make the pilgrimage to Bayreuth. The master's disciples were less strong-willed, however. Guillaume Lekeu fainted during the Prelude to *Tristan* at the Bayreuth Festival and had to be carried out. Chabrier resigned his government post and became a composer on hearing *Tristan* in Munich; his opera *Gwendoline* is characterized by leitmotifs and other Wagnerian fingerprints. Chausson and Duparc are among other notable composers heavily influenced by Wagner.

Even less plausibly, Russia proved to be fertile Wagnerian territory too, in spite of the composer's tenuous association with the country in his lifetime. The spiritual dimension of his art struck a chord, however, with practitioners of the mystical, Symbolist-inspired movement that swept the country at the turn of the century. Wagner's theories and aesthetic ideas were actually discussed more than the works themselves were performed, and after the Revolution too it was the anticapitalist tendency of such essays as *Die Kunst und die Revolution* that appealed to Bolsheviks and intellectuals alike. Mass festivals were organized, often involving thousands of people, in a grand synthesis of music, dance, rhythmic declamation and decorative arts that unmistakably, though tacitly – art of the past not being officially approved – invoked the spirit of the *Gesamtkunstwerk*.

In Britain, Wagner's music was much better known: the *Ring* was performed in London as early as 1882 and only with World War I did German music temporarily disappear from the repertory. The influence on the harmonic language of composers such as Parry, Stanford and Elgar is obvious, while in William Ashton Ellis, indefatigable translator and editor, Wagnerism found one of its most dedicated adherents. In America, too, there was passionate enthusiasm for Wagner's operas and a veritable cult developed with the expatriate conductor Anton Seidl at its centre.

Adulation of Wagner in Germany itself inevitably became entwined with the upsurge of Wilhelminian nationalism. Kaiser Wilhelm II visited and subsidized Bayreuth, and had his car horn tuned to a Wagnerian leitmotif. The spirit of 'Bayreuth Idealism' was enshrined in its most unadulterated form in the *Bayreuther Blätter*, the periodical established by Wagner and Hans von Wolzogen in 1878. Wolzogen's six-decade editorship ensured a platform for Germany's leading racists and anti-semites, who interpreted the canon, and especially *Parsifal*, as harbingers of a true Aryan culture. A regular contributor to the *Bayreuther Blätter* was Houston Stewart Chamberlain, whose *Grundlegen des 19. Jahrhunderts* was a formidably influential proto-Nazi tract. The association of Wagner's works with Hitler and the Third Reich was to cast a long shadow that had still not been completely dissipated by the end of the 20th century.

The impact of the music itself on composers of the late 19th century and the 20th was similarly wide-reaching. On one level, it can be detected in the rich harmonic language, unresolved dissonances, sequences and other technical features of late Romanticism, as exhibited by Elgar, Richard Strauss and Berg, to name but three. The use of leitmotifs and through-composed procedures in opera also became standard. On a more subtle level, it is possible also to trace Wagner's principles of 'musical prose' through Schoenberg to later modernists such as Boulez and Maxwell Davies, while other formal parallels can be seen in the work of Stockhausen and Berio. Ultimately, however, no composer of the post-Wagnerian period can be said to be untouched by his influence, even if only in a negative sense.

The impact of Wagner on the other arts, particularly literature and the visual arts, was no less crucial. Baudelaire was an early admirer of Wagner in France, and other Symbolists such as Verlaine and Mallarmé demonstrated their allegiance both in their poetry and in theoretical articles – the *Revue wagnérienne*, founded in 1885, provided an ideal forum. From the use of symbolism and leitmotif to stream of consciousness techniques it was but a short step, and if James Joyce and Virginia Woolf perfected the latter, then no one deployed leitmotif with more subtlety and ingenuity than Proust in *A la recherche du temps perdu*. Wagnerian symbolism and mythology permeate the novels of D.H. Lawrence and Thomas Mann, with a host of other writers, from Joseph Conrad to Anthony Burgess in the modern era, also paying their dues.

Countless minor artists of the 19th, and indeed 20th, centuries similarly paid allegiance to Wagner in canvases that echoed the themes, symbols and *mises-en-scène* of his operas. Among major artists, it was again the Parisian avant garde that set the pace. The terms 'Symbolist' and 'Wagnerian' were almost interchangeable when applied to such artists as Gustave Moreau and Odilon Redon, while Henri Fantin-Latour's lithographs and paintings of Wagnerian scenes dated back to the Impressionist era of the 1860s; Renoir too painted a pair of overdoor panels illustrating scenes from *Tannhäuser*. German and Austrian artists, such as Max Klinger and Gustav Klimt, received their inspiration from Wagner via the Parisians, while Aubrey Beardsley, Van Gogh, Gauguin and Cézanne all came under the Wagnerian spell. Kandinsky's experiments with synaesthesia were influenced in part by the work of Skryabin, but his desire to combine several arts in a *Bühnengesamtkunstwerk* unmistakably reflects the expansionist ambitions of Wagner.

WORKS

Editions: *Richard Wagner: Sämtliche Werke*, ed. C. Dahlhaus, E. Voss and others (Mainz, 1970–) [SW]
Richard Wagners Werke, ed. M. Balling (Leipzig, 1912–29/*R*) [B; inc.]

Catalogue: J. Deathridge, M. Geck and E. Voss, eds.: *Wagner Werk-Verzeichnis (WWV): Verzeichnis der musikalischen Werke Richard Wagners und ihrer Quellen*(Mainz, 1986) [WWV]

Dates given for MS sources refer to the beginning and end of complete drafts only, including fair copies of librettos and full scores. Dates in square brackets have been deduced from sources other than those mentioned in the same column. Full details of all autograph MSS (including single musical sketches prior to first complete drafts), copies in other hands as well as first and subsequent major prints are to be found in WWV. For a discussion of terminology see WWV (foreword) and J. Deathridge: 'The Nomenclature of Wagner's Sketches', *PRMA*, ci (1974–5), 75–83. All texts are by Wagner unless otherwise stated.

NA – *Nationalarchiv der Richard-Wagner-Stiftung, Bayreuth*
RWG – *Richard-Wagner-Gedenkstätte der Stadt Bayreuth*

Text MSS (autograph): ps – prose sketch (outline); pd – prose draft (detailed); vd – verse draft (subsequent prose or verse drafts are indicated by superscript numerals: pd^{1}, vd^{2} etc.)

Music MSS (autograph): cd – complete draft (= single existing complete draft); fcd – first complete draft (outline); scd – second complete draft (detailed); fs – full score (= single existing full score); sfs – second full score (fair copy); pm – performance material; ffs – first full score (draft)

Prints: vs – vocal score; fs – full score; ps – piano score

INCOMPLETE OR PROJECTED STAGE WORKS

WWV

1 Leubald (Trauerspiel, 5), 1826–8 (extracts from Act 5: Leipzig, 1908); SS xvi (extracts), SW xxxi (complete); no music survives (?none written)

6 Pastoral opera (Schäferoper), after J.W. von Goethe: *Die Laune des Verliebten*, ? early 1830, lost

31 Die Hochzeit (Oper, ?3, after J. Büsching: *Ritterzeit und Ritterwesen*), Oct/Nov 1832–1 March 1833; B xii, SW xv; poem lost; of music, only introduction, chorus and septet written

40 Die hohe Braut (grosse Oper, 4 [5 in ps], after H. Koenig: *Die hohe Braut*), ?July 1836, Aug 1842 (Prague, 1848); SS xi, SW xxxi; music not set; no sketches survive. Wagner offered lib to K. Reissiger, then Hiller; finally set by J.B. Kittl as Bianca und Giuseppe, oder Die Franzosen vor Nizza

48 Männerlist grösser als Frauenlist, oder Die glückliche Bärenfamilie (komische Oper, 2, after *The Thousand and One Nights*), ?sum. 1838; SS xi, SW xxxi; intended as Singspiel, with prose dialogue and individual numbers; a hitherto unknown prose draft and sketches for 3 numbers (Introduction, Duet and Trio) resurfaced in 1994

66 Die Sarazenin (Oper, 5), probably 1841, early 1843 (pd [now lost]: Bayreuth, 1889); SS xi, PW viii, SW xxxi (pd)

67 Die Bergwerke zu Falun (Oper, 3, after story by E.T.A. Hoffmann), Feb–Mar 1842 (scenario only: Bayreuth,

	1905); SS xi, SW xxxi; scenario written for J. Dessauer; later offered to A. Röckel, who appears to have intended to set it. Wagner himself made no setting
76	Friedrich I. ([?opera], 5), Oct 1846, wint. 1848–9; SS xi, SW xxxi; scenario frag.; planned as opera, but not set, and no sketches survive
80	Jesus von Nazareth ([?opera], 5), Jan–April 1849 (pd: Leipzig, 1887); SS xi, PW viii, SW xxxi; 5-act scenario completed; not set, but 1 musical sketch survives
81	Achilleus ([?opera], 3), early 1849, Feb–July 1850; notes on *Achilleus* (Leipzig, 1885, SS xii, PW viii) may relate to projected theoretical essay rather than opera
82	Wieland der Schmied (Heldenoper, 3), Dec 1849–March 1850 (pds: GS iii, SS iii, PW i, SW xxxi). Scenario only; offered to Berlioz (via Liszt), A. Röckel and W. Weissheimer, but none set it. Wagner himself made no setting; no musical sketches survive
89	Die Sieger ([opera], 3), May 1856 (ps: Leipzig, 1885, SS xi, PW viii, SW xxxi). Wagner still planning composition in 1878
99	Luthers Hochzeit [?drama], August 1868 (ps: Bayreuth, 1937, SW xxxi); only prose sketches exist. Wagner appears not to have attempted to compose music; in 1878 considered prose play on subject
100	[Lustspiel], 1, Aug 1868 (ps: Zürich and Freiburg, 1975, SW xxxi); only prose scenario exists, but some musical treatment may have been intended
102	Eine Kapitulation (Lustspiel in antiker Manier), Nov 1870 (text: GS ix, SS ix, PW v, SW xxxi); text not set by Wagner, but he may have retouched setting by Richter, which has not survived (possibly destroyed by Richter)

ORCHESTRAL

10	Overture (Paukenschlag-Ouvertüre), B♭, sum. 1830, Leipzig, 25 Dec 1830, lost
11	Overture (Politische Ouvertüre), ?Sept 1830, lost and ?inc.
12	Overture to Die Braut von Messina (F. von Schiller), sum, or aut. 1830, ?lost
13	Orch work, e, frag., ?1830 (possibly to be identified with WWV 12); SW xviii/1
14	Overture, C (in 6/8 time), end 1830, lost

Kinder-Katechismus zu Kosel's Geburtstag (Mainz, 1983)
Die Meistersinger von Nürnberg (lib, 1962) with essay by E. Voss (Mainz, 1983)

WRITINGS, SPEECHES

This list includes most of Wagner's writings, reviews, speeches, open letters and letters on specific subjects published in SS, as well as a number of unpublished writings; occasional poems and dedications as well as prose drafts and texts of the stage works in GS and SS are excluded, as are certain items that appeared in obscure and now inaccessible newspapers and periodicals, and items published anonymously or pseudonymously and difficult to identify.

The entries are listed in chronological order (within as well as between years) according to the date of writing. The precise form of the title, which occasionally varies from edition to edition, is taken from the Volksausgabe of the writings (Leipzig, 1911–14), except that all titles of journals and musical and literary works are rendered in italics.

(2) Johanna Wagner [Jachmann-Wagner] (*b* Seelze, nr Hanover, 13 Oct 1826; *d* Würzburg, 16 Oct 1894). Soprano, adopted daughter of (1) Richard Wagner's elder brother, Albert. Through the influence of her uncle, she made her début at Dresden in 1844 as Agathe. She created the role of Elisabeth in *Tannhäuser* (19 October 1845) and also sang in Auber's *Le maçon*. After studying in Paris with the younger Manuel García (1846–8), she sang in Hamburg (1849) and was then engaged at the Hofoper, Berlin (1850–61), where she took over the part of Fides in *Le prophète* from Pauline Viardot. In 1852 she was announced to sing at Covent Garden, but a lawsuit brought by Benjamin Lumley, manager of the rival opera company at Her Majesty's Theatre, prevented her from appearing. She eventually made her London début in 1856 at Her Majesty's as Rossini's Tancred, Donizetti's Lucretia Borgia and as Romeo in Bellini's *I Capuleti e i Montecchi*. That year she sang Elisabeth in the first Berlin performance of *Tannhäuser*, and in 1859 Ortrud in the first Berlin performance of *Lohengrin*. Early in the 1860s she lost her singing voice and appeared for a decade as an actress. Her voice recovered, she sang in Beethoven's Ninth Symphony at the ceremony celebrating the laying of the foundation stone of the Bayreuth Festspielhaus (1872), and in the first complete *Ring* cycle at Bayreuth (1876) she sang Schwertleite and the First Norn. From 1882 to 1884 she taught singing at the Königliche Musikschule, Munich, and later gave lessons privately. Her voice was powerful throughout its range, clear and bright in the upper register, round and full in the lower; she had a magnificent stage presence as well as considerable

dramatic ability. Her husband, Alfred Jachmann, acted as intermediary when Wagner was negotiating his London concerts in 1877.

(3) Siegfried (Helferich Richard) Wagner (*b* Tribschen, nr Lucerne, 6 June 1869; *d* Bayreuth, 4 Aug 1930). Composer, conductor and director, son of (1) Richard Wagner. The youngest child of Wagner and Cosima von Bülow, he studied composition with Humperdinck, as well as architecture in Berlin and Karlsruhe. During a journey to India and China in 1892, he decided to pursue a professional career as a composer. From 1908 to 1930 he was director of the Bayreuth Festival. Following his marriage in 1915, he was supported in his diverse artistic activities by his wife Winifred (née Williams), Klindworth's adopted daughter. Thanks to numerous concert and lecture tours over a 10 year period, he secured the necessary financial means to resume theatrical work in Bayreuth in 1924. In his productions, which adopted the style of poetic realism, he attempted to reconcile his openness to dramatic reform with his father's original intentions. He opposed the increasing politicization of the Festival and the attempts made by populist-nationalistic circles to monopolize it.

Many of Wagner's works are thematically interlinked. His first large-scale composition, the symphonic poem *Sehnsucht*, takes up his earlier song *Frühlingsblick*, as well as anticipating themes of the later operas *Der Kobold* and *Sternengebot*. The Violin Concerto has strong connections with the fairy tale drama *An allem ist Hütchen schuld*, written at the same time. As an opera composer he not only followed the example of his father, but also that of his father's predecessors. With *Der Bärenhäuter*, his first and most successful stage work, he became known as 'the composer of fairy tale operas'. He wrote all of his own librettos, often basing them on Frankish legend. The wealth of his melodic imagination corresponds to his richly eventful plots, in which the dark and somewhat bizarre expression of his protagonist's psyches reveals a rather inscrutable sense of humour. After many years of neglect some of his operas have been revived (*Der Friedensengel*, London, 1975) thanks to the commitment of his elder daughter Friedelind and the musicologist and director Peter P. Pachl.

WORKS
(*selective list*)

Stage (all in 3 act with librettos by the composer, unless otherwise stated): Der Bärenhäuter, 1896–8, Munich, 22 Jan 1899; Herzog Wildfant, 1900, Munich, 23 March 1901; Der Kobold, 1903, Hamburg, 29 Jan 1904; Bruder Lustig, 1904–5, Hamburg, 13 Oct 1905; Sternengebot (prol, 3), 1906, Hamburg, 21 Jan 1908; Banadietrich, 1907–9, Karlsruhe, 23 Jan 1910; Schwarzschwanenreich, 1909–10, Karlsruhe, 5 Nov 1918; Sonnenflammen, 1911–12, Darmstadt, 30 Oct 1918; Der Friedensengel, 1913–14, Karlsruhe, 4 March 1926; Der Heidenkönig (prol, 3), 1913, Köln, 16 Dec 1933; An allem ist Hütchen schuld, 1914–15, Stuttgart, 6 Dec 1917; Der Schmied von Marienburg, 1919–20, Rostock, 16 Dec 1923; Rainulf und Adelasia, 1921–2, Rostock, 10 March 1923; Die heilige Linde (prol, 3), 1922–7, prol, Bayreuth, 27 Nov 1924, various scenes, Stuttgart, 4 Aug 1933; Walamund, 1928–9; Das Flüchlein, das Jeder mitbekam, 1929, prol, Bayreuth, 4 Aug 1934, complete, Kiel, 29 April 1984; Wahnopfer (2), Rudolstadt, 10 June 1994; incid music

Vocal: Stabat mater, 4vv chorus, 1889; Abend auf dem Meere (H. Thode), high v, pf; Frühlingsglaube (L. Uhland), 1v, pf, 1890; Frühlings Tod (N. Lenau), 1v, pf; Frühlingsblick (Lenau), S, pf; Abend am Meere (A. Meissner), high v, pf, 1897; Schäfer und Schäferin, 1v, pf (Berlin, 1903); Das Märchen von dicken fetten Pfannekuchen, A/Bar, orch, 1913; Der Fahneschwur (E.M. Arndt), men's vv, orch, 1914; Friedenshymne, S, chorus, orch, 1918; Wer liebt uns?, men's vv, wind, 1918; Wahnfried-Idyll, 1v, pf, 1918; Nacht auf Narosz (G. Holstein), T, pf, 1919; Hildisch-Hymne, 1v, pf, 1922; Hochzeitslied, 1v, pf, 1922; Das Dryadenlied, 1v, pf, 1927; Weihnacht (17th-century poem), 1v, pf, 1927; Das Bales-Tänzchen, 1929

Inst: Adagio, pf, 1889; Fugue, 1889; O Haupt voll Blut und Wunden, variations, str qt, 1889; Marsch aus Gottfried der Spielmann, 1892; Sehnsucht, sym. poem, orch, before 1895 [after F. Schiller]; Konzertstück, fl, small orch (Bayreuth, 1913); Vn Conc. (Bayreuth, 1916); Und wenn die Welt voll Teufel wär, scherzo, orch, 1922; Glück, sym. poem, orch, 1923; Han im Glück, scherzo, 1924; Sym., C, orch, 1925–7

Arrs: Liszt: Ekloge, 1890; Liszt: Heroides élégiaques, 1891; Schubert: Die junge Nonne, 1892

(4) Wieland (Adolf Gottfried) Wagner (*b* Bayreuth, 5 Jan 1917; *d* Munich, 17 Oct 1966). Director and stage designer, grandson of (1) Richard Wagner and son of (3) Siegfried Wagner. Brought up to direct the Bayreuth Festival, he observed the work of the designers Emil Preetorius and Alfred Roller in the 1930s. His first professional work as a designer and director was at Altenburg, but he also provided designs for *Parsifal* (1937) and *Meistersinger* (1943) at Bayreuth. After World War II, with his brother (5) Wolfgang Wagner, he revived the Bayreuth Festival, in 1951, with starkly modern, symbolist productions; he remained co-director of the festival until 1966. His productions were greatly at variance with the Romantic tradition of Wagnerian staging consolidated by Wagner's widow Cosima, who at the turn of the century had firmly rejected the symbolist projects of Adolphe Appia, an acknowledged influence on Wieland.

Wieland Wagner directed and designed all his grandfather's operas, from *Rienzi* to *Parsifal*, according to his conviction that the music did not require the old-fashioned, explicit scenery and stage action that the composer had prescribed. He used much reduced stage movements, dispensed with rainbow bridges and shattering swords, and imposed his own images on the works; in his 1954 *Tannhäuser*, Act 2 was set on a chessboard where the White Queen broke the rules by rushing forward to protect a threatened Black Knight. His productions were marked by the naked simplicity of their settings – most notably the tilted disc on which he staged the second of his three *Ring* cycles (1951) – by the importance he attached to lighting, and by their strongly defined characterizations. A political, even socialist,

element was perceived by some critics in productions such as that of the *Ring* of 1965, while other critics responded only to its mythical dimensions. He continually reworked his stagings, so that many Bayreuth 'revivals' were in effect new productions.

Though usually associated with Bayreuth and his grandfather's works, he contributed important productions of works by other composers, including Gluck, Verdi, Berg and Orff, notably at the Stuttgart Staatsoper. His *Fidelio* (1954) was notorious for his removal of the spoken dialogue and rearrangement of many of the musical numbers; *Salome* (1962), a production conceived specifically for Anja Silja, was remarkable for his reversal of the style of the piece: he found stillness in the dance, and movement in the traditionally static dramatic sections. After his death the Bayreuth Festival gradually replaced all his productions; *Parsifal*, the last to survive, was retired in 1973.

(5) **Wolfgang (Manfred Martin) Wagner** (*b* Bayreuth, 30 Aug 1919). Administrator and director, grandson of (1) Richard Wagner and son of (3) Siegfried Wagner. He studied music privately in Bayreuth and received practical theatre training in Berlin with Emil Preetorius. In 1951, with his brother (4) Wieland Wagner, he revived the Bayreuth Festival after World War II. Until Wieland's death in 1966 they were co-directors of the festival, Wolfgang assuming responsibility for administration; after that date he took over as sole director.

He began by assisting his brother with his modern, controversial productions, and later staged his own productions, beginning with *Lohengrin* in 1953; he has devoted himself almost exclusively to directing his grandfather's works. Though clearly influenced by his brother's reforms, his own productions, up to and including *Meistersinger* (1981), *Tannhäuser* (1985) and *Parsifal* (1989), have been more conservative, occasionally incorporating romantic and semi-naturalistic elements. He shares his brother's love of lighting effects, though some of his productions have been criticized as too dark. His 1973 version of *Meistersinger* won praise for its new floor projections and lush variety of colour. He is sceptical of following his grandfather's written stage directions, but his introduction of a curtain (or more exactly a shutter) closing from both the top and the bottom during the scene changes in the *Ring* was not a popular innovation. His control over production concepts has been questioned, but the basic concept of his 1970 *Ring* ranks as one of his most successful achievements. This was set on a tilted disc, like Wieland's, but in the early stages of the narrative the disc broke into fragments, to be restored whole only at the end of the epic.

Wolfgang's greatest contribution has been in maintaining the Bayreuth Festival's unique role as both a shrine to Richard Wagner and a workshop for modern opera production; in his choice of other directors, designers and musicians, he has taken chances and encouraged radical experimentation.

BARRY MILLINGTON (1, work-list with JOHN DEATHRIDGE, CARL DAHLHAUS, ROBERT BAILEY, bibliography), ELIZABETH FORBES (2), CHRISTA JOST (3), PAUL SHEREN (4, 5)

Wagner, Christian Salomon. Keyboard instrument maker, brother of JOHANN GOTTLOB WAGNER.

Wagner, Georg Gottfried (*b* Mühlberg, Saxony, 5 April 1698; *d* Plauen, 23 March 1756). German violinist and composer. After receiving early training from his father, Wagner matriculated at the Thomasschule, Leipzig, on 18 May 1712, and continued there until 1718 as a pupil of Johann Kuhnau. From 1718 to 1726 he studied at the University of Leipzig. He may have become one of J.S. Bach's first pupils in Leipzig in 1723, for the earliest known letter of recommendation in Bach's hand concerns Wagner and was written in that year. During the next three years Wagner certainly served as his assistant and he presumably performed in Bach's weekly church cantatas both as principal violinist and bass soloist. In 1726 Bach wrote four letters in support of Wagner's application for the post of Kantor in Plauen, describing him thus: 'he is thoroughly at home in composition . . .. He plays a good organ and clavier, is accomplished on the violin, violoncello, and other instruments, sings a bass that is, though not too strong, quite mannerly'. Wagner was approved unanimously and remained in Plauen until his death.

Wagner was most celebrated as a violinist and frequently appeared as a guest artist, particularly at the court in Weissenfels. He is said to have composed 'many church pieces, oratorios, concertos and trios, also 12 violin solos'. Of the two surviving works, one, *Lob und Ehre*, was published in 1819 as J.S. Bach's work (BWV Anh.162).

ROBERT L. MARSHALL

Wagner, Gotthard [Joseph] (*b* Erding, 29 Dec 1678; *d* Tegernsee, 13 Dec 1738). German composer. The son of a blacksmith, he first worked in his father's smithy. He attended grammar schools in the Augustine monastery of Weyarn and in Munich, then studied philosophy at the Benedictine abbey in Rott am Inn and theology at the Benedictine abbey in Tegernsee. In 1699 he entered that

abbey and took his vows on 17 October 1700; he was ordained priest on 18 October 1705. From 1705 to 1707 and from 1716 to 1721 Wagner taught at the Benedictine grammar school in Freising. Between 1724 and 1727 he was preacher and minister at Maria Plain near Salzburg and from 1728 at Tegernsee. His obituary mentions that he was an excellent organist.

Wagner is a notable representative in south Germany of composers of the German and Latin sacred solo song with accompaniment for instruments and continuo. Only the second of his five printed collections of sacred arias survives complete. He also produced homiletic writings and books of exercises for Latin teaching. The manuscripts of his polyphonic sacred music (masses, litanies, antiphons etc.) have disappeared.

WORKS

op	
1	Cygnus marianus, S/A, insts (Hallein, 1710), 85 arias
2	Musicalische Bruett dess marianischen Schwanens, S, 2vn, va, b va, org (Hallein, 1713), 30 arias
3	Musicalischer Hof-Garten, S/A, 2 vn, va, org (Augsburg, 1717), 100 arias
4	Marianischer Spring-Brunn in den musicalischen Hof-Garten (?Augsburg, 1720), 31 arias, lost
5	Marianisches Immelein, S, A, T, B, insts (?Augsburg, 1730), 52 arias, lost

Op.2 also mentions an Alveare musicum, to be published in 1718, containing 4 masses, 6 lits, 8 Marian ants, 1 Miserere, 1 Stabat mater, 1 TeD

ROBERT MÜNSTER

Wagner, Jean Théophile. *See* WAGNER, JOHANN GOTTLOB.

Wagner, J(osef) F(ranz) (*b* Vienna, 20 March 1856; *d* Vienna, 5 June 1908). Austrian bandmaster and composer. He composed several hundred dances and marches, including *Gigerl* op.150 and *Unter dem Doppeladler* op.159, both composed during the 1880s while he was bandmaster of the 47th Austrian Regiment. The latter, has remained the best known of Austrian military marches. Wagner was also bandmaster of the 49th Regiment (1891–9).

ANDREW LAMB

Wagner, Joachim (*b* Karow, nr Genthin, 13 April 1690; *d* Salzwedel, Altmark, 23 May 1749). German organ builder. He was probably taught by Matthias Hartmann of Magdeburg (a pupil of Arp Schnitger), and he worked for two years with Gottfried Silbermann in Freiberg, together with Zacharias Hildebrandt (from Silesia).

In 1719 Wagner built his first organ (Marienkirche, Berlin). He then set up his business in Berlin and immediately became the leading Prussian organ builder. In the following 30 years he built nearly 50 organs, including several in Berlin (his largest being in the Garnisonkirche), Potsdam (Erste und Zweite Garnisonkirche), Brandenburg (Cathedral (extant), St Katharinen, Gotthardkirche), Magdeburg (Heiliggeistkirche), Wusterhausen (St Peter und Paul; extant), Angermünde (extant), and Trondheim Cathedral, Norway (extant). Wagner's highly individual style derives from his synthesis of north German and Silesian styles with that of Silbermann, combined with his own new ideas and inventions.

Wagner's specifications are based on that of the Silbermann organ in Freiberg Cathedral (1710–14; *see* ORGAN, §V, 11, esp. Table 21 and fig.42. Wagner adapted this model according to the size of his organs and added new features. The specification of the pedal organ is the same in his medium organs as in his large ones; therefore a coupler to pedal is not necessary. The Mixture in the *Hauptwerk* is a *Scharff* (Ger.: 'sharp', i.e. five ranks including a Tierce). If there is a Principal 16′ in the Pedal, there will also be a conical Gembshorn 8′ in place of an Octava 8′. Usually there is a Quinta 6′ in the pedal organ. All Wagner organs have a compass of *CD–c‴* in the manuals, and *CD–c′* or *d′* in the Pedal. Wagner's style was copied by his pupils Peter Migendt, Ernst Marx, and Gottlieb Scholtze (who completed Wagner's last organ at St Marien, Salzwedel, in 1751).

DIETRICH KOLLMANNSPERGER

Wagner, Johann Gottlob [Jean Théophile] (*b* Medingen, 4 June 1741; *d* Dresden, 21 July 1789). German maker of harpsichords, clavichords, organs and pianos. He was a pupil of the Silbermanns before he established his business in Dresden. His younger brother, Christian Salomon Wagner (*b* Medingen, 1754; *d* Dresden, between 1812 and 1816), joined him as a partner in 1773, and assisted him in the invention of the *clavecin royal* in 1774. This was a four-and-a-half- or five-octave square piano, with the compass usually between *F′* and *f‴*, and its action (illustrated in Harding and Cole) was a modification of Cristofori's, with different dampers and no intermediate lever. The wooden, uncovered hammers produced a tone resembling that of the harpsichord, and there were usually at least three stops operated by knee-levers: 'Harfe' (where a bar covered with shag is lowered on to the strings), 'pianissimo' (or half-blow, as the hammers are moved nearer the strings) and 'forte'. Surviving *clavecins royaux* include examples at the Brussels Conservatory, the Bachhaus, Eisenach, and the Germanisches Nationalmuseum, Nuremberg.

After Johann's death Christian continued the business. In 1796 he invented a three-manual harpsichord (which he also called *clavecin royal*) and a method of quilling harpsichords, which he said made the replacement of quills unnecessary. The number of pianos and harpsichords that left their workshop is thought to have exceeded 800.

MARGARET CRANMER

Wagner, Johann Michael (*b* Schmiedefeld, 1727; *d* Schmiedefeld, 1801). German organ builder. With his brother Johann Christoph Wagner (*b* Schmiedefeld, *c*1725; *d* after 1770), Johann Michael (i) was the most prominent member of a family of organ builders resident over several generations in Schmiedefeld, Thuringia. The family history is not completely clear. Other members active as organ builders in the same workshop were Johannes Wagner (1733–1804), Johann Michael (ii) (1760–99) and Johann Friedrich (the two sons of Johann Michael (i)), Johann Michael (iii) (1798–1876), and Johann Gottlob (1771–1800). At various times members of the family worked with other organ builders: Johann Michael (i) was with Hofmann in Gotha from 1741 to 1747, and from 1747 to 1751 he worked with Johann Caspar Beck of Herrenbreitungen on the rebuilding of the organ in the Stadtkirche, Laubach, Hessen. He also collaborated with Johann Caspar Holland on the organ of the Kreuzkirche, Dresden (1789), one of the greatest of the Wagner instruments. He served as court organ builder to the principality of Bernburg, although his application in 1755 for the same position in Altenburg, to succeed T.H.G. Trost, was unsuccessful.

The Wagner workshop in Schmiedefeld supplied organs as far away as Saxony and the Netherlands. The specifications of the Wagner's instruments display typical characteristics of central German organs of the 18th century: full Principal chorus, mutation stops and relatively copious reeds, but also various flute stops. Mixtures contain the Terz. The Wagners made their cases in the Rococo style. One innovation of the Wagner brothers – the division of wind in the main wind-trunk – became especially influential. Other organs by the Wagners (it is often not possible to ascribe instruments to particular family members) include those at Döschnitz (1750–1), St Marien, Suhl (1757–62), Vachdorf (1770), Schmiedefeld (1770), the Groote Kerk, Arnheim (1770), and Gersfeld (1784–7). They were also active as piano makers. Johann Andreas Heinemann was a partner in the Wagner workshop before setting up on his own in Laubach.

FELIX FRIEDRICH

Wagner, József (*b* Stockerau, 1791; *d* after 1860). Hungarian music publisher, seller of books and printed music, and lithographer. He settled in Hungary in his youth as a cellist at the German theatre in Pest, but in 1837 ill-health obliged him to abandon his musical career, and after two years of uncertainty he opened his shop 'Musical Merchandise' in Pest. Besides working as a publisher he participated keenly in the musical life of the city, being closely connected with the Pest-Buda Musical Association; as early as 1837 he submitted to it his draft of a pension scheme for artists, which however was 'temporarily set aside'. The contemporary press criticized him for his anti-Hungarian attitude but mentioned with approval that 'at the time of the last Polish uprising he showed sympathy and helped the refugees'. His firm published works by the leading Hungarian composers (e.g. Ferenc Erkel's Hungarian national anthem and opera *Hunyadi László* and Béni Egressy's *Szózat*). Unfortunately he did not establish the sequence of his publications: some have only a number (notably works of 1840–44), some have only his initials (J.W., I.W., W.I., W.J.P.) and some are unnumbered, marked by letters of the alphabet (B, C, D, Dd, O etc., particularly in 1844–9). Surviving issues with a regular publisher's plate number (e.g. J.W.41–1846) apparently do not exceed 200, and these appeared only between 1846 and 1858. The chronology of the firm's activities is equally difficult to determine. For some time another member of the family, Ferenc Wagner, was involved in the management; some publications were issued under his name. After the music printing firm was sold to the publishers Rózsavölgyi és Társa in 1858, József Wagner dealt solely in lithography.

ILONA MONA

Wagner, Peter (Josef) (*b* Kürenz, nr Trier, 19 Aug 1865; *d* Fribourg, 17 Oct 1931). German musicologist and medievalist. He studied under Michael Hermesdorff at the Cathedral music school in Trier (1876–86), and at the University of Strasbourg he studied classics and then musicology (under Jacobsthal), taking the doctorate in 1890 with a dissertation on Palestrina as a secular composer. He continued his studies in Berlin with Bellermann and Spitta. In 1893 he was appointed lecturer in music history and church music at the University of Fribourg, where he remained for 38 years, becoming professor (1902) and rector (1920–21). Under the patronage of Pope Leo XIII Wagner founded the Académie Grégorienne at the university in 1901; under its auspices a series of more than 20 monographs on medieval chant was published. In 1904 Wagner was appointed to the Pontifical Commission for the preparation of the Editio Vaticana chant books. During the ensuing controversy surrounding their publication, Wagner staunchly defended the principles of restoration used by the board of editors. He was a member of many scholarly societies, and in 1927 was elected first president of the International Musicological Society.

Wagner's lifetime work, *Einführung in die gregorianischen Melodien*, is the first comprehensive survey of medieval chant based on modern musicological research methods. It covers the liturgical origins and development of Mass and Office chants, the palaeography of chant notations and the musical forms of chant melodies. Wagner was a leading figure among the mensuralists. In his earlier studies he was sympathetic to the theories of free rhythmic interpretation of Gregorian chant melodies proposed by Pothier of the Solesmes school, but in an article in the Peters *Jahrbuch* (for 1910) he reversed his position and advocated a mensural theory of neumes of set rhythmic values. The *virga recta* and *virga jacens*, according to Wagner, had long metrical values which, in transcription, equal crotchets; the *punctum* was of short duration equivalent to a quaver. Wagner applied his theories to all medieval musical notations, not just the

comparatively few St Gallen and Messine manuscripts which have rhythmic indications. Towards the end of his life Wagner published a series of important studies on medieval Spanish chant, especially on the music in the Calixtinus Manuscript and the responsorial psalm tones of the Mozarabic Office.

JOHN A. EMERSON

Wagner, Roger (*b* Le Puy, 16 Jan 1914; *d* Dijon, 17 Sept 1992). American choral conductor of French birth. He was taken in 1921 to Los Angeles, where he first began studies for the priesthood at a Santa Barbara seminary. After further education at Montmorency, France, from 1932, he studied the organ with Marcel Dupré, served in the French army (1934–6), and returned to Los Angeles in 1937 as organist and choirmaster at St Joseph's. In the 1940s he studied conducting with Bruno Walter and composition with Lucien Caillet; he took American citizenship during this period. In 1946 he formed the Roger Wagner Chorale (which became the source of the Los Angeles Master Chorale), which undertook many tours and gained a wide reputation for virtuosity and versatility in performance and on many gramophone records. His ensembles sustained exceptional degrees of tonal opulence, flexibility and precision, and he was specially adept at early music and the French repertory. A specialist in the music of Josquin Des Prez (for research into whose works he obtained the PhD degree from Montreal University), he gave choral courses as head of the music department at Marymount College, Los Angeles, 1951–66, and at the University of California from 1959, and published many choral arrangements. He reluctantly gave up leadership of the Master Chorale in 1986, assuming the title of conductor laureate. He received a papal knighthood from Paul VI in 1966.

MARTIN BERNHEIMER

Wagner-Régeny, Rudolf (*b* Szász-Régen, Transylvania [now Reghin, Romania], 28 Aug 1903; *d* Berlin, 18 Sept 1969). German composer and keyboard player. Born Rudolf Wagner, he adopted the name Wagner-Régeny after his birthplace. Although his family was of German descent, the boy spoke no word of the language until he began his schooling. In 1919 he was sent to Leipzig to study the piano with Robert Teichmüller. From there he gained admission to the Hochschule für Musik in Berlin, where his main studies were conducting with Rudolf Krasselt and counterpoint with Friedrich Ernst Koch. Koch was admired and held in awe by his composition pupils, including the select handful from Schreker's masterclass (to which Wagner-Régeny had not aspired, contrary to the impression left by his first post-1945 autobiographical sketch).

On leaving the Hochschule, Wagner-Régeny married a Franco-Austrian artist, moved to her studio flat in Berlin-Charlottenburg, and allowed his Romanian citizenship to lapse. For the next seven years he pursued a desultory freelance career as a conductor and accompanist, while indulging his private and lifelong passion for early keyboard instruments. Influenced by Boris Blacher, whom he had met while continuing his studies with Koch privately, Wagner-Régeny sought work in the worlds of film and modern dance. The former he found uncongenial in itself, but helpful with regard to his amicable and long-lasting working relationship with Guido Bagier, the pioneer of the German sound film.

As yet there seems to have been no strong commitment to composition. It was modern dance, and an immediate rapport with the Hungarian-born Rudolf von Laban, that afforded Wagner-Régeny his longest and most stable professional engagement during the 1920s. As conductor and occasional arranger-composer for Laban's touring ensemble, he gained access to many of the smaller theatres and opera houses in Germany and central Europe.

Meanwhile Bagier had introduced him to Hindemith's modern-music festival in Baden-Baden, where his work attracted the attention of Benno Balan, an eccentric music publisher from Berlin now specializing in the new market for short chamber operas. With Balan's help and encouragement, Wagner-Régeny obtained his first opera commission, fulfilled it promptly, and emerged in Gera in 1928 as composer of the comic opera *Moschopulos*, coupled the following year with *Sganarelle* (after Molière), an unpretentious postgraduate piece from 1923.

Further one-acters were to follow, but to no great avail. By 1931, when Germany was in the grip of economic and political crisis, the golden years of operatic experiment were over and modern dance had already been attacked as a particularly offensive form of cultural bolshevism. Balan's business affairs were in chaos, and Wagner-Régeny was reduced to eking out a living in Berlin as a bar-room and beer-cellar pianist.

His rescuer was Caspar Neher, the outstanding German stage designer of the younger generation, a friend and associate of Brecht's since their schooldays, and Weill's most recent recruit to the art and craft of libretto writing. His first professional encounter with Wagner-Régeny had been in connection with the Essen Opera's production of *Sganarelle* and *Moschopulos* in 1929. Subsequent meetings, notably in connection with Pabst's film of *Die Dreigroschenoper* (1931), had consolidated their relationship. Towards the end of 1932, and allegedly with Weill's blessing, Neher furnished Wagner-Régeny with a draft libretto for a three-act opera, *Der Günstling*, and helped secure for him an agreement and retainer from Universal Edition in Vienna (the Balan enterprise being by then bankrupt).

Shortly before or very soon after the Nazi seizure of power in March 1933 (and not in 1930, as Stuckenschmidt suggested) Wagner-Régeny acquired German citizenship. After Weill's flight from Germany that same month, the future of *Der Günstling* became almost as important to Universal Edition as to its composer. In due course approaches were made to the Dresden Opera and its new music director, Karl Böhm, who had been released from his contract in Hamburg on the orders of Hitler himself. The Dresden première of *Der Günstling* on 20 February 1935, cleverly promoted beforehand by Alfred Rosenberg's National Socialist 'Kulturgemeinde', was the first unequivocal operatic success for which the Hitler regime could claim credit. Although it was equalled if not surpassed later that year by the success of Egk's *Der Zaubergeige*, nothing – other than a change in the political climate – could remove from *Der Günstling* and its composer the double accolade of having inaugurated a 'new' operatic era on behalf of a 'new' generation. In that same spirit, the Kulturgemeinde offered to commission 'new' incidental music for *A Midsummer Night's Dream* from young composers as well as senior ones. Strauss and Pfitzner declined the offer; Wagner-Régeny did not.

Three years of fame and apparent good fortune culminated in the January 1939 première at the Berlin Staatsoper, under Karajan, of a second Wagner-Régeny–Neher opera, *Die Bürger von Calais*. After the outbreak of World War II Wagner-Régeny was for some while protected from the threat of military service by Heinz Hilpert, the Intendant of the Deutsches Theater, a notable adept in the art of manipulating the party apparatus in the interests of preserving his own artistic independence and that of his associates. While working on a third Neher opera, *Johanna Balk*, Wagner-Régeny wrote a series of scores for Hilpert's classic drama productions – work of 'national importance' that exempted him from military service. The era of Goebbels's 'total war' was yet to come.

Early in 1941, Wagner-Régeny, Neher and Hilpert moved from Berlin to Vienna, which was becoming a refuge for many prominent artists and intellectuals (much to the fury of Goebbels). Under the personal protection of the Gauleiter of Vienna, *Johanna Balk* had its controversial première at the Vienna Staatsoper on 4 April 1941. Reports of a first-night 'scandal' reached neutral countries, including the USA, but were already exaggerated and for obvious reasons were made much of by the composer after the Allied victory.

With a stipendium from the cultural authorities in Vienna, Wagner-Régeny settled in nearby Klosterneuburg and continued working on a fourth Neher collaboration, an 'opera for actors', instigated by Hilpert. Its progress was fitful, for reasons implicit in the curiously fragmented and secretive keyboard pieces of the same period.

The 40-year-old composer was no longer in favour with the Berlin authorities, and in February 1943 he was conscripted into the army. After service in occupied Paris and as a firewatcher in Berlin he was transferred to Mecklenburg, where a sanatorium was found for his wife, who was undergoing treatment for the cancer from which she died in 1947.

Thanks in the first place to the understanding and concern shown to him by Russian authorities when the Soviet forces reached Mecklenburg, Wagner-Régeny survived the war and his own severe illnesses, spiritual as well as physical. He remained in the Soviet zone and, after the formal division of Germany in 1949, was appointed professor of composition at the Musikhochschule in (East) Berlin. *Der Günstling* and to a lesser extent *Die Bürger von Calais* had already won official approval in the German Democratic Republic, and, after Brecht had firmly identified himself with the aims of the new regime, his renewed collaboration with Neher at the Berliner Ensemble was wholly to Wagner-Régeny's advantage. It was thanks to Brecht's personal and literary intervention that *Persische Episode*, the 'opera for actors' left incomplete after Wagner-Régeny's conscription in 1943, was completed in 1951. First published under its original title, *Der Darmwäscher*, it had little success in the East and none in the West.

For Wagner-Régeny as for Hanns Eisler, non-aligned Austria offered a small bridge to the West. It was at the Salzburg Festival that his last opera, *Das Bergwerk zu Falun*, was staged in the summer of 1961, only a few days before the erection of the Berlin Wall. Immured in the DDR for his remaining eight years, but held in high affection by his many composition pupils at the Musikhochschule – among them Siegfried Matthus, Friedrich Goldman and Paul-Heinz Dittrich – Wagner-Régeny avoided the party limelight to the best of his ability, and continued to add to a body of work which since *Der Günstling* had developed consistently if at times slowly and painfully. Even in the three operas of the Nazi era, the calculated and characteristic equivocations of Neher's librettos are circumvented by a music that preserves, and at times bravely proclaims, its 'un-German' roots – in the English virginalists, in Musorgsky, Satie and Milhaud, in

the simplest Hindemith (notably *Wir bauen eine Stadt*) and, not least, in his own surreal transplantation of Weill. The same roots are as apparent in the Piano Concerto of 1935 as they are in the ballet *Der zerbrochene Krug*, based on the story by Kleist rather than on Nazi misappropriations of that great figure. It is their manifest and unacknowledged presence in the *Midsummer Night's Dream* score that might serve as the composer's strongest excuse for that deplorable venture – stronger, certainly, than his wife's (allegedly) half-Jewish origin.

So fleeting are the signs of an individual voice in the works of the 1920s, and so amateurish their technique and composition, that the quality and memorability of *Der Günstling* and its immediate successors would be astonishing but for the inaudible and unseen presence of Neher and his pervasive influence. Simple and often crude though the craftsmanship still is in *Der Günstling*, it becomes progressively more assured from work to work, until the processes of self-tuition came to an abrupt end after *Johanna Balk*. Completed and refurbished though it was in the aftermath of war and under the wing of Brecht, *Der Darmwäscher* seems almost desperate in its regressions to the famed spirit of the 1920s, as indeed do many of the postwar Brecht settings, with the notable exception of the incidental music for *Pauken und Trompeten*, a miniature masterpiece 'in the old style'.

The search for a new style that was already beginning in the desolate two-part inventions of *Hexameron* and other piano pieces of the Viennese war years is resumed in the tonally orientated serial music of 1948–60. Of particular significance on account of their religious texts and what flows from them are the *Cantica Davidi regis* and the cantata *Genesis*. Their promise is fulfilled in the luminous harmony of *An die Sonne* (Bachmann) and above all in the final atonements and valedictions of the *Hermann Hesse-Gesänge*.

WORKS

excluding lost works; for detailed list see KdG

STAGE

Sganarelle, oder Der Schein trügt (graziöse Oper, 1, Wagner-Régeny, after Molière), 1923; Essen, Städtische Bühnen, 12 April 1929

Moritat (theatralische Sinfonie [ballet], Wagner-Régeny), 1928, Essen, March 1929

Moschopulos (kleine Oper, 3, Wagner-Régeny, after F. Pocci), 1928, Gera, 1 Dec 1928

Der nackte König (kleine Oper, 3, V. Braun, after H.C. Andersen), 1928, Gera, 1 Dec 1928

Esau und Jacob (biblische Szene), 4 solo vv, spkr, str orch, 1929, Gera, 24 May 1930

La sainte courtisane (musikalische Szene, Wagner-Régeny, after O. Wilde), 4 spkr, chbr orch, 1930, Dessau, 24 Oct 1930

Die Fabel vom seligen Schlächtermeister (Stück für die Musikbühne, 3 scenes, H. von Savigny), 1931–2, Radebeul, nr Dresden, 23 May 1964

Der Günstling, oder Die letzten Tage des grossen Herrn Fabiano (op, 3, C. Neher, after V. Hugo: *Marie Tudor*), 1932–4, Dresden, Staatsoper, 20 Feb 1935

Die Bürger von Calais (op, 3, Neher, after J. Froissart: *Chronicles*), 1936–8, Berlin, Staatsoper, 28 Jan 1939

Der zerbrochene Krug (ballet, 2 pts, L. Maudrik, after H. von Kleist), 1937, Berlin, Staatsoper, 1937

Johanna Balk (op, 3, Neher, after Transylvanian chronicles), 1938–40, Vienna, Staatsoper, 4 April 1941

Persische Episode (Der Darmwäscher) (komische Oper, 4, Neher and B. Brecht, after *The Thousand and One Nights*), 1940–51, Rostock, 27 March 1963

Prometheus (szenisches Oratorium, 5 scenes, Wagner-Régeny and K. Holl, after Aeschylus), 1957–8, Kassel, Staatstheater, 12 Sept 1959

Das Bergwerk zu Falun (op, 8 scenes, Wagner-Régeny, after H. von Hofmannsthal), 1958–60, Salzburg, Festspielhaus, 16 Aug 1961

Incid music: A Midsummer Night's Dream (W. Shakespeare), 1935; Pauken und Trompeten (B. Brecht, after G. Farquhar), 1955; Moritz Tassow (P. Hacks), 1965

VOCAL

Choral: Der neue Plan (W.W. Aschenbach), unison chorus, pf, 1950; Cantica Davidi regis (Psalms), boys'/women's chorus 3vv, B chorus, chbr orch, 1954; Genesis, A, chorus 4vv, small orch, 1955–6; Jüdische Chronik, A, Bar, chbr chorus, 2 spkr, small orch, 1960 (collab. Blacher, Dessau, Hartmann, Henze); Schir haschirim (Song of Songs), A, Bar, female chorus, small orch, 1964; An die Sonne (cant., I. Bachmann), A, orch, 1967–8

Songs (1v, pf, unless otherwise stated): [17] Lieder der Frühe, 1919–25; Liederbüchlein, 8 songs, 1920–34; 8 Zigeunerlieder aus der Tatra, 1935; A Crust of Bread (P.L. Dunbar), unacc., 1945; Die [5] Lieder des Anglers, 1946; Ich will mein kindlich Herz behalten (H. Kükelhaus), 1947; [8] Lieder, 1948–67; 2 Beispiele, 1949; Hausmusik I (Klabund, Brecht), 1949; 2 Lieder (A. Glassbrenner), 1949; Lied im Herbst (Klabund), 1949; Zuspruch (Klabund), 1949; 10 Lieder (Brecht), 1949–50; Soll das heissen, dass wir uns bescheiden (Brecht), 1949–50; Lied der deutschen Einheit (M. Remané), 1952; 2 Rilke-Lieder, 1952; Dahinter wird Stille, 5 songs, 1952–65; Lied von der Einheit (M. Zimmering), 1966; Die Erinnerung (S. Hermlin), 1968; Hermann Hesse-Lieder, 1968; Hermann Hesse-Gesänge (Gesänge des Abschieds), 1968–9, arr. with small orch, 1969; Glück (E. Stadler), 1969; 2 Leierkasten Gesänge (F. Wedekind), perc, db, ad lib, 1969; 3 Fontane-Lieder, 1969

INSTRUMENTAL

Orch: Orchestermusik mit Klavier (Pf Conc.), 1935; Mythologische Figurinen, 3 pieces, 1951; 3 Orchestersätze, 1952; Einleitung und Ode, 1967; 8 Kommentare zu einer Weise des Guillaume Machauts, chbr orch, 1968

Chbr and solo inst: Kleine Gemeinschaftsmusik, 6 insts, 1929; Spinettmusik, 1934; 10 Melodien, rec, 1937; Str Qt, 1948; Liebeslied, a sax, pf, 1950; Gitarrenstücke, 1951; Introduction et communication à mon ange gardien, str trio, 1951; 5 Miniatures, gui, 1951; 2 Sätze, 2 gui, 1951; Trio, 2 gui, db, 1951; Divertimento, 3 wind, perc, 1954; Sonatina, gui, 1961; Etüde, accdn, 1969; Kindertrio, guis, pf/other insts, 1969; Moderato, gui, 1969

Pf: Klavierbuchlein, 1940; 2 Sonatas, 1943; Hexameron, 1943; Sonatina, *c*1945; Largo, after 1945; 2 Klavierstücke, 1949; 2 kleine Klavierstücke, 1949; 2 Sonatinas, 1949; Dreistimmige Fuge für das Lehrbuch, 1950; 2 Klavierskizzen in ein Album für Gerty Herzog, 1950; 2 Klavierstücke (Studien in variablen Metren), 1950; 2 Klavierstücke für Helmut Roloff, 1950; Sonatina, 1950; 2 Tänze für Palucca, 1950; Cocktail für Gottfried von Einem, 1951; L'ivresse tranquille, 1951; [5] Klavierstücke für Gertie, 1951; 3 parfums, 2 hommages à la cuisine (5 französische Klavierstücke), 1951; 7 Klavierfugen, 1953; Klavierstück für Kikusch, 1954; Variationen über ein kindliches Thema, 1954

Principal publishers: Bote & Bock, Peters (Leipzig), Universal

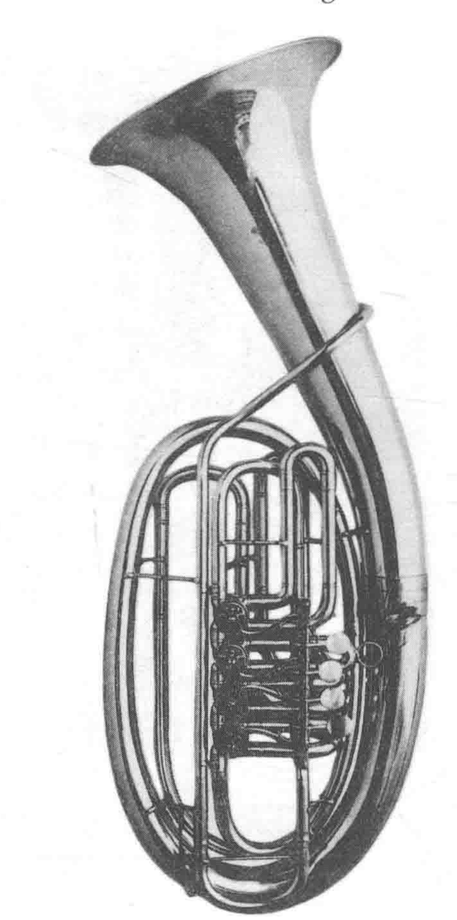
Wagner societies. From 1871, when Wagner chose Bayreuth for his festival, a number of subscription schemes came into existence with the aim of supporting the project. In an open letter of 16 June 1882 to Friedrich Schön, Wagner proposed a foundation to assist financially those who would benefit from a visit to the festival but who would otherwise be unable to attend. On 14 May 1883, three months after Wagner's death, the Allgemeiner Richard-Wagner-Verband was formed to coordinate the enterprise and by 1886 there were over 200 branches in

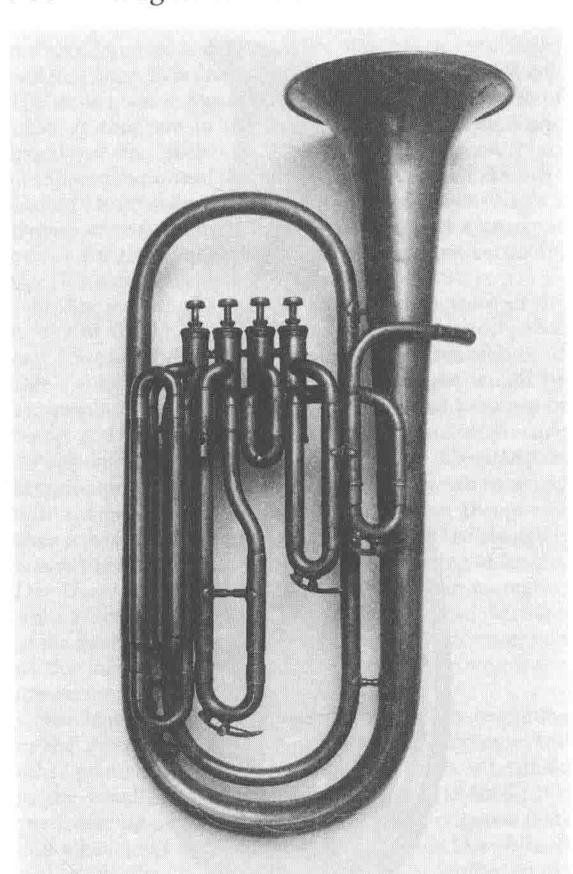


Germany and many other countries. The *Bayreuther Blätter* (begun in 1878 under the editorship of Hans von Wolzogen) became its newsletter. The Verband was dissolved in December 1938 and re-established in Hanover as the Richard Wagner-Verband in 1947; its primary function is still to subsidize visits to the festival by young musicians, theatre directors and technicians nominated by the affiliated societies. In 1998 110 societies were affiliated, mostly German, but also representing Austria, Britain, France, Sweden, Russia, Ukraine, Spain, North and South America and Australia.

There have been Wagner societies in Britain since 1872; an early one produced the magazine *The Meister* under the editorship of William Ashton Ellis between 1888 and 1895. The current society, now called the Wagner Society, was founded in 1953 to foster interest in and encourage productions of Wagner's works. This remains its essential aim, together with nurturing young singers capable of singing Wagner. Its internationally acclaimed magazine *Wagner* (produced three times a year) has printed new translations of the composer's prose sketches for *Wieland der Schmied* and *Jesus von Nazareth* as well as articles of topical interest. The popular magazine *Wagner News* is published six times a year and includes articles, interviews, news and reviews of opera productions and recordings. To mark the centenary of the Bayreuth Festival a bilingual yearbook *Wagner 1976* was published.

□

Wagner tuba. A special kind of tuba devised by Wagner for the *Ring* with the object of bridging the gap between the horns and trombones. In the *Ring* Wagner scored for a set of four of these instruments, to be played by an extra quartet of horn players who alternate between the two instruments as the part directs. The quartet consists of two tenor tubas in B♭, played by the fifth and seventh horn players, and two bass tubas in F, played by the sixth and eighth players. These two pitches are the same as horns in B♭ alto and F.

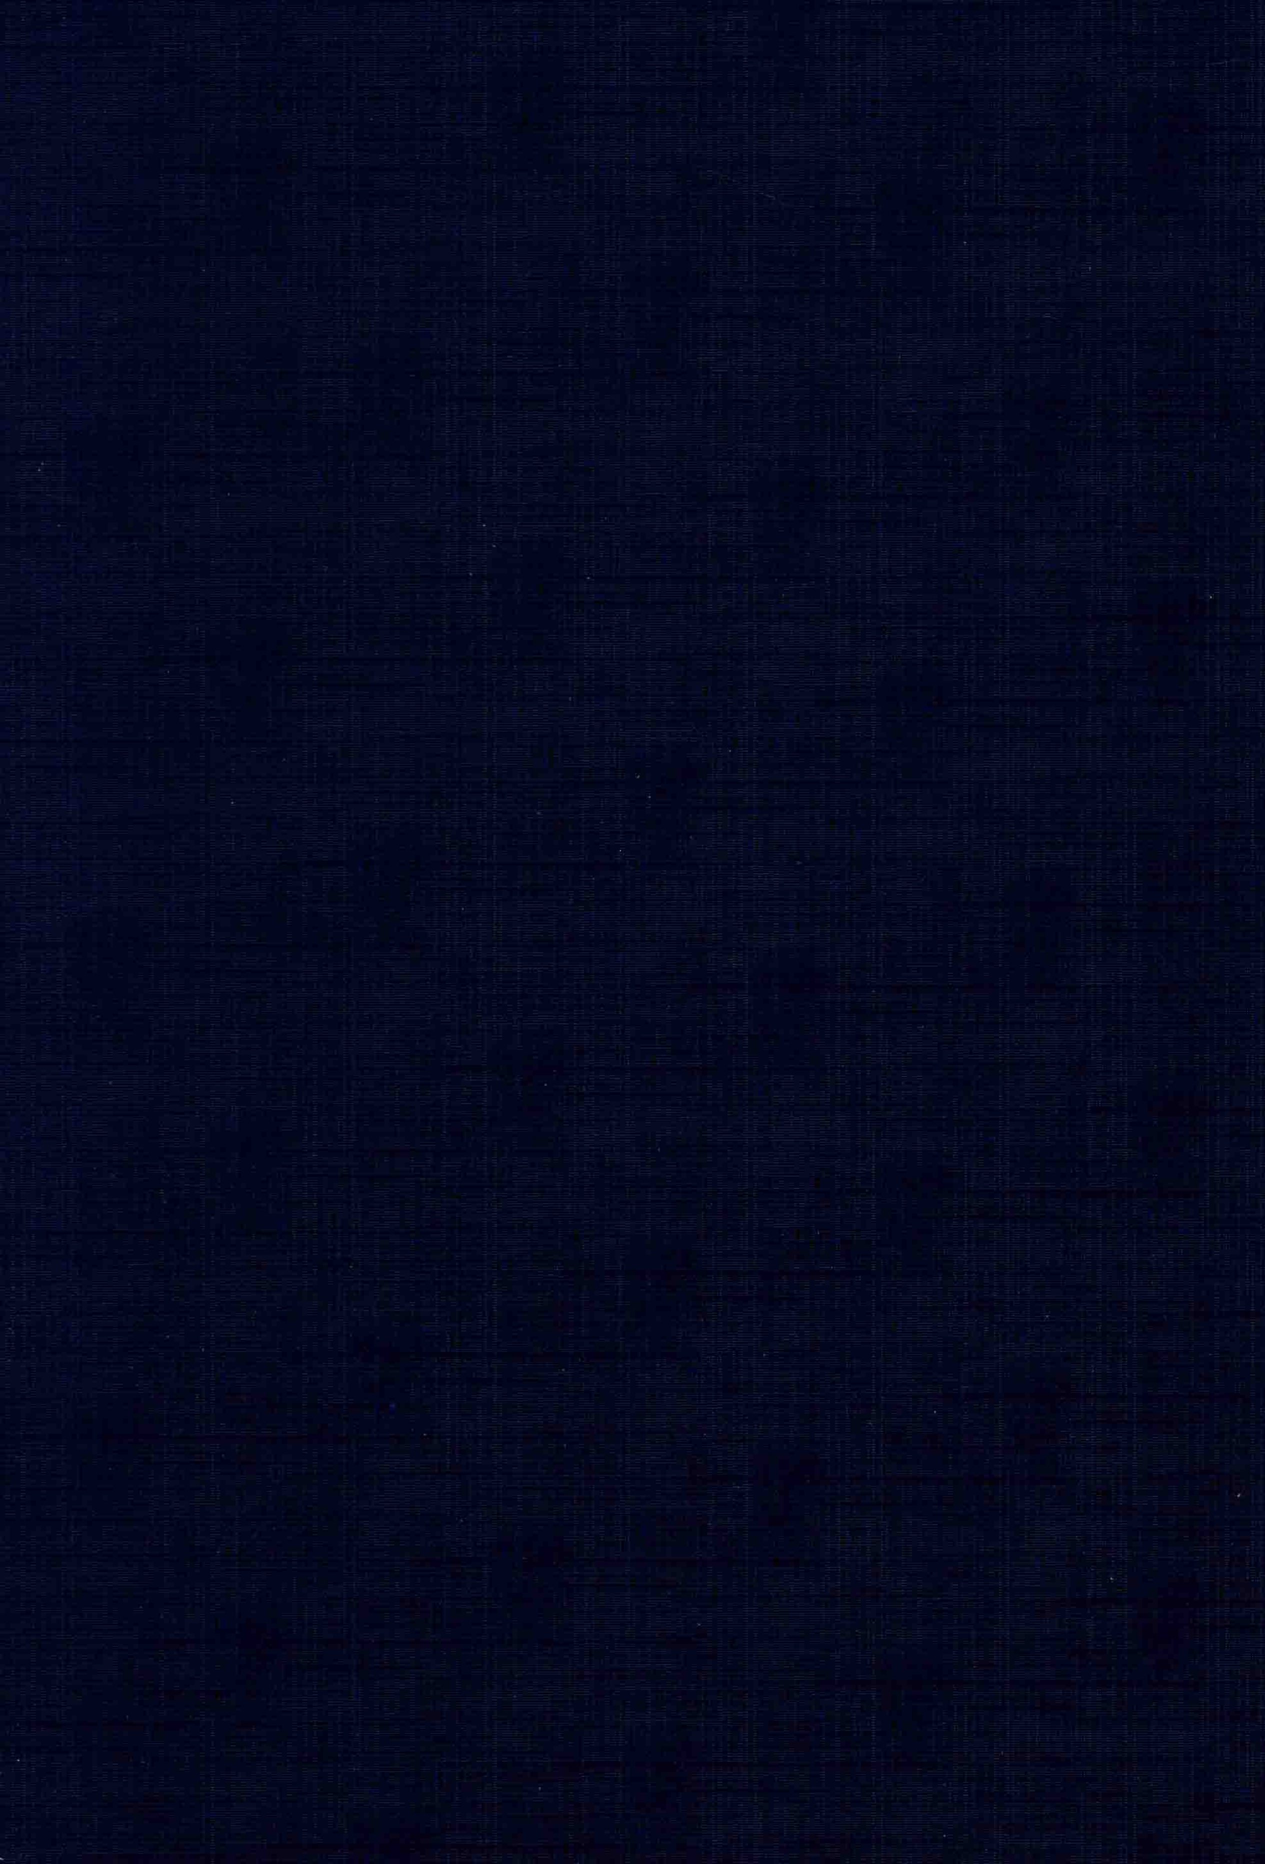


The main body of the modern instrument is elliptical, like most German tenor horns, with the bell emerging from the top at a slightly oblique angle, while the lower end almost rests on the player's lap (fig.1). In the centre of this ellipse are the four rotary valves which are manipulated by the fingers of the left hand, the fourth valve lowering the pitch by a perfect 4th. The conical bore increases steadily throughout the whole length and terminates in a small bell (thus differing from the horn, whose bore increases very slowly up to the last 30 cm of its length, when it flares out suddenly into a bell, the diameter of which measures over 5 cm more than that of the tuba). The wider bore, though not nearly as large as that of a true tuba, results in a certain lack of incisiveness in the attack and makes the instrument much freer to blow than the horn; thus in performance the chief difficulty is intonation. The ordinary horn mouthpiece is used, and its comparative smallness rounds off the tone while maintaining the correct relationship with the horns. In general the tone may be said to be more sombre and less biting than the 'white' tone of the horns, while Wagner's own concept (according to Bayreuth tradition) was that the tubas should be solemn, dignified and heroic as opposed to the lyrical and romantic horns. The compass of the tenor tuba in B♭

1. Bass Wagner tuba in F by Gebrüder Alexander, Mainz

(actual sounds) is *E*♭ to *f*″; of the bass tuba in F, *B*♭′ to *a*′. The fundamental is obtainable on both instruments.

Wagner had begun to compose *Das Rheingold* before he thought of these tubas. In the 1853 sketch the opening of scene ii (the Valhalla motif) is marked for trombones ('Pos. dolce'), but in the full score, made the following year, the tubas are specified. Von Westernhagen showed that they must have been inspired by instruments which the composer examined in the workshop of Adolphe Sax in Paris (*Die Entstehung des 'Ring'*, Zürich, 1973, p.46). This would have been during Wagner's short visit there in October 1853. In a letter of September 1865 to King Ludwig, Wagner referred to the extra instruments for the *Ring* including the 'Sax'schen Instrumenten'. He wrote that he had seen these some time earlier, that they were Sax's invention and that they were proving difficult to match with the instruments used in military bands in Germany. The tubas may thus originally have been saxhorns; the use of a special mouthpiece with which horn players would use their own mouthpieces was evidently a later idea, possibly Richter's. The instruments eventually made for Bayreuth are said no longer to exist, though they were kept in the theatre until at least 1939. It is not known who made them, but the firm of C.W. Moritz, Berlin, claimed to have done so (*ZI*, xxviii, 1907–8, p.643). The first set was superseded for



2. Bass Wagner tuba in F by Mahillon, Brussels, c1890

performances in 1890 by a set made by Gebrüder Alexander, Mainz. The saxhorn type of Wagner tuba, made by Mahillon of Brussels and London (fig.2), was widely used (see J. Webb, *GSJ*, xlix, 1996, pp.207–12). One set survives in Naples; another, housed at the RAM until the early 1990s, was orginally bought in 1895 by Sir Henry Wood for the formation of the Queen's Hall Orchestra and the introduction of the Promenade Concerts. A third set is owned by the Royal Opera House, Covent Garden. These all require mouthpieces of trombone size. Elsewhere, other instruments, such as Besson's cornophones (Paris), were used (see J. Webb, *GSJ*, li, 1998, pp.193–5). The first set of modern Wager tubas to be used in London was obtained for the LPO by Beecham from Alexander in 1935.

The orchestral parts for the tubas are written in B♭ and F; in the scores the notation varies. In *Das Rheingold* the B♭ tenor tubas sound a tone lower than written, and the F bass tubas a 5th lower (as in the parts); in the Prelude to *Götterdämmerung* the B♭ tenors sound a 9th lower; the F basses a 12th lower. Elsewhere the E♭ tenors sound a 6th lower (but in the bass clef, a 3rd higher); B♭ basses a 9th lower (in the bass clef, a tone lower): this last notation was intended by the composer to facilitate score reading.

Other composers who have scored for Wagner tubas are Bruckner in his later symphonies, Stravinsky in *The Firebird* and *The Rite of Spring*, and Strauss in *Elektra*, *Die Frau ohne Schatten* and the *Alpensinfonie*. Strauss wrote more advanced parts, with mutes even required. The tubas have been used in America as substitute horns for film and television music.
